* Assemblyman Barnes does not concur in the portions of the report which deal with academic freedom and unprofessional conduct. He has submitted separate views on these topics which appear at the conclusion of this report.

SUBCOMMITTEE ON PERSONNEL PROBLEMS

The Subcommittee on Personnel Problems was established in June 1963 to study various legislative proposals, resolutions and problem areas related to school district employees and their employment duties. The committee was instructed by the full committee chairman, Assemblyman Charles B. Garrigus, to conduct any studies and investigations necessary in order to present legislative proposals to the 1965 session of the Legislature.

Measures submitted to this subcommittee were as follows: House Resolution 429 (relating to academic freedom of school teachers); House Resolution 128 (state college faculty research); House Resolution 244 (year-round use of facilities of higher education); House Resolution 546 (relating to unprofessional conduct); Assembly Bill 271 (retirement benefits for teachers); Assembly Bill 404 (classifications of administrative employees); and Assembly Bill 310 (health plan for school employees).

Each of the above proposals was studied at length, although the majority of final recommendations made by this committee are stated in nonspecific terms. In general, the committee has attempted to avoid endorsing any particular proposal and rather has endeavored to discuss the broad issues involved in each measure and to make recommendations which relate to the broad issues, rather than the recommendation of specifics.

ACADEMIC FREEDOM

House Resolution 429 (1963)

RECOMMENDATIONS

1. The committee believes that the defense and maintenance of academic freedom in the public schools of this state is a direct charge upon local school district governing boards and officials of local school administrations. The committee urges vigilance on the part of the citizens in order to ward off slanderous and unsubstantiated attacks upon the public school system and its personnel.

2. Should these attacks upon academic freedom continue at the present level, this committee believes the Legislature should initiate a full-scale investigation of the problem.

INTRODUCTION

On July 11, 1963, the Assembly assigned to the Rules Committee for reference to the proper interim committee the subject matter of House Resolution 429 (Ryan) of the 1963 session. HIR 429 reads as follows:

WHEREAS, Academic freedom, including free and unqualified inquiry in areas of controversial ideas, has historically been recognized in this State as an essential facet of an educational system designed to meet the highest standards possible to serve not only the youth of this State but all of its people; and

WHEREAS, Concern is growing over the many pressures currently being exerted to restrict academic freedom, and an examination should be undertaken of all influences and causes tending to restrict academic freedom; now, therefore, be it

Resolved by the Assembly of the State of California, That the Assembly Rules Committee assign to an appropriate interim committee for investigation and study the subject of academic freedom of teachers in all public schools and educational institutions and such interim committee shall report its findings thereon, together with its recommendations, to the Assembly not later than the fifth legislative day of the 1965 Regular Session of the Legislature.

The Assembly Rules Committee referred this subject matter to the Assembly Education Committee, which in turn assigned the investigation of this subject to its Subcommittee on Personnel Problems.

The format of the committee report that follows is unique. Our decision has been to let the matter speak for itself by placing before the members of the Legislature and the citizens of California large portions of actual testimony taken in committee hearing. We do this without intent to embarrass or expose any individual or organization, but rather with the desire to keep our interpretive text at a minimum and concentrate our attention upon a statement of legislative policy toward academic freedom.

The remarks we have selected for publication are, we believe, representative of the tenor of the whole hearing, and in themselves are worthy of publication to a wider audience than is commonly encountered in legislative hearings. The entire transcript is of public record, all information was presented under oath, and any persons desiring the complete transcript of the Paradise hearing may secure it by writing the office of the Assembly Committee on Education in Sacramento.

The Slender Thread

No one can follow the history of academic freedom in this country without wondering at the fact that any society, interested in the immediate goals of solidarity and self-preservation, should possess the vision to subsidize free criticism and inquiry, and without feeling that the academic freedom we still possess is one of the remarkable achievements of man. At the same time, one cannot but be appalled at the slender thread by which it hangs, at the wide discrepancies that exist among institutions with respect to its honoring and preservation; and one cannot but be disheartened by the cowardice and self-deception that frail men use who want to be both safe and free. With such conflicting evidence, perhaps individual temperament alone tips the balance toward confidence or despair.¹

The tensile strength of this "slender thread" has been sorely tested in numerous communities throughout California in recent years; in some the thread was held, in others the jarring caused by the "snap" has wrought wounds from which communities are still seeking to recover. In all instances placed before the committee the evidence of tension and turmoil was appalling.

When national attention was focused on Paradise, California, in a *Life Magazine* article, the State Assembly deemed it advisable to initiate an inquiry into the influences and causes of the turmoil and the debilitating effects wrought upon academic freedom.

We state quite frankly that we were highly disconcerted to find it necessary to initiate this sort of investigation. It is a sad commentary upon the state of academic freedom in our public schools when the irresponsible and often times vicious allegations and misrepresentations of modern "know-nothings" can so upset the harmony of and local control over public education that circumstances call for a legislative investigation with an eye toward corrective legislation.

Committee Findings

A reading of the materials contained in the following section of this report provides a background for the committee's findings.

The committee finds:

- (1) That precipitation of attacks upon local school officials and teachers is often instigated initially by the activities of persons who are not members of the community in which the attacks are made.
- (2) That these persons are often representatives of a political persuasion and that an unjustified and uncalled for "link" is established

¹ Hofstadter and Metzger, *The Development of Academic Freedom in the United States*, Columbia University Press, 1955, p. 509.

between political concepts with which they disagree and the concept of academic freedom. The equation thus established provides an emotional and anti-intellectual framework within which sweeping attacks upon unassociated political issues are translated into attacks upon school administrations, curricula and teaching methods.

(3) That members of the community who eventually warm to the attack are often times individuals with no children presently attending the schools in the community (or with no children at all); and who, furthermore, have little or no knowledge of the quality or nature of what is being taught in the classroom based on personal experience.

(4) That disseminators of misleading or libelous materials have received such information from sources outside the community and passed it on to others in the community without questioning or ever seeking to establish the veracity of such material.

(5) That teachers who have utilized political propaganda of all persuasions, with the approval of local school officials, as basic tools in an effort to develop the analytical and critical faculties of their students, have been viciously attacked; and that teachers who will not bow to pressure and harassment must face a totally unnecessary fight for their academic lives.

(6) That individuals who have sought to serve their community as members of school boards or in other official capacities have done so with a "heavy heart" in view of the extraordinary harassment of them as individuals and the consequent interruption of their family and business life.

(7) That school districts lose heavily both in terms of time and energy spent in self-defense and dollars and cents when bond issues are lost time and again, not for reasons of cost or educational need or the lack thereof, but because the validity and necessity of further educational expenditures becomes submerged in highly volatile and unsubstantiated charges.

(8) That students lose incalculably in the impairment of their educational opportunities when the ability to teach and develop curriculum undergoes an ideological attack.

Summary

On February 20, 1963, the committee held hearings in Paradise, California, as part of the study inaugurated under the terms of HR 429.

The testimony of the Superintendent of the Paradise Schools set out in full below, illustrates the nature and extent of the situation in Paradise.

Q: Mr. Tregarthen would you start by explaining to the committee what happened here in Paradise in recent months that led to the publicity that your school district has had, and the sequence of events from the official side of the school district as far as you are concerned.

Superintendent: Thank you, I will be glad to do so. I can give you the sequence of events to give you an historical perspective, and I can touch only upon the highlights. I must tell the

committee something they know from observation. Paradise is a wonderful community. It has wonderful people, wonderful climate, and an outstanding geography. Despite this, over a period of time a history of tension and turmoil has existed. Much of it has centered around the formation of the unified school district, the location of the high school site, and the criticism of teaching methods. Specifically, in February 1959, before an American Friends Service Committee Human Rights Conference, a group from the American Legion came to the high school and asked to address students on the dangers of subversion at the conference. Arrangements were made for them to meet with the administrators and several members of the school board and the press in the principal's office, at which time they voiced their concern.

Beginning in the spring of 1961, arrangements were made by various groups to bring speakers on anti-communism to speak in our community. These speakers included a Mr. Woolery, Mr. Billy Joe Hargis, Mr. Vanderfort and Mr. Brustadt. The Butte County Speakers' Forum was active in conducting meetings. Study groups were formed and citizens of the community were invited to participate. At these meetings the speakers made such statements as these, 'Some teachers teaching four classes of 25 pupils influence day after day 100 youth a year in a continuing brainwashing program.' Excerpts were read from persons purported to be pro-Communist whose books could be found in a school library. They said the pro-Communists influenced parents, speakers at PTA meetings, career meetings, and courses for teachers. A claim was made that the Communist conspiracy was to get one or more teachers into the school system who were not loyal Americans. The National Congress of Parents and Teachers, the United Nations, the National Education Association, President Eisenhower, President Truman, Chief Justice Earl Warren, the National Council of Churches, and many other agencies and people were labeled as part of the Communist conspiracy.

In September 1961, at an open house at the high school, a parent questioned the use of the 11th grade U.S. history textbook, *Our Nation's Story*, and also a discussion of the United Nations in our curriculum. On October 31, Halloween, 1961, a family distributed a mimeographed sheet attacking Mrs. Franklin, and the Asilomar Conference. The leaflet was handed out attached to a candy sucker for trick-or-treaters. During this period of time, literature on anti-Communist, racial prejudice, warning of subversion in schools, government, and churches, was distributed to members of the committee, board and teachers. Most of this was anonymous. There were innumerable telephone calls, many of them anonymous, to board members, community members and school people. An attempt was made to pass out on the high school campus handbills. There were letters to the editor which questioned the patriotism of the school people and Mrs. Franklin in particular. Pamphlets were distributed attacking isolated passages from texts and suggested that authors were not 100 percent American. Youth study groups on anti-communism were formed and a Minutemen's group was established, and some Paradise High School students were members. In Feb-

ruary 1962, a meeting of parents of children who had attended the Asilomar Conference with representatives from the American Friends' Service Committee was arranged. A group came to the meeting and challenged Mr. Seever, the American Friends' Service Committee representative. They asked such questions as, 'Would you defend your country? Would you want your daughter to marry a Negro?' Needless to say, these questions were not relevant to the discussion.

In the spring of 1962 the Oroville *Mercury* printed an editorial which attacked the Paradise teachers' attendance and remarks at a meeting in San Francisco. During this period of time parts of the text that Mrs. Franklin used in her class were duplicated and distributed throughout the community as evidence of subversion in the schools. In September of 1962 each of our new teachers received an anonymous letter degrading the school system and casting doubts upon teaching methods employed. On September 14 a letter to the editor was printed from the American Legion Americanism Committee, which suggested to people that they not vote Yes at the coming bond election. They listed a number of complaints about ultraliberalism. On September 18 the bond election lost. The latter part of September and early part of October two public meetings were held, at the first of which the American Legion Americanism Committee was asked to present their charges. For some years we have had statements made throughout the community that opponents had a file of documented evidence proving that Mrs. Franklin was subversive. The staff and community waited anxiously to finally have these aired publicly. As finally presented, they were meaningless. Nevertheless, one week later these charges were answered by school people at which time a large group of people attending gave the board of trustees and Mrs. Franklin a standing ovation. To a great degree, these public meetings provided a catharsis for the entire situation. Immediately following this, however, another incident occurred in which a parent called the high school and called on the intermediate school, complaining about a national school assembly in which a group of colored singers sang.

In the fall of 1962 Mrs. Franklin filed a lawsuit. In April 1963, at the board election, the incumbents ran for reelection and were opposed by three people who ran on a platform of economy, teaching the fundamentals, elimination of life adjustment classes, reducing adverse publicity which the schools had had, and the elimination of psychological testing. After a spirited campaign, the board members were reelected by a comfortable majority.

In April of 1963 a *Life Magazine* article appeared which described the unrest in Paradise and defended Mrs. Franklin. It also defended and praised the board and the community for their Americanism in withstanding the attack. On October 8, 1963, a bond election for the high school lost by 2 percent. A bond election was held on February 11, 1964—last week. During the campaign, opponents of the election, in letters to the editor, stated among other things that until Bibles were returned to the classroom, there would be no bonds. Another letter to the editor asked for economy in school construction. Another stated that until a

lawsuit was settled upon, it should be defeated. Another was to the effect that until subversion was eliminated from our schools, the bonds should be defeated. Radio broadcasts carried out the same themes. The bonds carried by a 69 percent majority because of the determination of this community that they wanted adequate classroom facilities for the boys and girls of Paradise. The remarkable citizens committee for schools conducted an extensive and splendid campaign.

Recently the Bible Presbyterian Church again attacked Mrs. Franklin. This brings us to the next occurrence, which is this Assembly Education hearing.

I would be glad to answer any questions. There are other members in this group who will tell you what the impact of the attack has been, the pressures people have undergone, and some of the things we have done to withstand the attack.

The following exchanges, between members of the committee and local school officials, illustrate the injurious and wasteful effects that are brought about by the uninformed attacks of a small segment of the community.

Q: Mr. Russell, inasmuch as you are principal of the high school which became involved in all of this, can you comment on what effect this controversy has had on your administration of what you consider a normal and worthwhile high school curriculum?

A: Yes, I will. Mrs. Franklin touched upon some of the problems, tensions, and so forth, that she felt because of the attacks. I would like to talk a little bit about the effect it has had upon the Paradise Schools. The total effect on the Paradise Schools cannot ever be completely measured. It can be described only in part. The toll in human dignity and health can only be mentioned. Specifically, some of the effects have been, first of all, the expenditure of time on the part of the administration and teachers during the past two and a half years counteracting the attacks from these critics. It has been tremendous. Time expended in this way should have been used for curriculum development, the provision of instruction, and other important educational matters. The time spent defending our schools, if translated into money, would run into thousands of dollars. Had this time and energy been directed to improvements of the program in the Paradise Schools, young people would be receiving a much better educational program. At times the preoccupation of the administrative staff on these problems has placed a heavy load on the shoulders of my teachers and personnel. Unfortunately we were sometimes unavailable to help them solve pressing education problems. Secondly, the impact caused by the aroused distrust and suspicion was an important factor. One speaker came to our community attacking in his speech every public agency beginning with our local police force on up to the highest federal offices, consequently bringing pressure upon school officials and the Board of Education. These attacks may have been a factor for defeating the two bond issues prior to the successful election this month. If this is the case, then these people have

prevented not only the youngsters of Paradise from having an adequate opportunity for learning, but they have also cost the taxpayers a considerable amount of money. The cost of these additional elections alone has run into the several thousands of dollars, but this is nothing compared to the increased responsibility in our schools now as compared to three years ago.

In summary, it can be definitely stated that the attacks on the Paradise schools have had the following adverse effects. First, the opportunity for our young people to learn has been impaired. Next, they have made it harder for us to teach, and, finally, they have increased the cost of education to the local taxpayer. The impact on the Paradise schools, because of these views of people, has been considerable. I wish to point out in closing that in spite of these attacks and the above adverse attacks on the schools, we did not alter our educational program. We did not remove questioned textbooks from the curriculum, and we are continuing to study controversial issues. As a member of the professional staff of the Paradise Schools, I feel that the defense of our beliefs and our educational program is well worth the effort.

A major portion of the Paradise controversy revolved around, as we have seen, the teaching methods and curriculum of one high school history and civics teacher. We have set forth below that portion of her testimony in which she describes the teaching methods she used in attempting to develop the critical and analytical faculties of her 12th grade students.

"As a teacher of American government at the 12th grade level, I feel that I have a tremendous responsibility in helping to develop the qualities, skills, attitudes, and habits which will enable our students to attain the very highest level of citizenship. To me, this high level of citizenship requires a sense of social sensitivity and civic responsibility. It implies that a citizen have respect for human dignity, that a citizen have respect for the open society and the democratic process, and that a citizen have respect for the law and a sense of involvement to help make the law. If one stops to analyze the citizen's role in making the law, he will realize that direct participation in voting demands an educated, well-informed voter in order to achieve the best that a representative democracy can offer. A good citizen must have learned the skills to apply rational and logical solutions which involve making judgments. Our students will soon be leaving school, some to go to college and others to have no more formal education. It is therefore imperative that the highest level of maturity be developed in all senior students and that the school provide them with the tools for critical analysis. Although this is gradually developing through the years, the maturity level of senior students permits and makes important such critical analysis of our current issues of the most significant nature. The nature of the term "issue" implies controversy, with the choice of alternatives according to the individual's belief. Allowing the students to examine issues and to make choices implies a trust in the democratic process. Many people would rather have students learn by indoctrination, that certain pat cliches be taught over and

over again, but this type of teaching does not allow for critical analysis which to me is the crux of the job of every single voter in the United States.

"What is the method of critical analysis? I should like to give an example of the method that I employ in my teaching. Having read an article, a student is asked to answer the following questions—and I would like to point out that these are not original with me. They have been used by political scientists for a long time. They are first given an article to read and the students are asked, 'What is the event? Is there any event? What details have been included about the event and why?' This *why* is very important and underlined. Then we ask about the propagandists. 'Who puts this piece of literature out? Who is he? What is his relation to the event? What are his assumptions? What are his aims?' (This is very difficult for some students at first but you would be surprised how simple it becomes later on.) Then we study the propaganda itself. The students tell me they enjoy this unit the most of any unit we have. 'What is the fact? What are facts? What do you as a student accept as facts? What judgments are made by the author of this piece of literature? Are the judgments based on fact?' And when we get there we have a fact-judgment relationship quotient. 'What rhetorical devices are in evidence?' The students here discuss all kinds of devices such as name calling, transfer, glittering generalities, card stacking, and so forth. 'What is the logical pattern of the argument?' Naturally not all questions can readily be answered. The wise student learns, however, that these are the questions he should ask of himself, and thus critical analysis of reading materials becomes a habit. The fallacy of logic and non sequitur arguments, faulty syllogisms, and other false analogies, are explained to the student. We advance by applying the above principles to simple commercials and finally to articles written by people of such divergent views as F. J. Cook, Frank Donner, J. Edgar Hoover, Carey McWilliams, Dan Smoot, William Buckley and Robert Welch, just to name a few. They are not told what to think. They are told to think. An essential point to make here is that frequently an article is chosen for reading material because of the author's relationship to the event described, and thus it might be necessary to find out what Barry Goldwater, Nelson Rockefeller, Arthur Schlesinger, Bertrand Russell, and many other persons think. This gives the reader a chance to make a critical analysis for himself. Thus two students taking the same topic with opposing views may both come out with A's, providing that the method of critical analysis was applied to the materials studied."

In response to questions from the committee as to whether she utilized material from a variety of political persuasions or points of view, this teacher indicated that she had often done so and encouraged her students to do so on their own.

The success of teaching methods employed by the teacher being attacked and the respect in which they were held by informed members of the community were amply demonstrated by the remarks of one Paradise citizen.

Mrs. Wesley: I am Mrs. Constance Wesley. I have lived in Paradise since 1951. I have two boys who are attending Chico State College. Both of them have been students of Mrs. Franklin's class.

Q: Would you address yourself to this question—as it relates to academic freedom in this situation?

A: I certainly will. I happen to be a very ardent Republican. I will support the Republican Party in the future as I have in the past. However, my children's interest in political science has been so stimulated in the Paradise High School that one of them is now a political science major. His last grade point average was 3.5. She (the teacher) knew all the time we were a Republican family, that they disagreed with her politics. She never at any time penalized them. She asked them to think. The last time that my older boy's thesis was handed in to her, she wrote, "Congratulations, John, you have evolved a very sound conservative policy." I would say she was instrumental in seeing that my boy got the Davis award for excellence in current events, and the second boy, who followed the next year, got the Bank of America achievement award in social studies. That's all I wish to say although I think that there's no personal persecution if a teacher can make students think for themselves and understand the other person's viewpoint. It's time in this country that those steps were taken. Thank you very much.

Q: Do you have any recommendations for improving the school system in Paradise or are you satisfied with it—as a parent?

A: I am satisfied as a parent. I think every individual, if he feels something is wrong, should certainly be entitled to a hearing by the school board, but you've just got to promote individualism in this country. I think any minority group has the right to its opinion, has a right to investigate, but certainly bigotry, rumor, and making statements when you haven't really verified them, well, you can see what it's done to an entire community. This is my town and I love it and I'm not criticizing it. The people here are wonderful. I know people on both sides who are wonderful, and I think it's unfortunate that we've had this situation—simply because people haven't really investigated before making accusations.

Q: You think then there have been charges made here that are irresponsible?

A: I think so. Now I will also state that I know the teacher is a liberal. All the students know it. My boys have gone to work and studied to get arguments to refute her position and sometimes she'll say, "Well, that's a pretty good point." That's the sort of atmosphere, to me, that "academic freedom" means. That's what it is.

Two letters representative of the published opposition to the Paradise Schools, appear in Appendix A. After the introduction of the first letter the following colloquy between members of the committee and a cosigner of the letter ensued.

Q: Mr. Millus, you say that every citizen should be aware of the conduct of the schools in the community. I presume from your

own responsibilities in the Legion, and from what you've just said, that you are cognizant or aware of what the activities of the schools are in Paradise. Would that, generally be an accurate statement?

A: No, I wouldn't say that I know everything that goes on in the schools.

Q: I didn't say everything; I mean enough. Do you think as an interested citizen that you have an average citizen's knowledge of what the schools are doing here in Paradise?

A: No, I wouldn't. Other than what's in the papers.

Q: Have you ever consulted with the school superintendent about the schools?

A: No, I haven't.

Q: Have you ever talked with the high school principal about the high school itself?

A: No, I haven't. The only thing is . . .

Q: What about the board members? Have you ever talked with the board members about their policies or their practices, or about their conclusions?

A: I think I did talk to one.

Q: Do you remember the gist of the conversation? I'm trying to find out here if you have expressed any kind of opinions regarding the policy which might relate to the policy which the board has regarding the teaching and instruction in the schools.

A: I don't remember; it was just a conversation.

Q: Was this very recently or some time back?

A: No, it's been some time back.

Q: Then you haven't had any recent contact with the school system itself, let's say, in the last year?

A: No, I don't remember the dates I talked with Ray Nieland. I think it was just before or just after that I was sued for the letter.

Q: Did you take any part in any of the election campaigns?

A: No, sir.

Q: Do you have any children in the Paradise school system?

A: Not at the present time.

Q: Have you ever visited any classrooms, any high school classrooms?

A: I'm sorry to say I haven't.

Q: Does the Legion have a program for improving our school system in Paradise or California?

A: I really don't remember whether there is one or not. I'm sure that there is some kind of a program set up by the American Legion.

Q: Does your post have a program for improving our school system in Paradise or California?

A: They have a program whereby they give a donation to the scholarship awards, and they send a boy to Boys' State each year.

Q: I don't mean scholarships. In curriculum matters, do you have any recommendations for teaching?

A: Not to my knowledge.

Q: Has your committee ever sat with the board and discussed programs and plans for improving the school system in Paradise?

A: I couldn't answer for the committee. Myself, I have not.

The author of the second letter found in Appendix A also appeared and members of the committee sought to ascertain the author's basis for mentioning Paradise, specifically, as a community in danger of communist subversion. The following discussion ensued.

Q: Mr. Langdon, after having reread that letter, you don't consider that critical of the schools?

A: Not particularly here. As I say, it applies to the whole country.

Q: Your choice of words here in one paragraph where you say, "The problem of subversion in our schools is not new or peculiar to Paradise alone."

A: I think the word 'alone' shouldn't have been there.

Q: But it's not peculiar to Paradise. It exists here and elsewhere, is that correct?

A: The impression I intended to convey is that there is a problem all over.

Q: You believe there is, in fact, subversion in the schools?

A: Yes, sir.

Q: To what extent? In what way?

A: All over.

Q: You say there is subversion. In what sense?

A: I think the textbooks are slanted.

Q: In what way?

A: I think they are slanted in favor of socialism.

Q: Could you give any specific . . . ?

A: They don't convey the true history of our country.

Q: Can you give any specific example of the textbooks that you feel are slanted, that you have gone through?

A: Not from memory.

Q: Have you studied the textbooks and read them through to determine if this is the case?

A: I have read the book that I quote there.

Q: E. Merrill Root?

A: Yes.

Q: Have you read George Orwell's book, *Animal Farm*?

A: No, sir.

Q: Have you read his book, *1984*?

A: No, sir.

Q: Are you aware of the content of those books?

A: No, sir.

Q: Those two books are probably the finest examples of a slashing attack on communism, as such, and socialism, and what the welfare state can lead to. These two books are very commonly used in the schools. Are you aware of the fact that these are used in the schools?

A: No, sir.

Q: Are you aware of the fact that *1984* has been criticized by people because it is in use in the schools?

A: No, sir, I've never heard of it.

Q: Well, the reason I asked the question is because I think it is important to see—to develop here that if there is to be criticism of the schools and the content and the subversion, and so forth, this is a rather broad charge which can cause doubt and suspicion and fear in people's minds in the community. And in a case like that, where they become concerned and excited and lose confidence in their schools, and their schoolteachers, and their administration, it can lead to the kind of situation we have here. Your charge of subversion is then, I think, rather serious. You say here that there is indoctrination. In your letter you mention indoctrination. Could you give me any idea what you meant by that? Mr. Langdon, would you read that paragraph again so there won't be any misunderstanding about it?

A: [Reads] "Indoctrination is not done in a brazen easy manner to discern but rather by an insidious presentation such as a continued downgrading," and so on.

Q: Would you read the whole paragraph, please?

A: [Continues reading] "Of the things that a republic stands for, and a constant upgrading of communism, generally done under the name of socialism."

Q: Now would you be specific? I think this is a very specific charge here and I think it is directly enough related to the condition here in Paradise so that it relates to this particular situation. I would like you, if you can, to be more specific about what you feel is a "downgrading of our republican system" and I've forgotten the exact words you used, "the upgrading" I believe, "of socialism, which is the same thing as communism."

A: All through E. Merrill Root's book he cites example after example of where the true history of the country wasn't brought forth in the textbook. That's what I'm referring to.

Q: Have you ever read any books on socialism?

A: No, I've never read any books on it.

Q: Have you read read any books which were of a different political philosophy or persuasion of E. Merrill Root's book? What other books have you read about this subject?

A: I don't think I have read any other books. I have read lots of magazine articles.

Q: Well, now, would you say that in order to form a valid conclusion in regard to any situation that it would be necessary to examine all sides of a question?

A: I presume so.

One of the difficulties we have encountered in presenting the position of those who initiated the attack upon the Paradise schools stems from our inability to get that attack on the record from anyone else other than those who were attacked. The committee chairman in his summation at the close of the hearings, expressed the committee's concern for this insubstantial and unsubstantiated presentation of their point of view by the attacking forces.

"We came here seeking the truth and we feel that no one need fear stating the truth if they are honest with themselves.

"It seems to me that there has been a pattern of vague charges and implications. For example, we have heard it implied that Mrs. Franklin is engaged

"In religious indoctrination;

"In sexual immorality and looseness;

"In deliberate distortion of factual material to teach un-American concepts.

"We have heard it implied that there are Communists and Socialists in our schools, busy, I suppose, teaching the subversive overthrow of our government. And we have heard it implied that attractive young teachers use their physical charms to dazzle youngsters while they seduce them morally and intellectually with dangerous ideas.

"Yet not one witness has had the *courage* to use this forum where the truth can be measured to make *specific* charges—to say, 'I accuse.'

"The witnesses have followed a consistent pattern:

"Fears and suspicions about the schools have been voiced;

"Subversion and un-Americanism of those teachers involved has been implied.

"With all this, the classroom has remained free of those who, in the true American sense of fair play, should have seen for themselves by visiting the classes before they made such statements or accepted such statements from others.

"Finally, before this body, *no one* can be found to make such statements!

"I can only conclude that such statements are without basis in fact and are groundless."

Committee Conclusions

Academic freedom is a modern appellation for an ancient idea. It goes back at least as far as Socrates' eloquent defense of his teachings in the face of charges of corrupting Athenian youth. Traditionally, the idea has struggled and flourished in the great universities of the world. In California today, the idea of academic freedom in public education of our State is being sorely threatened.

In California, since our earliest days of statehood, we have adhered to the idea that free public education is the cornerstone of our democracy. Our goal is and has been an enlightened and informed citizenry, capable of assuming the responsibilities placed upon them by a democratic way of life. One of the operational principles in the realization of this goal is to teach students to think, evaluate and participate as citizens even if it involves controversy. Democracy will not function if, at all levels of public education, we fail to resist the efforts of those who would seek to raise our children in a cocoon of ignorance.

Another operational principle is the necessity of academic freedom for the true proprietors of our educational system: our teachers. By this we mean, in the context of this study, the right of the teacher to free and unqualified inquiry into areas of controversial ideas, and sufficient latitude within the educational structure to permit realization of this inquiry in the classroom.

We do not believe the Legislature can provide by law for the guarantee of academic freedom. When weak or willful administrators seek to reinforce themselves in the face of attack by threatening a teacher into submission, the Legislature can act; and we have done so in another report of the committee dealing with the dismissal of teachers for "unprofessional conduct." (See the section on HR 546, this report.) In those instances, protective legislation under what we have termed "academic due process," we trust, will be effective. But legislative protection of the tradition of academic freedom, is inherently unrealistic. The elementary and only truly effective support for academic freedom rests in the administrators of our schools and the citizens of our communities.

Our summary of testimony taken at Paradise demonstrates, we think, the extent to which small and despairing people can, through uninformed allegations and rumormongering, disrupt for an extended period of time an entire school system. And Paradise is not a unique example. In other California communities actions comparable to medieval "bookburning" have torn communities apart; concerted efforts have been made to "stack" local school boards with persons unrepresentative of the total community; and generally bona fide community debate over the conduct of the school system has been buried under a landslide of emotional and irrelevant charges and countercharges of "subversion," "moral decadence" and the like.

The committee's sincere hope—and major recommendation—is that the story of Paradise will serve as a lesson to the rational and honest citizens of other communities, so that they too will not awake one morning to find their community a hotbed of antagonism with consequent paralyzing effects upon school life.

When communities in our state are visited upon by the activities of those who sow—with words of hate, fear and suspicion—either through misguided ignorance or for the deliberate purpose of subversion and the destruction of the traditions of academic freedom as it exists in the educational system of this state, the committee charges the citizens of the community to know and recognize these people and to challenge them to make their vague, fearful and dangerous charges out loud and to be specific. Extremists of the left or right, individually or organizationally, must be taken seriously. The citizens of California cannot sit idly by and permit the subversion of a whole school system and the slander of its people, while self-appointed groups pressure, harass and debilitate our system of public education.

UNPROFESSIONAL CONDUCT

House Resolution 546 (1963)

RECOMMENDATIONS

1. The committee recommends that the Legislature define the term "unprofessional conduct" in substantive form such that governing boards of school districts and state courts have prior knowledge of legislative intent.

2. It is recommended that definitions of "unprofessional conduct" should not vary from district to district and area to area.

3. The committee recommends that charges of "unprofessional conduct" be restricted to activities of employees during the hours of their employment.

4. The committee recommends that charges of "unprofessional conduct" relate to specific instances of behavior.

5. It is recommended that Education Code Section 13417 be amended to provide that "expert panels" utilized in cases arising from charges of "unprofessional conduct" be used by mutual consent and agreement of the adversary parties.

FINDINGS

The committee heard testimony in November 1963 and September 1964 at Millbrae and La Mirada regarding House Resolution 546 by Assemblyman Petris. Testimony was received from virtually every educational group representing teachers, school administrators, and governing boards.

The committee finds that associations which represent teachers exclusively are unanimously opposed to the use and continued existence of Education Code Section 13403(a).

The committee finds that associations which represent governing boards, school administrators or combinations of teachers and school administrators oppose any change in the code.

The committee was informed at length of the case of *The Board of Trustees of the Lassen Union High School District*, Plaintiff and Respondent, v. *Jack Owens*, Defendant and Appellant, decided in the Third District Court of Appeals, July 26, 1962 (206 Cal. App. 2nd, 147). The committee finds this case to be the only California case solely devoted to the issue of unprofessional conduct as that charge relates to dismissal proceedings against a tenured teacher. The committee finds that in all other cases the courts have rendered decisions based on other charges filed in the indictments leaving the issue of unprofessional conduct unresolved through judicial decision.

In the Owens case, the court said:

"The word 'unprofessional' is a relative expression without technical meaning, and the phrase 'unprofessional conduct' as used in the Education Code has been given no legislative definition."

In a positive manner, the court said:

"In an action to dismiss a teacher on the grounds of 'unprofessional conduct' where the sole basis of the charges was the publication of letters critical of education, the trial court's primary inquiry should have been to the questions of whether there had been any disruption or impairment of discipline or the teaching process as a result of defendant's letters." (See Appendix B for the majority opinion in the Owens case.)

The committee finds that actions and attitudes are considered by local boards and administrators to be unprofessional in one context or in one place or area but not another. We find that no statewide pattern of professional behavior exists, save for behavior directly connected with the teaching process during duty hours. We find that imbibing alcoholic beverages, use of tobacco, signing petitions, revealing contents of school documents to legislative committees, appealing directly to one's legislative representative, and opposing majority opinions have been interpreted as being "unprofessional."

The committee believes that the phrase "unprofessional conduct" should be strictly construed insofar as it serves as a legal cause for dismissal of a permanent certificated employee. Conversely, professional conduct should be limited to that behavior directly connected with the education of students in the classroom or on official excursions. It should not be used as a technical substitute for "indelicate," "nonconformist," etc.

Strictly construed, professional conduct is that behavior which imparts knowledge and values to students. Unprofessional conduct, by converse definition, would impair the imparting of knowledge or universally accepted values.

The committee heard no testimony to the effect that teachers should not be subject to reasonable directions in the performance of duty. No one has suggested that the teacher should be a totally free agent. Indeed, the district court noted:

"One employed in public service does not have a constitutional right to such employment and is subject to reasonable supervision and restriction to the end that proper discipline may be maintained and that employees' activities may not be allowed to disrupt or impair the public service."

However, the committee heard testimony and the court cited a characteristic case from the Florida Supreme Court (*Adams v. State* 69 So. 2nd 309, 311), that the issue of unprofessional conduct is often couched in terms not of whether the public service *has been* impaired, but whether it *might be* impaired in the future. The committee does not believe that charges of unprofessional conduct should be leveled on assumptions that deleterious consequences might possibly result from certain past actions. It would, by contrast, seem proper to have to prove that impairment actually has resulted from the alleged unprofessional conduct, and that this impairment relates specifically to the learning capacities and achievement of the students.

The committee heard repeated testimony that a teacher does not know beforehand what conduct is considered professional. Few, if any,

local governing boards have written policies of professional conduct. There are deep divisions of opinion among various educational associations on what constitutes unprofessional behavior.

In contrast, the committee heard testimony relating to unprofessional conduct as used in legal and medical circles. It is apparent that this phrase is tightly defined in the professions of law and medicine, such that it is almost never used. The practitioner has foreknowledge on a statewide basis even before he officially enters upon his career.

The expert panel procedure under Education Code Section 13417 was criticized on a number of grounds, the most important of which deals with a lack of procedural due process. It appears that permanent employees accused of "unprofessional conduct" must frequently prove their innocence, without the right of cross-examination. The burden of proof is, therefore, sometimes shifted from accuser to accused. It was also learned that the expert panel is not necessarily engaged by the governing board with the prior agreement of all parties to the dispute. Present code provisions allow the importation of a panel against the challenges of an accused. This provision is especially relevant as the committee notes major philosophical disagreement among the various statewide educational associations. It is also clear that the code makes no provision for choice between competing expert panels drawn from separate statewide organizations if such a circumstance should arise.

Throughout the hearings, specific examples of "unprofessional conduct" were cited. The committee believes, however, that in every case, the charges could have been subsumed under one or another of the other specific charges contained in Section 13403 such as dishonesty, incompetency, or evident unfitness for service. No cases were brought to the committee's attention which clearly required the use of an undefined category such as "unprofessional conduct."

The committee notes, however, that special cases may arise in the future which would not lend themselves to proceedings under the other subsections of 13403. Therefore, the committee does *not* recommend that the phrase be entirely stricken from the Education Code. Rather, the committee recommends extreme caution in the use of the charge. Because of the inherent vagueness of the term, we recommend that dismissal proceedings against a certificated employee separate charges of "unprofessional conduct" from the other subsections such that a conviction for e.g. dishonesty is not confused with conviction for "unprofessional conduct."

The committee would recommend that legislative intent be expanded to assure that charges relate to specific concrete instances of behavior of a grave nature and that the courts construe the phrase strictly, limiting it to direct effects on the teaching process.

The committee takes the position that efforts to dismiss tenured teachers are allowed and reinforced by state law. Therefore, we believe that charges of "unprofessional conduct" should be governed by statewide standards. The committee would hope that the various statewide educational organizations could voluntarily agree to set aside divisive matters and unite in a common attack on this problem.

Lastly, the professional position of the teacher is complicated by a situation wherein he is expected to serve many masters. The teacher has an obvious professional duty to his students. He has a duty also

to his employer, the governing board representing the residents of the school district. The committee believes that much dissention has arisen because of this dual commitment of the professional teacher. Where he truly believes that the interests of his students are being sacrificed to the interests of his employer, the professional teacher is inherently placed in the impossible position of having to choose between masters. Such conditions, the committee finds, are frequently the cause of a choice in favor of the students with consequent charges of unprofessional conduct being filed by the school administration or the governing board.

The committee finds this dual master relationship involving the professional teacher and his students on the one hand and the school employee and his employer on the other, to be cause for great concern in developing greater status for California educators. So long as schooling continues to be an enterprise in which employees are hired by governmental entities to accomplish the purpose, there can, but not necessarily must, be disagreements.

The committee heard testimony outlining the relationship of medical doctors to governmental and private employers. The evidence shows clearly that there is a strictly observed dichotomy between the role of the medical practitioner as a professional expert in health and his role as an employee of a hospital, a clinic, and so forth. The committee recommends that the dual capacity of certificated school employees be similarly defined by consensus, and that the proceedings for dismissal under the "unprofessional conduct" clause be limited to actions which have been proven to be detrimental to the direct teaching process.

CLASSIFICATION OF BUSINESS MANAGERS AND OTHER ADMINISTRATIVE EMPLOYEES

Assembly Bill 404 (1963)

RECOMMENDATIONS

1. The committee finds that the position of school district business manager should not be restricted to either certificated or classified personnel. Individuals from either service should be eligible, if qualified, for the position of business manager.

2. The committee recommends amendment of the Education Code to permit assignment of a title now carrying with it the requirement of certification to those employed in a position which functions as a business manager, irrespective of the position title.

3. In order to insure that positions of business manager will remain open to all qualified applicants and that local school districts will be free to develop such standards of qualification as they see fit, the committee recommends that subsections (m), (n) and (o) of Section 13055 of the Education Code be repealed.

4. The committee also recommends that public information duties be unrestricted as to the classification of individuals hired to fulfill such duties.

5. It is recommended that consideration be given to codifying minimum standards of qualifications for these types of positions, particularly those which embody business-type functions. In lieu of such codification, the Department of Education might be directed to provide such minimum requirements by administrative regulation.

FINDINGS

On October 7, 1964, the committee heard testimony relative to AB 404 (Winton), which provides for the hiring and titling of persons performing the function of business manager and amends the Education Code to provide that such persons need not be credentialed.

Testimony before the committee centered around this issue: Should administrative duties in the public school system that can be performed by persons not holding a credential, be restricted to and performed only by persons holding a credential?

At the outset, the committee notes that there was some confusion as to the present state of the law regarding this issue. The committee thinks it advisable to set forth the present law so that a clear comparison with operational changes and consequences of the proposed AB 404 may be made.

Currently the law does not require a credential or other certification as a prerequisite to holding a business manager position. Such positions are neither mandatorily certificated nor classified. However, operation under the code does, as the committee found, result in the practical consequence that nearly all business manager positions in the upper

echelons of local administration in fact require credentialed persons. The reasons for this appear to be twofold:

- (a) Persons performing 50 percent or more of their duties in the area of educational policymaking are required to be credentialed. (Education Code Section 13055.)
- (b) Persons who receive certain title assignments as specified in Section 1537 of the Education Code must be credential holders.

With regard to (a), the committee found that falling into the categories listed in Section 13055 are persons engaged in budget preparation, building programs, public information dissemination, and other unspecified business functions. It is apparent from the code provisions and from testimony that there is no credential authorized or required which directs itself to these activities or to the qualifications of persons performing them. There is merely the arbitrary requirement that when one performs 50 percent or more of his duties in areas set forth in Section 13055, he must be a possessor of a valid credential. This being so—with the result that there is no guarantee that a perfectly good teacher holding a credential will make a good business manager—the issue is again highlighted: Why restrict such positions to holders of credentials?

The argument most frequently advanced in favor of the principles of Section 13055 (m), (n) and (o) was that holders of credentials will insure that decisions affecting educational policies will be made by persons familiar with the peculiar problems and needs of education. This argument though valid to a certain extent, is not conclusive. Business managers are not at the top of the administrative hierarchy in school policy decision making. There are always fully credentialed, certificated personnel who are responsible for making the decisions concerned with educational policy. As one witness stated:

... a business manager or a public relations man does not necessarily need a long history in education. He does not necessarily need certification because as a member of an administrative staff, his direct superior is the superintendent, who is answerable to the board in the setting of policy matters. . . . It would seem to follow that there is no reason why a public relations person or a business manager need be fully credentialed when his direct superiors will make the educational decisions.

A further and inherent weakness of Section 13055 described to the committee relates to the opportunity of the local board to define away the possibility of open competition for qualified noncredentialed persons for business manager positions, without at the same time insuring that qualified persons will actually fill the position. Local districts are capable of restricting the holders of business manager positions to credentialed personnel simply by the device of defining the duties of such a position to include 50 percent or more of matters set forth in Section 13055, whether or not such duties are actually performed. Possible abuse of this section's intent by simply appending the proper words in the job description must be remedied if qualified persons are to be encouraged to apply. The Legislature or the Department of Education might undertake to specify the minimum criteria to be used to evaluate a person's qualifications for the position of business manager;

or the Legislature might go so far as to develop a credential for this position.

The committee, at this time, prefers neither of these latter alternatives. We do feel, however, that consonant with policy of so-called "local option" powers over these matters, there is a strong correlative responsibility for districts to conduct their hiring practices with utmost concern for obtaining qualified personnel. It is apparent that conditions vary so from district to district that the functions of a business manager should be suited to best serve local needs; and consequently local school districts should be relatively free to structure that position as they see fit. On the other hand, the committee feels quite strongly that certain minimum standards should be recommended to all districts hiring business managers.

With regard to (b) above, the committee found again that the code was inadvertently restrictive. Whether the local board intends to restrict the business manager position to credentialed persons or not the title assignment provisions are an inhibiting factor: They automatically require credentialed persons even in cases where the job duties are strictly accounting. Where the only intent is to give a position higher prestige and/or financial rewards commensurate with the work to be done, assignment of one of the "superintendent" titles to that position will automatically restrict it to credential holders. (Again, the committee notes there may be no logical connection between the credential requirement and the nature of the job.)

The committee notes that there is a subtle irony in the fact that opposition to AB 404 was expressed on the grounds that it would interfere with "local option" powers of school districts to prescribe qualifications for the position of business manager according to local needs and desires, yet as the committee found, the latitude presently available to school districts under the code is virtually nil by reason of the Section 13055 (m), (n) and (o) provisions and the title assignment laws.

The provisions of AB 404, with one exception, are adequately designed to remove these factors, to increase the freedom of school districts in the formulation of their hiring policy, and by "opening the door" to a wider field of potentially qualified persons to enhance the interest in sound business management.

The operational principles of AB 404 are these:

- (1) Business managers are made classified positions. (As noted below, the committee disapproves this change.)
- (2) A person may not be required to possess a credential to hold this position by:
 - (a) Making a credential a prerequisite,
 - (b) The accident of title assignment,
 - (c) Defining the position so as to require a credential (under Section 13055).
- (3) Persons already holding such positions are protected from any losses that might be incurred by enacting AB 404.

The practical consequences of AB 404 are that credentialed, classified, or other persons interested are encouraged to compete for the position of business manager on the basis of qualifications as required by the self-determination of local districts through open, competitive

examinations. Assembly Bill 404 removes the artificial and unsubstantiated elimination (either accidentally because of the present structure of the code or because a local board willfully adopts a policy of elimination by utilization of the code provisions contrary to their original intent and without assuming the responsibility for engaging qualified or better qualified persons) of potentially qualified persons.

The committee does *not* believe that the business manager position should be made wholly classified. This would simply build into the position another form of restriction. A further reason was advanced by one witness:

“Our present approval (of AB 404) is now based upon the feeling that a broad field of selection would assist the school board in making a selection of the most qualified applicant . . . as much as possible discretionary authority should be written into the law to account for the complexity and differences existing throughout the State between districts. . . . The sole interest of the school governing board is to be permitted to select the best applicants available to fit the position that is open without having a board being unable to consider both classified and certified employees.”

The committee recommends that Section 13055 (m), (n) and (o) be deleted from the code for the reason that the generalities of job description, and the vagaries of arbitrary line-drawing at 50 percent or more inherent in these provisions, impose artificial and unjustified restrictions upon the “local option” of school boards and upon the ability of perfectly suitable persons to be considered for positions for which a credential requirement is not shown too relevant. Certainly business manager decisions will impinge on educational policy to a certain extent—it would seem that this is unavoidable at nearly all levels of the administrative hierarchy—but, as the committee noted above, this inherent element of the business manager’s duties will always be subject to review by the superintendent and ultimately the school board. These are the people who, in the final analysis, will actually make the educational policy decisions as they may relate to budgeting, purchasing and the like.

Concomitant with the committee’s study of the business manager position, it was brought to our attention that similar restraints prevail in the area of public information officers. Again, a lack of sound rationale is apparent. As a consequence the committee recommends that similar changes as are provided for in AB 404 be made pertinent to that position. We have in mind here amendment of the title assignment law to provide that assignment of one of the “superintendent” titles not result in the requirement that such person be a credentialed position.

EMPLOYEE BENEFITS

Assembly Bill 310 (1963)

RECOMMENDATIONS

1. The committee believes that some form of extending health and medical benefits to school employees is proper and in consonance with the general trend in private industry and government service.

2. The committee recommends that if such a plan is adopted that nonemployee contributions be equal to the level provided for other state employees.

3. Although the committee favors a health and medical care program for school employees, we believe that the cost of such a proposal must *not* be borne by the local property tax, which is already overburdened by the expanding costs of local governments.

4. Finally, the committee recommends that proposals requiring substantial state funding be considered together with similar proposals in order to develop the priorities deemed proper for expenditures for education by the Legislature.

FINDINGS

The committee heard testimony on AB 310 (Casey) in San Diego on October 8, 1964. The measure proposes that local school districts be required to establish health and medical plans for all employees, and that the district's contribution be at least \$60 annually for each employee.

The committee was presented with a new proposal by the original sponsors of AB 310. Rather than requiring local districts to adopt health plans and finance them locally, the new proposal would have the state extend health benefits to school employees using the General Fund to support the first \$72 of the annual premium.

The cost of the proposal to the state is estimated at \$20 million annually. It would be administered through the offices of the State Employees Retirement System, and policy decisions would be made by a statewide board appointed by the Governor.

The committee discussed the necessity to consider the costs and priorities of other proposals for improving the total educational system in California. The committee recommends extending medical and hospital benefits to school employees. At the same time, however, the committee feels that the Legislature may wish to assign a somewhat lower priority to this endeavor with a view to competing programs for increased retirement benefits, compensatory education, and others.

The committee also discussed the necessity of widespread public support for the possible increases in state revenue collections which might be necessitated by any enactment of such legislation. The committee was told that such support would be forthcoming. It was felt that support for necessary revenue collections should equal the support for the program's appropriations.

The committee was impressed by the research conducted by the sponsors of the new proposal. The staff of the State Employees' Retirement System, which administers the health plans for nonschool state employees, is to be congratuated for cooperating with the sponsors to develop a superior overall plan, utilizing the experience gained from the operation of the Meyers-Geddes Act.

Assembly Bill 271 (1963)

RECOMMENDATIONS

1. The committee recommends that teacher retirement allowances be adjusted to take into account the rising cost of living since 1956, the date of last adjustment of such retirement allowances.

2. It is recommended that any adjustments made in retirement allowances, on a percentage basis, be limited to the first \$300 of monthly retirement income.

3. The committee also recommends that prior to the enactment of any such legislation, the Legislature consider its appropriate priority in view of competing claims for educational programs which involve substantial state expenditures.

FINDINGS

On September 30, 1964, the committee heard testimony responsive to AB 271 (Elliott). At that hearing the proponents of the bill placed before the committee an amended bill which revised and updated the percentage schedule for adjustment of retirement allowances.

The present teachers' retirement plan was enacted in 1955 to become operative July 1, 1956. The committee found that since that date no adjustments have been made in the retirement allowances to offset or compensate for the rising cost of living, except for the adjustment in 1963 of the minimum allowance.¹

The committee heard testimony that allowances are in fair accord with living costs at the time of retirement; but that immediately upon retirement the allowance begins to fall behind the cost of living. The extent of the increased difficulty that a retired person has in paying for the necessities of life is, therefore, closely related to the length of time elapsed since retirement.

The committee found that since 1955 two adjustments were made in the State Employees' Retirement System totalling a 21-percent increase in retirement allowance for a person in the \$200 per month allowance bracket who retired prior to 1957.

The annual initial cost of this proposal to the state would be \$7,624.-633 based on the amended percentage for adjustment of retirement allowances. This is less than one half that contained in the original proposal, which would have arrived at an initial or first year total annual cost of \$16,905,807; and an actuarial obligation or present value, of \$152,040,780.

¹ In 1963 the minimum annual allowance of \$70 for each year of credited service was increased to \$80. The proposed legislation provides that the new adjustment will not be in addition to, but shall be offset by, the increase granted in 1963. Thus the retired teacher receiving the minimum would receive the adjustment made in 1963 or the adjustment herein proposed, whichever is the larger.

The committee feels that adjustments in retirement allowances, subject to certain limitations, are a legitimate concern. California and the nation as a whole have experienced several periods of significant inflation during the postwar years, noticeably in the 1946-48 period and during the aftermath of the Korean War.

This legislation provides a limitation on the benefit in that it is limited to the first \$300 of retirement income. At present, a teacher retiring at age 60 with 30 years of service and a final salary averaging \$9,000 annually would be eligible for an annual allowance of \$4,500.

The committee notes that the majority of the funds proposed for retirement augmentation would go to individuals retiring before 1956. Insofar as retirement benefits for other state employees have been increased by legislative action in past years, the committee feels that similar treatment should be afforded retired teachers, especially when allowances are such that they no longer reflect realistically the cost of maintaining a reasonably dignified retired status.

The committee realizes, however, that proposals to expend additional and substantial amounts of public monies cannot be treated in isolation. We recommend, therefore, that all proposals involving these additional and substantial state expenditures be viewed in context by the full Legislature with the object of establishing the most defensible system of priorities.

The committee considered the possibility of adopting an automatic adjustment feature similar to that of the legislators' system, but having no pertinent facts and figures available which might reveal the implications of such a measure, the committee makes no recommendation in that regard.

YEAR-ROUND USE OF HIGHER EDUCATION FACILITIES

House Resolution 244 (1964)

RECOMMENDATIONS

1. The committee recommends that the Coordinating Council on Higher Education provide increased and sufficient data on current year-round operations within and without the State of California.

2. It is recommended that reports be filed with the Education Committees of both houses of the Legislature relative to the experience of the state colleges and the University of California in initiating a quarter system at various campus locations.

3. The committee recommends that the basic decisions on matters such as a year-round calendar should be made in cooperation with the Legislature, with a view toward the fact that social, cultural and other factors will inevitably be involved.

4. The committee urges the Coordinating Council on Higher Education to study more fully the advantages and disadvantages inherent in a split-summer trimester plan, such as the one recently adopted by public institutions of higher education in the State of Florida.

FINDINGS

House Resolution 244 (Ryan) of the 1964 First Extraordinary Session of the Legislature directed a study of the feasibility of year-round operation of institutions of public higher education in the state.

The committee heard testimony in San Diego on recent developments in plans for year-round operation of higher education facilities. Much of the hearing was devoted to the pros and cons of the quarter system as adopted by the Coordinating Council on Higher Education in January 1964.

The committee noted an apparent conflict in the role played by the Coordinating Council which, as established in law, is an advisory body to the Governor and the Legislature, rather than the repository of final decisions. The committee felt that in such a basic matter as state-wide calendar reorganization, the matter should have been presented formally to the Legislature before any final or definitive statements were issued.

The committee noted that considerable opposition from faculty groups to the quarter system was manifested. It would seem that greater liaison between faculty and administration might culminate in a broader measure of agreement when such basic decisions are to be adopted.

While the committee recognizes the inherent efficiencies in year-round operation, it appeared that little consideration in the decision-making process was given to broad social and cultural impacts that might be anticipated.

The committee would hope to be fully informed in the future of the effects of shifting to a quarter system as is being planned for a few of the campuses in the public higher educational system.

Subsequent to the interim hearings held on this matter, the committee has been informed of a modified trimester plan for year-round operations recently adopted in the State of Florida. According to the available information, there is considerable opinion in that state that this plan, which differs from the plan heretofore considered by the Coordinating Council in that it calls for a split summer trimester (a 16-16-8-8 plan), has been successful and has instilled a greater academic atmosphere on Florida's college campuses. Likewise, such a plan apparently has overcome numerous faculty objections. The committee urges the Coordinating Council to investigate such a plan and its possible adaptation in California. (See Appendix C, for a reprint of an explanatory article published on this plan.)

STATE COLLEGE FACULTY RESEARCH

House Resolution 128 (1963)

RECOMMENDATIONS

1. The committee recommends that the Legislature go on record as encouraging state college faculty members to apply for both federal and private research grants as they become available.
2. The committee wishes to emphasize that it views as sound policy the provision of the Master Plan for Higher Education which designates the University of California as the "primary" state academic agency responsible for research.
3. Nevertheless, the committee believes that a modest research program in the state colleges, state funded and designed primarily to improve the instructional process, is proper. Such a program, however, should envision the granting of state research funds only for specific projects and purposes.
4. We recommend that the education committees of both houses of the State Legislature scrutinize and review yearly all research projects carried on in the state colleges for which state, federal or private moneys were obtained.
5. The committee recommends that such a state college research program include a proviso that faculty members report and disclose each year the research projects in which they are engaged, and the financial assistance, if any, which they receive from their projects.

FINDINGS

During the 1963-65 interim period the Subcommittee on Personnel Problems conducted two hearings on the subject of faculty research in the state colleges. The committee reviewed the past history of this program which most recently was refused by the Legislature in 1963 and, pending this interim investigation, again in 1964. The committee believes that the prime reason for the refusal of the Legislature to grant research funds to the colleges in the past has been the portion of the Master Plan for Higher Education (the Donahoe Act of 1960) which designates the State University as the primary academic research agency in California. That portion of the statute reads as follows:

22550. The Legislature hereby finds and declares that the University of California is the primary state-supported academic agency for research.

At the same time, throughout our study of this matter no evidence has been presented which has been used to interpret "prime" as meaning "sole" or "exclusive" in terms of the conduct of research by faculty members. Certainly the Legislature in its enactment of the

Donahoe Act did not intend to limit research *per se* to the university, as evidenced by its qualification of Education Code Section 22550, cited above, by the use of the terms "*state-supported* academic agency for research." The committee has, in fact, determined that a significant amount of private, contract and federally funded research is presently being performed at state colleges; in 1963-64 this amount totaled some \$2.6 million. Its distribution to individual colleges within the system and the disciplines for which it was made available has been fully documented by the California State Colleges.

Proposed program costs for a research program at the state colleges have been set at slightly less than \$500,000, beginning in 1965-66. These costs through 1970 are shown below:

PROPOSED ANNUAL COST	
STATE COLLEGE FACULTY RESEARCH	
1965-66	\$497,749
1966-67	622,186
1967-68	777,732
1968-69	972,165
1969-70	1,215,206

The committee is informed that these figures were arrived at by giving to each college a "base allocation," plus a sum related to size of the college, graduate enrollment, and other such variable factors. The committee has made no study of the particulars of the formulae proposed by officials of the state colleges, nor has the inadequacy or overadequacy of the proposed initial program cost been examined. Suffice it to say that the committee was more concerned with the principles and policies involved in a program of faculty research for the California State Colleges.

The committee believes that the language of the master plan, designating the university as the "primary" research agency is sound and should not be changed. We believe that it would be unwise, both from a fiscal and from a policy point of view, for the university and the state colleges to conduct research at the same level of intensity. Such a policy could only lead to unbelievable duplication of effort and a great waste of manpower and of financial resources. At the same time, the committee believes that a modest system of state college faculty research, such as has been proposed by college officials, is proper and in consonance with the master plan. The committee views such a program as primarily an aid to the teaching process; such research should have as its basic premise the design of improving instruction and of producing better teachers. A program such as we propose should involve strict legislative controls. These controls should include a provision that state research funds should be granted only for specific projects and purposes, and that the individual research projects should be evaluated periodically to determine their suitability and value. In making its recommendation for a "modest" program of faculty research the committee wishes to emphasize that it in no way endorses or rejects the specific dollar amounts requested by the state colleges, but that such a judgment should rest primarily with the committees most concerned with state finances.

The committee suggests that several additional controls over this program would be highly desirable. These would include a yearly review by the education committees of both the State Assembly and the State Senate of the research projects carried out, to include a review of federal and private, as well as state, research programs. Additionally, this committee recommends that the state colleges require their faculty members to disclose each year the research projects which they have undertaken and any financial aid which they may have derived from the project.

Finally, although the committee views state college faculty research, in terms of a "modest" program, as desirable, we are unable to conclude that such a program has a higher priority than many other new programs which may be requested by the state colleges or by higher education in general. We believe, therefore, that the colleges should be required to weigh their expressed need for research program against their oft expressed desires for increased faculty salaries, employment benefit increases, increased staff, and other elements of new or expanded program.

STATEMENT OF
ASSEMBLYMAN E. RICHARD BARNES
RELATING TO ACADEMIC FREEDOM

I find myself in substantial disagreement with the report of the Subcommittee on Personnel of the Assembly Interim Committee on Education, with reference to academic freedom.

This report grew out of a hearing held by the subcommittee in Paradise, California, on February 20 and February 21, 1964.

At the hearing I strenuously objected to the questioning of certain witnesses who were defendants in a civil action brought by a teacher, Mrs. Virginia Franklin, an employee of the Paradise school system. These witnesses were subpoenaed against their will and over the protest of their attorney who pointed out that such testimony might tend to jeopardize their legal position in the court action. The attorney specified that he had no objection to testimony by his clients after the trial, but that to compel them to testify prior to the settlement of the civil litigation involving nearly a million dollars would tend to try the matter in the press to the detriment of the defendants.

It is certainly not customary for a committee to hold a hearing where there is a pending law suit, and the Supreme Court has consistently warned against cases being tried out of court by the press.

In his final comments at the hearing, the chairman of the subcommittee made the following statement:

"I now ask the staff of the Assembly Education Committee to study this transcript closely for perjury, since I find that there is a marked difference between the statements made here and previous statements made in the controversy here in the schools. I further ask that the staff obtain copies of the transcript of this hearing for use in possible further investigation of the charges made in the last few years in this city."

Such a statement could not help but give the impression that the case was, in fact, being tried out of court.

At the hearing I made a motion to defer the subcommittee's inquiry until after the civil trial. This motion was rejected by the subcommittee.

While the subcommittee's report expresses a proper interest in freedom of expression for school officials and teachers, the report fails to take any cognizance of the difference between the legitimate interest of the taxpayers and citizens in the public schools, as opposed to what the subcommittee calls "slandorous and unsubstantiated attacks."

The report fails to differentiate between what it calls "medieval bookburning" and the legitimate attempts by citizens to inform themselves and seek improvement of the public school system.

The subcommittee report describes our teachers as the "true proprietors of our education system."

If, in fact, we have a public school system, then all of the people of the community are the proprietors of the school system, not the

teachers alone; and if, in fact, the schools do belong to the people—the voters, parents and taxpayers—then the academic freedom of the teacher and school official is not unlimited. Public institutions must be responsive to the public will, and the people of a community have a right to freedom of speech equal to that of the teachers and school officials. The subcommittee's report fails to take proper cognizance of this necessary balance.

Throughout the Paradise hearing school officials defended the right of teachers to present controversy in the classroom, yet they strenuously objected to controversy about the schools in the community. I reject this apparent application of a double standard. If unlimited discussion is not harmful to minor students in a classroom situation, it certainly cannot be harmful to adult citizens in the context of the entire community.

The subcommittee report departs from the Paradise situation to charge that "concerted efforts have been made to 'stack' local school boards with persons unrepresentative of the total community." This is a value judgment not substantiated by the subcommittee's hearing.

In a free society every citizen has a right to seek election to a school board or other public office. Those who have the most votes win. Whether or not public officials are responsive is a proper judgment which must be rendered by the electorate.

The subcommittee report also fails to take cognizance of the fact that there can be abuse of the classroom situation to present only one side of a current social problem. In this regard card stacking can occur at many different points, including the selection of materials which are to be subjected to "critical analysis." Unfair presentation to immature minds in the classroom can be bold or subtle, with a subtle approach being less readily identifiable and quite probably more effective. The testimony of Mrs. Virginia Franklin, the high school teacher about whom the Paradise controversy centered, fails to convince me that she was totally objective in her classroom presentations.

In another report of this subcommittee the recommendation has been offered that the Legislature prescribe a more comprehensive and detailed definition of "unprofessional conduct." I would also recommend that the Legislature review and more closely define "academic freedom."

STATEMENT OF
ASSEMBLYMAN E. RICHARD BARNES
RELATING TO UNPROFESSIONAL CONDUCT

With reference to unprofessional conduct, I disagree with the third recommendation of the subcommittee, which reads:

“The committee recommends that charges of ‘unprofessional conduct’ be restricted to activities of employees during the hours of their employment.”

It seems to me that it is impossible for a teacher or school official to divorce his conduct during off-duty hours from his role of leadership in the classroom and from his responsibility as a professional person. Professional conduct can only be determined by a teacher’s total behavior in and out of the classroom situation.

The conduct of a teacher in the community must certainly have an influence on the students he instructs and represents a part of the total example set by the teacher in his leadership role.

A teacher who participates in an act of civil disobedience or who encourages lawless behavior, cannot help but set an unfortunate example for students. It may be difficult to prove a direct causal relationship between a teacher’s bad example and antisocial student activity, such as participation in a riot, but there can be little doubt that a relationship exists.

I further disagree with the comments of the subcommittee on the “dual master relationship, involving the professional teacher and his students on the one hand, and the school employee and his employer on the other.” If the schools are indeed public, then school officials and employees must be responsive to the public will. The job of these public employees is to do the task which the state and community prescribes. Teachers certainly have a responsibility to their students but this responsibility lies in the context of their instructions from the state and community at large, represented by the elected school board and the administrative officials whom that board appointed.

APPENDIX

APPENDIX A

LETTERS TO THE EDITOR

Letter No. 1

Chico Enterprise-Record
Monday, September 10, 1962

Dear Editor:

A letter, unanimously approved by the Paradise American Legion Post, was printed, appropriately on Washington's birthday last February by the *Chico Enterprise-Record*, criticizing the part some of the Paradise school staff members played in promoting the Asilomar Human Rights Conference, an event originally sponsored by the American Civil Liberties Union. The public response to this letter was most gratifying to the Legion: of the approximately 75 phone calls, letters and personal contacts received by Lawrence Wrobel, commander, he reported that all but three were favorable to the stand taken by the post.

With a request from the Paradise School Board for the passage of a large bond issue in the near future, the Legion feels it appropriate to review the situation today.

In 1959, according to reports, 17 students were recruited to attend the conference; in 1962, about a month after the Legion letter with its widespread response of public approval, 23 made the trip. One of the subjects presented for general discussion by these high school pupils, according to one of the returnees, was birth control, while another concerned living together and accepting other ethnic groups. Some of the people from the bay area were described as beatniks while others were heard to profess being atheists.

The Legion would also like to call attention to the type of material used by Mrs. Virginia Franklin in her teaching. As an example, copies of the magazine "The Nation" were issued to students in her classes. Members of the Americanism Committee had an opportunity to examine the publication, which is often classed as ultra-liberal, and found this issue to be filled with one long article, in eight parts, attempting to show the hazards to the United States of building up armaments. One full-page ad was for a book titled "Premarital Intercourse and Interpersonal Relationships"; another ad was for 25 books imported from Russia and translated into English; another for a magazine for atheists.

The Legion does not feel that this type of material belongs in the high school curriculum.

One student reported that so much anti-religious sentiment was thrust at them that her parents removed her from the Paradise school and enrolled her in another city.

Mrs. Franklin seems to be regarded in a somewhat different light in Chico than in Paradise. According to a school official, Chico would not give her a new contract after she had been on the staff for some time, while the Paradise school board seems to feel that she is a darling. One board member told one of the men on the Americanism Committee, "If it's Mrs. Franklin you are after, you can just forget it."

Many Legion members are beginning to feel reservations about the Paradise school board and wondering if their decisions would meet the popular approval of the people of the district. If the responses to the February letter are to any extent accurate 72 to 3, and they may well be, it does appear that many of their decisions would not meet popular support.

The Legion is also wondering if the hammer and sickle flag over the city dump, the shooting with BBs of Robert Welch of the John Birch Society in Chico by a Paradise youth, and the abortive march of a band of students with left wing slogans on banners in the Nugget Days Parade could in any way be products of the school's teachings.

These are points to ponder, the Legion feels, before voting for or against another large bond issue.

Letter No. 2

"Regarding the school controversy in Paradise, I would like to add my voice to the dissenters. In the first place, I do not believe that those who vote against the bonds are doing so for selfish reasons. Among those dissenters I have talked to, a great majority do so because they do not have any confidence in the present school administration either financially or educationally. The problem of subversion in our school is not new or peculiar to Paradise alone. It is a problem of almost the entire United States. However, on the local level, it can be controlled through your elected administration if the public is well informed enough to do so. Indoctrination is not done in a brazen manner easy to discern, but rather by an insidious presentation such as a continued downgrading of the things that a Republic stands for, and constant upgrading of Communism, generally done under the name of Socialism. It is my belief that many parents do not find, or take the time, to even acquaint themselves with the problems. How many have read "Subversion in our Schools" by E. Merrill Root or Max Rafferty's "The Passing of a Patriot?" A friend of mine recently talked to a compara-

tively recent graduate of a Paradise High School. This young man swore by his former teachers, but on questioning, stated that they taught him very little about the history and heritage of our great country, government, and our free enterprise system. However, he was convinced that he knew all about Communism, which he considered a good thing. What he did not know was that he had idealistic concept of Communism that did not exist in actuality. Now do you think that this young man is going to recognize subversion when his own children are being indoctrinated? This, with the continued increase in juvenile delinquency, suggests that something is lacking both at home and in our schools. Communism has no moral code as understood and practiced by Christian people all over the world. No civilization has ever endured that abandoned the high standard of moral responsibility. Give us an educational system and administration we have confidence in and we will be glad to vote for any needed school bonds. We are interested in our young people.

"This letter is not meant to bring discredit on the teachers, school bonds, and so forth, as we are sure there are still many fine people in our school systems. Any hope that we can continue to exist as a free people must take into consideration the education of our young people. When some in our school administrations are not willing to salute the flag, and only do so because it is required to hold their jobs, when high government officials and some members of our school administrations advocate the use—if only by making it available—of such material as the 'Dictionary of American Slang' in our schools, it is time we are giving serious thought to some of the things that are more important than school bonds.

"In closing, I would like to quote three highly regarded Americans. Richard Arens, the Director of the House Committee on Un-American Activities, advised Congress that, 'Our American civilization is going down the drain, and not more than a handful of people are concerned about it.' General Mosley said, 'Historians of the future will marvel most of all at the nonresistance of those who had most to lose.' General MacArthur said, 'This evil force caused many Christian nations abroad to fall, and their own cherished freedoms to languish in the shackles of complete suppression. As it happened there, it can happen here.' "

APPENDIX B

THE BOARD OF TRUSTEES OF THE LASSEN UNION HIGH SCHOOL DISTRICT, Plaintiff and Respondent, v. JACK OWENS, Defendant and Appellant.

APPEAL from a judgment of the Superior Court of Lassen County. A. K. Wylie, Judge.* Reversed.

Action to determine whether charges against a permanent teacher were sufficient grounds for his dismissal by the board of trustees of the school district. Judgment for plaintiff reversed.

PEEK, P. J.—This is an appeal from a judgment permitting plaintiff to dismiss defendant and to terminate his employment as a permanent teacher in the Lassen Union High School District on the grounds of “unprofessional conduct.” (Ed. Code, § 13403, subd. (a).)

On May 13, 1959, charges were formulated by plaintiff alleging that causes existed for defendant’s dismissal. After the written notice of plaintiff’s intention to dismiss him was received, defendant demanded a hearing upon the charges in accordance with the provisions of sections 13403 et seq. of the Education Code. Plaintiff thereupon elected to file this action asking the court to inquire into the charges, determine whether or not they were true and, if so, whether they constituted sufficient grounds for defendant’s dismissal. (Ed. Code, § 13412.)

Although the pretrial statement set the issues in dispute as to (1) whether the publication by defendant of five letters in the *Lassen Advocate* constituted unprofessional conduct or evident unfitness for service, and (2) whether the contents of the letters were false and as such constituted dishonesty, the superior court made no findings on, nor did it mention, the dishonesty or evident unfitness charges. The court found that the allegations in the letters were “unwarranted,” “unfounded,” and “unsupported by the evidence,” and that the publication of the five letters constituted unprofessional conduct of a degree justifying dismissal.

The purport of defendant’s contention on this appeal is that he has been punished solely for the expression of political ideas critical of education generally, and in Lassen County particularly, and that such is not a constitutional basis for dismissal, either under the guise of unprofessional conduct or on any other basis. Defendant further contends that inasmuch as the “warrantedness” of expressed opinions is an inquiry exceeding the court’s constitutional power to adjudicate, any inquiry into the sufficiency of the evidence to support the findings is irrelevant.

[1a] We do not entirely agree with defendant’s reasoning but for reasons later to be expressed, we hold that defendant’s conduct under all of the circumstances presented does not constitute unprofessional conduct of a nature justifying dismissal. Furthermore, the record does

not support dismissal on the grounds of dishonesty and evident unfitness. However, there would appear to be no reason to elaborate on this point, since no findings were made on these charges and no discussion was directed thereto at the trial.

Since the factual circumstances are of particular importance in a case of this nature, they will be set out at length.

Defendant was in his eighth year of teaching and was employed by the Lassen Junior College when the charges were filed against him. He had taught in both the Lassen High School and the junior college for the preceding five years and had attained tenure in his position. All of his teaching experience was in Lassen County, during which time he had been active in problems relating to education and the teaching profession.

For example, he was instrumental in the organization of the local chapter of the California Teachers Association (hereinafter referred to as the CTA); he had served as president of the Susanville Secondary Teachers Association (hereinafter referred to as the SSTA) for a period of two years; he had served for three years on the Board of Directors of the CTA Northern Section; and he had served as chairman of the local CTA chapter's professional relations committee.

The record indicates that for some time defendant had been critical of the teaching conditions in the district. In 1957, while president of the SSTA, he presented a list of proposed improvements at a meeting of the board of trustees. Defendant testified that at the meeting the representatives of the association were greeted with a great deal of hostility, and that shortly thereafter he was being considered for dismissal. A member of the board of trustees stated that the 1957 meeting had been quite cordial and the trial judge, in his memorandum opinion, accepted this testimony. It is undisputed that some of the improvements suggested by the association in 1957 were accepted by the board. However, it appears that during that year a number of teachers left the district because they thought that the efforts of the SSTA had been a failure. The board members conceded at the trial that the teacher turnover problem had been troublesome. Additionally, it appears that many of the points raised by defendant had been the source of comment among educators in some of the major universities of this state; that editorials had appeared in large metropolitan newspapers; and that the Citizens Advisory Commission on the Public Education System had recommended many of the proposals suggested by defendant.

The professional relations committee of the SSTA strongly recommended to the board that defendant be given a contract for his tenure year. Although the board replied that it would accept recommendations on personnel matters only from the administrators, defendant was given his tenure contract.

There is nothing in the record indicating the nature of defendant's relationship with the board, or his other extracurricular activities regarding education in Lassen County, until December 24, 1958. On this date defendant wrote a letter which appeared in the *Lassen Advocate*, a newspaper of general circulation in Lassen County, announcing a forthcoming series of discussions during the following three months

on education in Lassen County, which would be sponsored by the Public Affairs Forum.

The Public Affairs Forum was apparently a "town meeting" type of gathering which had been founded by defendant at some undisclosed date. Prior to the education issue, it had explored various political questions and such problems of local interest as water fluoridation at the specific request of the city council. Various Lassen County citizens, including teachers, were active in the forum presentations.

The December 24, 1958, letter, addressed to the local newspaper and signed by defendant, was critical of local educational conditions, and urged a public turnout to discuss the matter. Although this letter was not included among the five which ultimately constituted the basis of the dismissal charges against defendant, it was not unnoticed by the board. Immediately upon the appearance of the December 24 letter, at the request of the president of the board the Lassen school administrators called in a CTA representative for "advice." The results of this meeting are not of record. However, on January 10, 1959, by the time defendant had written two letters, neither of which was listed in the statement of charges later filed against him, the CTA ethics commission met with defendant in an effort to have him stop his letter writing; but, according to the commission, "Mr. Owens made known that he planned to continue his newspaper article and the Public Forum knowing full well that a group such as ours could never go along with him."

On February 4, 1959, defendant published a letter, which was the fifth he had written, but the first to be ultimately included as a basis of the charges later filed against him.¹

¹ "Wednesday, February 4, 1959 PURPOSEFUL EDUCATION To the Editor: The teacher is the best example, that I know, of the possibilities of 'purposeful education'—education subtly done for a particular purpose with scant regard for truth.

"(The term 'teacher' does not include educators who make up the personnel in the state department of education, district and county school administration, and college and university education departments.)

"Mr. Frank Lindsay, director of the state department's bureau of secondary education, was asked by the California Citizens' Commission on Education how he would go about the business of rating a high school.

"Mr. Lindsay replied that he would visit the boys' toilet and the library, question the janitor and bus driver, but implied that he didn't trust the superintendent. (Incidentally, superintendents as a group call themselves 'teachers' when it is convenient to do so.)

"Mr. Lindsay did not note the existence of the classroom thing—the teacher.

"Mr. Conner, also of the state department of education, recently did the educators' 'jargon song' (always done to obscure and confuse) before the State Citizens' Commission on Education.

"Conner is the top authority of the State Central Committee for changing the social studies curriculum. That Committee begot committees which begot committees and finally summer session workshops where teachers on the leash, as usual, could offer 'constructive suggestions' about a hodge-podge program which had probably already been decided upon.

"At that workshop some classroom teachers with doubts about the proposed changes were either seduced by grades, maneuvered, or told to shut up. Most of the teachers there recognized the true nature of the situation but are silent.

"The instilled belief, backed by salary dollars, is that a promoted teacher becomes an administrator. Yet any discerning person, not ashamed to admit the results of his observations, can plainly see that teaching and administration are two entirely different occupations. What is the position of the able teacher who wants to teach not administer?

"Teachers in excess of 100,000 pay \$22 per teacher per year to belong to the California Teachers Association. The record indicates that this organization is extremely effective in changing California's constitution and in securing appropriate laws.

"The California Teachers Association also has a legally accepted Ethics Commission which quietly covers nasty situations and controls junior administrators and classroom teachers where the power of hiring and firing fails at the local level.

"The teachers sit on committees and are counted for publicity purposes, but 'educators' sit at the controls making the world safe for their kind. Teachers are given such dubious half crumbs as tenure, minimum salary laws, and insurance programs.

"Teachers have their voices 'given' in support of local school programs which they admit privately are absurd and deteriorating. At a personal risk, some quietly teach in unaccepted ways or public education would be much further in the mire.

The CTA representative again met with the board on February 25, 1959, to discuss the situation. It was suggested that the board ask defendant to appear before it, thrash the matter out, and *stop the letters*. This idea was not adopted. Although defendant apparently had never approached the board with his grievances at any time between the inauguration of the letter-writing campaign and the trial, nor had he been requested to do so, he did, on February 5, invite the board to participate in the education forums. However, in its letter of *February 13* declining this invitation, the board commended the "very American principle of the Public Forum and the very great local interest it has inspired," and thanked defendant for his "kind" invitation.

The next letter deemed "unprofessional" was written on March 4.²

On March 10, a meeting of the Lassen Junior College faculty was called by the acting director of the college to question defendant on the exact nature of his grievances. The acting director testified that

"Teachers are publicly, therefore, led to stamp and make their own chains and those for others.

"As undergraduates, teachers are required to take a number of education courses, the content of which is junk and repetition. We return to college from time to time at great personal (and taxpayer) expense to take more of the same required trash and repetition! We spend time that could be used to take academic courses that would help us unswaddle ourselves eventually.

"Now we teachers are about to lend our passive voices to increasing the misery. A teacher certification change is being pushed through the usual organizations, following the usual process of 'taking' the teachers and the public.

"In summary, I offer for consideration the ethically and intellectually castrated American, first echelon—the teacher in the classroom.

"In the past our only solution for the above problems has been to run or bow, and conditions have become worse.

"Now the public desperately needs us. We have a moral obligation as citizens and as professionals to that public.

"Let us not run from the California Teachers Association and our districts of employment. Stand and reform! Help wrest the power of decision from the few (the California Teachers Association and the districts) and give it to the many.

"We must do this now or forever be the ethically and intellectually altered American or Russian national as the force of unhappy circumstances may dictate.

"Now is the time for us to attempt to stand and be the professionals that the 'educator' for propaganda reasons has said that we are.

"Stand with dignity and strength before and with the public so that we may have the chance to be with dignity and courage in the classroom.

"Thus we may teach.

"Jack Owens, Teacher

"Lassen Junior College"

² "Wednesday, March 4, 1959 CHANGES NEEDED To the Editor:

"The Lassen Union High School and Junior College administration and a part of the board of trustees have well illustrated a disease that is rapidly sinking American public education, California first, that of autocracy. These people have had and believe that they still have absolute and final authority over their 'empire,' the high school and junior college. That time is no more.

"They have created, mainly through ineptness and indifference, a mess obviously and primarily beneficial and desired only by themselves, if by anyone. They have created and permitted situations and conditions in those schools that does gross violence to the dignity and decency standards of many teachers and students. They have created and maintained a situation in which the possibility of reasonable education is seriously hampered. How can teachers teach and students learn under conditions distasteful and shameful to both?

"The public is now seriously and justifiably questioning the type of school and educational situation that these people insist on protecting. The administration and some of the board members are obviously and naturally reluctant to meet the public in a space large enough to contain all those people of Lassen County who obviously wish to ask questions and who will expect straight and complete answers; large groups are more difficult to bluff and confuse. Neither does the Forum have an 'executive session' into which the board and administration can retreat when questions seek revealing answers; nor does the Forum permit rudeness as a means of squelching persons who ask questions. The administration, and probably some members of the board, are fully aware that pertinent questions would be asked for which they have no decent answer.

"The need for reasonable changes is a desperate one and the public, who really own the schools, have a right to question even those who have been a part of the failing school situation. This is the only way to make changes based on reason.

"With this in mind, let us go forward then to the March 20 Forum on the High School and Junior College District dedicated to action guided by judgment and tempered with reason and firmness.

"Jack Owens"

the group was not satisfied with defendant's answers, but decided not to take any group action other than to publish a letter in the *Lassen Advocate*, dated March 18, to indicate that defendant was not representing the faculty in his letter-writing campaign. Two more letters, later adjudged "unprofessional," followed on March 11 and March 18. While the letter of March 11 is set forth in full, only portions of the letter of March 18 appear in the record before us.³

³ "Wednesday, March 11, 1959 CTA ORGANIZATION To the Editor:

"My efforts to help effect changes in public education that are desired by both teachers and the public led me into the ranks of the California Teachers Association and then into office in that organization. I have served as a member of the board of directors for the CTA Northern Section during the past three years and was recently reelected for another three year term. Most of the people on this board and in other key positions are educators—administrative people and education professors.

"For us lower echelon people (teachers), the CTA channels of communications are as clogged and confused as they are for the public in the local school districts; efforts to reform are simply ignored and the energy of reformers is dissipated with 'side projects.' My energy and time was used in among other things, organizing a credit union for the approximately 9,500 school people of the CTA Northern Section.

"The entire CTA is a powerful thing; it has a membership of over 100,000 and an annual budget of over \$2,200,000. The efforts of its lobbyists are extremely effective in the passage of taxes and other laws; it can and does elect and defeat candidates for public office. It also quickly and almost automatically protects and assists the administration in any local district where difficulty with the public or subordinates is encountered; if two administrators quarrel the senior one is supported.

"Thus, through the CTA and other organizations, local and public control of education has been practically eliminated; the educator is in charge of hiring and firing and he pretty much controls policy (if any) and curriculum. My present campaign was designed to show among other things the CTA in action.

"After my letters to this paper were started the local educators, as expected, sought and obtained CTA assistance. The local teachers association (people who can be fired locally) were urged to investigate; Mr. Howlett, CTA field man whose home office is in San Francisco, was called in and met secretly with the administration and board. He recommended, apparently early in February, that I be dismissed, for unprofessional conduct, probably because of my public criticism of education. Plans have subsequently been made to accomplish this.

"This is the usual way that situations such as this are handled and teachers are kept from talking publicly. Now do you understand why teachers complain bitterly in private but refuse to talk or take a stand in public in opposition to the educator?

"The CTA has a 'long arm' and can permanently affect the job opportunity of any teacher.

"Mr. Greenleaf had talked with Howlett when he expressed, in this paper, compliments about the Forum of which I am a part.

"The appearance and activities of Mr. Howlett and Mr. Greenleaf demonstrate an interesting attitude toward the people of Susanville and the teachers of the Lassen High School and Junior College; neither knew that he was here.

"Who really owns and controls the local schools?

"Jack Owens"

"[March 18, 1959] In my letters, I have taken the opposite and badly needed stand; here in Lassen County we have serious problems in education. These should be cured; it is more important to talk of the problems than to continue the bouquet-tossing game. After all, who would be interested in remedying anything that is already nearly perfect? If we don't see and cure our problems the Russians quite probably soon will; they also will cure us of the "liberty" habit. Certainly we cannot cure all the problems of education in the United States but let us at least do our share.

"Fourth, every issue is confused by fence sitters who insist that they see no reason to act. We have tried to knock down the fence and thus clarify the issue; local education either does or does not need changing. It is time to decide.

"Fifth, we have hoped to illustrate that the board, the public, and the teachers have all been isolated and cannot, under present conditions, communicate adequately; they cannot meet and discuss current issues in education. The educators have created, for their own interest, a strong wedge of distrust between these groups. Thus problems in education cannot be cured. Events during the past years, highlighted by the high school board and administration refusal to appear in the Forum, justify this viewpoint.

"Sixth, that administrators backed by large state organizations and the board-given authority to hire and fire have deprived the teacher of the dignity and security necessary for independence and adequate public responsibility.

"Finally, that the people here in Susanville and Lassen County have been unable to secure reasonable and badly wanted changes in their own educational system. Regardless of the law, the administration has the authority but escapes the responsibility; the boards have the responsibility but no real authority (the administration has that—it is on the job all the time and has effective control over the faculty), the public has tax bills and a mess but no control (the recent furries in school meetings, curriculum construction, etc., are pacification gestures; something that will, it is thought, lull the public back to sleep).

"Where shall we go from here? All interested people should come to the Forum Friday night and talk it over."

The final letter, also adjudged "unprofessional," was published on May 13, the same date that the charges were formulated against defendant by the board.⁴

It should be noted that one of the directors of the forum, who also had been a speaker at one of the sessions in the education series, was a successful candidate in the school board election alluded to in the letter of May 13.

Before discussing the additional evidence presented at the trial of this cause, primarily because we feel the trial court erred in its approach to this problem, we believe it necessary to discuss the concept of "unprofessional conduct."

[2] Basically, the word "unprofessional" is a relative expression without technical meaning, and the phrase "unprofessional conduct" as used in the Education Code has been given no legislative definition. (*Board of Education v. Swan*, 41 Cal.2d 546 [261 P.2d 261].)

[3] In the judicial determination of whether the precise facts presented constitute "unprofessional conduct" the trial courts enjoy a great deal of discretion. (*Board of Education v. Swan*, *supra*, 41 Cal.2d 546.) [4] However, in exercising this discretion they are bound by the limits placed by the appellate courts upon the concept of the scope of "unprofessional conduct." Defendant, in effect, argues that one of those limits applicable to his case is his constitutional right to publicly criticize the educational process, including his superiors, without fear of losing his teaching position.

[5] However, this is too broad a proposition, and has been answered by the California Supreme Court in this manner: "One employed in public service does not have a constitutional right to such employment and is subject to reasonable supervision and restriction . . . to the end that proper discipline may be maintained, and that activities among the employees may not be allowed to disrupt or impair the public service. [Citing cases.] (*Board of Education v. Swan*, *supra*, 41 Cal.2d at p. 556.)

[6] Thus, the trial court's primary inquiry in the present case where the sole basis of the charges were letters critical of education should have been to the questions of whether there had been any dis-

⁴ "Wednesday, May 13, 1959 TUESDAY'S ELECTION To the Editor:

"The school boards in this area have been guilty of a practice that would be more fitting in Russia than in the United States; that of permitting or placing unlimited and unsupervised authority in the hands of the administration. This practice has cost the people of Lassen County untold sums of money, many excellent teachers, and it has deprived our children in most cases of an adequate school system. The price has been very high.

"Boards have become little more than rubber stamps for administrators, their authority is simply being used. These administrators apparently use the board and its authority as they wish. After a few board sessions over the conference table board members see both the public and the teachers as enemies and are quite ready to rubber stamp the administrator's autocracy or one man rule.

"The basis of administrative supremacy is (1.) He is on the job every day—the board member is there just once each month. (2.) He has with the board consent, a service staff to do research and to back him along with the CTA and other such administrative protective associations—the board member has no one.

"If the people of this area want decent high school and Junior college education, I strongly urge that they elect the maximum number of new board members. Elect people who have the strength to be responsible to the public, then go to each board meeting and back the persons you elect. Require that your board use the intelligence of everyone, teachers and public, to construct and use a basic curriculum of fundamentals—with the frills left out.

"One person rule in the schools has produced a mess and this should be changed.

"See you at the polls.

"Jack Owens,

"Susanville."

ruption or impairment of discipline or the teaching process as a result of defendant's letters.

Instead, the trial proceedings and the findings comprise a meticulous attempt to establish that the statements in defendant's letters were "unwarranted" or "unsupported by the evidence." The result of this approach is that the court often ended up weighing its opinion against that expressed by defendant in his letters. The following excerpt from the findings is illustrative: "The court feels that there is nothing in the record to show any apparent deep concern, or concern of any kind, by the people of Lassen County over poor results of public education locally . . . because the record in this case abounds with irrefutable evidence that the junior college and the high school are functioning in a *proper* manner, have been and are obtaining good results and have good rating as such . . .

" . . . the record shows that the junior college and high school . . . are being conducted, managed and *properly* handled, in a careful and *proper* manner . . ." (Italics added.)

[7] It was not the court's function to debate the subject of *proper* administration of the school system. Within the limitations previously discussed (disruption or impairment of discipline or the teaching process), defendant had the constitutional right to differ with the court and the administrators over what is *proper* management, at least in a responsible manner.

Furthermore, as a matter of record, the only substantial evidence indicates that the people of Lassen County *had* expressed concern over the results of local education. For example, the board's letter of February 13 to defendant noted the "very great local interest" in the forum, petitions requesting the withdrawal of the superintendent were circulated by the public at the time of the forums, and a "reform" candidate who had defendant's backing was elected to the board. Since we have mentioned the comment of the board, we should also note the testimony of the principal of the high school that the median in one of the high school English classes was "way down" to 9, and that of 150 incoming freshmen, 14 were not tested in English because of their inability to read and "because we felt it was a waste of the test."

We will not further examine the court's findings, except to indicate that the evidence presented relevant to a properly framed inquiry, as delineated above, will not support the general finding of "unprofessional conduct." That small amount of relevant evidence revealed by the record is uncontradicted. This dearth of pertinent information is partially due to plaintiff's predilection to excoriate defendant for his letters, and to effectually place the burden upon defendant to justify them. Plaintiff might more profitably have spent its time in attempting to establish what effect harmful to education in Lassen County had been engendered by the letters.

[1b] The uncontradicted evidence reveals that defendant violated no board or school policy by publicly airing his grievances; indeed, it appears that the board and school had no written grievance procedures. Neither did defendant violate any other ascertainable school rule.

There is no issue of disobedience or insubordination. (Cf. *Board of Education v. Swan*, 41 Cal.2d 546 [261 P.2d 261] and *Midway School Dist. v. Griffeath*, 29 Cal.2d 13 [172 P.2d 857].) As previously noted, the board made no direct demands upon, nor any contact with, defendant concerning the letters, except to decline his invitation to discuss the charges at the public forum lecture.

Furthermore, there is nothing in the facts presented to support plaintiff's sole contention on this appeal that the judgment finds "incontrovertible" support in the decisions of *Board of Education v. Swan*, 41 Cal.2d 546 [261 P.2d 261] and *Pranger v. Break*, 186 Cal.App.2d 551 [9 Cal.Rptr. 293].

The defendant in the *Swan* case repeatedly violated various school district rules, refused to accept teaching assignments, was insubordinate, refused to conform to the instructions and requirements of her superiors, continuously refused to attend required meetings, and told a Parent Teachers Association Meeting that when she had been called before the Los Angeles City Board of Education she had "spit in their faces." In addition, before a regularly scheduled meeting of the local Parent Teachers Association, defendant had made derogatory remarks concerning the superintendent of schools and criticized the board of education for bringing him to Los Angeles. The Supreme Court affirmed the trial court's finding of unprofessional conduct, and we agree. However, the case is in no way "incontrovertible" support for the judgment in the present case which is based on completely dissimilar facts.

Nor is the *Pranger* case in any way controlling. That case involved the dismissal of a civil service employee for "conduct unbecoming a public employee." The basis for the dismissal was an editorial written by defendant, an employee of a county air pollution control board, which could be interpreted as sanctioning, and even advocating, a strike for higher pay. The court concluded that public employees have no right to strike against the government, absent legislative authority. In that context, defendant was advocating illegal action.

Defendant in the instant case is advocating the perfectly legal and laudatory "action" of public debate on vital issues, and in the letter of May 13, exhorts the people to vote in the school board election. These pleas bear no similarity to the advocacy which the court in the *Pranger* case labeled illegal.

Reference must be made to the evidence supporting the court's finding that defendant's conduct was "unethical and unbecoming a person in the profession of teaching." The question of ethics, although seemingly germane to this inquiry into "unprofessional conduct," suffers from a difficulty of definition. This unfortunate fact was reflected in the trial proceedings.

In response to questioning, defendant testified that prior to his resignation from the CTA on April 14, 1959, he generally subscribed to the association's recommended code of ethics, but since his resignation he subscribed to his own code of ethics. Other teachers, including the acting director at Lassen Junior College, testified that they followed their own personal code of ethics.

The record indicates that approximately 102,000 of the potential 120,000 teachers in the state belong to the CTA, but that they take no oath to support it, nor do they agree to subscribe to the CTA code of

ethics when they join. The CTA code is in no way embodied in any California legislation.

Nevertheless, a report of a CTA professional ethics panel was introduced into evidence without opposition. Section 13417 of the Education Code, which seems to authorize this procedure, reads in part: "Upon any such trial [such as the case before us], the court or any party may call and examine expert witnesses to testify as to any matter of professional or personnel standards . . . or other such professional matters as may be involved in the subject matter at issue.

" . . . the court may also receive and consider as evidence any report . . . submitted by such expert witness . . . or a panel . . . maintained by a statewide professional and educational association.

A CTA panel member testified that the panel believed defendant's conduct to violate the CTA code of ethics, and the panel's written report so deciding was filed with the court.

An examination of this report indicates that defendant's act of *publicly* criticizing the board's policy, once it had been established, was a prime factor in its decision. This is consistent with the uncontradicted testimony that the CTA representative had told defendant in January that the CTA could "never go along" with his letter-writing campaign (which merely urged public discussion).

It is clear that defendant, even while a member of the CTA neither subscribed to nor agreed with this part of the CTA code of ethics. It is likewise clear (from their testimony and conduct) that the several teachers who assisted in the preparation of the letters and in the administration of the public forums did not subscribe to this "maxim."

Nevertheless, the court concluded that defendant had ignored "all codes of professional ethics," when he chose to publicly criticize aspects of local education. This conclusion is not supported by the uncontradicted testimony mentioned above and thus, the investigation of ethical codes in the teaching profession was of little assistance.

However, this is not to say that the phraseology of defendant's letters can be looked upon as a model of scholarly clarity, nor that the somewhat intemperate language employed therein is commended to the teaching profession. But it is a matter of record that a great deal of public debate on the subject of education was occurring, both in California and nationwide, at the time of the Susanville public forums. It is not surprising that many of the arguments were not temperately phrased in terms of universal clarity, and that much of the logic employed was flavored by personal experience. [8] Defendant, a father of school-age children, was not precluded from joining in this great public debate because of his status as a teacher. Nor was he precluded from criticizing education in the course of his electioneering in support of his choice of a candidate for the school board in the coming election. Furthermore, in the case before us, plaintiff had the opportunity to meet publicly with its protagonist for the purposes of clarification and rebuttal. However, the choice was to postpone this encounter until the trial of defendant on the charges presented.

At the trial, defendant's conduct of partially basing his opinions on material published in California newspapers was rejected by plaintiff

as unsatisfactory evidence because it was not "personal knowledge." Indeed, plaintiff required that defendant name any teacher expressing views similar to his, and bring the teacher into the trial to testify first-hand if he wished to rely upon his statement as "justification" for his opinions. Few teachers so designated were named by defendant and few appeared as witnesses. Considering the quasi-inquisitorial nature of plaintiff's trial tactics and the fact that charges had been filed against defendant, it is not surprising that more of this "evidence" was not presented.

As we have previously indicated, plaintiff's and the court's exhaustive examination of the "evidence" to "warrant" defendant's statements (for example, in regard to "purposeful education," "injustice to the teacher," "autocracy" or "proper handling of the school system") was not a helpful approach to the problem of "unprofessional conduct."

The only scintilla of evidence bearing on the decisive issue raised by the facts of this case, whether defendant's conduct had resulted in an impairment of the teaching process or had raised disciplinary problems, is found in the CTA panel report previously mentioned. That report contains the following statement:

"The panel concludes that Mr. Owens' continued employment in this district is untenable and would lead only to embarrassment to himself and the district. The antagonism created by his actions has caused a rift, which if continued, would undermine the educational program to a degree which could not be compensated for even by effectiveness as a classroom teacher."

This statement is boldly set forth in the record without explanatory comment. Accordingly, the basis for the statement, the nature of the "rift," the "embarrassment," or the "undermining," are not before us. Nor was it before the trial court. It is not surprising then, that no mention of this aspect of the report was made by the court, nor were there any findings on the matter.

The flat prediction that the continued employment of defendant "would undermine the educational program" is similar to a charge levied against a school principal after a particularly acrimonious Florida school election campaign. The Florida Supreme Court answered: "This apprehension is necessarily speculative . . . [and] there is no logical reason now to determine that because of animosity growing out of the election the relator will inevitably be so recalcitrant that she should be excluded from a position of authority [as school principal]." (*Adams v. State* (Fla.) 69 So.2d 309, 311.) This statement is most appropriate to the record we have examined in the present case.

On the basis of the record before us, and for the reasons above discussed, the judgment allowing dismissal because of "unprofessional conduct" is reversed.

APPENDIX C

THE TRIMESTER PLAN OF UNIVERSITY OPERATION ¹

Florida's Answer for Year-round Education

By J. B. CULPEPPER

(From *State Government*, Summer 1964)

The rapid increase in enrollments all over the United States and the geometric expansion of knowledge have led many institutions of higher learning, as a means of meeting the challenge, to adopt or to consider year-round plans of operation. In fact, if we are to educate all our youth to their highest potential, then, as a result of the pressure of numbers and the increasing demands for expanded and improved offerings in higher education, the institutions must function under some pattern of year-round operation. Thus far more than fifty colleges and universities in the country are engaged in year-round operation under an extended school year of one sort or another, and at least another hundred institutions are considering adoption of such a plan.

In Florida, because of these pressures, the State University System after careful study has chosen to initiate a program under which it has used a trimester plan since September 1962.

Genesis of the Plan

Florida has proceeded systematically, beginning in 1954, to make provision for its rapidly growing college enrollments. Following carefully formulated plans, the state has established a statewide system of locally controlled community junior colleges, and it is expanding and developing the State University System in an effort to provide needed educational opportunities for the increasing numbers of students who are both willing and able to profit from education beyond the high school.

Concurrently there has developed an awareness that the state's ability to provide for all of the students who want to attend college in Florida is contingent in part upon the attainment of a fuller utilization of existing and new institutional facilities. While steps were being taken to increase the utilization of instructional space under the semester plan, the Board of Control, which governs the State University System, developed an active interest in the utilization of the university plants throughout the entire year. Accordingly, the board in November 1959 directed that a careful study be made of the feasibility of operating the State University System on a year-round basis. Following preliminary examination of the possibility for year-round operation, a system-wide committee proposed that serious consideration be given to a trimester plan.

Members of the Florida legislature were advised that the study of possible year-round operation was being made. The 1961 session of the

¹Reprinted with the permission of *State Government*.

legislature indicated its great interest by providing for each of the universities a supplementary appropriation for the biennium, the receipt of which was contingent upon "the full implementation of a trimester or quarter plan including the requirements that the Universities undertake whatever steps . . . may be necessary to encourage a uniform level of enrollment throughout each of the instructional periods."

Upon the recommendation of its Executive Director, the Board of Control in its July 1961 meeting determined that all institutions in the State University System would operate under the same type of year-round plan, and that the several institutional calendars would be uniform with respect to dates set for the opening of each of the terms. At that same meeting the board instructed its Director, working with the Council of Presidents and a system-wide committee on calendar, to provide it with recommendations concerning the plan for consideration and action by the board at its October 1961 meeting.

Rationale for Year-round Operation

While the widespread interest in year-round operation was occasioned in part by the need to serve larger numbers of students, there were also academic considerations which called for such calendar reform. With the recognition of our cultural dependence upon the college-educated segments of the population, it has become imperative that students complete the initial phases of their professional preparation in time to assume professional responsibilities at the age of their greatest strength and energy. The availability of full programs of instruction on a year-round basis will make it possible for society to obtain longer periods of service from its professional educated manpower, as well as to have that service available at an earlier time. Although the demand is insistent for professionally trained manpower, there is also a clear recognition in many specialized fields today that professional education must be thoroughly integrated with liberal education. Under year-round operation it is possible for both liberal and professional educational experiences to be completed within the period traditionally devoted to one or the other.

Apart from academic consideration, year-round operation has significant administrative advantages. Since under the year-round plan a given student body can complete a traditional four-year program in less than three years, the acceleration under such a plan has the effect of permitting the enrollment of the equivalent of one additional class without additional instructional or residential space. Also, year-round operation permits the spreading of university overhead costs over the larger output resulting from operation of an additional term in the year. Utilization of instructional faculty services over a longer period each year is a decided advantage in the face of the critical shortage of well-qualified teachers. At the same time, the year-round operation will enable faculty members to increase their earning power.

For these and other reasons which space does not permit delineating here, the State University System of Florida is undertaking a year-round operation. In summary, it does so because this makes possible a more effective use of resources to accomplish educational objectives

which are consistent with the demands and pressures of the times and which are in harmony with the maturation of college students.

In considering the various possibilities it was felt that the plan must allow a maximum amount of time for instruction, with the least time possible devoted to carrying out efficiently such related activities as registration of students, examinations, reporting of grades, and changing of schedules. It was judged that the plan must accomplish as nearly as possible a uniform distribution of the instructional load through the several terms of the year, and it was agreed that it must make provision for the summer enrollment of teachers employed during the regular academic year in the public schools.

The Plan Recommended

After careful review and many meetings of University Presidents and interinstitutional committees, the following plan of year-round operation was adopted upon their recommendation by the Board of Control, to be effective September 1, 1962. It provided:

That the trimester plan would include three ninety-four-day trimesters (fifteen two-third weeks);

That not more than eight days during any trimester would be devoted to final examinations, registration and advisement, commencement, and recesses occasioned by legal holidays occurring within the term;

That the first trimester would begin immediately following Labor Day and end before Christmas; that the second trimester would begin immediately following New Year's Day; and that not more than five days would intervene between the close of the second trimester and the opening of the third trimester;

That the third trimester would provide a full program for all of those students for whom it would be advantageous to attend throughout the term;

That the third trimester may include in the first half a period of not less than forty-seven days for students who might be unable to enroll for the entire trimester;

That the third trimester would include a period of not less than forty-seven days scheduled at such time as will permit the enrollment of teachers employed in the elementary and secondary schools;

That not more than four days of either forty-seven-day term would be devoted to final examinations, registration and advisement, and recesses occasioned by legal holidays occurring within the term;

That the unit of credit would be the semester hour;

That there would be a system-wide committee to advise the Board of Control through the Council of Presidents concerning the ways in which a uniform distribution of the instructional load throughout the three trimesters could be attained and maintained, and to devise ways of evaluating and improving the year-round plan of operation.

Implementation of the Plan

Adoption of the trimester plan outlined above provided a framework within which the objectives of year-round operation could be achieved. But full implementation of the plan required a number of steps beyond

the development of institutional calendars in the universities. Among other factors which required consideration were faculty morale, fatigue factors, administrative changes, cost to students, curriculum changes, effects on research, impact on students' social and recreational patterns, and others. Perhaps the most pressing of the decisions which had to be made related to faculty salaries and conditions of faculty employment. The Council of Presidents, after consideration of at least five possible courses of action, recommended that the Board of Control adopt the following plan for adjusting salaries of administrators and faculty members under the trimester organization:

Each regularly employed faculty member engaged in teaching and/or research was assured employment for two and a half trimesters of each year, or for five trimesters in two years.

The salary received by each faculty member for two semesters (nine months' instruction) was increased by 11 percent effective September 1, 1962, to compensate for the additional month of work time occasioned by being employed two and a half trimesters (10 months' instruction).

Each regularly employed faculty member who was employed for three trimesters in the year was to be paid during the two months of the additional one-half trimester at the same monthly rate as was established for the two-and-a-half trimester period.

Academic administrators being employed for the full twelve months' period were allowed only merit increases, which were recommended by the Presidents.

Where librarians, student personnel officers, and nonacademic administrators were involved in part-time teaching or were so closely related to instruction that adjustments in salary should be made, such adjustments were recommended by the Presidents to the board.

Agricultural extension and agricultural experiment station faculty personnel employed for the full twelve months' period were allowed only merit increases justified by the Presidents for these individuals.

The single most important factor which was judged and later found to be true in realizing uniform enrollments in the three trimesters was the impact of increasing enrollments.

The administrations of the several universities would have preferred to initiate the plan in September 1963, when enrollment increases advanced sharply. However, as the additional money was advanced by the legislature for the term beginning in September 1962, all agreed, for obvious reasons, that the plan should be initiated at that time.

In this initial year the percentage of enrollments in the third as related to the first trimester varied in the several institutions. Even with the interest of students in attending Trimester III-A (or the first half of the third trimester) and with large numbers of public school teachers attending Trimester III-B (or the second half of the third trimester), enrollment declined in one university, having the highest third trimester enrollment, to 70 per cent of the enrollment of the first trimester; and in the university having the lowest third trimester enrollment, it declined to 55 per cent of the enrollment of the first trimester. As the pressures of enrollment mount it is judged that, by careful administrative planning, more and more students will register

in the third trimester, thus realizing a more equal distribution in enrollment among the three trimesters. To date in subsequent third trimesters, enrollments have increased by approximately 6 per cent in each year.

Suggested Advantages of the Plan

Among the advantages which may be stated for the trimester plan of operation are these:

The plan allows a shift from a semester operation to a trimester operation more smoothly and rapidly than alternative means of accomplishing year-round operation would allow. The same length of time can be given in the classroom by lengthening the daily class period five to ten minutes, and the same semester credit can be earned. No massive reorganization of semester instructional materials by the professors is required, though in time it may be desirable.

Under the trimester plan, less time is taken in registration and in examinations.

With the lengthening of the class period by ten minutes, a longer block of instructional time is gained, thus allowing desirable innovations in instruction, such as use of modern teaching aids.

The trimester plan as it operates in Florida will allow many students to find employment at peak periods of job demand and still permit them to finish in a four-year period.

The plan has all of the advantages of the semester system plus allowing completion of the undergraduate degree in a period slightly under three years.

The concentration of fifteen weeks of instruction into fourteen weeks is an incentive to students to work harder and to utilize their time more efficiently.

The plan allows more effective use of faculties and facilities.

It eliminates the post-Christmas lame duck session, when students and faculty are in a furor, preparing for examinations.

Suggested Disadvantages

Various objections to the plan also have been offered since its implementation. Some examples of what has been said by critics follow:

Trimester operation fails to provide sufficient time for assimilation, reflection, digestion, maturation.

A trimester course cannot be the equivalent of a semester course. A decrease in the student's course load and/or a decrease in the amount of material in a given course is imperative.

The increased pressure under trimester operation has resulted in lower quantity and/or lower quality education.

Under the trimester system there is less time for faculty research and creative work.

There is increased exhaustion and fatigue under the trimester operation, accompanied by a prevailing attitude among faculty and students that education and teaching have been reduced to a harried, frantic race.

Trimester operation forces students to neglect reading and thinking.

Random Reactions from Students and Faculty

Comments on the plan from students and faculty have ranged from highly favorable to strongly critical. Examples of the reactions have included these:

"The students are under terrible pressure; I don't see how they can stand it."

"The trimester system is geared to IBM and dehumanization."

"About the time I learned where classes were, we had midterms, and now finals are here."

"The trimester makes a handy excuse for the students. They blame everything on the 'trimonster' now."

"Students are seen sitting on the floor of the library for the first time this fall because they don't have enough room to study at the tables."

"Most of the kids have just too much to do, with no time for extracurricular activities."

"It's rugged. It has ruined my social life. I am going to have to graduate so that I can get reacquainted with the opposite sex."

"It is a good thing the trimester gets you through school more quickly; my beauty is fading fast."

"A student dropped his pencil, and by the time he had picked it off the floor he was two weeks behind the rest of the class."

"There are still those who just plain don't like it, don't want it, and there have even been allegations that some university people are deliberately intent on seeing to it with all in their power that it will be scuttled."

"Fears of massive dropouts and flunkouts are largely unfounded."

"The teachers are having to spend more time in class and less time doing private work or outside work. But apparently they are not leaving the university, as was predicted."

"Reevaluation of the trimester may show that a lot of dead wood may need to be cut out of many courses."

"One conclusion is obvious. The universities have taken on more of an academic atmosphere under the trimester plan than at any time in the remembered past."

"The trimester plan gets more work out of the professors for very little increase in pay."

"The trimester system is undoubtedly an advantage for students."

"I believe that everyone benefits from the ending of the first trimester before Christmas. Now, no one has to face the mad rush of exams when he returns."

"I hate it. It rushes things too much and doesn't really prove beneficial."

"The trimester system encourages students to go through college too rapidly."

"Now that we know what the trimester is, we are ready to begin really testing and judging the system. Those who condemn it now are merely admitting their own inability to adapt with changing conditions. We know what to expect. There is no excuse for repeating the mistakes of the previous trimester. It is time to make the system work."

Conclusion

The trimester plan has been in operation in Florida since only September 1962. There has not been time, therefore, to permit a full, comprehensive, and honest evaluation of its merits and demerits. Preliminary investigations show that there has been no increase in the over-all dropout rate. Studies also indicate that grade point averages are approximately the same as before. The average number of hours carried per student has dropped slightly at the undergraduate level. However, the average reduction amounts to not more than one semester hour at any level. The number of disciplinary cases for all causes in all of the universities is down.

The trends pointed up by these and other reports are contrary to rumors and assumptions which have been rather widely circulated among faculty members, who perhaps feel the pressure of the trimester more than do students. There is sufficient evidence to assume that students under the trimester system are studying harder than under the semester plan. Certain midweek and weekend social activities have been eliminated, in most instances on the suggestion of the students themselves.

The trimester plan of operation is one of several means being employed to use more effectively the faculties and facilities of the universities. It is true that the plan has certain disadvantages, but it has many advantages. Opposition to it is to be expected, since opposition thrives on every new idea, concept or plan. Careful study of the plan as it now operates in Florida is under way. After a student generation has passed through the universities under the plan, perhaps evaluation will lead to some adjustments, some modifications, which will improve the system. In any event, it seems safe to predict that some type of year-round plan of operation is here to stay.

** Assemblyman Winton concurs with footnotes and comments made to this report by Assemblyman Flournoy.

SUBCOMMITTEE ON SCHOOL FINANCE

CONCLUSIONS

1. The committee concludes that a reasonably small classroom size is directly related to pupil achievement. The committee believes that the available evidence shows that small pupil-teacher ratio and relatively generous teacher salary scales have a directly beneficial relationship to the achievement of pupils in the public schools.

2. The committee has found no evidence to support the thesis that administrative staffing patterns, noninstructional personnel staffing or other nonteaching staffing have a marked effect upon the achievement of pupils in school.

3. It is concluded by the committee that under the present system of school finance the Legislature has little control over the expenditure of funds by local school districts. It is further concluded that this lack of control results in a wide variation in patterns of employee staffing, class size, salary ranges, and philosophies of curriculum development.

4. The committee believes that the present system of allowing a minimum amount of state "basic aid" to all school districts regardless of their wealth mitigates against equal educational opportunity for all children.

5. The committee concludes that there is no particular relation between the numbers and percentages of nonteachers employed by school districts and the wealth of those districts.

6. The committee finds that class size, or pupil-teacher ratio, is directly related to district wealth and, in fact, is more responsive to the financial ability of a school district to support an educational program than any other single factor.

7. It is the committee's conclusion that nonteaching staffing in school districts has no relation to any of the normally used district criteria, such as size, wealth, location, and so forth. Rather, such staffing outside the classroom is dependent primarily upon the decisions of local school boards and administrations.

8. It is concluded that teachers' salaries are directly responsive to school district wealth. Administrative and nonclassroom salaries, however, while responsive, are not nearly so variable. Further, the committee finds that a slowly increasing dollar gap exists between salaries of classroom teachers and administrators.

9. Considerable doubt exists among educators and members of the public as to the educational value of the vast numbers of publications, curriculum guides, study outlines, and course guides produced by school districts. The committee is appalled by the unbelievable duplication which exists in the production of this material. The committee has found no evidence to show that pupil achievement is in any way connected with the absence or presence of such material.

10. The committee finds that the absence of one single standardized statewide test at the 5th-, 8th-, and 11th-grade levels makes it difficult to properly evaluate the effectiveness of various districts' educational programs.

11. The committee believes that the foundation program levels established by Assembly Bill 145 of the 1964 First Extraordinary Session are reasonably adequate for the immediate future. The committee believes, however, that the present system of two separate foundation programs, each established to support "a minimum acceptable educational program," is contradictory. The committee is disturbed by a financial system which allows a higher level of foundation program to supposedly "impoverished" school districts, while guaranteeing a lower "minimum program" for those districts technically nonimpoverished. The committee is not convinced that many districts presently classifying as "impoverished" are truly as destitute as one might believe.

12. The committee believes that efforts should be increased to place excess administrators and nonclassroom employees in newly unified school districts into the classroom in order to lower classroom size and to avoid administrative overstaffing.

13. It is concluded that a long range, experimental study will be necessary if the foundation program is to be adequately defined in substantive terms. The committee does not believe that varying foundation program levels can or should be devised to take into account the myriad of differing local situations and problems.

14. The committee concludes that a continuous effort must be made to increase the prestige of the classroom teacher, as well as the school administrator.

15. It is concluded that the existing system of legislatively established maximum tax rates for school districts, together with numerous "permissive override" tax rates authorized by the Legislature for specific purposes, detracts from local control and school district governing board fiscal responsibility.

16. Maximum tax rates, established by the Legislature in 1937 and not substantially revised since then, are unrealistically low.

17. Continual recourse by school districts to local tax elections represents a considerable expense to the property taxpayer.

18. Legislatively established maximum school district tax rates no longer serve the prime purpose for which they were originally intended—the control of school district expenditures.

19. Permissive override taxes, adopted each year by the Legislature, serve to frustrate the original purpose of the statutory maximum tax rates in establishing expenditure control.

SUMMARY OF RECOMMENDATIONS

1. The committee recommends the adoption of legislation which requires unified school districts with less than 25,000 pupils in average daily attendance to make use of county-produced curriculum publications rather than produce their own, when such county publications are available to meet the needs. Conversely, county boards of education should be required to review the curriculum publications produced by school districts within their counties and, if they meet the needs, to adopt them as county publications in lieu of producing separate documents on the same subject.

2. The committee recommends that the Department of Education be directed to study and implement methods of disseminating as widely as possible information relating to the availability of curriculum publications produced by various educational agencies and subdivisions in the state.

3. The committee recommends that a system of upgrading the teaching profession which utilizes the Master Teacher concept be adopted. The committee also recommends legislative consideration of the cost involved in such a program and the state's responsibility in sharing the cost.

4. The committee urges that school districts give thorough study to proposals which presently base administrative salaries upon a factor of what the administrators would earn if they were classroom teachers.

5. It is recommended that present requirements for an administrative credential be reviewed so that other avenues of entrance for qualified individuals into school administration may be developed, in addition to the present exclusive avenue of classroom teaching. The committee believes that the best and most qualified individuals must be found to administer the school system, whether from within the ranks of teachers or from without.

6. It is recommended that the Education Code be amended to provide that in the case of newly unified districts the state will pay the difference between what a school administrator or certificated nonteacher would have earned out of the classroom and what he would earn as a teacher, for the life of the existing contract, if the district will agree to place the individual into the classroom on a full-time basis.¹

7. The committee recommends that a research design be developed with the objective of defining in a substantive manner the foundation program of school support. Such a design should include participants

¹ Assemblyman Flournoy dissents from this recommendation, and states: "I dissent completely from the recommendation that the state ought to provide a special contribution to school districts who place administrators in the classroom after a unification takes place. Whether or not it is advisable for any particular administrator to return to the classroom is, I think, a local decision to be made by the district locally, and without regard for a special financial benefit which they might obtain by such action from the state."

Assemblyman Monagan does not concur in recommendation number 6, believing that such a procedure would merely substitute what might be considered one wrong for another wrong.

Assemblyman Porter states: "I take exception to this recommendation. This should remain a local matter."

10. The committee finds that the absence of one single standardized statewide test at the 5th-, 8th-, and 11th-grade levels makes it difficult to properly evaluate the effectiveness of various districts' educational programs.

11. The committee believes that the foundation program levels established by Assembly Bill 145 of the 1964 First Extraordinary Session are reasonably adequate for the immediate future. The committee believes, however, that the present system of two separate foundation programs, each established to support "a minimum acceptable educational program," is contradictory. The committee is disturbed by a financial system which allows a higher level of foundation program to supposedly "impoverished" school districts, while guaranteeing a lower "minimum program" for those districts technically nonimpoverished. The committee is not convinced that many districts presently classifying as "impoverished" are truly as destitute as one might believe.

12. The committee believes that efforts should be increased to place excess administrators and nonclassroom employees in newly unified school districts into the classroom in order to lower classroom size and to avoid administrative overstaffing.

13. It is concluded that a long range, experimental study will be necessary if the foundation program is to be adequately defined in substantive terms. The committee does not believe that varying foundation program levels can or should be devised to take into account the myriad of differing local situations and problems.

14. The committee concludes that a continuous effort must be made to increase the prestige of the classroom teacher, as well as the school administrator.

15. It is concluded that the existing system of legislatively established maximum tax rates for school districts, together with numerous "permissive override" tax rates authorized by the Legislature for specific purposes, detracts from local control and school district governing board fiscal responsibility.

16. Maximum tax rates, established by the Legislature in 1937 and not substantially revised since then, are unrealistically low.

17. Continual recourse by school districts to local tax elections represents a considerable expense to the property taxpayer.

18. Legislatively established maximum school district tax rates no longer serve the prime purpose for which they were originally intended—the control of school district expenditures.

19. Permissive override taxes, adopted each year by the Legislature, serve to frustrate the original purpose of the statutory maximum tax rates in establishing expenditure control.

SUMMARY OF RECOMMENDATIONS

1. The committee recommends the adoption of legislation which requires unified school districts with less than 25,000 pupils in average daily attendance to make use of county-produced curriculum publications rather than produce their own, when such county publications are available to meet the needs. Conversely, county boards of education should be required to review the curriculum publications produced by school districts within their counties and, if they meet the needs, to adopt them as county publications in lieu of producing separate documents on the same subject.

2. The committee recommends that the Department of Education be directed to study and implement methods of disseminating as widely as possible information relating to the availability of curriculum publications produced by various educational agencies and subdivisions in the state.

3. The committee recommends that a system of upgrading the teaching profession which utilizes the Master Teacher concept be adopted. The committee also recommends legislative consideration of the cost involved in such a program and the state's responsibility in sharing the cost.

4. The committee urges that school districts give thorough study to proposals which presently base administrative salaries upon a factor of what the administrators would earn if they were classroom teachers.

5. It is recommended that present requirements for an administrative credential be reviewed so that other avenues of entrance for qualified individuals into school administration may be developed, in addition to the present exclusive avenue of classroom teaching. The committee believes that the best and most qualified individuals must be found to administer the school system, whether from within the ranks of teachers or from without.

6. It is recommended that the Education Code be amended to provide that in the case of newly unified districts the state will pay the difference between what a school administrator or certificated nonteacher would have earned out of the classroom and what he would earn as a teacher, for the life of the existing contract, if the district will agree to place the individual into the classroom on a full-time basis.¹

7. The committee recommends that a research design be developed with the objective of defining in a substantive manner the foundation program of school support. Such a design should include participants

¹ Assemblyman Flournoy dissents from this recommendation, and states: "I dissent completely from the recommendation that the state ought to provide a special contribution to school districts who place administrators in the classroom after a unification takes place. Whether or not it is advisable for any particular administrator to return to the classroom is, I think, a local decision to be made by the district locally, and without regard for a special financial benefit which they might obtain by such action from the state."

Assemblyman Monagan does not concur in recommendation number 6, believing that such a procedure would merely substitute what might be considered one wrong for another wrong.

Assemblyman Porter states: "I take exception to this recommendation. This should remain a local matter."

from all segments of society, including public educators. It might include, but should not be limited to, the establishment of an experimental school.

8. It is recommended that no action to substantively define the foundation program be taken until the results of such research becomes known and evaluated.

9. The committee recommends that any increases in state aid through the foundation program which may be made in the near future be allocated with full consideration to its effect upon class size and in light of the experience under Assembly Bill 145 of the 1964 First Extraordinary Session.

10. The committee strongly recommends that a proposal to abolish state "basic aid" be approved by the Legislature and placed upon the ballot for voter approval. It is further recommended that the funds thus "freed" be applied to increase the foundation program for all districts in the form of equalization aid.²

11. It is recommended that the State Board of Education be required to adopt one standardized achievement test yearly at each of the appropriate grade levels for use in the statewide testing program. The use of various approved tests *in the statewide testing program*, as determined by the individual school districts, should be halted.³

12. The committee recommends that no further "permissive override" taxes be approved by the Legislature.⁴

13. It is recommended that all present statutory tax ceilings and all existing "permissive override" taxes be repealed.⁴

14. In place of the above expenditure control devices, legislation should be enacted which requires voter approval of exceptionally high expenditure proposals for the current expense of education.⁵

² Assemblyman Whetmore dissents from this recommendation, stating that he would favor lowering basic aid rather than abolishing it completely.

³ Assemblyman Winton dissents from this recommendation. His views on the subject are included in a statement at the conclusion of this report.

⁴ Assemblyman Porter comments: "I believe that these recommendations are acceptable provided that their implementation is accomplished simultaneously."

⁵ Assemblyman Flournoy comments: "While I agree with the committee's conclusion that the present statutory tax ceilings are unrealistically low, I do not concur with the committee's proposal for the method of reinstituting a "voter approval of exceptionally high expenditure proposals for the current expense of education." The method proposed by the committee appears to be unduly cumbersome and of dubious value as a control. I feel that we should either establish more realistic statutory tax ceilings in conjunction with the elimination of the permissive override taxes, or grant full local control over school budgets, subject, if possible, to the normal referendum procedures."

Assemblyman Monagan does not concur with recommendation number 14, and states: "I find this recommendation to be too cumbersome and unrealistic in approach."

Assemblyman Porter states: "I take exception to this recommendation. I believe that the recommendation, as stated, is too involved and may well be self-defeating."

THE FOUNDATION PROGRAM

Introduction

Two years ago this committee concluded an extensive study of the State School Fund and of state assistance to local school districts in general, largely concentrating upon the technical methods by which moneys are apportioned to school districts and upon methods of overcoming the massive differences in local district financial ability or wealth. The committee notes with pleasure that numerous of its recommendations were considered at length by the Legislature in 1963 and several were adopted.

One of the major achievements of the Legislature in 1964 was the adoption of Assembly Bill 145, a measure with far-reaching significance to the public schools of California. Assembly Bill 145 made available to the schools of this state the largest single increase in state aid ever authorized by the California Legislature. In the 1965-66 fiscal year the state will for the first time expend simply for local assistance to school districts more than one billion dollars. Assembly Bill 145 also attacked several problems with which this committee has long been concerned: inequality of financial resources, and hence educational opportunity among school districts, and the growing numbers of children in our elementary classrooms.

As significant as this measure was, and will be for education in California, it did not attempt to solve, however, what is perhaps the most difficult and evasive problem having to do with support by the state for the public schools. For years responsible groups both in and out of state government have bemoaned the fact that the Legislature has really very little control over or knowledge of how the funds which it apportions to school districts are spent. Two years ago this committee recognized this fact when it reported to the Legislature:

"The foundation program is the basic unit of support for the public school system in California. California has, however, failed to accomplish the first step in the process of establishing a satisfactory foundation program, the establishment of a meaningful definition of the program. Present definitions of the foundation program ordinarily employ terms as 'minimum acceptable level of education' and 'essential educational opportunities.' These terms might be satisfactory as generalizations but unfortunately no specific and detailed content has been agreed upon. Thus, what for some is essential is nonessential for others; what some would say a minimum level must include, others would exclude."

Today this situation remains essentially unchanged. Until it is clarified it will be impossible for the Legislature to determine with any degree of exactitude precisely what its obligation is to support the public school system. As we stated in our 1963 interim report: "When the Legislature does not see clearly what this obligation is, the likelihood is that the public school system will suffer."

Realization of this lack of substantive definition led the committee to recommend that the Legislature grant it authority to study during the 1963-65 interim period the problems inherent in defining the foundation program. Such authority was granted through the adoption of House Resolution 303 by Assemblyman Casey⁵ which directed the committee to study the foundation program, its adequacy and the possibilities of recognizing varying factors and school district characteristics which might be recognized through a foundation program.

The Study

The foundation program study authorized by HR 303 comprised the large portion of the deliberations of the Subcommittee on School Finance during this interim period. During the study, which was spread over a period from December 1963 through November 1964, the committee was ably and capably assisted by the Office of the Legislative Analyst, represented by Messrs. Clinton M. Jordan, Michael A. Manley, and James Murdoch, and by the Office of the Auditor General, represented by Mr. Albert L. Monighan. In addition, the committee wishes to express its appreciation to officials of the seven school districts which were studied in depth and visited, together with members of the staff of the State Department of Education who took part from time to time.

This study began in the final months of the 1961-63 interim period with the issuance by the Assembly Interim Committee on Education, through the Office of the Legislative Analyst, of a salary and personnel questionnaire to all school districts and county offices in the state. The returned questionnaires, representing approximately 90 percent of the districts in the state and nearly 95 percent of the pupil enrollment, provided specific data not previously available on staffing patterns and salary scales for public school employees. Tabulation of the questionnaire results by the Department of Education revealed, however, that a mere statistical summary, with statewide averages and medians, would be insufficient to provide data necessary to define a foundation program. The committee quickly became aware that statewide averages were no measure of "minimum acceptable educational opportunities." The committee believes that a summary of the average of the existing situation does not necessarily indicate that that situation is proper, minimal, acceptable or measurable.

In consequence, it was determined that a number of individual school districts would be examined in depth and visited personally by the committee. Seven school districts, chosen because they were believed to represent nearly every type of conceivable problem which faces a large number of school districts, and because of their varying financial, organizational, socioeconomic and educational characteristics, were chosen for this study. The first such district was visited in December 1963; the final district was surveyed in September 1964. Implicit in this decision to study a small number of districts intensively, rather than broadly survey a large number of districts, was a belief that while major problems facing school districts could be isolated and were perhaps capable of recognition in a defined foundation program, the myriad of small, less significant problems were incapable of solution through a statewide system of school aid. This is not to say that these

⁵ See Appendix A for a text of HR 303.

problems do not loom large for the particular district which experiences the problem. Rather, this approach recognizes that there are limits to even the state's ability to recognize in a financial way all the difficulties faced at the local level. Consequently, the committee rapidly came to the conclusion that it would be impossible and dangerous to adopt a series of differing foundation programs for schools in various locations and situations in the state. Rather, the committee believes that the program, emphasizing true "minimum" characteristics, should be developed and applied to *all* school districts, rich or poor, and the normal equalization program should be applied to each such district.⁶

Study of the selected districts included a one or two week advance staff visit and study of the district and all aspects of its programs and problems, followed by the preparation by the two legislative agencies involved of a complete report on the district's staffing patterns, financial and socioeconomic characteristics, pupil achievement as measured by test scores, and admittance to institutions of higher education, hiring and personnel practices, administrative policies, curriculum development policies, and accounting records and books. Investigating personnel held discussions with administrators, teachers, board members, officers of local employee organizations and community leaders. Following preparation of the report, this committee held a hearing in the district, hearing first from the persons making the study and then from the school administrators involved. It is the committee's belief that this format provided for members a valuable insight into the workings of school districts. Certainly the committee is much better informed as to how state money is expended and for what purposes.

School districts chosen for this study exhibited characteristics of extreme wealth and poverty, and several were technically "impoverished." Some districts were of only average wealth. Elementary, high school, and unified school districts were studied. One school system exhibited the somewhat rare characteristic of being operated by a common administration, while legally existing as two districts. Districts were studied in all parts of the state. In terms of district size, the smallest district studied had an average daily attendance of less than 3,000; the largest district exceeded 50,000.

General Committee Findings

The committee noted throughout its study a general lack of correlation between the wealth of school districts and the numbers of nonteaching employees, expressed as a percentage of total teachers, employed by districts. Table I below indicates that at the elementary levels alone percentages of nonteachers have very little to do with a school district's financial ability. At the same time, as Table II shows, when the same districts are compared in relation to their ADA/teacher ratios, we note a very definite relationship between district wealth and this "class size" measurement. Statewide data, obtained through an analysis of the school district questionnaire, support both these observations. The committee has therefore concluded that while nonteaching or administrative staffing decisions are not based upon financial ability of school districts, the staffing of classroom teachers is. This, in the com-

⁶ Assemblyman Flournoy does not concur in the general conclusion stated here and has submitted a statement of his views at the conclusion of this report.

mittee's view, is a conclusion full of alarming import for public education in California. If, as we suggest, school administrations are more desirous of creating generous administrative staffs, without relation to the available financial resources, than they are to maintain a reasonably average class size, then the quality of public education in this state will most certainly be threatened. The committee wishes to state that it has been shocked by the statements of some school administrators encountered during this study concerning their beliefs regarding the "essential" character of specialized services and increased nonteaching staffs. The following exchange from one of the school district hearings may help to illustrate the committee's dismay:

- Q. Dr. —, some of us have viewed with some concern the drop in the ratio of administrators or nonteaching personnel to teachers in the state. In the last thirty years it has gone down from about one to 22 to a point where the statewide average is now about one to seven. These figures we are looking at this morning indicate that the — district has a ratio of something like four nonteachers for every five teachers, and yet you say you need still more?
- A. Yes, the school systems that I have worked closely with have had more administrative help than we have here in — and I realize that this is shocking news to you but nevertheless it is true.
- Q. Do you really feel a need for that much nonteaching personnel?
- A. Yes, sir. This is an age of specialization. I haven't found this school system to be overstaffed. I might suggest to you that maybe the other districts are understaffed.
- Q. Well, we are reaching a point here in California where the figures for our educational costs are going to reach astronomical figures and unless we find some way of reducing the unit costs of education, I don't know where we are going to find the money.
- A. I agree with you, Assemblyman. I consider it a very critical question in America. I will defend, however, the number of administrators and supervisors working in the typical school systems of America. I think they are needed.

TABLE I

Foundation Program Study

District number	Assessed valuation per ADA (1)	Elementary Level		Average daily attendance (3)	Percent of nonteachers to teachers (4)
		District tax rate (2)			
10	\$121,443	\$1.66		2,632	66.5
13	14,928	4.24		11,045	82.8
9	14,535	1.83		3,787	37.5
4	7,730	3.87		30,428	64.2
15	4,500	1.86		9,142	61.3
8	1,660	2.56		4,072	58.3
Statewide median ----	\$12,212				40.0

TABLE II

District number	Elementary School Level	
	Assessed valuation per ADA (1)	ADA:teacher ratio (class size) (2)
10	\$121,448	19.7:1
13	14,928	28.1:1
9	14,535	26:1
4	7,730	31.3:1
15	4,500	28:1
8	1,660	34.8:1
Statewide median (questionnaire)	\$12,212	26:1

These tables state clearly that although as a district becomes poorer and its class sizes grow, there is not necessarily a consequent decrease in nonteachers as the school district grows less wealthy. The committee might well assume, then, that many school boards and administrations consider items other than classroom teachers to be of higher priority.

The committee also attempted to draw substantive conclusions from its study in terms of relating educational achievement, so far as it is measurable, to the several characteristics of district staffing patterns. For analytical purposes, the districts were ranked statistically as to how they performed on statewide tests at the various grade levels (Appendix B, contains a complete explanation of the methods used in comparing districts). The test rankings were then analyzed against the various staffing and salary categories used in the district by district analysis. This "quality index," and the staffing and salary factors against which they were measured, appear below:

	Index
A. ADA/teacher ratio -----	0.87
B. Nonteacher/teacher ratio -----	0.26
C. ADA/certified <i>non</i> instructional ratio -----	-0.06
D. ADA/certificated instructional ratio -----	0.64
E. ADA/all positions ratio -----	0.55
F. Certificated <i>non</i> instructional salaries/ADA -----	-0.03
G. Certificated instructional salaries/ADA -----	0.90
H. All positions salaries/ADA -----	0.81

The inferences which the committee has drawn from this analysis include the conclusion that the two most important factors which affect pupil achievement are the ADA/teacher ratio (A), and the salaries of certificated instructional personnel, most of whom are teachers (G). Conversely, the least important factors, both showing a *negative* correlation, are the ratio of ADA to certificated *non*instructional persons (largely administrators), and the salaries of these individuals (C and F, respectively).

The committee also wishes to state that it has been amazed at the volume of curriculum publication material, eventually referred to at each school district hearing as "the stack," produced by some school districts. The committee is left with the impression that a great many of the coordinators, specialists, supervisors, and consultants employed by school districts to "develop curriculum" spend a majority of their time writing publications of this sort. Conversations with members of the staff and teachers in many of the districts studied indicated that much of this material is never used by teachers and, indeed, is held in

mittee's view, is a conclusion full of alarming import for public education in California. If, as we suggest, school administrations are more desirous of creating generous administrative staffs, without relation to the available financial resources, than they are to maintain a reasonably average class size, then the quality of public education in this state will most certainly be threatened. The committee wishes to state that it has been shocked by the statements of some school administrators encountered during this study concerning their beliefs regarding the "essential" character of specialized services and increased nonteaching staffs. The following exchange from one of the school district hearings may help to illustrate the committee's dismay:

- Q. Dr. —, some of us have viewed with some concern the drop in the ratio of administrators or nonteaching personnel to teachers in the state. In the last thirty years it has gone down from about one to 22 to a point where the statewide average is now about one to seven. These figures we are looking at this morning indicate that the — district has a ratio of something like four nonteachers for every five teachers, and yet you say you need still more?
- A. Yes, the school systems that I have worked closely with have had more administrative help than we have here in — and I realize that this is shocking news to you but nevertheless it is true.
- Q. Do you really feel a need for that much nonteaching personnel?
- A. Yes, sir. This is an age of specialization. I haven't found this school system to be overstaffed. I might suggest to you that maybe the other districts are understaffed.
- Q. Well, we are reaching a point here in California where the figures for our educational costs are going to reach astronomical figures and unless we find some way of reducing the unit costs of education, I don't know where we are going to find the money.
- A. I agree with you, Assemblyman. I consider it a very critical question in America. I will defend, however, the number of administrators and supervisors working in the typical school systems of America. I think they are needed.

TABLE I

Foundation Program Study

District number	Assessed valuation per ADA (1)	Elementary Level		Average daily attendance (3)	Percent of nonteachers to teachers (4)
		District tax rate (2)

TABLE II
Elementary School Level

<i>District number</i>	<i>Assessed valuation per ADA (1)</i>	<i>ADA:teacher ratio (class size) (2)</i>
10	\$121,443	19.7:1
13	14,928	28.1:1
9	14,535	26:1
4	7,730	31.3:1
15	4,500	28:1
8	1,660	34.8:1
Statewide median (questionnaire)	\$12,212	26:1

These tables state clearly that although as a district becomes poorer and its class sizes grow, there is not necessarily a consequent decrease in nonteachers as the school district grows less wealthy. The committee might well assume, then, that many school boards and administrations consider items other than classroom teachers to be of higher priority.

The committee also attempted to draw substantive conclusions from its study in terms of relating educational achievement, so far as it is measurable, to the several characteristics of district staffing patterns. For analytical purposes, the districts were ranked statistically as to how they performed on statewide tests at the various grade levels (Appendix B, contains a complete explanation of the methods used in comparing districts). The test rankings were then analyzed against the various staffing and salary categories used in the district by district analysis. This "quality index," and the staffing and salary factors against which they were measured, appear below:

	<i>Index</i>
A. ADA/teacher ratio -----	0.87
B. Nonteacher/teacher ratio -----	0.26
C. ADA/certified <i>non</i> instructional ratio -----	-0.06
D. ADA/certificated instructional ratio -----	0.64
E. ADA/all positions ratio -----	0.55
F. Certificated <i>non</i> instructional salaries/ADA -----	-0.03
G. Certificated instructional salaries/ADA -----	0.90
H. All positions salaries/ADA -----	0.81

The inferences which the committee has drawn from this analysis include the conclusion that the two most important factors which affect pupil achievement are the ADA/teacher ratio (A), and the salaries of certificated instructional personnel, most of whom are teachers (G). Conversely, the least important factors, both showing a *negative* correlation, are the ratio of ADA to certificated noninstructional persons (largely administrators), and the salaries of these individuals (C and F, respectively).

The committee also wishes to state that it has been amazed at the volume of curriculum publication material, eventually referred to at each school district hearing as "the stack," produced by some school districts. The committee is left with the impression that a great many of the coordinators, specialists, supervisors, and consultants employed by school districts to "develop curriculum" spend a majority of their time writing publications of this sort. Conversations with members of the staff and teachers in many of the districts studied indicated that much of this material is never used by teachers and, indeed, is held in

To illustrate, in one particular district visited by the committee we were informed that teachers' salaries had recently been increased by five percent. Obviously, such an increase in the base for teachers' salaries also increases administrative salaries since these are based upon a factor multiplied by what the individual would earn if he were a teacher. However, the committee was further informed that less than a month later the school board of the particular district was given a request by the administration to further increase the factors themselves. The school board complied and, in effect, the administrators and other nonteachers in the district had a double salary raise for the year in question. Thus, the gap between teachers and administrators was further widened. The committee believes that this practice must cease as soon as possible. It believes that it is the responsibility of local school boards to act in this area. The committee is thoroughly aware of teachers' shortages which were especially acute some years ago, and with the current shortage of teachers in some rural districts. However, there has never been a shred of evidence to suggest that a shortage of school administrators has ever existed, and special salary increases for this group cannot be justified by any accepted standards of good business practices or sound economics.⁸

One additional development which could equalize to a greater degree the status level, and the compensation levels between teachers and nonteachers in the public school system would be the creation of a system whereby able nonteachers might enter the profession of school administration. Such a system would entail extensive amendment to the "Fisher Bill" of 1961, as well as changes in the implementing administrative regulations adopted by the State Board of Education. In view of our conclusions that many qualified classroom teachers leave their profession for administrative positions purely for the added financial compensation, we believe that the creation of such a program could aid in the retention of many of these individuals in the classroom. In addition, such a development might result in the recruitment of more qualified individuals for school administration than is presently possible because of the requirement that the individual applying for the administrative credential must first be a teacher. Although the committee has heard often the argument that the administrator should be a former teacher in order to be familiar with classroom problems, we have seen numerous cases and situations (such as in specialized areas of business administration and public information) where the duties of the administrator have very little relation to the problems of the classroom. Essentially, the qualities necessary for an effective manager or administrator of any public function or activity do not differ

⁸ Assemblyman Flournoy states: "While I have no objection to urging school districts to study proposals which base administrative salaries on a factor of what the administrators would earn if they were classroom teachers, I do object to the implication that 'special salary increases' for administrators in any school district under any circumstances cannot be justified. I think the committee is hardly in a position to base such a statement on any evidence."

Assemblyman Monagan states: "I have no objection to recommendation number 4 that would propose a study of administrative salaries. I do not concur with the language appearing in these paragraphs, however, that indicates there 'never has been a shortage of administrators' or that 'special salary increases for this group cannot be justified by any accepted standards of good business practices or sound economics.' I believe there is a shortage of 'good' administrators and certainly these administrators are entitled to additional salary considerations."

greatly. Obviously, the proposed master teacher concept must be included as a part of this program, in that it will help to upgrade both status and salary levels for teachers, which is an integral part of any proposal such as this.

Several of the school districts visited by this committee were newly unified and the committee was impressed by the problem of effectively utilizing excess administrators and other nonclassroom persons from former component districts in the new unified systems. We are aware that one of the major arguments for increased unification of school districts is greater efficiency and economy of operation. However, because current state law regarding unifications requires that the newly unified district retain all component district employees on the payroll for at least two years, the affected administrative persons are often placed in meaningless, or at least nonessential, positions for this two-year period. In addition, at the expiration of the two-year period they are often retained indefinitely in these positions, having by that time been able to justify their activities. In order to remedy this situation, and to provide additional financial assistance to districts which desire to unify but express concern over this problem, this committee recommends adoption by the Legislature of a plan whereby the state agrees to pay to the new district the difference between what the nonteacher would have earned out of the classroom and what he would earn as a teacher, provided the district places him in a full time teaching occupation. As proposed, this guarantee by the state would extend for the life of the existing contract. At the end of the contract the district could then make a clear determination as to where to place the individual. The committee notes that in addition to increasing district efficiency and economy, such a plan would aid in the reduction of class size in unified school districts.

Defining the Foundation Program

Although this study under HR 303 represented an attempt to substantially define the foundation program in terms of elements of education which the state believes are truly adequate and necessary, the committee has been impressed by the wide variation in patterns of employee staffing, class size, salary ranges, and philosophies of curriculum development which exist in public schools in California. We have concluded that under the present system of school finance, the Legislature has little, if any, actual control over the expenditure of the approximately \$1 billion per year which it apportions to local school districts for support. As useful as the studies in depth of the seven school districts conducted by this committee throughout the 1963-65 interim period have been, the committee does not believe that any proposal to substantively define the foundation program of school support can be drawn from the experiences gained in these seven studies. The problem is simply too broad and has suffered from a paucity of thorough study for too many years. At the same time, the committee does believe that such a definition must be developed. As we pointed out earlier, until the foundation program is defined in terms other than dollars per child in average daily attendance, which is really nothing more than a device by which to apportion state money to school districts, it is likely that the school system will suffer financially.

The Legislature, in our view, will be hesitant to appropriate money for a function when it has no idea of how that money is to be spent.

The committee notes that the Office of the Legislative Analyst has recommended that an experimental school be established in order to obtain data necessary to define the foundation program.

In a report entitled *Foundation Program Study: Summary, Conclusions and Recommendations*⁹ prepared by the Office of the Legislative Analyst on October 15, 1964, it is stated:

It is recommended that an experimental program be conducted for the purpose of evaluating the different approaches to obtaining quality education at various expenditure levels. This experiment should be associated with the state college laboratory teaching schools and should be fully state supported. The design of this program should include a school situation with a minimum number of nonteaching positions and relatively high teaching salaries and small class size. Such an experiment should be designed to produce standards which would make it possible to measure the extent to which the annual state appropriation of nearly \$1 billion for support of the public schools is being efficiently spent. The culmination of such an experiment could result in definitions of the foundation program in more precise terms than is presently possible.

Although the committee has discussed this proposal it was unable to reach agreement on the specifics of such a school. The committee believes, however, that more research needs to be done in this important area; when it is considered that more than 40 percent of the total state budget each year goes to comprise the State School Fund the need to insure that funds are efficiently expended becomes obvious. Consequently, the committee recommends the development of a research design directed at substantively defining a foundation program in terms of those items which can be shown to be "minimal" and yet "acceptable." Such a project should be participated in by representatives from all areas of society and should not be limited to educators alone. Research such as we suggest might include as a part of the methodology an experimental school; it should not be limited to this type of approach.

In the absence of any firm definitions of the foundation program the committee recommends that any increases in state aid which may be made in the near future by the Legislature be allocated with consideration to the reduction of class size through the mechanism created by Assembly Bill 145 of the 1964 First Extraordinary Session. Consideration should be given to the extension of this class size provision throughout the elementary grades.

Basic Aid

In our 1961-63 interim report this committee strongly urged the repeal of the existing guarantee to all school districts in the state, regardless of their wealth, of a set amount of basic aid. Under current law each school district receives \$125 per unit of average daily attendance. Of this amount \$120 is required by the Constitution to be distributed, and not less than \$2,400 per district shall be so distributed.

⁹ See Appendix B for this report.

The remaining \$5 per ADA was added through a statutory amendment made in 1957.

The committee strongly recommends that basic aid be reduced by \$5 through a statutory amendment to a total of \$120 per unit of average daily attendance and that the funds thus made available be added to equalization aid to be distributed to all school districts. The committee further recommends that the Legislature adopt a constitutional amendment to be placed before the voters repealing the basic aid currently guaranteed in the Constitution. Such an amendment for repeal of basic aid might well be linked with an *increase* in the constitutional guarantee of money per ADA which must be transferred into the State School Fund for distribution. Currently this guarantee stands at \$180 per ADA, although state law provides that \$235.64 per ADA shall be so distributed. It appears, therefore, that the constitutional guarantee could be raised to an amount substantially more than \$200 per ADA.

It hardly seems necessary to document the need and the reasons for the repeal of basic aid. In the past several years the Legislature has considered this proposal several times. Each time the proposal has been fully documented. Each time the Legislature has been shown that the financial ability of districts vary widely. The committee notes that in California school districts with less than \$3,000 of assessed valuation per pupil exist; we have seen districts of this nature compared in the past with school districts with hundreds of thousands of dollars behind each pupil. This committee is not convinced that school district reorganization procedures and safeguards made by AB 145 will be sufficient to completely overcome these differences in school district wealth or financial ability. To properly complete the job it will be necessary to repeal basic aid and to place school apportionments on a strict equalization basis. The committee is well aware that there are practical political difficulties in this proposal. However, we also realize that the increases in foundation programs made by AB 145 have placed many districts formerly receiving only basic aid on equalization aid. Thus much opposition to the repeal of basic aid has been reduced.

As an example of the need for the repeal of basic aid, the committee wishes to cite the experience of one school district which it visited with an extremely high assessed valuation behind each pupil, an extremely low tax rate and an excellent educational program. The committee noted that in this district the repeal of basic aid would have resulted in the loss by that district of only 16 percent of its current operating income. This loss would consequently have resulted in an increase in the tax rate which would have left that district's tax rate still substantially below the unified district tax rates prevalent in this state. The committee is convinced that the excellent educational program offered by this district would not be adversely affected by the repeal of basic aid, nor would the taxes become burdensome. At the same time the funds released or freed for increased equalization aid would result in an increase in the foundation programs of less wealthy school districts. Such an increase could only be to the benefit of public education in California. The committee strongly urges that its proposal in this area be carefully considered.

Pupil Achievement Measurements

Throughout this school district study this committee has utilized the available measurements of pupil achievement. These have included results of district testing, results of statewide testing and accomplishments of school district graduates in institutions of higher learning. Throughout the study it has been difficult for the committee to find and use comparable data. We are convinced that such data can only be made available when the statewide testing program is revised so that one uniform test is used at each grade level tested in the statewide testing program. Consequently, this committee recommends that the State Board of Education be required to adopt each year one standardized achievement test for each of the appropriate grade levels tested in the statewide testing program. The use of the several approved tests in the statewide testing program, each chosen individually by school districts, should be halted immediately.

In addition the committee wishes to state that it has been disturbed by reports that school districts have instituted "cram courses" for their pupils in preparation for the yearly statewide tests. The committee recalls that when the statewide testing legislation was considered by the Legislature school districts strongly opposed the publication of such data on the basis that school districts would be unfairly compared with one another. However, the institution of "cram" programs in school districts makes it appear that districts *are* comparing one another despite the fact that they are not allowed to publicize the results. If the statewide testing program is to have any validity in terms of measuring the school districts' instructional effectiveness, school districts must voluntarily cease these cramming courses. Such policies are inconsistent with the intent of the Legislature in adopting a program of statewide academic testing. It is the opinion of this committee that if districts do not voluntarily halt these practices that publication of test results should be made mandatory. If school administrators are intent upon comparing their various school systems on a privileged basis, we see no reason why taxpayers supporting these school districts should not likewise be informed of their district's effectiveness.

SCHOOL DISTRICT PROPERTY TAX RATES

The committee considered two measures which dealt with school district property tax rates and the legislatively set limitations on these rates. Assembly Bill 2511 (Garrigus) would establish several additional so-called "permissive override" tax categories; that is, categories of school district expenditure exempted by the Legislature from the statutory maximum tax rate limitation. The bill stated that expenses for teachers' salaries, for teaching (but not for administrative) space and overhead, and for pupil transportation shall be established as categories for which school district governing boards may levy taxes not subject to the legal tax limits. House Resolution 161 (Flournoy) called for an extensive study of property taxation for school districts, with particular emphasis on the problem of the numerous "permissive override" taxes.

Testimony offered on these two measures revealed that the entire field of school district taxation, particularly the district tax rates themselves, has become confused to a point where the average property taxpayer has little idea of how much of his yearly tax bill supports his schools and cannot have much knowledge as to which agency of government has established the various portions of the school district tax rate. To the committee's astonishment, a representative of the State Department of Education revealed that there are presently 28 individually authorized purposes for which the maximum school district tax rates established by statute may be overridden by a vote of the local board. These are listed below.

PERMISSIVE OVERRIDE TAXES

<i>Purpose</i>	<i>Limit</i>	<i>Education Code Section</i>
1. District contribution to Retirement Annuity Fund	None	14210, 14214
2. District contribution to S.E.R.S. (classified employees) -----	None	Gov. Code 20532
3. District contribution for O.A.S.D.I. -----	None	20801.5
4. Meals for needy pupils -----	None	11706
5. Health and welfare benefits -----	None	20806
6. Community services -----	\$0.05 per level	20801
7. Adult Education -----	\$0.10	20802.8
8. Education of mentally retarded minors -----	None	6913.1
9. Payment to County School Service Fund for education of mentally retarded minors -----	\$0.10	8955
10. Payment to County School Service Fund for education of severely mentally retarded minors -----	None	8955.1
11. Educationally handicapped minors -----	None	20807
12. Payment of junior high school tuition by elementary or unified district -----	None	20808
13. Excess cost of educating 7th and 8th graders in elementary or unified district -----	None	20808
14. Education of 7th and 8th graders by high school district maintaining a junior high school -----	None	20808.5

PERMISSIVE OVERRIDE TAXES—Continued

<i>Purpose</i>	<i>Limit</i>	<i>Education Code Section</i>
15. Payment of retirement or health or health and welfare contributions as part of junior high tuition -----	None	20810
16. Junior college interdistrict attendance -----	Contained in E.C. 25541.5	25541.5
17. Payment for education rendered in county institutions -----	None	6854, 6855
18. Payment to county superintendent for education provided in youth conservation and training program -----	None	Pub. Res. Code 4997
19. Payment to county superintendent for education provided in technical, agricultural and natural resource conservation schools -----	None	6741
20. Fire prevention systems as directed by State Fire Marshal -----	\$0.10	15517
21. Annual repayment to State School Building Fund -----	None	19443
22. Annual repayment to State School Building Fund -----	None	19619
23. Payment to original district for acquisition of property -----	None	1828
24. Bond interest and redemption payments -----	None	---
25. Operation of child care centers -----	None	16633, 16635
26. Operation of child care centers for mentally retarded and physically handicapped -----	None	16645.12
27. District contribution to local employee retirement plan -----	None	14657, 14758
28. Annual charge for use of property of component district -----	None	3347

In general, witnesses expressed their opposition to the particulars of AB 2511, stating that they felt the measure would be cumbersome and unworkable from an accounting point of view, but noted with appreciation the author's purpose in bringing before the interim committee, together with the broad study requested in HR 161, the subject of property taxation for the public schools and particularly the various legislative limitations placed upon these tax rates.

The committee noted that every organization appearing before it on this subject stated that it would support either an increase in or the complete removal of the legislative maximum tax rates. In addition, several experts proposed, together with complete elimination of these limits, the repeal of every existing permissive override tax enacted by the Legislature. The testimony of the representative of the State Department of Education seemed to the committee particularly illuminating on this point.

The use of the statutory maximum tax rate device to control school expenditures has perhaps outlived its usefulness. This fact is demonstrated by the action of local electorates in voting to permit tax rates far in excess of those provided by statute and by the action of the Legislature in permitting taxes for special purposes to be levied in excess of statutory or voted maximum tax rates. The remnant of this expenditure control system is a maze of confusion providing a protective facade behind which local governing boards may reject responsibility in the budget adoption procedures and which administratively has created an expenditure con-

trol system that can be neither accurate nor precise, and which adds considerably to the complexity of school finance and budget adoption problems and the cost of administrative control.

This witness proceeded to point out that, in the department's view, the place to control school district expenditures is at the local school district level. The committee must agree that as a practical matter governing boards presently have very little discretion in matters involving budget control and the setting of a tax rate. As a result, there is ample evidence to prove that many school district governing boards have become weak and lacking in their responsibility for adopting district expenditure programs and setting tax rates. In effect, many of them defer to county boards of supervisors, or indeed to their state legislators in attempting to explain soaring school property tax rates. This committee, in its year-long study of seven selected school districts, discovered several districts in which as much as 40 percent of the total actual tax rate was represented by permissive override taxes allowed by the Legislature and, hence, granted by the local board. This situation must be reversed. In urging this action one witness noted that "actual responsibility for control of school district expenditures cannot be assumed by a governing board until its actions, without limitations, make it responsible for the tax rate that is levied in the district."

The committee questions how such responsibility is to be determined when the tax setting, and hence the expenditure, authority emanates from several, unconnected authorities. We note that at the present time (1) the Legislature adopts certain maximum tax rates for general operations which may not be exceeded without a vote of the people in the school district; (2) the electors of the district authorize their governing board to exceed this "maximum" rate by a specified amount; and (3) the Legislature again permits districts to exceed even these rates by certain amounts, or by unlimited amounts, for various specified purposes. Testimony presented to the committee indicated that on an average daily attendance basis only 1.6 percent of the ADA reside in districts taxing less than the present maximum rates, 6.2 percent attend districts taxing at the maximum, while 92.2 percent are in attendance in school districts which presently exceed the statutory maximum tax rates. Further, until the passage of the limited increase in tax rates for low-expenditure districts contained in AB 37 (Donovan), 1964 First Extraordinary Session, no change had been made in the maximum tax rates since 1937. There is no need to document the increase in the general price levels since that year. The table below shows the present statutory ceilings. It should be remembered that AB 37 did not change these ceilings for the vast majority of school districts but allowed only districts expending an extraordinarily low amount per pupil to exceed the limitations.

TABLE IV

<i>District</i>	<i>Tax Limit</i>
Elementary:	
Grades 1-8.....	\$0.80
Grades k-8.....	.90
High school:	
Grades 9-12.....	.75
Grades 9-14.....	1.10

<i>District</i>	<i>Tax Limit</i>
Unified:	
Grades 1-12	\$1.55
Grades k-12	1.65
Grades k-14	2.00
Junior college:	
Grades 13-14	.35

Against these generally low tax rate limitations, the committee found that increasingly large portions of district tax rates are devoted to purposes for which "permissive override" taxes are authorized. Data presented indicated, for example, that while in 1963-64 the Berkeley, Garden Grove and Castro Valley school districts devoted 13, 15 and 14 percent, respectively, of their total tax rate to such "special" purposes, in 1964-65 the same districts allocated 20, 25 and 26 percent of their tax rates to the exempt category. The committee concludes from these data that the present statutory maximum tax rates, coupled with the numerous "permissive override" authorizations, are useless as devices by which to control expenditures. Table V shows the number of districts, and the ADA in those districts, which were in 1963-64 taxing below, at or above the present statutory maximum tax rates.

TABLE V

	<i>Under</i>		<i>At</i>		<i>Above</i>	
	<i>Maximum</i>		<i>Maximum</i>		<i>Maximum</i>	
	<i>No.</i>	<i>%</i>	<i>No.</i>	<i>%</i>	<i>No.</i>	<i>%</i>
Districts

Average Daily Attendance						
Elementary	5,396		99,278		1,213,296	
High school	2,074		15,085		576,073	
Junior college	54,784		103,240		35,589	
Unified	5,855		44,825		2,060,539	
Total	68,109	1.6	262,428	6.2	3,885,497	92.2

Finally, the point should not be overlooked that if the principle of local control, of which this committee has heard much in recent years, is to be truly effective and observed by the state and by local school districts, it becomes extremely difficult to argue that the state should attempt, by artificial means, to control local district educational tax rates and expenditures. This committee submits that local control can be operative only if local boards have complete authority over the expenditure of local funds and the setting of local tax rates. Local control, in our view, implies local fiscal responsibility. It is time that this responsibility was recognized and exercised at the proper level.

Although the committee believes that the present legal tax limits should be repealed, together with all existing permissive override taxes, it also believes that expenditure controls must be reestablished at the local level where they rightfully belong. To grant immediately to local governing boards a responsibility which has not been exercised for years, without *any* checks by the local electorate, could be dangerous.

Consequently, the committee has studied several methods by which electorates might be given a chance to express themselves on a district's total current expenditure program, in lieu of legislatively established maximum tax ceilings.

The committee's subsequent recommendation entails a proposal that would require local voter approval of a district governing board's proposed budget which would expend, on a per ADA basis, in excess of one-third more than the average statewide current expense of education (excluding transportation) for the second preceding fiscal year. Put in the simplest terms, this proposal would mean that if a unified district desired to expend in 1964-65 more than \$603.53 per ADA on current expense of education, excluding transportation, it would be required to gain a majority vote of its voters. (The figure of \$603.53 represents the 1962-63 average current expense, minus transportation, plus one-third of that amount.) Further, in order that school districts not be encouraged to raise taxes immediately to a level which would produce a program equal to this amount, the committee proposes that over a four-year period the "cap" or limitation on expenditures be gradually increased to the one-third level, as follows:

- 1st year: one and one-twelfth of average current expense
- 2nd year: one and two-twelfths of average current expense
- 3rd year: one and three-twelfths of average current expense
- 4th year: one and four-twelfths (one-third) of average current expense

The committee realizes that such a proposal raises some difficulty with relation to the current school district budget adoption schedule, but it is assured that these technical obstacles are not insurmountable. The current expense of education, less pupil transportation, of a number of large unified school districts has been examined, and the committee has found few large unified districts of low or middle wealth which would be at all hindered by this requirement. Obviously, school districts presently spending more than this limitation for current expense would have to be considered to be at their authorized expenditure limit (although some leeway for normal year-to-year increases might well be allowed). Any substantial increase above that limit should require voter approval. Under this proposal, voter approval, once obtained for a general expenditure level, should be permanent. The committee believes that the salutary effect of requiring voter approval for exceptionally high expenditure programs which voters can relate directly to the district's educational program is obvious. Under the present system the average citizen is unable to link the override tax election with educational programs being offered. Thus, such elections are often decided on other than educational grounds.

Finally, in lieu of the previously cited recommendations, the committee strongly urges that no additional "permissive override" taxes be authorized by the Legislature. We believe that such authorizations have been used to subvert tax rate limitations and that they encourage questionable financial practices and thinly veiled justifications for tax rate increases on the part of school administrations. The committee fears that if this practice is allowed to continue, widespread public opposition to school expenditures of any kind and for any purpose is likely to ensue.

SEPARATE VIEWS OF ASSEMBLYMAN HOUSTON I. FLOURNOY

I disagree with the committee's concept of the ultimate purpose of a substantive definition of the foundation program. In my view, the purpose of the foundation program is primarily to provide a standard of evaluating the adequacy of the state's financial support for public education, not to create a category of required expenditures, or to standardize the programs of local school districts.

In order to help the Legislature determine the appropriate level of state support, I feel that a substantive definition will be quite useful. However, I do *not* feel that it should be used as the basis for anything like the creation of separate categories of school expenditures—one appropriate for state funds or local funds, and another appropriate for local funds only; nor do I feel that it should prescribe the particular program which each school district must offer.

California is a state of diversity, and our school districts in their local environments reflect a variety of conditions and circumstances. The committee recognizes this factor in pointing out the impossibility of adapting the foundation program to the "various locations and situations of the state." As a result, I think we should explicitly consider the foundation program as a guide primarily for the state in considering the adequacy of its financial support—not as a required program for every school district.

The administration of education in California, like the financing, is a partnership between the state and the local school district. Within the outlines of state law, I believe our educational program will be best served if we retain the authority of the local school districts to establish the particular priorities which serve their local circumstances and needs.

STATEMENT OF ASSEMBLYMAN GORDON H. WINTON

While I was unable to attend all of the meetings of the committee, I do not believe the matter of pupil achievement measures was the subject of direct testimony before the committee. I think the proposal to institute "standardized statewide tests at the 5th, 8th and 11th grades" is absolutely contrary to the best interests of education. In the text there is a statement, "The committee wishes to state that it has been disturbed by reports that school districts have instituted 'cram courses' for their pupils in preparation for the yearly statewide tests." I have seen no evidence that there are such cram courses, and I believe that the committee should not use the old dodge of "anonymous reports" as the basis for a statement.

In 1960-61 I made a very comprehensive study of the situation and found that in New York where the board of regents tests were uniform and comparison was easy that there was very definite evidence of "cram courses" for these tests. I realize that comparison of educational achievement is difficult under the present system. However, this difficulty is minor compared to the damage that might be done to education by instituting standardized tests. There is general agreement that tests at best are only an indication of achievement levels, that they fail to take into consideration many factors which are inevitably present such as the economic and social backgrounds of the students, etc. These factors play an important part in a child's ability to achieve. In fact, it is for this very reason that the Legislature has looked with favor upon compensatory education programs. The very word "educataion" comes from the Latin meaning "to lead forth", and I believe that the basic purpose of education is to develop the mind of the child into an instrument of reason, not to create a machine which can regurgitate facts and figures without the ability to analyze or understand. I am sincerely afraid, and I believe the experience in other states as shown by our study in 1961, will substantiate this fear, that standardized tests or any drive to compare so-called "educational achievement" will lead to the very "cram courses" which the committee so rightly condemns.

Tests are but one instrument which can be correlated with many others in guidance of an educational program. They cannot and should not be used as an end in themselves nor as a definitive yardstick by which the caliber of a school or educational program is to be judged. It was for this reason that in my legislation in 1961 setting up the statewide testing program that I deliberately provided the safeguards which tend to eliminate the possibility of these tests being used for any other than valid educational purposes.

APPENDIX

APPENDIX A

HOUSE RESOLUTION NO. 303

(By Assemblyman Casey)

Relative to the foundation program of
support for the public schools

Resolved by the Assembly of the State of California, That the Committee on Rules is directed to assign to an appropriate interim committee for study the subject of the foundation program levels of support for the public schools, with particular reference to: (1) the elements or phases of the educational programs for which it should be formulated, including curriculum and the particular individual courses of study included therein, and textbooks and necessary materials, supplies and equipment required to provide an adequate educational program; and (2) whether factors including geographical situation, local economic structure, population composition, and others, should form a basis for its formulation; and that such interim committee shall report its findings and recommendations to the Assembly no later than the fifth legislative day of the 1965 Regular Session of the Legislature.

APPENDIX B

FOUNDATION PROGRAM STUDY:

SUMMARY, CONCLUSIONS AND RECOMMENDATIONS

Prepared by the Offices of Legislative Analyst and Auditor General for the
Assembly Interim Committee on Education, October 15, 1964

PART A

(Part A prepared by Office of Legislative Analyst)

Background

This is the final report of a foundation program study conducted under the authorization of House Resolution No. 303 of the 1963 Legislative Session. This report will present summary staffing, curriculum and financial data obtained from seven selected school districts which were surveyed between December 1963 and August 1964 by the Legislative Analyst's Office and the Auditor General's Office for the Assembly Interim Committee on Education. From this data we hope to present significant comparisons and conclusions concerning the ways in which the education dollar is being spent by these respective districts. On the basis of these findings we will try to identify the essential educational factors which we believe the state should support financially in order to provide a minimum acceptable level of support.

Basically, House Resolution No. 303 called for an examination of the various educational, financial and personnel factors necessary for "an adequate educational program," along with the identification of those key factors for which the state should assume financial responsibility. It also asked for recommendations concerning the application of such key elements in the formulation of the school foundation program.

During the first portion of the study, comprehensive position and salary questionnaires previously distributed to each of California's 1,586 school districts were analyzed in order to find out how funds were actually being spent by local school districts for these purposes. These documents had been originally prepared and distributed in February 1962 for the Assembly Interim Committee on Education by the Legislative Analyst, the Auditor General and the Department of Education. The returned questionnaires provided specific data heretofore unavailable regarding staffing, salary schedules, pupil teacher ratios and pupil administrator ratios.

Between November 1962 and the spring of 1963 the results of these surveys were tabulated and edited by the Department of Education. After this initial tabulation the questionnaire results were broken down to determine statewide medians and highs and lows for district staffing expenditures as determined by lowest and highest quartile figures.

In December 1963 the Legislative Analyst and Auditor General presented a joint progress report to the Legislature which analyzed the

results of the questionnaires and established expenditure models based on these documents. Although the report provided local school district expenditure levels previously unavailable this data was deemed insufficient for defining a foundation program in terms of items which the state should support.

For this reason it was necessary to go beyond the questionnaires and examine representative school districts in order to find out for what specific items money was being spent and the relationship of such expenditures to the districts' overall educational programs. Seven districts were selected for examining in depth based upon their unusually high or low current expenditures for various items or upon their unusual programs or problems, or upon a combination of both. The actual field work was done between December 1963 and September 1964. The evaluation of each district included an examination of its social and ethnic characteristics, staffing patterns, personnel and administrative policies, financial records and books, amount of state and federal aid received and testing results. These surveys were followed by a visit and examination of each of the districts by the subcommittee on school finance.

School Districts Examined

The following is a list of the school districts examined and includes a brief summary of the community and district characteristics:¹

District No. 15—Elementary district located in a "bedroom community" of middle class origins; extremely rapid pupil growth; relying upon state aid for nearly 80 percent of its current support; building all schools out of state building aid funds. Technically, an "impoverished" school district with low local wealth.

District No. 4—Unified district located in suburban, unincorporated area; community of largely middle class characteristics; rapid pupil growth; state aid provides more than 60 percent of operating income and also builds all schools; also an "impoverished" school district with low wealth; the largest district surveyed.

District No. 9—Elementary district; a small, rural-oriented city elementary district of middle wealth and very slow pupil growth.

District No. 20—High school district; taking in a large rural area; governed by a common administration; largely a middle class community with slow growth. Middle wealth, but receiving state building aid.

District No. 10—A very wealthy unified school district located in an urban area; population of higher socioeconomic characteristics; low growth; schools all built by local funds; the district experiments and attempts many unusual and very high-quality and high-cost educational programs.

District No. 8—One of the state's poorest school districts, located in a poverty-stricken and economically depressed unincorporated community; very high minority population; an elementary school district which has been unable to unify with its wealthier neighbors, although it desires to do so.

District No. 13—A middle wealth unified district of moderate size located in a largely residential community with a generally middle class population although every segment of society is represented; possessing large minority segments in its population; low growth.

¹ District numbers have been changed in the reprint of this report in order to maintain anonymity for the districts studied.

Current Expense of Education Per ADA

The sample districts' expenses of education for 1962-63 are presented below. The districts are ranked in terms of their district wealth.

Unified Districts		
<i>District number</i>	<i>Current expense per ADA</i>	<i>State average</i>
10 -----	\$784.09	} \$462.19
13 -----	520.15	
4 -----	398.26	

Elementary Districts		
<i>District number</i>	<i>Current expense per ADA</i>	<i>State average</i>
9 -----	\$427.77	} \$378.90
15 -----	327.67	
8 -----	304.84	

High School Districts		
<i>District number</i>	<i>Current expense per ADA</i>	<i>State average</i>
20 -----	\$528.40	\$570.58

Before examining this table it should be noted that these figures obtained from the Bureau of Education Research are not strictly comparable with the per-ADA cost breakdown in Part B of the report. Certain items (driver education, special education and adult education) included in the above statistics have been subsequently deleted in order to obtain a true per-ADA cost of the regular instructional program.

However, the table is useful for illustrating the wide range in district unit cost expenditures and it also shows the direct relationship between district wealth and current expenditures per ADA. Unified district number 10 with a current expense of education of \$784.09: ADA spends more than twice as much as elementary district number 8 (\$304.84: ADA) for educating a pupil. This wide range based on district wealth is also apparent within both the unified districts and elementary districts. Unified districts number 13 (middle wealth) and number 4 (impoverished) each spend proportionately less than the wealthy district number 10. In examining this table it is helpful to place these figures in perspective by noting the dollar percentage of the district's educational expenditures supported by the state.

Unified Districts		<i>State's share of current expenditures</i>
<i>District number</i>		
10 -----		16%
13 -----		31
4 -----		60
Elementary Districts		
9 -----		39%
15 -----		80
8 -----		98
High School Districts		
20 -----		39%

This table shows that the districts surveyed received state funds in an inverse ratio to their district wealth. Elementary district number 8 (extremely poor) received 98 percent of its education dollar from the state, whereas in unified district number 10 (wealthy) the state's share of current expenditures was only 16 percent. Even though wealthy district number 10 could easily afford a current expense: ADA well in excess of the state average it still received \$125 per ADA in basic aid.

General Reference Data

The basic staffing and salary data derived from our visits to the selected school districts is presented below with statewide medians obtained from the salary and personnel survey questionnaires. This data is ranked in descending order according to each district's assessed valuation and is included here for general reference purposes. Much of it has been subsequently broken down into tables on the following pages of the report in order to facilitate understanding. These various ratios will be defined as they are used.

A. ADA: teacher ratio

Elementary level	
District No. 10 (unified)	19.7:1
District No. 13 (unified)	28.1:1
District No. 9 (elementary)	26:1
District No. 4 (unified)	31.3:1
District No. 15 (elementary)	28:1
District No. 8 (elementary)	34.8:1
Statewide median	26:1
High school level	
District No. 10 (unified)	21.6:1
District No. 13 (unified)	24.3:1
District No. 20 (high school)	25.5:1
District No. 4 (unified)	27.4:1
Statewide median	21:1

B. Percent of nonteaching positions to teachers

Elementary level	
District No. 10	66.5%
District No. 13	82.8%
District No. 9	37.5%
District No. 4	64.2%
District No. 15	61.3%
District No. 8	58.3%
Statewide median	40.0%
High school level	
District No. 10	72.7%
District No. 13	71.6%
District No. 20	48.6%
District No. 4	56.9%
Statewide median	64.0%

C. ADA: each certificated noninstructional position ratio

Elementary level	
District No. 10	1,360:1
District No. 13	3,224:1
District No. 9	940:1
District No. 4	571:1
District No. 15	1,180:1
District No. 8	1,357:1
Statewide median	800:1

High school level	
District No. 10	1,279 : 1
District No. 13	3,294 : 1
District No. 20	948 : 1
District No. 4	570 : 1
Statewide median	800 : 1

D. ADA : Each certificated instructional position ratio

Elementary level	
District No. 10	16.3 : 1
District No. 13	21.6 : 1
District No. 9	23.7 : 1
District No. 4	26.8 : 1
District No. 15	22.5 : 1
District No. 8	32.6 : 1
Statewide median	23 : 1

High school level	
District No. 10	16.3 : 1
District No. 13	19.3 : 1
District No. 20	22.9 : 1
District No. 4	26.7 : 1
Statewide median	18 : 1

E. ADA : All positions ratio

Elementary level	
District No. 10	11.1 : 1
District No. 13	15.4 : 1
District No. 9	19.3 : 1
District No. 4	18.2 : 1
District No. 15	16.7 : 1
District No. 8	22.4 : 1
Statewide median	17 : 1

High school level	
District No. 10	11.3 : 1
District No. 13	14.2 : 1
District No. 20	16.6 : 1
District No. 4	18.2 : 1
Statewide median	11.5 : 1

F. Salaries for all certificated noninstructional positions per ADA

Elementary level	
District No. 10	\$24.02
District No. 13	3.77
District No. 9	6.96
District No. 4	7.07
District No. 15	7.66
District No. 8	9.58
Statewide median	10.00

High school level	
District No. 10	25.80
District No. 13	6.04
District No. 20	9.50
District No. 4	8.88
Statewide median	12.00

G. Salaries for all certificated instructional positions per ADA

Elementary level	
District No. 10	529.40
District No. 13	325.35
District No. 9	331.47
District No. 4	241.63
District No. 15	265.08
District No. 8	216.36
Statewide median	230.00

High school level	
District No. 10	568.47
District No. 13	487.46
District No. 20	376.11
District No. 4	354.91
Statewide median	340.00

H. Salaries for all positions per ADA

Elementary level	
District No. 10	684.87
District No. 13	385.54
District No. 9	380.23
District No. 15	317.00
District No. 8	216.36
Statewide median	290.00
High school level	
District No. 10	735.41
District No. 13	577.65
District No. 20	591.85
District No. 4	441.76
Statewide median	450.00

Findings

The major district findings are presented in the following five tables in the interest of brevity and in order to make significant district comparisons.

District Financial Capability, Tax Effort, Average Daily Attendance and Percent of Nonteachers Employed by District

This table illustrates the relationships among district wealth, local tax rates, average daily attendance and the percent of nonteachers to teachers employed by the districts.

TABLE I
Elementary Level

District Number	Assessed valuation per ADA (1)	District tax rate (2)	Average daily attendance (3)	Percent of nonteachers* to teachers (4)
10	\$121,443	\$1.66	2,632	66.5
13	14,928	4.24	11,045	82.8
9	14,535	1.83	3,787	37.5
4	7,730	3.87	30,428	64.2
15	4,500	1.86	9,142	61.3
8	1,660	2.56	4,072	58.3
Statewide median	\$12,212			40.0

High School Level

District Number	Assessed valuation per ADA (1)	District tax rate (2)	Average daily attendance (3)	Percent of nonteachers* to teachers (4)
10	\$84,207	\$1.66	1,825	72.7
13	31,484	4.24	5,237	71.6
20	26,672	2.00	3,847	48.6
4	23,001	3.87	10,226	56.9
Statewide median	\$34,362			64.0

* Nonteachers includes all nonclassroom personnel such as administrator, clerks, secretaries and custodians.

The first two columns of Table I illustrate district wealth in terms of assessed valuation and the local tax rates. The wide variances in district financial capacity to support educational programs become apparent when it is noted that district number 10 has an AV/ADA of \$121,443 with a tax rate of \$1.66, while district number 8 has an AV/ADA of \$1,660 with a tax rate of \$2.56. It is interesting that of the three unified districts visited (numbers 10, 13, 4) district 13, a middle wealth district, has the highest tax rate (\$4.24). These figures clearly illustrate that certain districts surveyed are much more financially capable of supporting educational establishments than are others but also that some districts are willing to tax themselves in greater proportion to their ability than others.

When we compare column 4 (percent of nonteachers to teachers employed by each district) with column 1 we note a lack of correlation between a district's assessed valuation:ADA and the number of nonteachers employed at both elementary and high school levels. Stated another way, it would seem reasonable to expect poorer districts to employ a lower percentage of nonclassroom personnel in order to use their limited funds for direct classroom purposes. However, this is not the case. For example, in the elementary table it is interesting to note that district number 13 possesses one-eighth the assessed valuation per ADA of district number 10 and yet it actually employs the highest percentage of nonclassroom personnel of all elementary levels surveyed. One might expect district number 8 to have a very conservative staffing ratio because of its low wealth. However, it employs nearly the same percentage of nonclassroom personnel as does district number 4.

This lack of correlation between district wealth and nonteachers employed by the districts is also apparent in the high school table. Once again we note that district number 13 has very generous nonclassroom staffing; it is almost the same as district number 10 although it possesses less than one-half the other district's assessed valuation per ADA at the high school level. Undoubtedly a considerable portion of district 13's high tax rate is supporting this liberal staffing.

The sparse nonteacher staffing ratios of elementary district number 3 and high school district number 20 should be noted. Both districts possess middle wealth characteristics and could probably afford richer nonteacher:teacher ratios and yet they employ fewer nonclassroom people than any of the districts surveyed. This staffing pattern which appeared to be adequate greatly impressed the interviewers and will be examined more thoroughly in later sections of the report.

No fixed relationship is apparent between the percent of nonteachers:teacher ratio and district size as determined by ADA (average daily attendance) although one might contend that a large unified district would require a greater percentage of nonclassroom personnel (administrators, clerks, janitors, etc.) than does a smaller district because of additional facilities, services, and supervisory requirements.

Comparing the elementary levels of districts number 4 and number 13 in terms of their average daily attendance (30,428 and 11,045 respectively) and nonteacher staffing ratios shows that the former district which has a much larger ADA actually employs fewer nonclassroom personnel per ADA than does district 13.

These findings reinforce our view that nonclassroom staffing has little relationship to district wealth and size.

Class Size as a Function of District Wealth

This table shows the relationship between class size and wealth.

TABLE II
Elementary School Level

District number	Assessed valuation per ADA	ADA: teacher ratio (class size)
	(1)	(2)
10 -----	\$121,443	19.7 : 1
13 -----	14,928	28.1 : 1
9 -----	14,535	26 : 1
4 -----	7,730	31.3 : 1
15 -----	4,500	28 : 1
8 -----	1,660	34.8 : 1
Statewide median (questionnaire) --	\$12,212	26 : 1

High School Level

District Number	Assessed Valuation Per ADA	ADA: teacher ratio (class size)
	(1)	(2)
10 -----	\$84,207	21.6 : 1
13 -----	31,484	24.3 : 1
20 -----	26,672	25.5 : 1
4 -----	23,001	27.4 : 1
Statewide median (questionnaire) -----	\$34,362	21.1 : 1

Table II illustrates that there is a general relationship between district wealth and ADA : teacher ratio (class size) in that class size diminishes as wealth increases. With the exception of elementary districts numbers 9 and 15, which will be examined later in the report, this relationship exists at both school levels. These findings reinforce our position that classroom size is more responsive to district wealth than any other factor.

Overall Staffing

Before examining the table which deals with district staffing patterns we would like to make some general comments regarding the different central staffing philosophies found in the various districts visited. It should be stated that the seven sample districts examined are too few in number and too varied in district wealth to definitely determine any fixed relationship which may exist between district staffing policies and the size of the district. However, the two largest unified districts visited, namely number 13 (middle wealth) and number 4 (impoverished), appeared to us to have extremely generous central office staffs relative to their district wealth. Both districts were staffed with all types of "coordinators," "specialists" and "consultants." These districts also maintained extensive curriculum staffs for the formulation and dissemination of teachers guides, school publications and new curriculum materials. It appeared that in district 13 many of these nonclassroom services were added gradually and subsequently became institutional-

ized, whereas in district number 2 the administration seemed determined to establish a large central staff for its growing school system as soon as possible. While we do not question the districts' prerogative to determine the number of nonclassroom staff, we do question the extent to which the state should support such activities as basic to an adequate foundation program.

As mentioned previously, we were very favorably impressed by the limited central and district staffing found in middle wealth districts numbers 9 and 20. The administrators in the commonly administered districts told us that they believe in placing primary emphasis on the classroom teacher. These districts employed fewer "curriculum coordinators" and none of the full-time counselors found in districts 13 and 4. This conservative staffing philosophy will be clarified by subsequent data in Table III.

Overall Staffing Patterns

This table illustrates the relationship between district wealth and district staffing policies.

TABLE III
Elementary Level

<i>District number</i>	<i>ADA: teacher ratio</i> (1)	<i>ADA: certificated instructional position ratio</i> (2)	<i>ADA: all positions* ratio</i> (3)
10 -----	19.7:1	16.3:1	11.1:1
13 -----	28:1	21.6:1	15.4:1
9 -----	26:1	23.7:1	19.3:1
4 -----	31.3:1	26.8:1	18.2:1
15 -----	28:1	22.5:1	16.7:1
8 -----	34.8:1	32.6:1	22.4:1
Statewide median -----	26:1	23:1	17:1

High School Level

<i>District number</i>	<i>ADA: teacher ratio</i> (1)	<i>ADA: certificated instructional position* ratio</i> (2)	<i>ADA: all positions† ratio</i> (3)
10 -----	21.6:1	16.3:1	11.3:1
13 -----	24.3:1	19.3:1	14.2:1
20 -----	25.5:1	22.9:1	16.6:1
4 -----	27.4:1	26.7:1	18.2:1
Statewide median -----	21:1	18:1	11.5:1

* This category includes not only teachers but also consultants, specialists, vice principals, principals and counselors. It excludes the personnel of a school district who are strictly administrative and are generally found in the district office such as superintendents and assistant and associate superintendents, etc.

† Total number of persons employed per district ADA.

Table III illustrates that central and district nonclassroom staffing patterns are not necessarily dependent upon district wealth. Note the difference between the ADA: teacher ratio of 28:1 and the ADA: Certificated instructional ratio of 21.6:1 in elementary district number 13. This comparison tells us that although district number 13's elementary teacher: pupil ratio is relatively favorable, there are also a large number of certificated nonteachers employed to work at these grade levels. We

previously noted in discussing Table I that district number 13 (middle wealth) employed a greater percentage of nonteachers to teachers at the elementary level than did district number 10, the wealthiest district surveyed. Comparing these two districts in terms of their ADA:all-positions ratio shows that district number 13 is exceeded only by the wealthiest district studied in terms of the total number of persons employed. Obviously district 13 believes that a generous nonclassroom staffing policy is necessary in order to provide a good education.

A comparison of middle wealth elementary districts number 13 and number 9 in terms of their ADA:teacher ratios, ADA:certificated instructional ratios, and ADA:all-positions ratio also substantiates the former district's liberal nonclassroom staffing policies. Such a comparison shows that district number 9 has a more favorable classroom size, employs a smaller percentage of nonclassroom personnel, and employs fewer employees overall.

Similarly, if middle wealth high school districts number 13 and number 20 are compared in terms of the same ratios, district 20 also demonstrates a more sparse staffing policy although this district's classroom size is not quite as favorable as district 13's classroom size.

When comparing elementary district number 4 (impoverished) with district number 9 (middle wealth) we find that the former district has a higher average classroom size and yet employs more employees per ADA overall than its more wealthy neighbor. Furthermore, at the high school level, district number 4 also employs a higher percentage of nonclassroom teachers to teachers. (Table I)

District number 15 (impoverished) also exhibits liberal nonclassroom staffing; it employs more certificated instructional personnel who support the classroom teacher and it employs more individuals per ADA to run the district than does middle wealth district number 9. However, the ADA:teacher ratio of 28:1 is quite favorable. It appears that this district has been able to maintain this low ADA:teacher ratio because of a proportionately large number of new teachers hired at beginning salaries. The "savings" are then used to maintain a lower class size.

These findings regarding district staffing policies reinforce our position that such staffing is primarily dependent upon the desires of individual district administrators rather than on district wealth or any other discernible factors.

Before proceeding to the salary data in Table IV, it should be explained that the ratios in general reference item C (the ADA:each certificated noninstructional position) have not been included in this analysis. These ratios attempt to establish a relationship between the ADA and the number of certificated administrators employed by the districts. This ratio for district number 13 implies that the district has a sparse central office staffing. This is misleading since district number 13 employs numerous noncertificated administrators who do not appear in this ratio but in the all-positions ratio.

District Salary Schedules

This table presents district salary schedules for 1962-63 and relates them to district wealth.

TABLE IV
Elementary Level

<i>District number</i>	<i>Teachers' salary range (1)</i>	<i>Principals' salary range (2)</i>
10 -----	\$5,300-\$11,000	\$12,439-\$14,300
13 -----	5,001- 9,969	9,159- 12,309
9 -----	5,100- 9,900	6,987- 14,553
4 -----	4,800- 9,025	6,384- 12,003
15 -----	5,120- 8,220	8,712- 11,508
8 -----	4,732- 7,956	8,511- 10,296

High School Level

<i>District number</i>	<i>Teachers' salary range (1)</i>	<i>Principals' salary range (2)</i>
10 -----	\$5,300-\$11,000	\$15,309-\$17,600
13 -----	5,001- 9,969	11,488- 14,598
20 -----	5,100- 9,900	6,987- 14,553
4 -----	4,800- 9,025	7,680- 14,480

Table IV presents teachers' salary schedules and principals' salary schedules for 1962-1963, and it also illustrates the overall disparity between the maximum salaries which individuals in these two categories may earn.

As one would expect district number 10 (wealthy) has the most generous over-all salary scales for teachers and principals and district number 8 (poor) has the lowest. With the exception of district number 9 (principals' salaries) the table also illustrates a direct correlation between district wealth and teachers' and principals' salary scales.

Most of the districts surveyed have a considerably higher maximum salary step for principals than for teachers. This gap between the two categories is perpetuated because principals' salaries are based on a "factor formula" (based on the teacher salary scale) which is normally used in determining administrators' salaries. For example: A beginning principal's position might be assigned a factor of 1.5. If the beginning teacher's salary in our hypothetical example is \$5,000 the principal would make 1.5 times \$5,000, or \$7,500. Every time the teachers' salary scale is improved, salaries of others which are based upon a factor of that base schedule also improve. Thus, for every dollar added to the teachers' salary schedule, the district must add \$1.50 to increase salaries of high school principals.

Two districts examined, district number 8 and district number 13, do not base administrative salaries on a factor basis; rather, such salaries are established by the local boards of education. Although this method would appear to be independent with respect to the teacher, its value is negated by general salary increases which both districts grant their administrators when the teachers' salary scale is raised. The practice of employing a factor basis to establish administrative salaries which range from a factor of slightly more than "one" to greater than

"two" at various districts shows a great variation among districts in the use of this method. It also shows a rigidity which does not permit adjustment of the salary levels between the two salary categories from year to year. Furthermore, if increasing teachers' salaries is intended to "professionalize" teaching, the effect is minimized when administrators' salaries are thereby automatically boosted to higher level.

It is interesting to compare the similarity in principals' salaries at the elementary level in district number 13 (middle wealth) and in district number 4 (impoverished). This latter district pays its principals at the top of their salary range only \$300 less than does district 13, but the maximum teacher's salary in district 4 is more than \$900 less than in district number 13.

One of our more interesting findings was the unique teacher salary incentive program which exists in district number 10 (wealthy). This program established this year enables an instructor who has attained the maximum step on the salary scale to earn an additional \$2,000 by completing extra course work and by undergoing a periodical teacher evaluation.

There follows a table which deals with the average salaries paid by each of the districts examined.

Salaries As a Function of District Wealth

This table presents actual salaries paid teachers, principals, and administrators for 1962-63.

TABLE V
Elementary Level

District number	Average teacher's salary	Average principal's salary	Average certificated administrator's *
	(1)	(2)	(3)
10 -----	\$7,881	\$13,602	\$20,075
13 -----	6,828	11,800	18,234
9 -----	7,568	11,555	18,141
4 -----	6,453	11,608	18,125
15 -----	5,812	10,360	15,522
8 -----	6,440	9,794	12,999

High School Level

District number	Average teacher's salary	Average principal's salary	Average certificated administrator's *
	(1)	(2)	(3)
10 -----	\$9,469	\$17,600	\$20,075
13 -----	7,417	13,264	18,234
20 -----	7,861	14,137	18,141
2 -----	7,065	14,440	18,125

* This category includes top district administrators: i.e., district superintendent and assistant superintendents.

The first column of the elementary and high school levels in Table V shows a general correlation between district wealth and average teachers' salaries paid in 1962-63. Once again we note that district number 10 leads the other districts. Especially interesting is its high school salary which is \$1,600 more than the next closest district. This accounts in large measure for this district's \$529.40 cost per ADA for certificated instructional salaries. (General reference item G.) This

district also has much higher per ADA salary costs for certificated non-instructional positions (certificated administrative personnel such as superintendents, business managers, etc.) and per ADA salary costs for all positions (all employees of district) than does any other district. (General reference items G and H.)

One of the more interesting findings of our survey was that district number 8 (very poor) did not employ any provisional teachers. There exists little staff turnover in this district because these minority group teachers despite their fine qualifications, have difficulty in seeking employment in many other districts. Consequently the average length of time that the teacher has been with the district is quite high; this accounts for the average teacher's salary being higher than one might expect considering the low wealth of the district.

The extremely low teachers' salaries paid in elementary district number 15 were the result of the district's rapid growth over the past few years. Large numbers of new teachers have been hired thus depressing this district's salary averages.

It is interesting to compare middle wealth districts numbers 9, 20 and 13. At the elementary level the average teacher's salary in district number 9 is over \$700 higher than in district number 13. For each district the salaries paid for certificated instructional positions per ADA were \$331.47 and \$325.35 respectively. (General reference item G.) These comparable figures tell us that district number 9 is putting much of its educational dollar in the classroom rather than in other consulting positions such as curriculum directors, subject matter specialists, etc. The difference in average high school salaries between districts number 20 and number 13 was over \$400. However, at the high school level, district number 13 has a much higher per ADA cost for certificated instructional position than does number 20. (General reference item G.) These figures tell us that district number 13 has many non-classroom personnel who support its high school teachers, thus further contributing to the high nonteacher:teacher ratio previously presented (Table I). We may conclude from these comparisons of districts 9, 20 and 13 that districts 9 and 20 place a higher priority on teachers' salaries than they do on the generous central and district staffing policies of district number 13.

In examining the second column of Table V showing average principals' salaries at the elementary level, there is noted a similarity in principals' salaries in districts numbers 13 and 9 (middle wealth) and district number 4 (impoverished). It is interesting that district number 4 paid its teachers \$1,100 less than district number 9 and yet the principals in district number 4 earned slightly more (\$11,608) than those in district 9 (\$11,555).

In column three of the table the similarity of salaries paid top administrators of the various districts is shown. It is interesting that the highest administrators' salaries are paid by the three unified districts and the two commonly administered districts. At the elementary level in districts number 13 and number 9 (middle wealth) and district number 4 (impoverished) average administrative salaries paid superintendents and their assistants are only slightly below the district number 10 level. Impoverished district number 4 has a considerably lower average elementary teacher's salary than district number 10 (\$6,453 versus \$7,881) but in terms of percentage district number 4 pays its

administrators an average salary only slightly below the district number 10 level (\$18,125 versus \$20,075). These findings reinforce our belief that administrative salaries are not nearly as responsive to district wealth as are teachers' salaries.

Educational Quality in Surveyed Districts

Drawing substantive conclusions from a sample of seven school districts is admittedly a hazardous affair, but there is enough evidence of strong character to warrant tentative judgments, subject to more extensive study.

One unfortunate aspect of the analysis is that all surveyed districts did not use the same statewide tests. Three districts used the California Achievement Test at the elementary level, one each for the Science Research Associates Test and the Stanford Achievement Test, and one administered a nonapproved test. Nevertheless, statistical inferences can be drawn and tentative judgments made, subject to those inferences.

In the future, however, it would be most helpful for statewide analysis if all school districts were required to use the same battery, at least for 5th and 11th grade levels. The necessity of this is buttressed by communications from all recognized test publishers who attested to the fact that scores on one test have not been, and probably cannot be, integrated with scores on other tests. There are shortcomings in this nonuniform approach, and lengthy conversations with test experts lead us to believe that a state-sponsored test might properly be substituted. It appears, for example, that private test publishers create tests to suit district wishes, and these purposes may not coincide with state purposes. District wishes may seek to distinguish among individual students, whereas state purposes may seek to distinguish among separate districts.

We would also say that statewide test results ought not to be legally proscribed from publication. We feel that local district taxpayers have a right to know the local results, such that generalized misrepresentations are not encouraged. We understand that many local districts have peculiar circumstances which may often explain high or low statewide standings partially—for instance, a high percentage of suburban residents or an equally high proportion of poverty-afflicted students. However, we do not feel that comparisons ought to be automatically prohibited.

It has come to our attention that a number of districts appear to misrepresent (perhaps unintentionally) the relative quality of district achievement, and we have yet to encounter an administrator from an average district who did not insist that his district was above average.

For analysis, we have ranked the surveyed districts in the following order for the elementary level.

<i>District</i>	<i>Statistical rank</i>	
No. 10	1	First in state by far.
No. 13	3½	Above average 5th on S.A.T. (Stanford Achievement Test)
No. 9	2	Top 5th on C.A.T. (California Achievement Test)
No. 4	3½	Above average 5th on C.A.T.
No. 15	5	Average 5th on C.A.T.
No. 8	6	Test not approved, but I.Q. scores indicate such would be the ranking.

These rankings have been correlated with the various categories included in the district-by-district analysis. The relationship between this quality index and the substantive factors affecting education are as follows:

A. ADA/teacher ratio87
B. Nonteachers/teacher ratio26
C. ADA/certificated <i>non</i> instructional	(-0.06)
D. ADA/certificated instructional64
E. ADA/all positions55
F. Certificated <i>non</i> instructional salaries/ADA	(-0.03)
G. Certificated instructional salaries/ADA90
H. All positions salaries/ADA81

A correlation of 0.87 for this quality factor and the ADA:teacher ratio means that educational achievement is very closely associated with a small class size. The higher the correlation factor the more difficult it is to obtain statistically; therefore, the 0.87 correlation of the above item and the even higher factor of 0.90 for the relationship between quality and certificated instructional salaries are of great significance. The negative figures are caused by the statistical method and mean that the ratio has no effect on pupil achievement.

These data bear out conclusions which have been reached on national and statewide surveys. Category D, for instance, includes the teachers of category A. Hence, if the teachers in category A were separated out of category D leaving only the instructional nonteachers, the correlation coefficient would be diminished.

The gist of the analysis, based on these six districts operating elementary levels, is that the ADA:teacher ratio is highly correlated with district quality, that nonteaching instructional ratios bear an indeterminately positive relationship to district quality, and that noninstructional central office administrators bear no relationship at all to district quality.

By reversing the analytical process, it would be possible to predict that policy decisions to reduce teacher ratios, add more nonteaching instructional personnel, and add more central office administrators should show results ranging from excellent, to moderate, to nil in determining future student achievement in the district.

The following table shows the grade point average of first year freshmen entering the University of California from the districts surveyed.

**University of California
(1962-63)**

District No. 10	2.64
District No. 13	2.61
District No. 20	2.54
District No. 4	2.34
Universitywide average	2.37

Care must be exercised in attempting to derive conclusions from these averages because they represent results for only one year. However, the table does illustrate a direct correlation between college achievement and both class size and district wealth.

Conclusions

1. In the introduction of this final report we stated that we would attempt to identify the essential educational factors which we believe

the state should support in order to maintain a minimum acceptable foundation program. These essential educational factors are identified in Part B of this report.

2. Perhaps the most significant conclusion that can be drawn from the district survey is that a small classroom size is the single most important educational factor necessary for an assured minimum acceptable educational program. This belief has been supported by our survey which discovered a high correlation between pupil achievement and small classes. It should be noted that the Legislature through AB 145 has already recognized the desirability of striving for class sizes of no more than 30 students (grades 1-3) by 1968-1969. For these reasons we believe that the state should devote an increasing proportion of its support for the maintenance of small classes.

3. The foundation study has also substantiated the widely held belief that the Legislature has little control over school district expenditures and thus it cannot directly influence the quality of education administered at the elementary and high school levels except through influence over maximum class sizes and minimum teachers' salaries. Our survey has pointed out that the unrestricted nature of local expenditures permits wide-spread differences in the districts' educational programs, curricula, staffing and expenditure patterns. Many of these factors such as classroom size and teachers' salaries are generally dependent upon district wealth. However, it has been demonstrated that many other differences (i.e., central and district staffing and administrative salaries) appear to be based primarily on local administrative desires rather than on district wealth, size or any other discernible factors. District administrators contend that all nonclassroom positions and services are essential and they are reluctant to establish priorities for such functions. However, it has been pointed out that administrators in different districts of comparable wealth do in fact establish priorities for items such as central and district staffing policies and teachers' salaries.

4. It is concluded that because of the almost infinite number of conditions reflected in the factors of geographic location, local economic structure and population composition, it would be neither feasible nor advisable to attempt to construct an infinite number of foundation programs which could take each of these factors into independent consideration. As mentioned above, the foundation program concept as it now operates does consider local wealth and effort generally, but still permits districts to provide more than a minimum acceptable program if they have the desire and the ability.

5. It has been noted that districts vary greatly in their financial capacities to support local school systems. Many basic aid districts still receive substantial amounts of state educational funds even though they can finance their ambitious educational programs with local taxes. Thus, under the present foundation program the state is not using its education dollar as efficiently as possible since basic aid districts are receiving funds which might be used more beneficially in impoverished districts.

6. It can be concluded that there is a wide gap between the level of teachers' salaries and administrators' salaries. We do not dispute the

contention that school administrators should earn more than school teachers. However, it is inequitable that overall administrative salaries are disproportionately higher relative to district wealth than teachers' salaries. Furthermore, it appears that low teachers' salaries do not contribute to good education. It is interesting that districts numbers 10 and 9 paid the highest average teaching salaries and that the students tested in both districts demonstrated the highest achievement levels. In order to keep experienced, competent teachers in the classroom this gap between teachers' salaries and administrators' salaries should be reduced. Otherwise many experienced teachers may leave the classroom for higher salaried administrative careers. If this situation should persist, overall teaching quality in the public school system would suffer. This condition can best be corrected by adopting incentive payment methods to permit the most highly qualified teachers to remain in the classroom and be paid accordingly.

7. It is concluded that the present lack of a standardized statewide achievement test prevents the Legislature from making adequate district comparisons and from evaluating the educational quality of the state school system with respect to various levels of expenditure. Without such tests it is impossible for the Legislature to measure the efficiency of the state's share of the foundation program.

Recommendations

1. It is recommended that with respect to the next increase in the state's apportionment to the State School Fund emphasis be given expressly to lowering class size as incorporated in Sections 17506 and 17507 of AB 145 (Unruh), Chapter 132, 1964 First Extraordinary Session.

2. It is recommended that the basic aid guarantee to all school districts be returned to the \$120 per ADA level specified in the Constitution by repealing the statutory guarantee of the additional \$5 per ADA. The funds "freed" should then be applied to equalization aid.

3. It is recommended that consideration be given to furthering incentive pay programs for the most highly qualified teachers to permit them to remain in the classroom rather than to be forced into administration because of salary differentials.

4. It is recommended that a standardized statewide test be administered to give a more objective yardstick for measuring the quality of education relative to the various items of expenditure. Care must be exercised, however, in the use of such a yardstick and any analysis must consider the socioeconomic characteristics of the various school districts along with the cost and quality factors.

5. It is recommended that an experimental program be conducted for the purpose of evaluating the different approaches to obtaining quality education at various expenditure levels. This experiment should be associated with the state college laboratory teaching schools and should be fully state supported. The design of this program should include a school situation with a minimum number of nonteaching positions and relatively high teaching salaries and small class size. Such an experiment should be designed to produce standards which would make it possible to measure the extent to which the annual state appropriation

of nearly \$1 billion for support of the public schools is being efficiently spent. The culmination of such an experiment could result in definitions of the foundation programs in more precise terms than is presently possible.

6. It is recommended that substantive evaluations be made of the results obtained by the use of funds made available for reducing class size (under recommendation number one and recommendation number five). The other supplemental uses of funds such as are employed in the existing compensatory education programs and are contemplated in proposed expansions of the McAteer Act programs should also be evaluated so that comparisons can be made of the results produced by both approaches and priorities can be established.

7. It is recommended that at this time no changes be made in the amounts of the existing statutory foundation programs since the cost analysis in Part B of this report indicates an existing level of support which is reasonably adequate for minimum acceptable programs. However, should additional funds for schools be made available, class size should receive first priority.

PART B

(Part B prepared by Office of Auditor General)

Summary of Study in Seven Public School Districts

The office of the Auditor General was requested in December 1963 by the Assembly Education Committee's Subcommittee on Finance to participate in a study of the public school foundation program pursuant to House Resolution 303 of the 1963 General Session of the Legislature. This study was made jointly with the Office of the Legislative Analyst which prepared Part A of this report. Our participation covered primarily the financial reporting, accounting, and auditing aspects of the study. Our studies were made in the same seven districts for the same period of time indicated by the Office of the Legislative Analyst in Part A of this report. Following is a summary of our findings and conclusions based on the seven detailed reports issued on the individual school districts from December 1963 to September 1964.

The state foundation program has been described as a minimum acceptable level of school support which is to be shared in a partnership of state and local district funds. This description indicates that such a partnership arrangement should be sufficient to guarantee an adequate education for each child in the state. However, a partnership arrangement also implies that there should be excluded from the partnership those district costs which are not intended to be shared or those which provide activities beyond the regular instructional program.

Our study was thus directed toward determining the objects and programs for which the districts were incurring expenditures, and determining what expenditures could be considered as not pertaining to foundation program support. We also tried to determine which expenditures, even though pertaining to foundation program support, were in excess of those needed to provide a minimum adequate level of education to be shared by the state and local districts. The results of our analysis of district expenditures are summarized for each district in Tables I and II from our reports on the individual school districts

for the elementary and high school levels. These tables show the comparative costs per ADA for the regular instructional program as distinguished from programs which are supported by the state on a basis other than the foundation programs, such as special education and driver training. Also included are Tables III and IV, which show for each level the comparative average salaries which were paid for the majority of positions common to the districts studied.

Tables I and II present the same costs as were shown in our individual district reports, but summarized by functional positions and their support rather than by individual positions. As in the previous reports, the classroom unit, with a teacher and necessary books and supplies, is presented as the primary unit around which all other expenditures for the current expenses of education are shown as support units. These support units consist of instruction, health, administration, utility, fixed charges, and transportation. The instruction support unit includes those functions of instruction which are performed outside of the classroom, such as coordinators, supervisors, principals, and deans. Health support consists primarily of the nurses and their supplies. Administration support includes the districtwide administrators, their clerical assistants, and supplies. Utility support includes both operations activities, such as custodial and gardening, and maintenance activities, which encompass the repair and maintenance of buildings, grounds and equipment. These two activities are shown separately within the utility unit. Fixed charges as presented here consist almost entirely of insurance costs. In the conventional school district financial statement, fixed charges also include district expenditures for retirement contributions. We have allocated these retirement costs to the support units which contain the related salaries. The transportation support unit excludes those transportation costs for which a state allowance is made for special education pupils. Tables III and IV show average salaries paid without regard to the support unit in which they are included.

It should be noted that in Table I the cost per ADA for the regular instructional program ranges from a high of \$775.25 in district number 10 to a low of \$299.98 in district number 8. In that these districts also represented the high and low with regard to wealth measured in assessed valuation per ADA; this was not unexpected. In the other districts (numbers 15, 4, 9, and 13), the cost per ADA was, in the same manner, generally related to each district's wealth per ADA. We concluded that the wealthier the district the greater the expenditure for the total education program for each child. However, an analysis of the detail in the various units contained in the table shows that this relationship did not in all cases continue to hold true. In district number 9, \$270.37 per ADA was spent on classroom teachers' salaries, while in district number 13 (a wealthier district), only \$242.09 was expended for the same purpose. At the same time, district number 13 expended \$66.78 per child for instruction functions (primarily supervision of classroom), while district number 9 spent only \$44.69. Thus we conclude that with total expenditures of approximately the same for the combined purposes, it was the policy of district number 9 to place emphasis on support for the primary unit (the classroom), while district number 13

concentrated on out-of-the-classroom instruction (supervisory) support. Our actual observations and analyses in these districts reinforced this conclusion.

It should be noted regarding the administration support unit in Table I, that the cost per ADA for the district superintendent fluctuated sharply between districts, and with the exception of district number 10, bore no particular relation to wealth. Since the actual salaries paid to the various district superintendents were relatively the same, we concluded that these per ADA fluctuations were a result primarily of district size. For example, the district superintendent in district number 4 and district number 13 received exactly the same annual salary, \$21,500. However, district number 4 had an elementary ADA of 32,000 while the district number 13 ADA amounted to only 8,700. This resulted at the elementary level in a cost per ADA for the district superintendent in district number 4 of only \$0.48, while in district number 13 it amounted to \$1.46.

Total administration costs per ADA did not, in most cases, follow the pattern observed for the district superintendent. District number 4, which had 10 times the ADA of district number 9, showed an administration cost of \$14.10 per ADA, while district number 9 had a cost of \$10.83 per ADA. From analyses of the number of administrative personnel and our observations in the districts, we concluded that district number 9 operated with fewer administrators and clerical personnel per ADA than district number 4.

* Retirement costs have been allocated to the various support units.

We observed that unit costs in the utility support unit varied considerably and that fluctuations in maintenance were greater than in operations. We drew no specific conclusions from these variations however because of the differences in size and age of school plants.

Transportation costs varied widely and were primarily a reflection of the type of transportation program necessary for each district. We concluded that geographical location and availability of public transportation were the primary factors contributing to the varied costs.

Table II shows comparative costs per ADA at the high school level. At the high school level costs per ADA range from a high of \$929.77 in district number 10, the wealthiest district, to \$480.52 in district number 4, which had the lowest assessed valuation per ADA. This is the same pattern as shown in Table I for the elementary level.

Table II shows a wide variation in the combined costs for supervisors and their clerical staffs in the instruction function for district number 20 and number 13. District number 13 expended \$24.95 for these purposes, while district number 20 spent only \$7.48 for these same purposes. Since the two districts are comparable in size, in wealth and, as near as can be determined, in success of their students, it appears that there was an excessive staffing for these purposes in district number 13.

Our observations and conclusions made with regard to Table I (elementary) apply for the most part to Table II (high school) with the exception of the cost per ADA of the classroom teachers.

Tables III and IV present average salaries for comparable positions common in most districts studied.

The information presented in the accompanying tables and our comments are based on the actual expenditures of the districts as reflected by their records and as audited by their independent public accounting firms. These tables show the purposes for which the districts actually

expended their available funds. The following comments are directed toward determining as nearly as possible a minimum acceptable level of

support to be shared in a partnership of state and local district funds. This does not necessarily mean the lowest cost found in the districts as this could reflect a level of support which would not be acceptable when measured in terms of the best information we now have with regard to the success of the students. We recognize that while a sample of seven districts is comparatively small, it did contain one of the wealthiest and one of the poorest districts in the state. Thus we could expect the costs of most districts not studied to fall between these extremes. As a preliminary to our determination of this minimum acceptable amount to be shared, we reviewed the results of the districts which were studied and chose for further analysis three districts which indicated by their

costs per ADA, their level of salaries, the success of their students, and their size, would be the most representative in this group of giving an adequate education program at a minimum cost. The districts chosen were one unified district and an elementary district and a high school district with a common administration.

Starting with each district's actual cost per ADA for the regular instructional program, as reflected in Tables I and II, adjustments were made to more nearly reflect a minimum adequate program. The adjustments were made for the following reasons:

1. The districts' actual unit costs did not necessarily reflect a minimum adequate level of support.
2. The actual costs in the districts, presented in the regular instructional program, still contained amounts which, even though they are part of the current expense of education, are not subject to a partnership sharing of state and local funds.
3. Summer school costs and its related ADA were excluded in the presentation of the regular instructional program. Since this ADA and cost is based on foundation program support, they were added into the figures for the regular instructional program.
4. In order to present costs which would compare with the latest statutory foundation program support, district actual costs were projected to include the 1965-66 fiscal year.

Maintenancemen.....	5,744	5,792	7,689	8,320

We wish to emphasize that these adjustments do not constitute criticisms of the districts' actual expenditures, but were made for the purpose of determining what portion of the expenditures, if any, constitute those in excess of a minimum adequate level of school support.

The following adjustments were applicable in the districts analyzed:

1. The cost per ADA for classroom teachers was adjusted to reflect a ratio of 33:1 ADA at the elementary level and 28:1 ADA at the high school level. The actual average teachers' salary paid in the district was used in the adjustment. The maximum adjustment necessary in the three districts analyzed was an increase of 4.5 ADA per teacher. Because of this district's excellent student achievement and the relatively high salaries paid, we considered that this adjustment would not cause the student achievement to fall below an acceptable minimum level of education.
2. District expenditures for retirement contributions were excluded from the actual unit costs. We recognize that these costs are included under the current definition of the current expense of education. However, we observed that most districts fund these expenditures in total through a district permissive override tax, and thus we do not consider that these costs are being shared by state and local funds.
3. District transportation expenses were adjusted to exclude the portion of unit transportation cost represented by transportation allowances received by the district from the state from a source

other than the foundation program. This portion constitutes total state participation and is thus not part of the cost to be shared.

4. District unit costs were adjusted where applicable for the excess costs of instructing 7th and 8th grade pupils. This was done in order that costs in districts instructing only kindergarten through 6th grade pupils would be comparable to those instructing kindergarten through 8th grade pupils.
5. The portion of unit costs represented by certain positions in the districts were excluded when, by subjective analysis, they were considered to be not minimal to an adequate program. For example, the costs of a Coordinator of Nurses and a Director of School-Community Relations, while being part of the district's current expense of education were not necessary, in our opinion, to a minimum adequate program. On the other hand, expenditures for many positions were included in total without adjustment, such as custodians, clerical, gardeners, and maintenance men because it was impossible, without a detailed study of the districts' minimum requirements for these positions, to determine what portion of these costs per ADA, if any, were in excess of their requirements.

Some of these adjustments are based on judgments containing subjective elements. No adjustments were made with respect to salary levels for teachers, directors, and administrators which may have been in excess of what was necessary to attract competent personnel in the particular circumstances. Further, no adjustments were made for either salary level or number of positions in custodial maintenance and clerical occupations. It is possible that the costs as adjusted represent an amount somewhat greater than an acceptable minimum.

Table V shows, for the districts chosen for further analysis, the comparative costs per ADA at the elementary level as adjusted for the factors mentioned previously. Table VI presents the same data for the high school level. In order to show the effect of the exclusions of retirement costs as against exclusions for other reasons, a segregation of the amount excluded in Tables V and VI in each district for retirement contributions as compared to other exclusions is summarized below:

	<i>Elementary district</i>		<i>High school district</i>	
	<i>No. 4</i>	<i>No. 9</i>	<i>No. 4</i>	<i>No. 20</i>
Retirement costs -----	\$10.97	\$13.94	\$14.99	\$15.79
Other costs -----	23.91	41.45	28.65	29.92
Total excluded -----	\$34.88	\$55.39	\$43.64	\$45.71

Thus in each case the amount excluded for retirement costs are about one-third of the exclusions with the exception of district no. 9 where they are about one-fourth of the total exclusions.

It is also interesting to note from Tables V and VI the high percentage of maximum statutory program available in 1965-66 to the projected adjusted costs of the districts studies. Table V for the elementary level shows that the maximum program guaranteed by the state in 1965-66 is 96 percent and 102 percent of the respective districts' adjusted costs. At the high school level (Table VI), these per-

centages for the respective districts are shown at 88 percent and 86 percent.

We have already noted that the adjusted costs on which these percentages are based included no allowance for salary levels which may be in excess of a minimum for the various positions studied. Further, we have noted that no adjustments were made for custodial, maintenance and clerical positions, for either salary level or number of positions. It appeared to us that further adjustments with regard to these factors could only increase the percentages shown in Tables V and VI, therefore, we considered it unwarranted to gather further data concerning them at this time.

The Department of Education in its 1961 report to the Legislature recommended foundation program levels at 92.8 percent of the elementary districts' costs for foundation program purposes and 90.3 percent for the high school level. Tables V and VI show that the percentages of the 1965-66 projected costs appear reasonably close to the percentages of costs recommended to the Legislature by the Department of Education in 1961.

SUBCOMMITTEE ON SPECIAL EDUCATION

The Subcommittee on Special Education was constituted in September 1964 by the Chairman of the Assembly Interim Committee on Education, Assemblyman Charles B. Garrigus, for the purpose of studying several proposals in this specialized area which had been referred to the full committee. Prior to the appointment of the Subcommittee on Special Education several hearings were held on these measures by the Subcommittee on School Finance; upon formation of this subcommittee all such measures were rereferred to it. Chairman Garrigus instructed the subcommittee to conduct a broad study in depth of special education subject matter with a view to presenting a coordinated program in this area to the 1965 Legislature.

Bills and resolutions referred to this subcommittee included the following: House Resolution 357 (calling for a study in depth of all special education subject matter); House Resolution 388 (relating to training of teachers for special education); House Resolution 11 (relating to materials for special education); and Assembly Bill 169 (the School Age Census Bill). In addition, several subject areas closely related to special education were studied by the committee's research staff and proposals were presented to the subcommittee. These appear in the text which follows. It is the hope of the committee members that the recommendations which have grown out of this study receive full consideration by the Legislature in 1965.

CONCLUSIONS AND RECOMMENDATIONS

1. The committee concludes that many children, both handicapped and otherwise, are going without an education because of failure to account for them. The committee therefore recommends that consideration be given to a mandatory youth census, conducted periodically to locate children who are not in school and to assist in future planning for them.

2. The committee finds present special education financing to be cumbersome and outmoded. The committee proposes that the special education portion of the school fund be made part of the total local assistance for education budget, to be distributed on an equalizing multiple ADA formula basis.

3. The committee finds that laboratory schools for exceptional children are needed to improve special education and to aid in teacher training and recruitment. The committee therefore proposes that laboratory schools for exceptional children be established on state college campuses. It is further recommended that the two existing state schools for the cerebral palsied, located on the campuses of San Francisco and Los Angeles State Colleges, be transferred from the jurisdiction of the Department of Education to the respective colleges.

4. It is concluded that many more special education teachers are needed and many of those now teaching are not qualified to do so. It is recommended, should other methods fail to produce a sufficient number of teachers, that financial incentives for teacher training in special education be increased and that financial encouragement be given to colleges for curriculum development.

5. It is concluded that there are no public school programs available for the majority of multiply handicapped children. The committee proposes that the cost of educating these multiply disabled children be reimbursed to approved private schools where no public school programs exist, through the mechanism already established by Senate Bill 346 (Sedgwick) of the 1963 General Session.

6. We note that although day programs for blind and deaf children are well established in our public school system, pressure on the state residential schools is increasing and proposals to build a new facility for multiply handicapped deaf are being made. The committee recommends that children applying to state residential schools be carefully screened on the basis of explicit standards, and that school districts pay a share of the education costs of children attending the state schools. Until such careful screening is instituted, it is recommended that no additional residential schools be authorized.

7. The committee finds that there is a great demand for child care centers, particularly for preschool and disabled children whose mothers must work to help support their families. The committee recommends the establishment of new child care facilities which will provide a combined program of care and education. It is further recommended that all sources of federal funds be explored to offset the added state

cost, including the 75 percent reimbursement for child care available through the 1962 service amendments to the Social Security Act.

8. The committee finds that there are no minimum standards of content and curriculum for special education classes. The committee therefore urges that the State Department of Education, in consultation with voluntary associations, devise appropriate minimum program standards for each disability group.

9. The committee finds that state building aid for special education, available to impoverished school districts on a 50-percent reimbursement basis, lacks criteria for allocation. Furthermore, there is indication of a need to extend state building aid for special education to technically nonimpoverished districts. The committee therefore recommends that maximum limits be set on state building aid in respect to square footage per child per classroom and auxiliary space, according to program purposes. It is further proposed that provisions be made for building aid for so-called nonimpoverished districts with inclusion of incentives to promote interdistrict cooperation and efficiency in planning and constructing special education facilities.

10. The committee is informed that because there is no research and demonstration unit in the State Department of Education, federal research grants must be forfeited and necessary studies are not accomplished. We propose that the State Department of Education be authorized to establish such a research and demonstration unit.

11. The committee concludes that present relationships between school districts, county superintendents of schools, and the State Department of Education are unclear and undefined. The committee calls for a resolution directing a detailed study of present relationships among all levels of special education administration, emphasizing the necessity of vesting greater responsibility and authority in a county or regional body.

12. We find that interagency cooperation among state departments and agencies presently is haphazard and there is no legal authorization to contract with one another for services. We recommend that interagency cooperation be encouraged and that the Education Code be amended to grant explicit permission to school districts, to county superintendents, and to the State Department of Education to contract with other agencies for appropriate services.

13. In fostering interagency cooperation, the committee is particularly concerned with the implementation of House Resolution 11 (1964), calling for the production of educational aids for handicapped children by inmates of Department of Corrections facilities. It is recommended that the Departments of Corrections, Rehabilitation and Education report to the Legislature regarding the financial and legal modifications necessary to implement the resolution. It is further recommended that federal rehabilitation act monies be fully utilized in the implementation of HR 11.

14. The committee recognizes that the programs for mentally gifted students in the public schools are similar in many respects to programs for other exceptional children. We recommend that the Legislature study the financing, identification processes and course content of special programs for the gifted.

INTRODUCTION

A study of special education is of timely importance because special education is now experiencing a tremendous growth, in terms both of numbers of children served and of cost to the state. Groups representing handicapped children are advancing in political awareness and are beginning to make their influence more keenly felt. No longer is it possible to view special education as something apart from general education, as an area which serves a small number of children and is of minor financial importance. The facts are that close to 300,000 school children participate in special programs of some type, at a cost of about \$65 million in state money. It is estimated that by fiscal 1964-65, special programs in our schools will require nearly \$75 million in state financing.

Provisions of state law and the State Constitution require that all children who can benefit from instruction and who are between the ages of 8 and 16 shall be in attendance in the public schools. The law makes no distinction in this regard between handicapped or normal children—it merely demands that a public education be offered to all. This committee rejects the notion that handicapped or exceptional children are new responsibilities of the school system. Rather, it seems apparent that their education has always been a responsibility of local school districts, whether or not that responsibility has been satisfied. It follows, then, that the financial responsibility for such youngsters should be seen as a partnership of state and local resources, not as the sole and exclusive responsibility of the state.

This report attempts to give an overview of the expanding field of special education from several vantage points. The first part of the report traces the historical development of special programs, from their origins in private charitable efforts to the present era of public responsibility. It concentrates on the history of California's educational program for exceptional children, which began in 1860 with the establishment of a state residential school for the deaf.

The century since 1860 has seen our state's special education programs grow to their present level of size, cost, and complexity. Section II describes the present-day programs in terms of such details as groups served, types of classes, specific costs, and numbers of students in each program.

The third section deals with broad questions of definition and purpose in the special education field. It points up the need for an overall philosophy to provide a perspective for evaluating present programs and for guiding future development.

Finally, and most importantly, Section IV gives the committee's conclusions and recommendations for legislative action.

The important issue is not so much whether state money will be spent, but whether it will be spent wisely. This raises questions regarding program content, operation, and development. These latter, of course, are related to finance but they are not financial matters alone.

The objective of this report is to equip the Legislature with some knowledge of a complex area, in the hope that it may be provided with the facts necessary in order to arrive at sound and balanced judgments in the area of special education.

The report also intends to provide a constructive framework for the various policy committees which will be considering legislation affecting the exceptional child. Beyond the provision of information, the report hopes to raise some broad policy issues. Among these is the question whether education has matured to the point where it should no longer continue to deal separately with the needs of various types of exceptional children. The focus of early public education was narrow; children were expelled for slouching in class or other small offenses. Education has now broadened its scope to include nearly all children of school age. While acknowledging responsibility to many different types of children, education has not yet gone the further step of trying to integrate children with special learning problems into regular programs.

SECTION I. HISTORICAL BACKGROUND

Special education in California began in 1860 when, by authorization of the Legislature, a residential school for the deaf was established in San Francisco. In 1865 funds were authorized for the education of blind children, and a combined school for the blind and deaf was established in Berkeley. The City of Los Angeles pioneered special classes in the public school program in 1897, by opening a public day class for deaf children. Within the next three years similar classes were established in San Francisco and Oakland.

In 1907, a law was passed making it permissive for school districts to establish a visual system of instruction for deaf pupils between the ages of 3 and 21. During the next ten years special education classes for deaf, hard of hearing, blind, and speech handicapped were instituted in several of the larger school districts in the state. By 1921, school districts were given authority to establish special classes for mentally retarded students.

Experiences with special education for handicapped children during the first quarter of this century seemed to demonstrate that such children could be more successfully educated in day classes than in residential schools. In addition, the cost was considerably less. Parents began to demand extended school facilities for their disabled youngsters, and such private organizations as the California Society for Crippled Children and the American Hearing Society began to press for legislative provisions which would give additional financial support to school districts to help defray the cost of educating the handicapped.

In 1927 the California Legislature enacted laws allowing reimbursement to school districts for the excess costs of educating the handicapped. From the beginning, school districts have not seen education of such children as their duty; they have tended to think of it as a state responsibility, to be shouldered by themselves only with state financing. The 1927 laws provided that governing school boards might offer education suitable to the needs of blind, deaf, hard of hearing, crippled, and such other physically handicapped individuals as the Superintendent of Public Instruction might designate. The cost to local districts would be reimbursed by half the actual excess expense not to exceed \$100 per unit of average daily attendance (ADA).

During the next 20 years only minor changes were made in financing the various programs for handicapped students. Some of them were: defining excess cost as the total amount spent for remedial and individual instruction of physically handicapped pupils, above the amount used to educate so-called normal children (not including capital outlay costs), and designating a day of attendance as 240 minutes.

By 1940, the Education Code contained authorization for the establishment of special education programs for all types of physically handicapped pupils and for the mentally retarded. Special classes, however, were actually being established in only a relatively few school districts.

At the same time, private agencies interested in the handicapped and parent organizations began to develop rapidly. These, along with the well-established California Congress of Parents and Teachers and individual educators, began to champion the cause of better education for California's youth, whether handicapped or not. With education costs rising, school administrators were reluctant to establish new and expensive school programs, and contended greater state subsidies were the answer to education for the exceptional. It is interesting to note that at no period of California's history has any major education organization taken responsibility for the introduction of legislation specifically aimed at improving the education of handicapped children.

Interested lay groups, however, persisted in their efforts until in 1945 the California Senate appointed an interim committee to study the problem of mental deficiency, and the Education Committees of both houses gave attention to the needs of the physically handicapped.

Under the Statutes of 1945 a new group of physically impaired children was brought into the school program, namely, the cerebral palsied. Not only were excess costs reimbursed to school districts for the education of the cerebral palsied, but residential schools were also established.

The Department of Education first established the Bureau of Special Education in 1947. In the 1947 General Session, as the result of awakened interest in the problem, a number of laws were passed relating to special education. The provisions of these laws accomplished the following:

1. Made it mandatory upon school districts either to provide proper educational facilities for their physically handicapped children or to enter into contracts with another district which did maintain such facilities.

2. Provided that the state reimburse school districts and county superintendents of schools for the excess expenses of educating the physically handicapped in amounts up to \$400 per unit of average daily attendance.

3. Established the County School Service Fund, and authorized county superintendents of schools to provide educational facilities for physically handicapped pupils who otherwise would not receive an education.

4. Made it permissive for physically handicapped children to enter special day classes at the age of three years.

5. Made it mandatory upon school districts and county superintendents of schools to establish and maintain special training classes for mentally retarded minors—such mandate to apply to districts with 15 retarded pupils in residence, and to the county superintendents of schools only for pupils residing in districts with less than 15 such pupils. (This provision was changed in 1949 to read that county superintendents would be responsible in districts with less than 900 pupils in ADA).

6. Made state funds available to reimburse school districts and county superintendents of schools for 75 percent of the excess cost of educating the retarded, not in excess of \$75 per unit of average daily attendance.

7. Appropriated \$250,000 to be used on a matching fund basis to assist school districts and county superintendents of schools to construct and equip special schools and classes for cerebral palsied children.

8. Made a special appropriation to San Francisco State College to develop a teacher education program in all fields of exceptionality.

The enactment of the mandatory laws created additional problems for school administrators whose responsibilities were already being increased by a tremendous growth in school enrollment due to the population influx, but the added state support for the education of the handicapped was of considerable assistance. Special class programs for both physically and mentally handicapped pupils began to show a decided increase. State excess cost reimbursements for special programs operating during the 1947-48 school year rose to new heights and reflected an increase in the number of handicapped pupils being served.

The four years between 1947 and 1951 showed even greater activity in special education. Thousands of mentally and physically handicapped pupils were provided for and the amount of state funds expended for the program doubled.

The period from 1953 to 1963 brought additional expansion of special education programs, and increased state reimbursement. One of the most significant legislative developments during the period was the 1955 Report of the Senate Interim Committee on the Education and Rehabilitation of Handicapped Children and Adults. This lengthy and thorough report is the last comprehensive statement from the Legislature on this subject. The section on special education praised California's efforts in educating handicapped children, but pointed out that special education programs were still serving less than half of the handicapped children of the state.

This brings us to the present day, with school systems exhibiting a proliferation of special classes and services. Many problems and many unmet needs continue to exist. However, before going into the problems, a description of current special programs is necessary.

SECTION II. PRESENT SPECIAL EDUCATION PROGRAMS

There is a difficulty in describing current special education programs, resulting from a disagreement about what special education is. In some contexts, the term designates only programs for physically handicapped and mentally retarded. In others, special education is considered to cover any program which receives special reimbursement, such as aviation education and public speaking. For purposes of this report, special education shall refer only to programs for *exceptional* children. The next section will be devoted to discussing this term.

Types of Programs

There are two kinds of programs for exceptional children in the educational system, both with special reimbursement. Classes for culturally disadvantaged, although with special reimbursement, are not considered special education per se. They are not the responsibility of the Division of Special Schools and Services of the State Department of Education. However, this distinction is somewhat arbitrary and the policy of special techniques for special groups holds.

Under the Division of Special Schools and Services itself are programs for the mentally retarded, the gifted, the physically handicapped, and the educationally handicapped (which include emotionally disturbed and neurologically disabled).

Arrangements for special programs are varied. First, there are children who attend *regular day classes* but who need such special services as transportation, special supplies and equipment, and whose attendance is reported separately for excess cost purposes. The reimbursement is the same as if the child attended separate special day classes. This financial fact hopefully encourages the integration of special students into regular classes.

Next, there are *remedial classes*. Under this arrangement, students attend regular classes for the major portion of the day, but are excused for short sessions of remedial instruction periodically during the week.

Next, in terms of specialization, are *resource classes*. The children in these programs attend regular classes most of the day, but are excused one or more periods per day to receive special instruction. Blind and hard-of-hearing children are presently the only types of children in resource classes. They are instructed in lipreading, speech, braille, typing, or other appropriate special techniques. The emphasis in the resource class is on communication techniques and not on subject matter. However, the program is flexible and children who need remedial type instruction are provided this by the resource teacher.

Where it is deemed unfeasible to allow children with a particular type of handicap to attend any of the above, *special day classes* are established on the same schoolgrounds. Classes for the mentally re-

tarded are of this type. In larger metropolitan areas separate public schools for children with one or more types of handicaps may be established.

Provision is made for a physically handicapped child to receive *individual instruction* at home or in a hospital, with an hour of such instruction constituting a day of attendance for regular and excess cost purposes. The teacher of hospital or homebound children averages a total of seven pupils.

Schools or classes in *sanatoriums* or *institutions* are the responsibility of the governing board of the school district in which the institution is located.

Beyond these provisions, there are *residential schools* for the blind, the deaf, and the cerebral palsied, which are directly under state control.

Thus, special programs run the gamut from the provision of special devices or assistance for children attending regular classes to the institutional arrangements of special residential schools.

Special Groups Served

For the purposes of cost accounting and tabulation, children's disabilities are divided into the following categories:

1. Trainable retarded
2. Educable retarded
3. Blind
4. Partially seeing
5. Deaf
6. Hard of hearing
7. Speech defective
8. Aphasic
9. Cerebral palsied
10. Orthopedically handicapped
11. •Lowered organic vitality
12. Other illnesses and physical conditions
13. Educationally handicapped
14. Gifted
15. Culturally disadvantaged

Although the latter category is usually included on any list of special education programs, as has been said, it is reimbursed separately from the other programs and is not under the Division of Special Schools and Services, as are the other programs.

Approximately 8 percent of the school age population are considered so exceptional in one or more areas as to need special education services. Some estimates of the numbers of exceptional children run as high as 12 percent.¹

Using the fairly conservative 8-percent figure, out of about 4,000,000 children of school age in California, probably at least 320,000 need special programs. In 1961-62 there were 240,499 mentally and physically disabled children in special programs in the public schools. In-

¹ Both estimates from Dunn, Loyd, ed., *Exceptional Children in the Schools*, (New York: Holt, Rinehart and Winston, 1963) p.17.

cluding children in state residential schools, the total was something over 242,000. If the 39,000 pupils in programs for the gifted are also added, there were 281,000 students in special programs in the year 1961-62. These numbers will be more meaningful if the programs are described in terms of the established categories.

1. *Physically Handicapped*

School programs for the physically handicapped are reimbursed at \$910 per unit of average daily attendance (ADA)². Transportation costs of \$475 per ADA are also allowed. These maximum figures represent the costs to a school district which are in excess of the reimbursement paid for educating a normal child in that district. The total excess cost reimbursement for programs for the physically handicapped in 1961-1962 was \$19,545,298 and, in 1962-63, was \$21,432,753. (For a detailed account of the number of children in each of the program categories for handicapped children see Appendices A and B: Tabulation of Excess Cost of Educating Mentally Retarded and Physically Handicapped Pupils, 1961-62 and 1962-63.)

By far the largest group among the physically handicapped are the speech defectives—of the total 195,173 children in programs for the physically handicapped, 137,854 are in speech programs. Speech disorders are difficult to define. Standards of correct speech vary from group to group. The most concise definition is that of Van Riper: "Speech is defective when it deviates so far from the speech of other people that it calls attention to itself, interferes with communication, or causes its possessor to be maladjusted."³

In California, teachers of speech handicapped children see them only periodically, perhaps once a week, while the students spend most of their time in regular classes. A recent survey revealed that the average caseload of speech teacher-therapists is 131 students. Most of the teachers felt they had more students than they could adequately handle. The recommended average caseload was 84.⁴

Reimbursement for speech programs is paid on the usual basis of \$910 for every unit of average daily attendance (ADA). However, since each student usually spends only a fraction of an hour per week in speech programs, it takes many actual students to equal one ADA. There are no tabulations of the total ADA of this group, since the numbers of each type of physically handicapped student are not separately computed. However, it should be noted that there are 195,173 pupils classified as physically handicapped, while the ADA for the physically handicapped is only 19,145. It can be assumed that the speech defectives are largely responsible for this difference between physically handicapped enrollment and ADA, meaning that they represent a small proportion of the total ADA.

Children with crippling and chronic health conditions, that is with nonsensory physical impairments, constitute another major category. Class size for these children averages 13. Although the nonsensory phys-

² Blind students may receive an additional \$910 for special services and supplies.

³ Van Riper, C., *Speech Correction: Principles and Methods*, (Englewood, N.J.: Prentice-Hall, 1958).

⁴ California State Federated Council for Exceptional Children and California Administrators of Special Education, *Survey* (March 12, 1963).

ically handicapped are an extremely heterogeneous group in the varieties of physical conditions they represent, they are usually grouped together in school programs.

The cerebral palsied, because of their numbers and the multiplicity of their handicaps, are usually separated from other children with non-sensory physical handicaps. Not only are there special classes for the cerebral palsied (limited to 15 students), but there are two residential schools, one in San Francisco and one in Los Angeles. The average student enrollment in the two schools was 61 in 1961-62. Most of the students stay only for a diagnostic period, hence the average enrollment does not represent the total served during the year.

The sensory handicapped, the blind and the deaf, constitute the last major group of physically handicapped. There were 2,011 blind and partially sighted children in public school programs in 1961-62 with an average of 11 students per teacher.⁵ Twelve students per class is the legal limit in this program. One hundred fifty-seven blind children attended the California School for the Blind at Berkeley. Eight deaf-blind children were also enrolled at the School for the Blind in 1961-62.

There are two residential schools for the deaf, one at Berkeley and one at Riverside. In 1961-62, enrollment at the two schools was 968. A total of 6,437 deaf and hard-of-hearing students attended special or resource day classes. The average number of pupils handled by teachers of the deaf is eight. The maximum allowable class size is ten.

2. Mentally Retarded

Next to the physically handicapped, the mentally retarded constitute the largest group served by special programs—45,324 in the year 1961-62. Current enrollment of retarded is estimated at 58,000. The mentally retarded are divided into two groups for educational purposes. The majority of retarded, with I.Q.'s between 50 and 75, are called "educable," meaning that they can benefit from a limited academic education. However, they must be taught at a slower pace and with special techniques. It is felt that children in this group can aspire to become self-supporting. The usual number of students in a class of educable retarded is 14. The maximum class size is 18. Classes for educable retarded are called Point I.

The second and smaller group is the "trainable," or Point II retarded, whose I.Q.'s fall below 50. The type of education given to this group is largely of the self-care, communication, and socialization type. Self-support is usually not considered a realistic goal and teaching of the three R's is not attempted. Classes for trainable children typically have 12 students. This is the maximum size.

Programs for both educable and trainable retarded have grown at a record pace in the past few years. Greater expansion is anticipated, particularly in the Point II program which was permissive, **not mandatory**, until 1963. Classes for trainable retarded have increased tenfold in 11 years. In 1953 there were only 376 trainable pupils in the public schools. By 1963 there were 3,720. Even so, the demand for such classes continues to greatly exceed the supply.

⁵ All average class size figures are from *ibid.*

Using the accepted formula of three retardates per every 100 of population, there are about 500,000 mentally deficient persons in California. Of these about 10 percent, or 50,000, are severely retarded. Allowing that some of these severely retarded are not amenable even to the demands of a Point II class, and admitting also that a number of adults are included in this number, it still must be assumed that the majority of severely retarded persons who might benefit from Point II classes are not yet enrolled.⁶ For a typical community, out of every 1,000 school age children there would be three children of trainable intellect.⁷ All but very small cities would probably have sufficient children of this type to justify exploration of the need for special programming. It is not known what proportion of the 11,835 patients⁸ currently in state hospitals for the retarded are severely retarded of school age.

Enrollment of educable retarded, those less severely affected, has also shown remarkable growth. In 1948-49, there were 7,541 pupils in educable (Point I) programs. By 1963, total enrollment in this category had risen to 45,008. Of these, 35,158 were in elementary school programs and 9,850 were in secondary programs. When added to the enrollment for Point II classes, the total of retarded served becomes one of 48,728.

The cost of educating the retarded in 1961-62, in terms of state reimbursements to school districts, was \$17,646,188. In 1962-63, this cost was \$19,790,364. These figures do not include special transportation costs nor capital outlay. No official estimate of the building costs for classrooms for the retarded currently exists.

State reimbursement for retarded pupils is paid on the basis of \$375 per ADA for Point I students, and \$680 per ADA for Point II students. Added to this are the special transportation reimbursements of \$475 per Point II pupil.

Teacher shortage continues to be a problem in the education of the retarded. Teachers of the retarded are generally less qualified than teachers of physically handicapped or normal children. The 1959-61 Report of the Assembly Education Subcommittee on Special Education noted that a sizable percentage of teachers of mentally retarded children lacked standard teaching credentials. At that time, of 2,375 teachers of the educable mentally retarded, 17 percent lacked standard credentials. Of 208 teachers of severely retarded, 30 percent lacked standard credentials. Presumably, most of those lacking standard credentials were teaching with provisional credentials. The question is not whether the teachers had special credentials for teaching mentally retarded, but rather whether they had the standard credentials to teach normal children. As yet, there was no credential for mentally retarded. There is now a credential for teachers of retarded, but no distinction is made between teachers in Point I and Point II programs. Also, while efforts to educate teachers of the retarded have intensified, a great shortage of qualified personnel exists.

⁶ It should be noted that the life span of severely retarded persons is far below average and includes a disproportionate number of children.

3. Gifted

During 1961-62, 39,000 pupils were enrolled in programs for the gifted.⁹ Current enrollment is estimated at 68,000. Reimbursement for this program totaled over \$1,300,000 for 1961-62. Maximum reimbursement per pupil is \$40.

Programs for the gifted are varied. The guiding principle is "enrichment." As an official publication puts it, the gifted pupil "thrives best in an atmosphere rich in opportunity for free discussion, independent thought, and high level performance. He enjoys extending and exerting himself in the realm of creative thought. He requires, therefore, an environment in which individual progress, imagination, and originality are valued and nurtured."¹⁰

Some educators have pointed out that students of average ability can benefit from the approaches and techniques directed toward gifted (and retarded) pupils.¹¹

4. Educationally Handicapped and Culturally Disadvantaged

Discussion of the programs for the educationally handicapped and culturally disadvantaged is combined because both programs are new, having been authorized during the 1963 legislative session.

Assembly Bill No. 464, which establishes the program for educationally handicapped minors, defines them as those who are unable to function in regular classes or in a school setting, by reason "of marked learning or behavioral problems." Physically handicapped and mentally retarded children are excluded.

It is difficult to estimate the numbers and identify the children who will require services for the educationally handicapped. While the bill itself is not specific, it can be assumed that many of these children are of a type commonly designated as emotionally disturbed. Some authorities submit that at least 10 percent of the school age population need psychiatric help.¹² It is not known what proportion of these children would be so disturbed in their behavior or learning ability as to require special classes or services for the educationally handicapped.

The bill appropriates a total of \$2,930,000 for the next three years, through 1964-65. The Legislative Analyst estimates that the eventual cost of the program, if made permanent by the Legislature, could be expected to reach \$12.1 million. The current maximum excess cost per ADA in the program is \$565. Participants in the program are not to exceed 2% of the enrollment of any district.

Senate Bill 115 established the Office of Consultant on Compensatory Education within the Department of Education and authorized grants to finance school district programs of compensatory education for culturally disadvantaged children. While the bill did not make a specific appropriation, an amount of \$346,000 was included in the budget bill

for the support of the Office of Compensatory Education and nine district projects. The Legislative Analyst estimates that costs could rise as high as \$19 million in future years, if expansion of the program is desired. The current maximum state share per ADA is \$24. It is estimated that 10% to 20% of the school population may eventually be eligible for the program.

When the total state costs of special education are added together, the amounts are significant. The following table shows actual and estimated total costs from 1961-62 through 1964-65.¹³

Item	1961-62 (Actual)	1962-63 (Actual)	1963-64 (Estimated)	1964-65 (Estimated)
School fund totals to mentally retarded and physically handicapped -----	\$47,742,607 ¹⁴	\$50,478,896	\$55,000,000	\$59,000,000
Building aid for special education -----	1,827,000	2,349,000	2,900,000	3,500,000
Residential schools -----	4,776,747	5,252,708	5,392,036	5,503,409
Gifted programs -----	435,712	1,342,439	1,700,000	2,200,000
Culturally disadvantaged -----	-	-	346,000	346,000
Educationally handicapped -----	-	-	830,000	2,000,000
Pilot day care -----	-	46,613	127,285	127,285
Bureau of Special Education -----	228,353	237,144	242,122	274,191
Braille book depository -----	-	-	-	28,000
Total -----	\$55,010,419	\$59,706,800	\$66,537,443	\$72,978,885

¹⁴ Figures in this row represent amounts apportioned for each year but which are actually part of the budget appropriation for the subsequent year.

While it is important to know the costs of our state educational programs for exceptional children, we must not lose sight of educational goals. In attempting to achieve for exceptional children the usual educational goals of self-realization and usefulness to society, it is important to remember that physical facilities and equipment do not alone make a good program. In fact, there is a real danger that special provisions for disabled children may be too specialized, and that students may become so surrounded with gadgetry designed to make things easier for them that they never learn to cope with the world outside the classroom walls. More vital to the realization of each child's goals than his physical surroundings is the attitudinal climate in which he learns. The determining factor is not where the child is, but how he and others think and feel about him.

The next section will deal critically with the philosophy of special education and will discuss some notions of the proper scope and function of special education programs.

¹³ Figures supplied by the California State Department of Education.

SECTION III. SPECIAL EDUCATION, DEFINITION AND PURPOSE

Special education is education, but it is considered a thing separate from education generally. It is different in financing, different in instruction methods and teacher training, different in the average class size, often different in curriculum and supplies, and different in the characteristics of the children it serves. This latter difference is the determining factor in special programs, for if there were no exceptional children, there would be no special education.

One writer on special education defines exceptional pupils as those "(1) who differ from the average to such a degree in physical or psychological characteristics, (2) that school programs designed for the majority of children do not afford them opportunity for all-around adjustment and optimum progress, (3) and who therefore need either special instruction or in some cases special ancillary services, or both, to achieve at a level commensurate with their respective abilities."¹ The basis of differentiation for exceptional children may be a physical, emotional, or intellectual deviation, or any combination of these.²

Given the exceptionality of certain children, most experts in the field explain the need for special classes on the basis that exceptional features prevent the children from benefiting from regular instruction. "Equality of educational opportunity is achieved through enabling each pupil to develop at his own pace and, as nearly as possible, to the maximum of his potentialities. Therefore, the true meaning of equality of opportunity lies in diversified rather than similar school programs . . . different expectancies are set for different children . . . Thus the guiding principle for the education process becomes one of devising a school program where each child has opportunity to work at his own level, and to progress as far and as fast as his learning characteristics permit."³

Carried to the extreme, the argument for special education would result in a special program for each child, geared to his particular abilities and potential. Educational philosophy is approaching this extreme through the increasing categorization of pupils and the creation of more special programs. Not only are there special classes of all types, but "normal" students are divided according to their abilities.

Here is an example of the trend in the categorization of handicapped children:

Another milestone in curriculum trends is the recognition that mental retardation rarely exists as a unitary entity. More and more multihandicapped classes are appearing countrywide. Here in New York City it is demonstrated in classes for the blind retarded, deaf

¹ Dunn, *op. cit.*, p. 2.

² Levine, Samuel. "A Proposed Conceptual Framework for Special Education," in *Exceptional Children* (October 1961) p. 83.

³ Dunn, *op. cit.*, pp. 5-6.

retarded, neurologically impaired retarded, and perhaps we will see, in the not too distant future, classes for the emotionally disturbed and socially maladjusted retarded.⁴

The article from which the above was quoted proposes the ever greater specialization of the education process and a tighter categorization of students. Homogeneity is the goal. Efficiency and smoothness of operation is assumed. The proposition that an emotionally disturbed retarded child will be better able to learn in a class for "emotionally disturbed retardates" than in a class for retardates generally is not questioned.

A good argument can be made that children with the same or similar handicaps all have similar special learning needs. However, there is a danger here which is not commonly recognized. A particular special class, no matter how specialized, may not serve the learning needs of a given child. It cannot be assumed that because, for example, children's physical limitations are the same, they all will benefit from the same educational approach. Educational specialists and lay persons alike tend to assume that given conditions determine particular curricula content and class methods.

We have already posited that according to this logic, the best educational program would be one which had as many special classes as there are students. However, it would be impossible to create a separate individual program for each student for two reasons. One is obvious: such a program would be too costly in terms of personnel and other needs. The second reason is of equal importance, students might achieve superior academic advances, but they would lack experience in group interaction and competition. These criticisms of an extreme individual approach to education apply to a lesser extent to special education programs. Special programs are costly and they tend to provide an abnormal, sheltered social environment for their participants.

It has been the tendency of special education programs to want to make exceptional children feel secure by categorizing them according to dominant social expectancies. The children are protected from competition with others and from sensitivity about their deviations. It is often pointed out that a severely handicapped child is better adjusted than a moderately handicapped child because his limitations are obvious and difficult demands are not made of him. "Severely retarded often exhibit better adjustment than those less severely retarded, since they are not placed in regular grades expected to achieve at the same level as their agemates."⁵

However, categorization is not only a realistic response to a child's ability (or lack thereof); it can also be an expression of social expectation and a way of insuring conformity to those expectations. Categorization has an effect beyond the learning of classroom skills. It influences a child's attitude toward himself and molds the attitude of his family and others toward him.

Too often special education advocates see only the positive aspects of special classification. They interpret some parents' desperate de-

⁴ Krugman, Morris, "Current Trends in Special Education in New York City," in *Exceptional Children* (January 1962), p. 248.

⁵ Dunn, *op. cit.*, p. 528.

sire to have their children remain in regular classes as lack of acceptance of the fact that "Johnny is retarded," or "Johnny is deaf." The parents may be able to accept facts, but they are denying the conclusion that their child must therefore be removed from a normal classroom and placed with "handicapped" pupils.

Sometimes teachers, as well as parents, resist the removal of so-called exceptional children from regular classes. One problem of educating the retarded, according to the State Department of Education, is convincing their present teachers that they belong in special classes.

The Nature of Disability

Perhaps the issue of segregating children in school programs according to their handicaps can be clarified by a discussion of what disability is. Society "understands" or conceptualizes the disabled individual in categorical terms. However, all disabled individuals may not share society's frame of reference in regard to their disabilities. Therefore, there will be instances in which the "disabled individual will come into conflict with the existing structure, whether it be in regard to educational, vocational or social aspirations. Conflict will be evidenced by overt rejection of the individual's aspirations, denial of his competence, and/or a refusal to extend consideration to him equal to that of a nondisabled individual."⁶

It is easy to contend that the disabled person and his family must "accept" his disability. But this is only a meaningless and contradictory platitude if the underlying situation of disability is not understood. "If 'acceptance' means that the person must be content with an inferior position that requires him to acknowledge his inferiority as a person and permits him to strive only for intrinsically less satisfying goals, 'acceptance' is difficult. If there is no assurance that society will 'accept' the disability also and not penalize the person for it, it is unrealistic to endow 'acceptance' with the qualities of a panacea."⁷

If this is a correct interpretation, it is therefore not surprising that many parents resist having their children placed in special classes, for the designation of a child as handicapped places him in a position of having to overcome not only his disability, but people's lowered expectations. The position of a handicapped child is, in many ways, analogous to that of a child of minority ethnic background. His education is geared to what is thought to be his position in society, although he may not wish to accept that position.

Special education has done a service to handicapped children simply by bringing them into the educational system. The problem now is to further overcome the barriers to acceptance which handicap the personal and social adjustment, as well as the educational achievement, of many children. In extreme cases continuance in special classes can certainly be justified. However, it is felt that teachers must reject the notion that every class should contain a homogeneous group of students, who can all be taught by one efficient and appropriate method. This

⁶ Levine, *op. cit.*, p. 85.

⁷ Meyerson, L., "Somato-Psychology of Physical Disability," in Cruick-Shank, W. M., ed., *Psychology of Exceptional Children and Youth* (New Jersey, Prentice-Hall, 1955, p. 56).

approach stifles the teacher's ingenuity and prevents him from treating each student as an individual. It prevents each student from knowing children who differ from him in important respects—children against whom he can measure his own individuality and test his own concepts. Furthermore, this approach deprives the deviant child of normal associations and of the chance for social integration, thus reinforcing his deviance.

It would seem that reducing class size generally might allow a teacher to cope with children of somewhat variant intelligence, cultural background, emotional development and physical characteristics. No one is saying that a teacher could adequately deal with a class of children with many different types of educational needs. However, he could probably cope with a small class which included some deviant children.

The reduction of class size generally and the education of teachers to face a *variety* of teaching problems would perhaps reverse the snowballing trend toward the establishment of special classes. Indeed, the small size of special education classes may be the reason for their success, rather than the use of special methods or techniques. "By keeping the classes small and by securing adequately prepared teachers, instruction for all children in regular classes has been advocated for many years. But to individualize instruction in a class of 35 or 40 pupils of varying abilities and needs is a difficult matter. The small size of classes in special education makes it possible to achieve that aim much more readily."⁸

Up to this point, an argument has been made in favor of integrating exceptional pupils into regular programs, with the re-education of teachers to cope with variety among their students. Nevertheless, it is recognized that thoughtfully created special programs have their place. A blind child needs special instruction in braille and typing, a deaf child must learn special methods of communication. However, this does not necessarily mean that special classes or schools are required. The major part of blind or deaf children's work should be the same as that of other children and in classrooms with other children. Likewise, a retarded child may be able to take cooking, art or physical education with mentally normal persons.

The exceptional child should spend only that portion of the school day in special classes that is truly necessary. This is not a defense of the position of the extreme environmentalist, who feels that identical school programs are not only most democratic, but will allow pupils to overcome physical, mental or social inequalities. Reality dictates that some special education is essential for handicapped pupils. However, if the mechanics of communication and mobility are solved early, there will be less chance of falling behind in subject matter areas. The emphasis should be on the special techniques, with compensatory education in subject matter being given to handicapped pupils on the same basis it is given to physically normal children. Once the special techniques are mastered, even a resource program is unnecessary, and complete integration is possible.

⁸ Henry, Nelson, *The Forty-Ninth Yearbook of the National Society for the Study of Education* (Chicago: University of Chicago Press, 1950) Part II, "The Education of Exceptional Children," p. 11.

At the same time it must be recognized that most of a handicapped child's normal agemates will have conventional social attitudes. It cannot be assumed that handicapped children will be accepted by their nonhandicapped peers simply by placing them in regular classrooms.⁹ In other words, physical integration does not assure social integration. In fact, pupils may be more cruelly segregated socially in a program where they are not accepted by their classmates, than in one where they are physically separate. This fact does not justify the segregation of physically handicapped pupils; rather, it is a challenge to find methods of educating regular students to the acceptance of exceptionality. The attitudes of many teachers, including some special education teachers, must also be modified.

Special mention should be made here of the educational needs of mentally retarded persons. Without going into the problems involved in discovering true retardation, retardation is by definition, a limited capacity to absorb abstract concepts. The disability of retarded persons is largely one of an inability to follow academic and intellectual pursuits. Thus, curricula for retarded children rightly emphasize vocational training for the mildly retarded and self-care and social adjustment for the severely retarded. These goals necessitate special curricula where learning is constantly related to concrete tasks, so that as an adult, the retarded person may more readily blend into everyday society.

Defining the Limits of Education

The scope of education has become increasingly broad in recent years. Schools now provide lunches, physical examinations, counseling and other services outside the classroom. Most of these functions are justified in terms of preparation for learning. Preparation for learning becomes even more significant in programs for exceptional children. Through special programs, children whose backgrounds have not afforded them intellectual stimulation can receive this. Children whose speech is peculiar can have it corrected. Youngsters who require physical therapy because of a crippling condition can obtain this help as part of their education. In some ways, the whole special education program can be considered preparation for learning. However, there are two problems which should be considered. First, there is some danger that preparatory functions will become the primary content of special education, meaning that the pupils may not also receive a good academic training in relation to their agemates. Second, other agencies, such as Crippled Children's Services, Social Welfare, and Rehabilitation (not to mention the family), may find that the schools are preempting their functions. It has perhaps become too easy to focus on the school as the agency for dealing with all social problems, particularly the problems of the young.

It would seem difficult to answer these questions and to determine the proper scope of special education without the results of the comprehensive study of general education called for by ACR 45 (1964),

⁹ Force, D.G., "Social Status of Physically Handicapped Children," in *Exceptional Children* (No. 23, 1956), pp. 104-7.

which calls for the development of a master plan for public education. Our views of special education must change with our changing expectations of education *per se*.

Our general view of education is changing from the notion of a static institution repetitiously passing down the time honored ideas and practices of centuries, to a conception of education as a process—dynamic, constantly evolving, sensitive and flexible. Its purpose is to prepare youngsters for a changing world. This new approach to education is helping break down the old stereotypes that have tended to dominate the education of exceptional children.

SECTION IV. LEGISLATIVE PRIORITIES

The State Department of Education contends that California has the best special education program in the nation. No one can dispute the fact that California has the most children in special programs and spends more for such programs than any other state. However, in spite of relative success, improvements are in order, both as to the quantity of children served and the quality of education provided. The purpose of the committee's recommendations, to be discussed in this section, is to improve special education in both quantitative and qualitative terms.

Legislative actions should assure that children with special learning problems receive the best program which can be designed and that this program be organized so as to test and incorporate new developments as they become available. Each of the committee's recommendations will be discussed in detail.

1. MANDATORY YOUTH CENSUS

Estimates of the number of handicapped children in California vary. All the evidence indicates, however, that there are many such children not being served by our educational system. Conservative estimates by the State Department of Education show approximately 95,000 physically and mentally handicapped children of school age not on school. In addition, we do not know how many nondisabled children are evading the compulsory education laws.

As of 1960, 43 states provided for a mandatory school census, with 14 of these registering children from birth. Of the total, 28 states took a separate census of handicapped children, or included special handling of this group within the regular census.¹ The main purpose of taking a census is to find how many schoolage children are not in school and the reasons for absence, such as employment, possession of a handicapping condition, etc. A census shows population trends and shifts, thus aiding in future planning.

California is the only major state which does not conduct an annual census of its youth. It is therefore proposed that a designated body keep an up-to-date census of children under 19 years of age who reside in the state. This body would record the names, ages, and addresses of children, including pertinent information as to those who are blind, deaf, or have serious physical or mental deficiencies.

The purpose of a youth census is to make possible the provision of education to all children, whether handicapped or not. The information and vital statistics a census would provide are essential if California is to identify children who cannot function in the regular school setting because of physical, emotional, or mental handicaps and who, therefore, are presently unknown to the schools.

For example, multiply handicapped children are generally not included in our educational system. A census would reveal the lack of

¹ United States Department of Health, Education and Welfare, Office of Education, *State Legislation on School Attendance* (January 1, 1960 OE-24000), p. 6.

educational opportunities for this group and might bring to light other groups of children who are not now being served by our schools. In accordance with the State Education Code, school districts must have committees to screen handicapped children for admittance. Those who are rejected or discharged from school are not presently accounted for.

Census information would be valuable for both local and statewide purposes. State agencies such as the Departments of Education, Social Welfare, Mental Hygiene, Rehabilitation, and Public Health have a direct stake in locating children with present or future needs for their services. Early case finding would enable preventive and remedial measures to be taken promptly.

A census of the type proposed would also improve school districts' ability to predict their future building and staff needs, and would enable officials concerned with the health and welfare of all children to make their plans on the basis of realistic information. At present the State Department of Education merely advises schools to project school housing needs by sample surveys among various parts of their communities.

Census information not only would discover handicapped children who are not enrolled, but would provide the number of employed children and "dropouts," enabling school authorities to more accurately deal with problems in this area. For example, there seems evidence that children of migrant farm workers often fail to register in school. The third annual *Conference on Families Who Follow the Crops* recommended:

The child labor and school attendance laws should be rigorously enforced. School attendance officers are not employed to interpret the law but to enforce it. If necessary, let drastic actions be taken, but get and keep the children in school.

In addition to migrant farm children who may not register in school, there are youngsters coming to the attention of probation departments who have large gaps in school attendance. A census would also help locate these children.

Failure to attend school, even for limited periods, has serious effects. Children of migrant workers are usually at least one year behind their agemates by the end of elementary school, partly because of lack of schooling for significant periods. Children coming to the attention of probation departments also appear to be retarded in scholastic development.

There are a number of ways a youth census could be administered. One way would be to vest responsibility for conducting a census in the county superintendent's office as part of his coordinating function. Another way would be to set up a census unit in the office of the county clerk. Funds could be provided through the county service fund. It is also possible that a youth census could incorporate into the anti-poverty program. (This assumes that the anti-poverty program continues indefinitely.)

Cost estimates vary. New York State's census operation costs \$0.41 per ADA. However, the State Department of Education considers

\$0.50 per ADA a more realistic figure, not including \$75,000 per year needed by the department for general administration, tabulation and interpretation. The cost aspect requires further exploration and development.

2. FINANCING

House Resolution 357 calls for a study of the possible revision of special education financing. This probably is the most crucial and most persistent problem area in special education.

The committee held a hearing on special education finance on November 16, 1964, at which time it became evident that the state is playing an increasing role in the care, treatment, education and rehabilitation of mentally and physically disabled persons. The past few years have seen a dramatic increase in the enrollment of disabled children in special education programs. With the passage of Senate Bill 115 and Assembly Bill 464, the next few years will see the cost of special education provisions exceeding \$100 million annually. This assumes that no new programs are added to those already established.

The present practice of allowing excess cost reimbursement is based upon a policy of full state responsibility for exceptional children. The state pays 100 percent of excess costs up to certain maximums, regardless of the tax base in the school district. Accounting procedures are complicated and cost tabulations for special programs must be kept separate from those for regular programs.

However, in spite of the difficulties involved, spokesmen for the Department of Education, as well as a number of school administrators, have defended it. These spokesmen contend that separate funding of special programs is necessary to prevent competition with general education and to insure that special education programs are adequately financed. They point out the difficulty of estimating the future growth of special education programs, which are developing at a greater pace than regular school enrollment. They therefore criticize any attempt to tie special education to the rest of the education budget.

With regard to the present lack of distinction between basic aid districts and impoverished districts in the distribution of special education funds, advocates of the present system state that less than total state financing would result in curtailment of programs or in failure to make needed improvements and growth. They feel that exceptional children are the state's responsibility. The notion is that if school districts could not be induced by 100-percent financing to educate exceptional children, then the state would have to build residential institutions.

These arguments are based on the fear that special education will perish unless protected. Yet, there is mounting evidence that special education programs—though still needing improvements—are very much a part of our public school system. Communities have an interest in seeing them maintained and often spend more than even the maximum available through state reimbursement. The committee feels that special education has come of age and is being recognized as a legitimate part of the school system. It appears that the great growth of numbers of students and of programs makes the old methods of separate accounting cumbersome and outmoded.

The special education portion of the state budget is presently allocated by multiplying total anticipated pupil enrollment by \$9.63. Each year special education funds are exhausted and a deficit is created.

Furthermore, the committee finds there are many shortcomings to the method by which school districts presently report special education expenditures. At the end of each school year, districts are reimbursed on the basis of the completion of forms furnished by the State Department of Education. These forms, designated J-22, do not require a breakdown of expenditures, nor are expenditures differentiated according to the type of children served, except for broad categories, such as physically handicapped. Verification of expenditures is not required, giving rise to complaints on the part of voluntary organizations that claims do not square with actual costs.

It is impossible, under the present reporting system, to compare the costs of educating a speech defective child, the most common type of physically handicapped pupil, and a cerebral palsied child. Do special day classes for the deaf cost more or less than resource programs for the blind? Although the reports of J-22 forms are used to justify proposals for increased special education expenditures, they in no way relate expenditures to the needs of the children being served. (A sample J-22 form is shown in Appendix D.)

Even as an accounting mechanism the committee finds the current J-22 forms seriously inadequate. For example, the percentage of time a school administrator spends on special education programs is prorated and reimbursed by the state. It seems rather unrealistic to expect superintendents and administrators to objectively analyze their time, to determine what portion of their salary should be reimbursed as a special education expense.

On the basis of these and other objections to the existing financial mechanism, the committee is strongly in favor of incorporating the special education fund into the general school support fund and substituting the J-22 form with a procedure which is essentially program oriented. Adjustments in the state's financial participation in special education could then more adequately be made on the basis of program considerations.

New methods of financing special education need to be considered. One specific proposal is to reimburse for children in special programs according to a multiple of the ADA formula for normal children *in that district*. The amount paid into each district per ADA varies according to the local tax base. It will take careful consideration and investigation to set up proper formulas. Suffice it to say here, for purposes of illustration, that a school district would be allowed to report, for example, four ADA for every physically handicapped minor and three for every severely retarded child it serves. Multiples would not have to be in round numbers, but could also include fractions. If this principle of special education finance is to be given serious consideration, a detailed financial investigation must be made along with a determination of its effects on state and local operation.

On the basis of present information, the multiple ADA accounting procedure in special education would appear to be simple in its tabu-

lation and administration. The state would no longer have to be interested in the item-by-item expenditures of districts, but could regularly check to see if required services were being provided. (See Section 8 on minimum standards.) It would be up to school districts to determine *how* the services would be provided.

A desirable feature of this plan is the fact that it would tend to equalize the quality of special education programs throughout the state by reimbursing according to the particular amount per ADA entering each school district. This is especially important as the percentage of pupils in special education increases, for otherwise the state is financing an ever greater part of local education without regard to the financial ability of the districts. Under the proposed system, as the cost of special education increases, state monies can be more judiciously apportioned to districts of greatest need.

The committee finds the multiple ADA approach to be consistent with a philosophy of integration. Putting special education on the same financial footing as general education should cause special education to be viewed as education *first* and special education *second*. Special educationists and particular interest groups support improvements in general education, while PTA's, teachers associations and others concerned with general education would hopefully come to take an interest in special programs. Increases in state payments per ADA would be reflected in special programs. Deficits would be spread over the entire education budget. In other words, special education would be viewed in a broader light as part of, instead of in competition with, education as a whole. A more integrative approach could be taken to special education programs, instead of building them piecemeal according to the requests of various interest groups.

3. LABORATORY SCHOOLS

At the October 14, 1964, hearing of this committee it was proposed that laboratory schools for exceptional children be established on state college campuses. At that time there was full agreement on the part of the Department of Education and statewide voluntary organizations for handicapped children that such a proposal would enhance the scope and quality of teacher training and educational methods.

On the whole, California leads the states in its education programs for disabled children. Nevertheless, teaching programs for special groups need further development, particularly for multiply-handicapped children and for the emotionally disturbed, mentally retarded, and neurologically disabled. The committee believes that the establishment of laboratory schools for handicapped children will uncover some of the deficiencies of special education programs and help provide remedies.

The laboratory school is a well-established aid for the training of teachers of normal children. Five state colleges have such schools on their campuses, thereby allowing students to observe classroom operation and to participate in practice teaching under the guidance of skilled master teachers.² Laboratory schools have demonstrated their value on stimulating campus interest in teaching, in providing training grounds for prospective teachers, and in serving as the focus of edu-

² Chico, Fresno, Humboldt, San Diego and San Francisco State Colleges.

educational research and experimentation. Furthermore, the pupils of a laboratory school usually receive a superior education because of the fresh attitudes and approaches used in instructing them.

All the benefits which laboratory schools offer to the education of normal children would be increased in laboratory schools for disabled children. This is because the needs which can be served by laboratory schools are so much greater in the special education field. Compared to education generally, special education is woefully lacking in adequate techniques of pupil instruction and teacher training. Furthermore, there is a tremendous need for more teachers. Finally, there are almost no methods of dealing with some types of children, most notably the multiply handicapped, with the result that there are presently no public school programs for such children.

A laboratory school can encompass the proper mixture of practical and academic orientations to further many of the objectives of special education. For example, one of the recurrent concerns of the State Department of Education and of local school districts is the implementation of new special education legislation. A 1963 Assembly bill (AB 464, Waldie) authorized schooling for neurologically disabled and emotionally disturbed youngsters. However, there is now some doubt among school districts as to the best way to implement the program. Should hyperactive children be taught in classrooms balanced with those who are less active, or would it be better not to mix the two?

In another important area, what advances in teaching methods are available to the mentally retarded, the largest single group (58,000) served by special classes in our public schools? How can present research in cybernetics and perception be translated into classroom success? What is the optimum teacher-pupil ratio for each disability group? The committee finds a paucity of answers to these vital questions. We believe they could find partial resolution through on-campus experimentation in laboratory schools. In addition, the various subject matters represented in the colleges, sociology, psychology, physiology, and even physical sciences, could be brought to bear on the tasks of special education. Some of the stubborn problems might yield best to an interdisciplinary approach.

There are additional considerations. Laboratory schools could take advantage of the educational expertise of professors of education to provide a good education to selected handicapped children. Research grants and the academic orientation of the colleges directing the laboratory schools would hopefully encourage more students to enter the special education field.

Finally, by combining some activities of the special education laboratory school with activities, classes, and child development programs for normal children, valuable comparisons could be made, not to mention the fact that disabled children would be given opportunities for association with nonhandicapped youngsters. These are all possible benefits of the proposed arrangements. Six state colleges have already submitted written statements delineating the ways laboratory schools on their campuses would assist disabled children and improve teacher training.

It would seem appropriate, as a first step, to transform the two state schools for cerebral palsied, already located on the campuses of San Francisco and Los Angeles State Colleges, into laboratory schools under the jurisdiction of the respective colleges. These facilities presently offer short-term diagnostic service to children with cerebral palsy and other similar handicaps. It is not proposed that the current diagnostic functions and contractual arrangements be abandoned. A plan could be developed whereby these vital functions would continue but a full educational program could be added via the laboratory school. In fact, the medical and diagnostic aspects could be expanded without concomitant plant expansion through fuller utilization of available hospitals and other facilities.

A questionnaire sent to parents of approximately 250 children served by the schools for cerebral palsied indicated that most children remained for a period of only a few weeks and did not receive instruction paralleling that available in public school special education programs. Because classrooms and educational equipment are already provided by the schools for cerebral palsied, it would seem logical that they become laboratory schools offering a rounded and more long-term educational program to a selected number of children going through the diagnostic procedure.

Whatever specific arrangements are made for establishing laboratory schools on state college campuses, it is clear that the need exists. Plans must go forward as soon as possible.

The committee has assigned a high priority to this proposal. Without question, laboratory schools are the most promising path to meeting short-term needs, such as teacher training, and long-term goals, such as the discovery of improved instructional techniques. A necessary part of a laboratory school will be a well-defined diagnostic procedure. Some residential provisions should also be included, where they are a necessary adjunct to the educational process. We envision the laboratory school as the central locus of many types of efforts for the improvement of special education.

4. TEACHER TRAINING

The committee has concluded that teacher shortages existing throughout education are accentuated in the special education field. The tables in Appendix C show the great needs in the presently existing special categories. What they do not show is how many more teachers would be needed if all potential students were enrolled. The committee held a hearing on teacher training on October 14, 1964. At that hearing, testimony by the Department of Education and voluntary organizations substantiated the lack of teachers in all areas of specialization.

A shortage of qualified teachers is particularly evident in programs for the mentally retarded. As of 1963-64, classes for the educable mentally retarded served only 63% of their potential enrollment. In the same period, classes for the trainable retarded reached only 55 percent of their total potential enrollment.³ The figures on teacher needs, shown in Appendix C, represent our best available information, consolidated with past history, trends, and relevant future variables. The

³ California State Department of Education, *Education of the Mentally Retarded in the Public Schools of California* (June 1, 1964), pp. 10, 21.

tables indicate that 1,211 new teachers will be needed for both retarded groups as of 1964-65. Only about one-third of present teachers of retarded hold a standard credential in this field.⁴

We believe that teacher training in special education needs to be improved on three fronts. First, many more teachers are needed. Prospective teachers could be induced to enter special education through increased scholarships and a possible shortening of credential requirements (without losing essential course preparation). Currently certified teachers of normal children should be encouraged, with the granting of educational leaves and stipends, and with assurances of salary increases, to acquire special education training leading to the special education credential.

We believe that the laboratory schools proposed by the previous recommendation will prove an important step in providing an adequate number of properly trained special education teachers. Through the availability of workshops and actual teaching situations, it is highly possible that more students may become motivated to enter this field. We believe that this avenue should be explored before large new extensions are made of existing systems of financial and scholarship aid for prospective teachers of exceptional children.

A second need is to keep teachers now in the field abreast of changes in philosophy and techniques, in order to increase their skill and effectiveness. This can be done through greater use of summer courses and workshops.

The third vital need is for curriculum development and improvement in our state colleges, along with training for college instructors. The federal government has shown leadership in the special education scholarship field. The state must now follow up with additional grants and stipends, and by creating new special education programs and facilities the state colleges and the University of California. A scholarship does a student no good if he has no source of training.

Special education teacher training is a matter of deficiency from top to bottom. Professors are scarce, college training programs are lacking, not enough students are entering the field, and teachers now in the classroom need to have their skills continually upgraded. Funds should be specifically designated for curricula improvement in those colleges now offering special education training. For those colleges which have no special education courses, the establishment of programs should be initiated as soon as possible. It is an essential minimum step to earmark funds in certain state college budgets to establish special education courses, where it is determined that a maximum return be obtained. A portion of the funds should be set aside for summer school programs and stipends for teachers attempting to complete their special education credentials.

Items for immediate specific attention include the establishment of summer training institutes on several state college campuses. These institutes would be designed primarily for tenured teachers who have not specialized in the special education field. Of equal importance is the continuation and expansion of the provisions of Education Code 6875-6878 (AB 813, 1963), which appropriated \$60,000 to the Depart-

⁴ *Ibid.*, pp. 12, 25.

ment of Education to reimburse school districts and county superintendents who had approved summer school grants for teachers obtaining special education credentials. According to estimates by the Department of Education, actual demand for the grants approximated \$150,000.⁵ The department estimates that full stimulation of teacher training in special education, including summer training, workshops, institutes, and grants to undergraduate students, would cost \$949,596, not taking into account any possible federal reimbursement.

The Coordinating Council on Higher Education has made a study of the long range needs for special education teachers and has also analyzed curriculum development for purposes of reporting to this committee and to the 1965 Legislature. The Legislature will be asked to determine the placement of the primary responsibility for continuing development of teacher training in special education and to provide adequate budgetary support. A copy of the Council's report may be found as Appendix D.

5. PROGRAM DEVELOPMENT FOR MULTIPLY DISABLED CHILDREN

The committee finds that instructional programs suited to the needs of multiply handicapped children are completely lacking in our public school system. Without a census such as that described previously, there can be no accurate estimate of the number of multiply disabled in the school-age population. However, the estimates which have been made by public and private agencies indicate that there are substantial numbers of such children who are not receiving the benefits of any educational program. These children have the same right to education as do other children.

The State Department of Education estimates that there are at least 700 multiply handicapped deaf youngsters who are not enrolled in schools. The Coordinating Council on Services for the Blind calculates that there are about 1,600 blind and partially sighted children with other handicaps. (These other handicaps include deafness, which may mean there is some overlap with the estimates of multiply handicapped deaf.) No estimates exist of how many other children there are with multiple disabilities.

There are several reasons why these very needy children have been forgotten by our educational system. First of all, the multiply handicapped are relatively few in number compared to the total school age population, although their proportions seem to have been increasing in the last few years due to lowered infant mortality. Second, there are no organized parents' groups to press demands for educational opportunities. Finally, the diversity and severity of the children's conditions present problems most school districts are unable or unwilling to cope with.

An ideal school program for multiply handicapped children would give as much individualized attention and instruction as possible. Residential care would be provided for those who required it. Schools would hopefully be small and community based, allowing frequent trips home and parental involvement in planning for each child.

⁵ California State Department of Education, *Bureau of Special Education* (November 1964).

The best method of achieving these aims would seem to be the utilization and encouragement of private facilities. There are already a few private schools serving multiply handicapped children who have been unable to find public facilities to meet their needs. Since these schools must depend upon philanthropy and tuition for their financing, they are limited in the types of programs they can offer and in the number of children they can serve. With some financial assistance through public funds, there is little doubt that such private facilities would multiply and expand to meet the demand, much as nursing homes have mushroomed as a result of the federal-state medical aid to the aged program.

Two types of financing are needed. First, the costs of the instructional program must be met. Second, there must be provision of residential care for those who need it. The charitable and volunteer services should not be discouraged, but expanded and supplemented. The instructional portion of the program could be financed in the same manner as public school programs for physically and mentally handicapped. The school district where the child's family lives would participate according to its normal cost per ADA. The excess cost would be reimbursed by the state, following a formula similar to that for children with other handicapping conditions. At present, neither the usual ADA nor the excess cost payments have been used by multiply handicapped children in private facilities, although their educational needs are as great or greater than those of other youngsters. For children needing residential care, direct vendor payments could be made to the private school providing their education.

Payment for the education of handicapped minors is sanctioned in law, but has not been implemented in practice. During the 1963 legislative session, a permissive measure, Senate Bill 346, was passed. It stipulated that "with the approval of the Superintendent of Public Instruction, any school district having a physically handicapped minor as defined by this chapter for whom special education facilities and services are not available and cannot be reasonably provided . . . and for whom the State of California has no appropriate special education facilities and services, may pay to the parent or guardian . . . an amount not to exceed the sum per unit of average daily attendance . . . excess current expenses . . . and the amount . . . derived from district taxation." Residential and other facilities offering educational services have to be certified by the State Department of Education before payment can be made under the measure. There has been no use of the measure to date, except for payment for children in out-of-state schools.

The committee proposes that the law be extended beyond the physically handicapped and be made mandatory. The neurologically and emotionally disabled (designated in the Education Code as "educationally handicapped") and the mentally retarded should be explicitly included in the special provision. Only then will an education be assured every severely and multiply handicapped youngster.

The alternatives to this proposal are the following:

(1) State hospitals, which already house a number of multiply handicapped children, could continue to accept them regardless of

whether they have mental impairments. The cost of state hospital care, including capital outlay, averages about \$4,000 per year per patient, an amount which would probably be increased if an adequate and complete educational program were provided.

(2) A new special education category could be created within local school districts to serve multiply handicapped children. Necessary residential care and diagnostic services would probably have to be furnished by some other agency. Excess cost, according to proponents of this plan, would be \$1,820, twice the amount allowed for a physically handicapped student.

(3) New state residential schools for the various combinations of multiply handicapped children could be constructed. The per pupil cost would greatly exceed the \$250 per month estimated for private care. In addition, decentralization would not be possible.

(4) The present-day care centers for severely handicapped children could be multiplied and expanded. Heretofore, their emphasis has not been educational and they have not provided residential care. However, perhaps these could be added, again, at considerable cost to the state.

The proposal for public financing of education in private nonprofit institutions is, admittedly, somewhat unorthodox. Such a plan would be inappropriate and unnecessary for ordinary children or for those with fairly common handicaps. These latter are best served in regular public school programs. But the proposal offered here would seem to have several advantages for severely and multiply handicapped children. Nonpublic schools have traditionally pioneered new educational methods, especially for exceptional children. A number of private facilities are already in existence and they have demonstrated success in educating children with a variety of severe disabilities. These facilities are usually small and near the children's homes. They are considered a community responsibility and are consequently the recipients of valuable volunteer services, as well as of voluntary contributions.

None of these advantages would be lost through making available the reimbursement due a public school if it served these children. The private schools have accepted a task which public agencies have not shouldered. It would seem that the educational costs should be borne by the public and, probably, the residential care and treatment costs as well.

Specifically, this proposal authorizes payment of excess cost reimbursement to a parent who chooses a facility approved by the State Department of Education, when there is no public school program suitable to a child's educational needs due to the severity of his handicap. Where it is determined that a child needs residential care as an adjunct to his educational program, this cost will be covered by a direct vendor payment. The source of this latter cost is yet to be determined. Parents might pay part of it according to their means.

Although operating under private auspices, these schools would be subject, under the plan, to state inspection. Representatives of the State Department of Education would periodically review curriculum and care in order to determine whether standards for reimbursement were

being met. As outsiders, these representatives could look at the operation of the schools in a critical and objective manner. The contingent nature of the funds would serve as an incentive to keep the programs at a high level.

The need is urgent and critical. The choices now available to parents of multiply handicapped children are to keep them at home without an education, to place them on the waiting list of a state hospital or school, or to educate them in a private school at their own expense. The present situation should not be allowed to continue. The question is not whether to educate the multiply handicapped, but how to do it in the best and most economical way.

6. SCHOOL DISTRICT RESPONSIBILITY FOR CHILDREN IN STATE SCHOOLS

The committee commends school districts for their response to the challenge of educating children requiring special programs. The progress that has been made is a tribute to the willingness and imagination of local districts. At the same time that special public school programs have expanded, however, pressure on state schools for the blind and deaf has also increased.

In order to deal with this situation, efforts should be made to insure that children now in state hospitals and in the state schools for the blind and deaf cannot be educated in their home communities. A child who is blind, deaf or retarded, without other defects, can probably be educated without going away from home. With the exception of a handful of blind-deaf pupils, none of the children presently enrolled in the state schools for the blind and deaf can be classified as multiply handicapped. Furthermore, the majority of these children are from metropolitan areas where there are sufficient numbers to justify public school programs where such programs are not already established.

Most counties in the state have more children in public day classes than in the residential schools. However, in the counties where the residential schools are located, and in adjacent areas, there are no day classes or very few such classes. Thus, the residential schools seem to have retarded the development of day classes in the nearby areas. If the children now in the state schools for blind and deaf could attend public school classes, costly bed space would be made available for blind and deaf children with other disabling conditions or from remote areas.

It has been noted, for example, that there is little, if any, formalized communication between parents of deaf children, local school districts (which may or may not have a program for the deaf), state residential schools, and the State Department of Education or the county superintendent's office. Because of this lack of communication, many parents have placed their children in the schools for the deaf, without proper screening and sometimes without awareness of local programs.

The committee contends that children referred to state schools should be thoroughly screened to see whether they cannot benefit from an education in their home community. If a child must attend a state school in order to have an education, then the present financial advantage to his district should be removed. It is therefore proposed that

the district of residence contribute at least the average amount of local tax dollars it would spend to educate a child with that handicap. According to estimates by the Legislative Analyst, this would yield \$1.1 million for operation of state schools.

The committee feels that most children can receive a better education in their local schools, at less public cost, and without the need for separation from families and normal social life. The present plan is designed to encourage development of local school programs and to give school districts some financial responsibility for those children they cannot serve. Where children *are* referred to state schools, the parents can rest assured that this is the best plan for their child, since the decision will be the result of thorough screening by persons knowledgeable about community school programs.

The state schools were established originally when there were no regular programs for blind and deaf children. Now these facilities should be converted to use by multiply handicapped children who, as yet, generally have no public school programs. This plan, along with the use of existing private facilities and expansion of day care,⁶ should meet the educational needs of those children requiring very specialized service or residential schooling, thus eliminating expansion of state schools.

7. CHILD CARE CENTERS

Since 1943, at the Legislature's behest, the State Department of Education has established and operated child care centers. These centers provide care and educational supervision to children, most of whom have working mothers. A means test has been established to determine the share of the cost each family must pay.

Child care centers have offered a variety of services, including pre-school care and after-school supervision of older youngsters. In 1959, two pilot day care centers for severely mentally and physically handicapped children were established in Stockton and Oakland and in 1963, two additional projects of this type were authorized by the Legislature.

Both the regular and the pilot child care centers have been helpful in relieving the burdens of working parents in terms of both finances and care. However, many more centers are needed to give supervision to youngsters whose parents must work, to provide disadvantaged pre-schoolers with preparation for later school experiences, and to reduce the demand for institutional placement of very severely disabled children.

Expansion of the child care program has been slow because of the large state expenditures entailed. Although parents' fees cover approximately one-third of the costs and school districts have added limited support, the state has borne the major expense. As a result only 25,000⁷ children are now covered by the service.

The need is particularly acute for preschool children, many of whom are ill-prepared to enter kindergarten and first grade due to lack of stimulation between the vital ages of three and five. "The growing numbers of programs throughout the nation, and especially in Cali-

⁶ See next section.

⁷ California State Department of Education (March 1964).

fornia, planned to provide compensatory experiences both in and out of the classroom for children from culturally disadvantaged backgrounds reflect the growing concern that all community resources be marshaled to help salvage children and, in the long run, help reduce the cost of the child's formal education, which rises with school failures and dropouts." ⁸

Adequate child care facilities must also be made available to families receiving aid to families with dependent children (AFDC). Single parent families are often prevented from finding work because of lack of child care arrangements, even though AFDC allows the parent to deduct this expense from his or her earnings.

Finally, expanded child care is needed for preschool and older children with severe mental and/or physical disabilities which keep them from attending other school programs. The mothers of severely handicapped children may need to work, but often are prevented from doing so by the lack of care for their children. At least 22 communities other than those now operating pilot projects have expressed interest in offering day care to such children. These centers, if established, could serve at least some of the approximately 1,600 children on the waiting list for admission to State Department of Mental Hygiene hospitals.

The total unmet need for child care is not known, but indications are that it is great. It is possible that the recommended youth census would establish the magnitude of this need. "The total need of families for the care and educational supervision of young children when their mothers must work never has been accurately assessed in California, nor has the known need been met." ⁹

At least part of the need can be met through the use of day care funds available through the 1962 service amendments to the Social Security Act. These funds are offered on a 75-25 matching basis to states which establish new child care programs for aid recipients and near recipients, roughly the same group being served by current child care centers. A 100-percent federal grant of \$250,000 has also been made available to California to assist local communities to operate day care centers.

Establishing day care centers through financing available to the State Department of Social Welfare will not require sacrificing educational or other high quality aspects of the program. The Department of Social Welfare is now presenting to the federal government a plan for expanded child care services. If this plan, now pending, is accepted, the social welfare budget would have to be increased and proper legislative criteria incorporated into the plan. The Department of Social Welfare could be authorized to contract with other agencies, including the State Department of Education.

Although full details cannot be worked out as yet, the great demand for child care centers requires full utilization of federal funds.

⁸ Mahler, Theresa S., *A Brief on the California Child Care Centers* (California Child Care Directors and Supervisors Association) (April 1964), p. 4.

⁹ *Ibid.*, p. 3.

8. ESTABLISHMENT OF MINIMUM STANDARDS

It is the conclusion of the committee that the number of children served by special education programs, the great financial investment, and the need for quality education all demonstrate the necessity of establishing minimum standards. A minimum standard would provide curriculum guidelines for each disability group and could act as a guide for state reimbursement if the multiple ADA financing system were adopted. (See Recommendation 2.)

What is proposed here is not a detailed blueprint of courses and activities for each group of children, but rather, requisites for achievement at various levels. For example, blind children should be expected to learn braille and typing after a certain length of time in the program. Deaf children should be taught special communication techniques early in their school career. In the case of the mentally retarded, the educational goals of self-care, social independence and self-support must be divided into specific sequential levels of achievement, without necessarily adhering to rigid time tables.

It must be remembered that two-thirds of the teachers of the mentally retarded do not possess an education credential. These untrained teachers, in particular, could benefit from knowing what is generally expected of them and their students. There are presently no standard, or even accepted, textbooks for mentally retarded classroom use. In such a situation, programs may tend to accept makeshift duplication of materials, haphazard arrangements, or busywork for idle fingers.

The establishment of minimum standards regarding class content is particularly appropriate now that programs for mentally and physically handicapped pupils are mandatory by law. The standards for these programs need not meet the same expectations set of normal children, but should approximate them where feasible. The line between an acceptable, constructive program and mere babysitting must be drawn now.

Controversial programs, such as those for speech defectives, could proceed confidently, in the knowledge of what is expected of a true program of speech correction, as distinguished from one for speech improvement. Children in programs of speech therapy, 137,854 in all, constitute 70% of all physically handicapped special education pupils. A 1961 hearing before the Assembly Interim Committee on Education revealed that one school district had 45% of its students enrolled in speech therapy. It is estimated that the average participant spends only 15 minutes per week in speech programs. These facts would cast doubt on whether the state is receiving proper value for the special education dollars invested in speech programs. Another factor for concern is the high proportion of students enrolled in speech therapy who are of high school age, when experts feel early identification and treatment are necessary to conquer speech defects.

Without guiding standards, school districts are called upon to make their own interpretations, whether in the provision of speech therapy or in the construction of a curriculum for the aphasic. Parents contemplating moving children from private to public schools currently have no basis of judgment. There is no method of evaluating classes of private schools receiving payment under Senate Bill 346. Finally, disabled

children may go without the quality education to which all children are entitled. Therefore, the committee recommends that the State Department of Education, in consultation with voluntary associations and agencies, devise appropriate minimum program standards for each disability group, to insure solid substance for California's special education programs.

9. BUILDING AID

The state school building aid program provides impoverished school districts with assistance in constructing special education classrooms. In providing this assistance, the state writes off 50% of the cost of the special education projects and the district is required to pay the remaining 50% with interest. Where special education facilities are to be administered by the county office, the 50% remainder will be repaid 10% by the district and 40% by the county office.

The cost of building special education classrooms under the state building aid program varies. The costs may run very high and there is no set limit on size of classrooms. For example, an application for a new cerebral palsy school for 24 pupils was recently submitted for approval. The school is to be a separate facility constructed on an existing site. The per pupil cost for this facility is \$12,389. The furniture and equipment cost per pupil is \$1,333 and the area per student is 508 square feet. By way of comparison, the *total* average per student cost of providing special education facilities under the building aid program has been \$1,814.

While the construction of very costly facilities tends to be unusual, it occurs with sufficient frequency to raise questions about the need for such great expenditures. It would appear that some top limits, either in terms of space or of dollar expenditures per student, are required. These limits or maximums could be somewhat flexible and could vary according to the disability or disabilities represented, the number of pupils per facility, and other considerations. However, the limits must be set through legislative action and after consultation with the State Department of Education and staff of the Local Allocations Board.

If a district wished to construct a facility costing more than the maximum allowed, it could do so with the understanding that it would have to fully finance the additional amount. However, the Legislature recognizes that limits on the expenditure of state money must be set if the already rising expenditures under the building aid program are not to soar to unpredictable heights.

This proposal does not deny the great need for more classrooms for exceptional children. Certainly school districts are to be commended for wanting to have superior facilities, which after all, are 50% district financed. The committee is in accord with this aim. What the committee proposes is adequate and reasonable limits, which will fully meet the classroom requirements of disabled children.

While impoverished districts have been offered aid in constructing special education classrooms, nonimpoverished districts, along with voluntary groups, have made pleas for the extension of building aid funds. A district may technically fall into the nonimpoverished cate-

gory and still be unable to finance much needed construction. The committee recommends revisions to extend building aid to nonimpoverished districts on a sliding scale according to their tax base.

If aid is extended to nonimpoverished districts, the necessity for limits becomes even more crucial. The Legislative Analyst considers that expenditures under a broadened program would be impossible to estimate without maximum standards. In view of the future unification of school districts under Assembly Bill 145, it is also felt that encouragement in the form of increased aid should be offered to projects which are the cooperative effort of two or more districts.

While specific details have not yet been worked out, the committee recognizes the need to spend building aid funds wisely and to extend their use. The committee therefore recommends that maximum limits be set on state school building aid funds allocated to particular projects, taking into account the handicaps of the students, the size of the facility and other pertinent factors. In addition, it is proposed that aid be extended to nonimpoverished districts on a sliding scale, with special incentives for projects which are the combined efforts of several districts.

10. RESEARCH AND DEMONSTRATION

The committee concludes that a research and demonstration unit is needed within the State Department of Education. Such a unit would not only provide leadership for research by other agencies, but would be eligible to receive grants through the National Institute of Mental Health, the Department of Health, Education and Welfare, the Office of Vocational Rehabilitation, and other federal bodies. Because of the lack of a research and demonstration unit in the Department of Education, California has had to forfeit a large portion of federal resources.

It is the explicit intent of this proposal to stimulate growth in all phases of special education, with the further intent that the county superintendent's office act as an intermediary between school districts and the state in the operation of pilot programs.

One of the major areas of research should be an evaluation of I.Q. scores and tests as they relate to disabled children. Although there are other areas where study is vitally needed, the I.Q. is singled out as an example because of its broad use in school programs.

Intelligence quotient scores are used in many ways. They are the basis of determining mental retardation and they distinguish between children in Point I and Point II classes for the retarded. They help tell us whether a child who is functioning on a low level is lacking in ability or in motivation. Also, placement in classes for the gifted is done largely on the basis of I.Q.

Intelligence quotient tests may have importance in predicting the performance of normal children. However, when used with children possessing distinct or unusual characteristics, they may be poor indicators of performance and of potential. Although I.Q. tests are routinely given to children in our public schools, it is well recognized that sociocultural characteristics and emotional factors greatly influence test scores. This, of course, brings up the question of how well intelligence tests actually measure ability, as distinguished from the effects of education and training.

The questions that can be raised about the validity of our intelligence tests have particular bearing on programs for exceptional children. The problem is that the results of I.Q. tests may lower our expectations of children's performance and thus actually retard that performance. While no teacher wants to demand more of a student than he can produce, there is an equal danger of not demanding enough, especially of exceptional children.

Time and again experience with teaching has shown that ability is very difficult to predict. This is true even in the cases of children with very low I.Q.'s, although most educators and psychologists hold that the lowest scores are the most valid and immutable.

Even special educators who place great weight on I.Q. tests admit that the I.Q. is not fixed. "Results of recent research suggests that the training of intellect is possible especially among low I.Q. children who have lacked adequate stimulation. Thus, the educability of intelligence (raising the I.Q.) through educational treatment has an important place in the curriculum, especially for the non-brain-injured mentally retarded."¹⁰

It is significant to note that less than 20% of all retardation is caused by known damage to the brain. As a rule, children in the very lowest I.Q. brackets evidence brain damage, while the mildly retarded do not. It is also significant to note that severely retarded, brain-damaged children are fairly evenly distributed through the population. There is a slightly larger percentage among lower socioeconomic groups, which can be attributed to inadequate prenatal or infant care.

However, *mild* retardation, unlike most forms of severe retardation, tends to run in families, even though there is usually no measurable congenital defect. What is important is that the mildly retarded are concentrated in low income, poorly educated families. Thus, mild mental retardation may be due, at least in part, to social deprivation.

The problem is that once children are tested and placed in a program for the retarded there is little chance that their designation can change. The children are often not retested after their initial categorization. In situations where retesting is done, a fair number of children are found to achieve scores within the average range. The new school program for culturally disadvantaged children may have some effect on the future numbers of children entering Point I classes for the retarded. At least, the relationship between the Point I program and the culturally disadvantaged program should be a subject of research.

Uses of intelligence tests with the blind and the deaf have also had some disquieting results. Both blind and deaf children achieve lower average scores than their normal counterparts.¹¹ It has therefore been hypothesized that damage to the sensory organs and the central nervous system may occur simultaneously, thus affecting the intelligence of children with sensory handicaps. Yet, a strong argument can be made that the lack of achievement these children show in I.Q. tests is educational in nature rather than intellectual. It is possible that our

¹⁰ Dunn, *op. cit.*, p. 115.

¹¹ Hayes, S. P., "Measuring the Intelligence of the Blind," in Zahl, P. A., ed. *Blindness* (Princeton, N.J.: Princeton University Press, 1950), and Dunn, *op. cit.*, pp. 360, 361, 432.

schools are failing to educate exceptional children, especially sensory-handicapped children, by methods which develop their true potential. If this is the case, I.Q. scores may be falsely exonerating current educational practices.

So much of our educational programs for both exceptional and normal children are based on faith in I.Q. scores that this area should not be neglected. While we cannot expect perfection from tests administered on a mass basis, we should expect revision of present tests if investigation proves they are substantially inaccurate.

Beyond specific attention to the intelligence quotient, research and demonstration would have a variety of tasks such as the evaluation of school district programs, of minimum standards, and of state college instruction, including the use of laboratory schools. The subject matter would not be restricted to special education programs and problems, but would include projects aimed at understanding and improving general learning as well.

The subcommittee feels that the implementation of this proposal would require only a small nucleus-type staff on the state level at this time. This staff would have the task of initiating, supervising, and distributing funds for projects carried out by county superintendents' offices and local districts. The state staff would also be responsible for reporting the progress and results of each study to the Legislature.

Actual review of applications for grants could be made by a committee composed of county officials, school district personnel, and legislative representatives from both houses. All other state departments have legal authorization to carry out research and demonstration projects; now is the time for Education to follow suit.

11. STATE, COUNTY AND SCHOOL DISTRICT RELATIONSHIPS

At the present time, State Department of Education staff attempt to provide consultation on program design and development, according to school districts' requests. County superintendents' offices, as one of their major functions, offer similar consultative and coordinative services to their districts. These offices also operate programs directly in small districts in their counties.

There are strong indications that although county superintendents are vested with coordinative functions, there is relatively little coordination and communication between state and county levels. A district may either request assistance from the county office or go directly to the State Department. Duplications may result and channels of communication are fragmented.

A recent study of the entire California education system has pointed out the need for new arrangements between the various levels of educational administration. This study, by Arthur D. Little, points out that some districts, especially larger ones, have little contact with the State Department of Education. It also shows that county offices are already assuming a greater role, especially in the area of special education.

According to this report:

As districts grow larger and become more self-sufficient through expansion of their administrative organizations, the county offices

are gradually changing the emphasis of their role. Most county offices are identifying functions that can be served more efficiently or economically on a county basis than by individual districts, and some are examining the possibility that certain county office functions can be reduced or eliminated. The appropriateness of acquiring, storing, distributing, and maintaining instructional materials in audiovisual or instructional materials centers at the county level is well-established. Except in very large and well-staffed districts, there is general agreement that the county office is also a logical center for the location of certain kinds of specialized personnel, such as consultants in special education, who would be underutilized if located within any one district. Similarly, in areas where the incidence of mental retardation of physical handicaps is low, the county is a logical level for the operation of special schools.¹²

Communities are becoming increasingly interested in providing for the special needs of handicapped children in the public schools. Since the incidence of need and the availability of alternative sources of assistance vary from community to community, a good deal of "tailoring" must take place in the design and installation of special education programs. However, as is the case with other bureaus in the department, the Bureau of Special Education cannot be expected to provide enough consultants to work closely with all of the individual districts in the state that might benefit from their assistance. On the other hand, the average school district cannot fully utilize the expensive and specialized talents of special education consultants within their staff organizations, and there are not enough such specialists at this time to meet the needs of all districts. We can only conclude that the Bureau of Special Education should intensify its efforts to strengthen the ability of intermediate units to meet the demands of local districts for help in establishing and operating special education programs, as we understand the bureau has been attempting to do in the recent years.¹³

The committee plans to give more detailed study to the possibility of granting county superintendents primary responsibility for special education, including state liaison functions. The role of state consultants could then become one of providing their services to the county level. If the previous proposal on research and demonstration is adopted, state staff could help supervise and arrange for projects through the county superintendent's office.

By giving authority for special education to the county boards of education, a specific entity would be established to create continuity of program throughout each county. Access to knowledge of the types of programs offered would be made easier and there would be a firmer base upon which to develop future programs. Such a system would also help prevent unnecessary duplication of programs within an area. As

¹² Little, Arthur D., Inc., *Emerging Requirements for Effective Leadership to California Education* (California State Department of Education, November 1964), pp. 50-51.

¹³ *Ibid.*, p. 108.

stated, counties already have authority for special education in cases where the population of districts is too small to merit separate programming.

An intermediate level between the state and district is definitely needed. County superintendents are a logical choice, particularly in districts where unification is taking place. The committee recommends a resolution calling for detailed study of the organization of present special education administration. The resolution will emphasize the necessity of vesting greater authority and responsibility for operation in an intermediary between the state and school districts, such as in a county or regional body.

12. INTER-AGENCY COOPERATION

We believe that the State Department of Education and school districts should be allowed, possibly directed, to contract with other agencies for services and the provision of supplies wherever this would be financially or programmatically advantageous. Federal monies are available to the Departments of Social Welfare, Public Health and Rehabilitation for some types of activities now performed by school districts using only local and state funds. Besides assisting with financing, other agencies could offer consultation and direct services in their own areas of expertise.

For example, if occupational training programs for handicapped youth are considered desirable, there is real question whether such programs should be financed with education funds. Rather than take workshop payments from the school fund, it might seem feasible to allow the Department of Rehabilitation to pay for this training through funds which are matched by 50% federal monies. The Department of Social Welfare also has 75% reimbursement available for workshop training through the service amendments to the Social Security Act. These funds are already being used to provide such training to mentally retarded recipients. School districts should be able to contract with the appropriate agency for workshop services.

Where vocational training is provided by a school itself, the Department of Rehabilitation would seem to have a vested interest in seeing that proper equipment and supplies are made available for instructing their possible future clients. If the age of eligibility for rehabilitation is lowered from the present 16 years, as is under consideration by the Department of Rehabilitation, establishing an explicit relationship between the Departments of Education and Rehabilitation will be even more significant. Rehabilitation counselors could then give direct employment counseling to disabled high school youngsters, something most teachers are not equipped to do.

Interagency cooperation would probably also bring to light a number of areas in which unnecessary and costly duplication of services exists. To give one example, the federal government gives a direct per capita allotment for equipment to each legally blind student reported by the State Department of Education. The Department of Rehabilitation also offers this service to its blind clients who are in school. And the State Department of Education has its own special reading and equipment fund for blind students. In another area, retarded or emotionally

disturbed children are released to their homes or to family care homes by the Department of Mental Hygiene, without notification to school districts or to the Department of Education. This means that there is no advance planning and some children may have inadequate public school programs or none at all.

More integration is needed in the provision of services, both educational and otherwise, to exceptional children. Interagency cooperation can help achieve this result. The committee therefore recommends that the Education Code grant explicit permission to school districts, to county superintendents of schools, and to the State Department of Education to contract with other agencies for appropriate services.

13. IMPLEMENTATION OF HOUSE RESOLUTION 11

House Resolution 11, passed during the 1964 legislative session, directs the Departments of Education and Corrections to develop special education materials for exceptional children, which could feasibly be manufactured in state correctional facilities. Because most special education supplies and teaching aids are specialized and limited to use by relatively few children, they are not subject to mass production and probably cannot be manufactured commercially on a profitable basis. However, production of such items would greatly enhance the education of exceptional children, who are apt to be more dependent than normal children on special aids and devices.

If classroom materials for exceptional children, specifically those not readily available on the open market, could be manufactured in state correctional facilities, there would be a twofold benefit. Inmates would have an opportunity to participate in socially useful endeavors and necessary materials could be provided for the education of exceptional children. According to testimony presented at a hearing of the Subcommittee on Special Education on November 16, 1964, a few inmates of the Department of Corrections have learned braille and have produced braille texts. Others have assisted in the preparation of large print books or tape recordings. However, these efforts have been limited due to lack of funds for materials and instructors.

On a smaller level, inmates of the Los Angeles county jails have produced toys and puzzles for mentally retarded children at the request of a local voluntary agency. There are, perhaps, other efforts being made in various parts of the state. The success of these small, unorganized projects is evidence of a greater potential.

As part of any proposal to finance an expanded program of the manufacture of special education materials, the possibility of receiving funds through the Department of Rehabilitation should be explored. If such funds are not available, alternate means of financing will have to be found.

14. PROGRAMS FOR THE MENTALLY GIFTED

The committee regrets that it has not had time to fully study the programs presently offered mentally gifted minors in California's public schools. We recognize that many of the special education problems which we have outlined in this report have implications also for

mentally gifted programs. In the areas of pupil identification and financing, particularly close parallels may be observed.

Despite the committee's inattention to this specialized area, we believe that it is important enough that a thorough study should be instituted by the Legislature. Our recommendation for study of the state-financed program for the gifted is submitted in the hope that thorough evaluation may be made by the Legislature before any major program changes are considered.

CONCLUSION

The goals of special education are those of education generally, since all children are fundamentally the same. This point has been aptly phrased:

Exceptional children are basically like other children. It must always be remembered that the education of exceptional children has basic concepts and goals in common with the education of all children. The same principles of child development prevail. A deaf child is a child with a hearing handicap. As a child, he has all the needs, desires, and physical energy of children in general. Basically, the only way in which he differs from an average child is his inability to hear.¹

A special education program, like other education programs, has not accomplished its purpose unless it has helped the pupil to view his assets and limitations realistically, to develop independence in thought and action, and to find a place for himself among his peers and in society. Nor has the school accomplished its purpose unless it has assisted the handicapped child's associates to see beyond his defect to his worth as an individual. This task is not the school's alone. However, the school, particularly, must take care not to reinforce the stereotypes which can damage a child's development far more than his mere physical limitations.

This committee strongly believes that allocation of funds for special programs should be based not on pity, or the desire to compensate the handicapped for their low position in society or protect them from the attitudes of others. Instead, special funds should be authorized only when it is found that educational aims will be served. Careful and rational planning of special education will discourage crippling attitudes and will result in improved programs for exceptional children and youth.

SPECIAL EDUCATION—TABLE A
MASTER ENROLLMENT PROJECTION
 California's Public School Projected Enrollment: Regular Pupils K-12 and Special Pupils Enrolled
 in Special Day Classes for the Mentally Retarded and Physically Handicapped
 (Enrollment in Classes for Educationally Handicapped Beginning 1965)

A	B	C	D	E	F
Year	Projected total fall enrollment ¹	Percentage of all special education pupils ²	Projected fall enrollment in special classes ³	Percent of increase of special class enrollment over previous year ⁴	Projected fall enrollment K-12 regular classes ⁵
1964-65.....	4,092,542	2.561%	102,192	12.995%	3,990,350
1965-66.....	4,257,967	2.842	117,667	15.143	4,140,300
1966-67.....	4,414,367	2.947	126,367	7.393	4,288,000
1967-68.....	4,594,763	3.063	135,663	7.356	4,429,100
1968-69.....	4,711,385	3.218	140,885	8.271	4,564,500
1969-70.....	4,853,960	3.432	161,060	9.650	4,692,900
1970-71.....	4,988,756	3.656	175,956	9.248	4,812,800
1971-72.....	5,121,715	3.874	191,015	8.558	4,930,700
1972-73.....	5,248,814	4.075	205,514	7.590	5,043,300
1973-74.....	5,379,662	4.255	219,562	6.835	5,160,100
1974-75.....	5,503,082	4.403	232,082	5.702	5,271,000

¹ Projected total fall enrollment, K-12, obtained by adding the projected enrollment in special day class programs for the mentally retarded, the physically handicapped, and the educationally handicapped (beginning with 1965) (column D) to the projected enrollment, K-12, of pupils in regular day classes (column F).

² The records of enrollment in special day classes for the physically handicapped and for the retarded over the past five years were analyzed to develop a history and base line for future projections. These projections attempt to take into consideration important variables such as: (1) the change in the severely mentally retarded program from a permissive basis to a mandatory basis in 1964; (2) the beginning of large-scale programs for the educationally handicapped in 1965; (3) the availability of newly completed physical facilities for the educationally handicapped in

1968; (4) the availability of an increased supply of special education teachers in 1968; and (5) the increased numbers of severely retarded to be given local help under proposals now being developed and expected to become effective during 1968.

³ Projected fall enrollment figures obtained by applying the percentages developed in column C to the total statewide enrollment projections presented in column B.

⁴ Developed by converting the numerical pupil increase in projected fall enrollment in column D to a percentage increase.

⁵ Basic data developed by the Department of Finance, Population Research Unit, July 1964.

DEAF
Predicted Increase in Enrollment and Anticipated Number of Special Teachers Needed for Deaf Minors for the 10-year Period 1964-65 Through 1974-75

School year	Predicted total school enrollment K-12*	Predicted enrollment of deaf minors	Anticipated total number of special teachers needed (1 teacher—8 pupils) class size or caseload used as divisor	New teachers needed to replace those of last year not returning to teaching for the year in question (5 percent)	New teachers needed because of the increase in enrollment over the preceding year	Total number of new teachers needed	Total number of new classrooms needed
1964-65	4,092,542	2,623	325	16	32	48	32

1974-75	5,503,082	.160	8,805	734	39	36	75
Total					411	301	712

¹ Total school (K-12) A.D.A. predictions taken from Department of Finance, Budget Division, Financial Research Section, July 1964.

² Anticipated incidence percentage of pupils enrolled in special day classes. This figure does not include those pupils enrolled in home and hospital programs, residential schools or regular classes.

³ Includes only pupils enrolled in special day schools and classes for the orthopedically handicapped, including the cerebral palsied.

⁴ Based on maximum enrollment as authorized under Title V, California Administrative Code, Section 193. (The state average is 12 pupils per class.)

⁵ Based on an estimated replacement ratio of teachers during the years 1953-1963.

MENTALLY RETARDED

TABLE I

Summary of Teacher Needs for the Mentally Retarded Based on Predicted Increase of Classes, Replacement Needs, and Training-Placement Loss

A Year	B Educable mentally retarded	C Trainable mentally retarded	D Total	A Year	B Educable mentally retarded	C Trainable mentally retarded	D Total
1964-65-----	1,024	187	1,211	1971-72-----	1,452	260	1,712

1967-68-----	9,129	75	6,846	622	1973-74-----	16,138	72	11,619	1,056
1968-69-----	14,134 ²	54 ²	7,632	694	1974-75-----	16,509	75	12,381	1,126
1969-70-----	14,561	58	8,445	768					

¹ 1964-65 through 1967-68, Incidence of 2 per 1,000 school enrollment. Due to influence of moving pupils from state hospitals into foster homes, the incidence figure is changed to 3 per 1,000.

² Pattern over last 10 years indicates gradual increase in potential. Note this change in 1969-70 due to influence of changed incidence.

³ Based on percentage of potential.

⁴ Based on 10 pupils per class.

TRAINABLE MENTALLY RETARDED

TABLE II

Predicted Teacher Needs for Trainable Mentally Retarded for the 10-year Period 1964-65
Through 1974-75 Based on Predicted Increase in Number of Classes Each
Year, Replacement Needs, and Training-placement Loss

A Year	B Predicted number of classes	C Predicted increase in classes ¹	D Replacement needs ²	E Training-placement loss ³	F Total needs for training ⁴
1964-65	468	86	70	31	187
1965-66	511	43	77	24	144
1966-67	562	51	84	27	162

1972-73	988	66	148	42	256
1973-74	1,056	68	158	45	271
1974-75	1,126	70	169	48	287

¹ Number of classes increased over the number in operation during the previous year.

² Based on 15 percent of the number of classes in operation.

³ Represents the loss of personnel receiving training but not accepting placement in the area of training (20 percent of C + D).

⁴ Represents total of columns C + D + E.

EDUCATIONALLY HANDICAPPED

TABLE I

Predicted Increase in Enrollment and Number of Classes for the Educationally Handicapped Pupils for the 10-year Period 1964-65 Through 1974-75

A School year	B Potential enrollment ¹	C Percent of potential enrollment ²	D Predicted actual enrollment	A School year	B Potential enrollment ¹	C Percent of potential enrollment ²	D Predicted actual enrollment
1962-63		Pilot programs only	100 (est.)	1969-70	97,079	48	46,598
1963-64		AB 464 effective	500 (est.)	1970-71	99,775	57	56,872
1964-65		6	4,911	1971-72	102,434	65	66,582
1965-66	81,850	12	10,219	1972-73	104,976	72	75,583
1966-67	85,159	22	19,423	1973-74	107,593	76	81,771
1967-68	88,287	30	27,388	1974-75	110,061	80	88,049
1968-69	91,295	38	35,804				
1969-70	94,223						

¹ Based on legal limit of 2 percent of total public school enrollment K-12. Potential enrollment figures are for the fall of each school year.

² Annual increases are not linear because an attempt has been made to consider possible future factors such as: transportation allowances, state building aid, teacher availability, secondary level expansion, etc.

EDUCATIONALLY HANDICAPPED

TABLE II

Predicted Teacher Needs for Educationally Handicapped for the 10-year Period 1964-65
Through 1974-75 Based on Predicted Increase in Number of Classes Each
Year, Replacement Needs, and Training-placement Loss

A School year	B Predicted actual enrollment	C Total teacher requirement ¹	D Increased teachers required for growth	E Teachers required for replacement ²	F Teachers required for training loss ³	G Total annual new teacher training requirement
1964-65	4,911	491	--	74	--	74
1965-66	10,219	1,022	531	153	137	921
1966-67	19,423	1,942	920	291	242	1,453
1967-68	27,388	2,739	797	411	242	1,450
1968-69	35,804	3,580	841	537	276	1,654
1969-70	46,598	4,660	1,080	699	356	2,135
1970-71	56,872	5,687	1,027	853	376	2,256
1971-72	66,582	6,658	971	999	394	2,364
1972-73	75,583	7,558	900	1,134	407	2,441
1973-74	81,771	8,177	619	1,226	369	2,214
1974-75	88,049	8,805	628	1,321	390	2,339
Grand total			8,314	7,698	3,189	19,201

¹ Since programs include provisions for special classes, learning disability groups, and out-of-school instruction, the prediction was developed using a ratio of 1 teacher for 10 pupils.

² 15 percent of current total requirement ($0.15 \times \text{column C} = \text{column E}$).
³ 20 percent of current increase plus replacement needs ($0.20 \times [\text{column D} + \text{column E}] = \text{column F}$).

APPENDIX C

CALIFORNIA STATE
DEPARTMENT OF EDUCATION
FORM NO. J-22 (REV. 1-63)

REPORT OF EXCESS EXPENSE OF EDUCATING PHYSICALLY HANDICAPPED AND MENTALLY RETARDED PUPILS

For the fiscal year beginning July 1, 19..... and ending June 30, 19.....

(Please read instructions carefully before making any entries)

DISTRICT.....

COUNTY.....

Grade span of attendance and expenditure data:..... through.....

(Enter lowest and highest grades; see General Instruction 9)

GENERAL INSTRUCTIONS

1. **Definition.** This report covers education of both physically handicapped minors and mentally retarded minors, except as otherwise specifically designated.

2. **Code References.** Legal provisions relating to the education of exceptional children and the allowance of state aid for the excess expense therefore are contained in Education Code Sections 6801 through 6821, 6901 through 6916, 17301, 17303(c), 11201 through 11203, 18060, 18062, 18102, 18106, 18152, 18156, 18202 through 18203 and 18206.

Sections 180 through 199.6, California Administrative Code, Title 5, set forth rules and regulations governing the education of mentally retarded minors, physically handicapped minors, and severely mentally retarded minors, respectively.

3. **District Reports.** The city or district superintendent of schools, or the principal in districts not employing a superintendent, or other employee acceptable to the county superintendent of schools, shall prepare this report, in quadruplicate, immediately upon the close of the fiscal year in each district which has incurred excess expense for the education of exceptional children, retaining one copy in the district files and forwarding the original and two copies to the county superintendent of schools.

4. **Approval and Transmittal.** The county superintendent of schools, after certifying his approval, shall transmit the original and one copy of each report to the Bureau of School Appointments and Reports, Division of Public School Administration, State Department of Education, Sacramento 14, California, not later than September 1.

5. Definition of Categories.

a. **Regular Day Classes (Column 2, Page 2).** This category shall include the attendance of physically handicapped minors enrolled in classes established for normal (nonhandicapped) pupils. The excess expense for physically handicapped pupils in regular day classes may include only identifiable special expenses, such as special supplies, special teaching aids, supplemental teaching (the supplemental teacher must be available for a minimum school day in the program and must possess a valid credential for teaching the type of exceptional children enrolled in such classes), and special transportation. No part of the regular teacher's salary can be included as excess expense in such programs.

This category shall also include the attendance of pupils who are partially seeing, blind, hard of hearing, or deaf enrolled in "Integrated Classes" (Education Code Section 18060.2). "Current Expenses" may include the salary of the properly credentialed "special" teacher that provided supplementary instruction and certain other expenses pertaining to the integrated class only in Items B-500, 600, 700 and 800.

b. **Remedial Classes (Column 3, Page 2).** "Remedial" classes as herein employed include special classes providing remedial instruction for physically handicapped pupils who are excused in small numbers for a portion of a class period from regular classes, special day classes and special training schools and classes for mentally retarded and severely mentally retarded, without appreciable reduction in the costs of such classes (Education Code Section 6816). The total current expenses incurred for remedial classes are defined as "excess expense."

c. **Individual Instruction (Column 4, Page 2).** Individual instruction of physically handicapped minors is furnished at the home or in an institution. It may also be furnished at school for pre-school children with speech disorders or defects (Ed. Code Section 6916). One hour of teaching time counts as one day of attendance for this category only. Any period of teaching time shall be counted for only one pupil regardless of the presence of any other pupil during any or all of this period. The total current expenses of individual instruction are defined as "excess expense."

d. **Other Special Day Classes (Column 5, Page 2).** This category shall include all other schools and classes for physically handicapped minors. Special day classes are organized for small groups of physically handicapped employing an additional special teacher and usually held for a minimum school day.

The excess expenses of educating physically handicapped minors in this category shall be determined, as indicated in this report form, by comparison of the current expense per unit of average daily attendance of pupils in this category with the current expense per unit of average daily attendance of "normal" pupils.

e. **Special Training Schools and Classes (Column 6 and 7, Page 2).** The excess cost of educating mentally retarded minors shall be determined, as indicated in this report form, by comparison of the current expense per unit of average daily attendance of pupils in special training schools and classes with the current expense per unit of average daily attendance of "normal" pupils.

For further classification and identification by category for physically handicapped minors, refer to Chapter 4 of the *Handbook on Attendance Accounting*, in California Public Schools.

NOTE: Expenses of educating pupils with mild neurological impairment may not be reported as physically handicapped. (See AGO No. 4-217 dated 12-27-62.)

6. **Allowance for Blind Pupils.** An additional allowance is provided for certain expenses incurred for blind pupils in either of the 5 categories of physically handicapped. Certain expenses are defined as follows:

a. **Current Expense (Item E-1).** Expenditures for providing a reader to assist blind pupils in their studies, the purchase of braille books, the cost of transcribing ink print materials into braille, the purchase or making of sound recordings, and the purchase of special supplies.

b. **Equipment (Item E-2).** Expenditures for purchasing equipment for blind pupils only.

7. **Average Daily Attendance in Whole Numbers.** Average daily attendance shall be computed in whole numbers and fractions precisely as the spaces allow.

8. **Current Expense.** Current expense shall be determined as defined by the California School Accounting Manual, including expenditure classes 100 through 800, only. (See exception for equipment for blind pupils.) The current expense data shall be reported in accordance with actual records maintained. Districts should be prepared to substantiate any expenses shown in this report.

Education Code Sections 18060 and 18060.2 provide for reimbursement up to \$475 per unit of a.d.a. to school districts for actual expense of transporting pupils who are blind, partially seeing, deaf and partially hearing to "integrated" classes and for transporting blind, partially seeing, deaf, partially hearing, aphasic, cerebral palsied and orthopedically handicapped to special day classes. Transportation in the same amount is also provided for severely mentally retarded pupils attending special training schools and classes.

Reimbursement will be based on data reported on Form J-22T. Form J-22 requires the reporting of the total current expense of the transportation of physically handicapped and severely mentally retarded minors attending integrated classes in B-500, special day classes, and special training schools and classes and the subtraction therefrom of the expense of such transportation in D.

The amount reported on this form (J-22) in Item D, Columns 2, 5, and 7, shall be the same as the total current expense reported on Form J-22T for reimbursement.

Expenses of transporting handicapped pupils to "regular classes" should be entered in B-500 as "current expense" and not deducted in Item D.

9. **Consistency of Attendance and Expense Data.** It is essential that attendance and current expense data be reported for exactly the same grade span. Kindergarten attendance and current expense are to be included if kindergartens are maintained. Attendance through grade 6, only, is to be included if seventh and eighth grade pupils attend junior high school, in such case, the current expenses shall not include tuition transfers for the seventh and eighth grade pupils. Attendance and current expenses for grades 7 to 12, inclusive, are to be included for a high school report in a district which maintains junior high schools.

High school district reports should not include grades 13 and 14, unless segregation of current expense data for such grades is unavailable, in which case both the attendance and current expense data shall include grades 13 and 14.

Union districts shall file a single report for attendance and current expense for the entire district.

Unified school districts shall file a single report for attendance and current expense of the entire grade span maintained by the unified school district.

10. **Maximum Which May Be Allowed for Special Physical Education Classes.** The total average daily attendance of pupils in special physical education classes for any one level may not exceed three percent of the average daily attendance of the district for that educational level nor may current expense reported be in excess of that incurred for the three percent (Section 194.5, Title 5, California Administrative Code).

11. **Reports for Only Certain Categories of Physically Handicapped Minors.** All data in Columns 1 and 8 on Page 2 should be completed only if this report includes other special day classes for physically handicapped minors or special training schools and classes for mentally retarded minors.

12. **Prefiling Audit.** Before the certification is executed, all data and computations in this report should be thoroughly reviewed. The attendance of physically handicapped minors and mentally retarded minors must agree with the attendance reported in the county superintendent's annual attendance report. All computations should be thoroughly checked for accuracy and conformity with all instructions contained in this report. Where major corrections are found necessary by the county superintendent of schools, he shall require the district to complete and file a new report. In the event minor corrections are made by the county superintendent of schools or other school officials, all changes shall be initialed by the official making the corrections.

APPENDIX D

SPECIAL EDUCATION TEACHER TRAINING PROGRAMS IN CALIFORNIA INSTITUTIONS OF HIGHER EDUCATION

A Coordinating Council for Higher Education Staff Report

(A Report Prepared in Response to a Request of the California
State Assembly Interim Committee on Education)

INTRODUCTION

The Coordinating Council for Higher Education was asked by Assemblyman Charles Garrigus, Chairman of the Assembly Interim Committees on Education, to provide information relative to the subject matter of HR 388 (1964 session) concerning teacher training programs in special education. An outline of the information to be gathered to assist the Assembly committee in its study was approved by the council on September 29, 1964.

In development of this report, the council staff interviewed several institutional directors of special education programs for the purpose of developing a questionnaire to be sent to all California higher educational institutions where programs of this type exist. In addition, supplementary information was provided by the State Department of Education.

TRAINING OF PUBLIC SCHOOL TEACHERS FOR SPECIAL EDUCATION

Hard of Hearing or Deaf. There are three institutions in California accredited by the State Board of Education to prepare teachers of hard of hearing or deaf children: Los Angeles State College, San Francisco State College and the University of Southern California. Some other institutions (Chico, Long Beach, and San Fernando Valley State Colleges, Stanford University and the University of the Pacific) offer a sequence of courses related to the field but are not presently accredited to grant the credential.

In general, this is a five-year program requiring 45-52 semester hours of General Education, a range from 22 to 62 units (average 48 units) in an academic major, 18 to 24 units in professional education for the standard teaching credential and 30-47 units plus 90 hours practicum in the minor of special education—deaf or hard of hearing.

The State Department of Education reports that 155 credentials to teach hard of hearing or deaf children were granted for the school year beginning July 1, 1962, through June 30, 1963. Fourteen of these were on a provisional basis. In addition, six special credentials were granted to teach hard of hearing or deaf children and 70 special credentials for teaching the deaf.

Mentally Retarded. There are 11 institutions in California accredited by the State Board of Education to prepare teachers of mentally

retarded children: Fresno, Long Beach, Los Angeles, Sacramento, San Diego, San Fernando Valley, San Francisco, San Jose State Colleges, University of California at Los Angeles, University of the Pacific and the University of Southern California. Chapman College offers course work in this field but is not accredited to grant the credential.

In general, this is a five-year program requiring 45-52 semester hours of general education, a range from 22 to 62 units (average 48 units) in an academic major, 18 to 24 units in professional education for the standard teaching credential and 26 to 37 units plus 90 hours practicum in the area of special education—mentally retarded.

The State Department of Education reports that 1,510 credentials to teach the mentally retarded were granted for the school year beginning July 1, 1962 through June 30, 1963; 560 of these were on a provisional basis. In addition, 193 special credentials for teaching the **mentally retarded** were granted under 1955 credential regulations. In the past five years the department granted 5,995 credentials, 2,513 of these being on a provisional basis. 1,834 special credentials to teach the mentally retarded were also granted under 1955 credential regulations.

Orthopedically Handicapped Including the Cerebral Palsied. There are two institutions in California accredited by the State Board of Education to prepare teachers of the orthopedically handicapped including the cerebral palsied—Los Angeles and San Francisco State Colleges. No other schools are known to be offering a program of instruction in this area, although UCLA and the University of Southern California have offered summer courses.

In general, this is a five-year program requiring 45-52 semester hours of general education, a range of 22-62 units (average 48 units) in an academic major, 18-24 units in professional education for the standard teaching credential and 22 to 35 units plus 90 hours practicum in the minor of special education—orthopedically handicapped.

The State Department of Education reports that 178 credentials to teach the orthopedically handicapped (including the cerebral palsied) were granted for the school year beginning July 1, 1962 through June 30, 1963. Thirty-nine of these were granted on a provisional basis. The total for the past five years is 917, with 220 being provisional.

Speech Correction and Lip Reading. There are 16 institutions in California accredited by the State Board of Education to prepare therapists in the subjects of speech correction and lip reading: Chico, Fresno, Humboldt, Long Beach, Los Angeles, Sacramento, San Diego, San Fernando Valley, San Francisco, and San Jose State Colleges; Stanford University; UCLA; University of California, Santa Barbara; University of Southern California; University of the Pacific; and Whit-tier College. Five other institutions are known to offer course work in this field but are not accredited to grant the credential. (La Sierra College, La Verne College, University of Redlands, College of the Holy Names, and the California State College at Fullerton).

In general, this is a five-year program requiring 45-52 semester hours of general education, a range of 22-62 units (average 48 units) in an academic major, 18 to 24 units in professional education and 37-66 units plus 135 hours practicum in the minor of special education—speech correction and lip reading.

The State Department of Education reports that 419 credentials were granted to teach speech correction and lip reading in the school year beginning July 1, 1962, through June 30, 1963. Sixteen of these were on a provisional basis. In addition, 51 special credentials were granted to teach correction of speech defects and 13 special credentials were granted to teach lip reading under 1965 credential regulations. The total for the past five years is 1,634 credentials with 46 being provisional, 532 special credentials in speech correction and 158 special credentials in lip reading.

Visually Handicapped. There are two institutions that are accredited by the State Board of Education to prepare teachers to teach the visually handicapped: Los Angeles and San Francisco State Colleges. No other institutions are known to have an accredited sequence of courses in this area.

In general, this is a five-year program requiring 45-52 units of general education, a range of 22 to 62 units (average 48 units) in an academic major, 18 to 24 units in professional education and 22-35 units plus 90 hours practicum in special education.

The State Department of Education reports that 91 credentials were granted to teach the visually handicapped in the school year beginning July 1, 1962, through June 30, 1963; 16 of these were on a provisional basis. In addition, one special credential was issued for teaching the blind and one for teaching the partially sighted child under 1955 credential regulations. The totals for the past five years show that 399 credentials were granted to teach the visually handicapped—79 being provisional, 14 special credentials to teach the blind and 17 special credentials to teach the partially sighted were also granted under 1955 credential regulations.

QUESTIONNAIRE RESPONSES

A questionnaire was sent to 22 institutions in California that were known to have a sequence of courses in the field of special education. Sixteen of these institutions were accredited to grant one or more credentials related to special education. The information received was grouped into the main categories of student assistance, credential requirements, doctoral programs and needed development. The major consensus of opinion presented in the questionnaires is outlined below and recommendations suggested by the institutions are shown under each category.

Student Assistance. This area did not appear to be of major concern to the institutions that replied. Most institutions have resources available such as part-time employment, state and federal scholarships, assistantships, and grants, but increasing needs will require more funds. Therefore, institutions indicated a *general* desire for more student assistance. There was only one specific request in this area. The University of California at Riverside noted that state grants to defray summer session expenses incurred by teachers desiring to qualify for teaching the physically handicapped and mentally retarded were oversubscribed last summer and the funds were thinly spread. More student assistance will be needed as the educational program is extended to five years and

recruitment programs for teachers in this field are increased. The State Department of Education has reviewed this problem and will submit recommendations to the Legislature.

Credential Requirements. The present credentialing system precludes the recruitment of experienced teachers. Most experienced teachers have an original major in education and to acquire a *special education* credential requires spending about two additional years in college. Roughly 15 to 30 units would be needed to complete the academic major and approximately 2-3 semesters to complete the special education minor. There is a loss of salary advancement while attending school and often no increase in salary upon returning to teaching. To correct this situation, the State Department of Education could allow experienced teachers who hold a valid teaching credential (granted prior to September 1964) to add a special education minor and thereby qualify to teach exceptional children without completing other present requirements for the teaching credential (i.e., an academic major).

The Department of Education's credential office reports that there are now 73 combinations or routes through the old and new regulations that may be taken to obtain the special education credential. Requests for revision of the entire section of the *Administrative Code* dealing with Special Education were reported by institutions. Among the suggestions made are: (1) the expansion of credentials to cover the areas of gifted, emotionally and neurologically handicapped; (2) making speech and hearing a service credential and a major; (3) strengthening the severally mentally retarded programs; (4) changing Section 6262(a)(5) of the *Administrative Code* (which relates to a course in mental retardation) to read "elementary and/or secondary" not "elementary and secondary"; (5) clarification of "postponement of requirements" authorization; and (6) allowing of a substitute for observation participation as stated in 6262(a)(7) of the *Administrative Code*. Council staff has not made a judgment on the value of each suggestion presented by the institutions, but an overall need for study is clearly indicated. Considering the complexity of the credential requirements, the high incident of partially qualified teachers and the diversified practices among institutions, a special committee might be established by the State Board of Education to review the credential policies as related to special education.

Doctoral Programs. All institutions surveyed indicated a need for more doctoral programs in special education. There are now only three special education doctoral programs in California. All of them are in Speech and Hearing (Stanford University, University of Southern California, and UCLA). A recent study by the Western Interstate Commission on Higher Education¹ makes a recommendation supporting the statements received in this study. Four strong doctoral programs (with one or more of these in California) were recommended to be established in the West to train people to become state and local

¹ *Teachers of Exceptional Children for the West*, (WICHE: Boulder, Colorado, 1960), p. 7.

supervisors and college faculty members in special education. The Donahoe Higher Education Act of 1960 provides the legal basis for *joint* doctoral programs and in 1964 implementation was begun. One study is currently being made of a joint doctoral program in special education to be conducted by San Francisco State College and the University of California at Berkeley.

Needed Development. Recent state legislation defined a new category of exceptional child: the educationally handicapped (E.H.). This legislation permits public school districts to receive a specified reimbursement if they wish to initiate classes for emotionally disturbed and/or neurologically handicapped children. Now, if it is obligatory upon the state to set minimum teacher preparation standards, then it is necessary that such standards be established for teaching these E.H. children. Precedent is meager in this field. Only New York, Illinois, and Maryland have any extensive experience with this education problem. It appears desirable that the State Department of Education in consultation with the California State Colleges, the University of California and independent institutions conduct an inquiry into the relevant and requisite specialized preparation needed by teachers of the educationally handicapped, and, from this inquiry, develop teacher preparation standards to be included in the California *Administrative Code*.

The expansion or reduction of programs in special education was another topic of concern voiced by the respondents to this questionnaire. Programs conducted by colleges with limited staff and facilities were thought to be in need of state review to see if they possess adequate depth to be effective. Other comments concerned the expansion of statewide programs in the area of deaf and hard of hearing, orthopedically handicapped, visually handicapped and mentally retarded. The State Board of Education has given permission to only two institutions (San Francisco State and Los Angeles State) to grant credentials in the area of deaf and hard of hearing, orthopedically handicapped and visually handicapped. The charge is made that many students, outside these geographic areas, interested in teaching deaf (for example) change their major rather than travel to San Francisco or Los Angeles to complete this training. However, the cost of the programs should be weighed against the need for beginning new programs. Review of existing needs in special education should be conducted in consultation with the California State Colleges, University of California and independent institutions (by the Department of Education) with these objectives: (a) to check the quality of college programs that are operating under limited staff and facilities, and (b) to inventory the need for additional accredited programs in the fields of deaf and hard of hearing, orthopedically handicapped and visually handicapped.

Students who complete a special education program find additional problems in the teaching field. The claim is made that working environments are unsatisfactory, inadequate compensation is made for required travel between schools, budgets are meager, and there is a lack of administrative interest and support despite the fact that the state has been generous in support of these programs.

Institutions conducting special education programs could offer special training sessions for principals and supervisors who are responsible for public school programs in special education and the State Department of Education could seek ways to adequately support special education specialists in the public schools (i.e., providing consultants, reimbursements for training sessions).

Summer sessions currently are supported from tuition without the usual state support. Consequently, small classes are discouraged and often eliminated. Such classes *may* be required of certain students in order to fulfill the requirements for a credential. Failure of a college to offer such a course may mean that a teacher is unable to renew a credential. There is no justification for large numbers in some classes since the field needs only a few teachers. This situation can be remedied by balancing enrollments in consideration of differences in class sizes and needs.

Extensive effort has been directed within both the University of California system and the California State Colleges toward master planning of curricula. Therefore, the machinery is already established for handling many problems related to the programming of special education. The size, complexity and increasing need in this area should continue to be studied. Increased attention needs to be given by both systems of higher education to problems of expansion and coordination of special education in California.

Subcommittee on Research, Structure and Function

The Subcommittee on Research, Structure and Function was appointed by the Chairman of the Assembly Interim Committee on Education, Charles B. Garrigus, in July 1963. This subcommittee was instructed by Chairman Garrigus to study specialized subjects within the field of public education, to include curriculum matters, district organization and matters relating to the overall educational system of the state, and to recommend solutions in these areas to the 1965 Legislature.

Measures submitted to the committee include the following: House Resolution 485 (Master Plan for Public Education); House Resolution 81 (relating to the elementary foreign language requirement); House Resolution 361 (improving the teaching of English); House Resolution 337 (advance site acquisition); Assembly Bill 2883 (relating to junior college districts); and House Resolutions 29 and 94, both of which relate to programs of vocational education in the public schools.

The committee has attempted to study each subject in detail but with few exceptions has avoided making specific suggestions in terms of possible new legislation. Rather we have attempted to investigate broad policy areas in an attempt to suggest several possible courses of action to the Legislature.

MASTER PLAN FOR PUBLIC EDUCATION

HOUSE RESOLUTION NO. 485 (1963)

Findings

The committee held four days of hearings in Los Angeles and Monterey devoted to the consideration of House Resolution 485 (Petrís)—A Master Plan for Public Education in California. These hearings gave every indication that the creation of a master plan for primary and secondary public education is both a worthwhile and desirable objective.

At the Los Angeles hearing representatives of farm, labor, business, professional, women's, religious, and minority organizations came before the committee to express their interest in a master plan and to state their ideas on educational philosophy which should be embodied in any such plan. A key element of this hearing was the development of a modest consensus that a master plan would aid in the creation of certain priorities in the structure and functions of the public school program.

The second hearing in Monterey was given over to a wide spectrum of professional education organizations representing all aspects of public education from the classroom teacher to the University of California. While substantive consensus appeared to be less conspicuous at this hearing, there was an agreement that a master plan would aid in deriving the greatest benefit from educational expenditures, and that it would aid in bringing the ultimate goals of the whole system into sharper focus.

In substantive matters the committee finds that great public concern exists regarding increased emphasis on the basic scholastic subjects—the skills of reading, writing, and arithmetic. Most organizations representing economic and social interests, and some of the professional education groups, were in general agreement that the school system should give a first and substantial priority to the basic scholastic disciplines—even if this emphasis entailed a moderate curtailment of other aspects in the school program. This attitude was expressed in regard to both the college-bound and the terminal student.

During the 1964 First Extraordinary Session the committee submitted a report calling for the creation of a joint committee. The committee felt that any undertaking of such scope and gravity should be developed cooperatively by both houses of the Legislature. The committee is pleased to note that the Legislature did, in fact, establish the Joint Committee on Public Elementary and Secondary Education during the 1964 session, and that the joint committee is to render its report by the beginning of the 1967 General Session of the Legislature under the terms of Assembly Concurrent Resolution No. 45. The text of this resolution may be found in Appendix A to this report.

FOREIGN LANGUAGE REQUIREMENT

HOUSE RESOLUTION NO. 81 (1ST EX. 1963)

Recommendations

1. The committee recommends legislation which would permit the staggered introduction of required foreign language instruction in grades 6, 7 and 8 in successive years, beginning in 1965-66.

2. It is recommended that state funds be allocated on a basis which might assist poorer school districts in taking advantage of federal funds under the terms of the amended National Defense Education Act.

3. The committee urges that school districts make maximum use of all available teachers, teacher aides and other nonprofessional but bilingual persons in the community to assist in the foreign language program.

4. We recommend that credential requirements be reformed so as to make maximum use of persons residing in California communities with fluent bilingual language capabilities, and of alien foreign language teachers, in order to reduce the shortage of qualified foreign language teachers.

Findings

The Subcommittee on Research, Structure and Function met in San Diego to consider House Resolution No. 81 (Casey). The committee heard from representatives of the Department of Education, local school districts, and Mexican-American groups.

The committee quickly learned that simultaneous implementation of foreign language instruction in three grades presents numerous unnecessary problems of administration, curriculum development and instruction. It became apparent that a language teacher in the eighth grade would have to teach three different courses in the first three years of the program

because of the varying degrees of prior preparation of the students. Likewise, regular ninth grade language teachers would have students coming to them with three different levels of preparation, requiring additional curriculum planning.

The committee believes that the introduction of foreign language instruction on a grade by grade basis, year by year, will not detract substantially from the educational value of the program, and that such a gradual introduction will minimize technical problems in administration, teacher recruitment and curriculum planning.

The committee finds that two issues loom largest in the area of the elementary foreign language requirement. Due to the strictness of credential regulations, an exaggerated shortage of foreign language teachers is created. Fluent bilingual persons are often not able to teach because they lack one or another of the technical specifications of the credential regulations. The committee notes that persons desiring to teach foreign language under a standard designated services credential must have a baccalaureate degree, whereas persons desiring to teach vocational courses full time may qualify for the same credential with but two years of higher education and some experience. The committee feels that the Legislature should give serious consideration to permitting fluent bilingual persons to teach elementary level foreign language on a credentialing basis equivalent to that allowed to vocational education and business education teachers.

The committee notes with interest a plan whereby qualified language teachers in some local districts change classes with other teachers for a period in the day. We feel that this type of fluidity in personnel matters can substantially alleviate one of the most substantial cost elements in implementing this instruction in 1965-66. Under this system it would not be necessary for the school district to hire additional personnel to relieve regular classroom teachers since those same classroom teachers would be relieving the language specialist for a class in arithmetic, English, or some other daily subject.

The committee has determined that substantial federal funds are available to school districts under the terms of the National Defense Education Act for the purpose of purchasing capital materials in foreign language instruction. Such items include virtually all conceivable materials except regular textbooks. It appears that approximately \$5 million in federal funds will be available this year under NDEA terms, and the committee would recommend to the Department of Education that a substantial

portion of this money be allocated to requests for foreign language equipment.

The committee notes that the federal law requires a 50-50 matching of federal moneys. We also note, however, that the law allows for gross matching on a statewide basis, rather than district by district matching. The committee finds that many poorer districts currently do not take advantage of the federal program because of the strict interpretation of the 50-50 concept. We would urge that the Legislature establish an equalization formula whereby wealthier districts will be required to spend more than the 50 percent, while poorer districts are allowed a lesser percentage as their contribution. We would urge that this revision be accomplished at the earliest possible moment so that local districts can incorporate the new requirements in their budgets for 1965-66.

The committee also heard testimony related to immigration regulations. Expert testimony was received from a representative of the U.S. Immigration and Naturalization Service on the subject of the availability of alien foreign language teachers to California public schools. We are pleased to note that teachers are considered as a first priority category and that immigration from Mexico is contingent only upon the availability of a position. The committee urges the Department of Education to initiate contact with the Mexican Ministry of Education with a view toward the employment of Mexican nationals and their subsequent naturalization under terms of Public Law 414.

Substantively, on the value of foreign language instruction, the committee heard from various statewide groups. Unanimity was expressed as to the positive values inherent in the program. In the light of the variability of staffing policies available to local districts and the availability of teaching materials through federal grants, the committee sees no insurmountable obstacles to the rapid implementation of foreign language instruction, save for the advisability of a grade by grade adjustment in the requirement.

IMPROVING THE TEACHING OF ENGLISH

HOUSE RESOLUTION NO. 361 (1963)

Recommendations

1. The committee recommends that the Legislature authorize state-wide curriculum improvement institutes for the state's English teachers.

2. We urge the University of California and the state colleges, in cooperation with the Department of Education, to seek ways and means of implementing federal funds made available through recent amendments to the National Defense Education Act to support the conduct of institutes for teacher training in English.

3. The committee believes that school districts should give emphasis and attention to the effective teaching of English in the primary and lower elementary grades.

4. It is recommended that schools of education with state-supported institutions of higher learning upgrade and renew efforts to train teachers of all subjects and grades in the effective presentation of the English language as subject matter.

Findings

On October 22 the committee met to hear testimony from teachers, administrators and representatives of business on House Resolution 361, authored by Assemblyman Casey.

The major deficiencies (attested to by witnesses) in the teaching of English in our public schools may be summarized as follows:

1. Programs for preparing teachers of English tend to be poorly planned, faulty in emphasis, and unnecessarily inconsistent with one another.
2. Many currently employed teachers are deficient in their knowledge of their subject matter and in ways of presenting it effectively.

3. Many teachers of English, even though well prepared, are prevented from doing their best teaching by overloads, lack of supervision, poorly planned buildings, and poor library facilities.
4. The products of our secondary schools are, to an alarming extent, so deficient in the basic English language skills as to be unemployable or untrainable.

The problems the committee noted above are not unique to California. In the modern press for technical achievement, concern for the quality of our preparation of teachers of English and methods of presentation of language skills to students has been left to the small voice of English language teachers.

The problems we have noted above are not indicative of a breakdown in any one isolated area in the field, but rather of a weakness of the system as a whole. From the training of teachers in our schools of education, to the teacher in the classroom, to the products of school systems, we have been guilty of neglect.

For example, in the area of teacher training, one witness made reference to a recent survey of the percentage of college units required for the degree of bachelor of science in education which indicated that approximately 74.3 percent of the program is devoted to education courses and only 25.7 percent of the program is devoted to liberal arts courses. It was his opinion that the elementary education program would be better fortified by reversing this percentage.

Another witness pointed to the fact that only three out of four openings are filled with properly credentialed personnel, and even less than that number are persons who have been properly trained to teach English courses but who, because of the shortage of teachers in general, are teaching such courses.

There was universal agreement among witnesses at the lack of follow-through in our system which permits teachers, whether initially ill prepared or not, to fall further behind in their ability to effectively present their subject matter. The committee finds that there is a definite need to provide means by which college and university teachers may meet with elementary and secondary teachers to encourage a productive exchange of insights, talents and skills.

The committee recommends the establishment of low-cost, easily accessible teacher in-service training programs and facilities. We believe these

should be accomplished by teacher training institutes which might be of two types: (1) three- to six-week summer training institutes held at various university or college campuses throughout the state, and (2) two- or three-day institutes held several times during the academic year as part of yearlong teacher training seminars. Such institutes should be held in coordination with college and university authorities and should place emphasis on training in the newest techniques of effective presentation of English subject matter. Furthermore, we believe that when such institutes are established, consideration should be given to stressing the teaching techniques developed so that fundamental English skills may be taught at the lowest possible grade level.

The committee recommends that such teacher training institutes be adequately funded. Full consideration should be given to obtaining funds currently available from the federal government under Title XI of the amended National Defense Education Act, 88th Congress, 2nd Session. We urge the state colleges and the Department of Education to explore ways and means of participating in this authorization for institutes of advanced study.

A sound knowledge of the English language is a prerequisite to success in almost all other fields of knowledge, and time and again has been demonstrated to be absolutely necessary to those individuals our school systems graduate into California's market place.

One of the state's largest employers indicated that less than half of all job applicants were capable of meeting the modicum of English language skills that this employer required. (There were 220,000 applicants interviewed in 1963.) While half of those interviewed were found "unemployable," many of those who survived were terminated shortly after the training process began "as they were unable to comprehend what they read in the training material." The threat of higher yearly rates of unemployment is not a matter of economics alone but is increasingly one of education. We cannot afford to send young men and women into today's job market without assurance that they will be readily trainable individuals. We believe we must look to our school systems to exercise this responsibility.

The committee urges local school boards and program planning authorities to be particularly attuned to the needs and problems of teachers of English. Work loads of 60 to 80 hours per week were cited to the committee as one basic reason why teachers of English may not be doing an

effective job. Effective instruction in composition and grammar, where individual attention to the pupil's special needs are of primary importance, is not enhanced by a pupil load of 175 or more students per day. The severity of overloaded English teachers is particularly serious in the case of teachers at the lowest elementary levels where, as numerous witnesses emphasized to the committee, pupil attitudes toward learning are most firmly established. The natural receptivity and inquisitiveness of a third or fourth grader might readily be damaged by the lack of attention a teacher can devote to helping that child solve his particular learning problems. In the last session the Legislature recognized the necessity for lower class size in grades one through three, having in mind just such a problem.¹ Because English language skills are so basic, we urge school boards to reexamine their teaching programs to discover whether they have placed sufficient priority on the teaching of English in accordance with the most modern and effective methods available.

In order to alleviate the burdens cited as hampering the effectiveness of the teacher, such as the hours spent on administrative paperwork or other nonteaching duties, we urge school districts to develop the latent resources of subprofessionals available in the neighboring community. Some school districts already have teacher assistance and reader programs; more should. High school students and college students, particularly those in educational programs, are a ready and surprisingly willing source of assistance to the teacher who often finds she cannot prepare adequately for each day's lessons. School districts should be encouraged to take every advantage they can muster to free their regular classroom teachers to spend more time with their students or in their own preparation.

Although we have spoken primarily of the responsibility of local school districts to conduct the teaching of English more effectively, we believe that there is much that can be done at the state level, beyond the authorization of teacher inservice training institutes.

One of these has recently been undertaken and we cite it because we believe that it should be continued and made effective. This is the Department of Education's program to coordinate and disseminate research developments in the teaching of English. This is a problem which pervades all areas of education but is particularly shameful in English. We hope that continued provision of this service program at the state level will be directed toward eliminating unnecessary duplication and waste

¹See the provisions of A.B. 145, Chapter 132, First Extraordinary Session.

in program experimentation, as well as serving as an information clearing-house.

There are several other areas which deserve full attention if this problem is to be met, which we initially indicated was a malady of the entire process. We recommend them to the Department of Education as well as the Legislature, and we urge that the recently formed State Advisory Committee on English consider them in their proposed survey of the English curriculum of the public schools. They are:

1. Development of regional centers on a county basis for preparing and distributing sample teaching aids and providing consultant help for teachers.

We have in mind here utilization of the county superintendent's office and the resources currently made available to that office through the County School Service Fund. A viable structure presently exists and we recommend that it be utilized.

2. Assistance in developing satisfactory library and textbook facilities.
3. Experimentation in using electronic, audiovisual, and other aids to improve English teaching.

Both of the above are already receiving attention at the state level but it is apparent that too little productive results have filtered down to local school boards and districts. We urge that both state and local authorities seek greater implementation of library and audiovisual programs toward the end that more effective teaching resources and techniques will be developed, and that teaching methods will be upgraded.

ADVANCE SITE ACQUISITION FOR HIGHER EDUCATION FACILITIES

HOUSE RESOLUTION NO. 337 (1963)

Recommendations

1. The committee recommends that the Legislature extend for an indefinite period the authorization granted in 1963 to the Trustees of the California State Colleges to accept site donations or gifts of land. The committee notes that this authorization to accept gifts expires on October 1, 1965.

2. The committee further recommends that permanent statutory authority be granted to the State College Trustees to acquire sites in advance of college authorization. We recognize that before any particular site could, in fact, be purchased, legislative authorization of the necessary funds would be necessary, constituting a significant and conclusive measure of legislative control over advance site acquisition.

3. The committee commends the Coordinating Council on Higher Education for clearly stating its policy with regard to priorities of college authorization and site acquisition.

Findings

The committee heard testimony on House Resolution 337 by Assemblyman Ryan on October 23, 1964, from representatives of the state colleges and the Coordinating Council on Higher Education. The resolution calls for a study of the feasibility and desirability of acquiring sites for possible college campuses in advance of the actual authorization by the Legislature of the college. Members of the staff of the Coordinating Council pointed out to the committee that authority granted to the Trustees of the State Colleges in 1963 (Chapter 1870, Statutes of 1963) to accept donations of

sites is slated to expire in October 1965. The committee believes that such authority to accept gifts of this nature should be extended to the trustees indefinitely.

The committee is also aware, as demonstrated by much of the testimony received, that substantial savings might be attained through the advance purchase of sites when it appears that such properties may appreciate in value and when the location is deemed a probable future state college site. The committee believes that statutory authority should be extended beyond October 1965 to the trustees to enable them to purchase sites ahead of actual authorization. However, the trustees should be required to fully justify the proposed purchase in terms of the probable future college needs of the area in question. Such justification will, we believe, be indispensable in view of the fact that final approval must be gained from the Legislature if funds are to be appropriated for such purchases. In other words, we see no harm and much possible value in granting authority for advance acquisitions, provided that final authority to appropriate funds rests, as it must, with the Legislature.

The testimony presented on H.R. 337 brought to light the fact that there has been in the past much confusion among the segments of higher education and within the Coordinating Council itself regarding advance site acquisition vis-a-vis actual college authorization. The committee is pleased to note that subsequent to its hearing on this matter the Coordinating Council has adopted a clear and firm policy regarding advance site acquisition and the circumstances in which it may occur:

Where the council finds there is a definite ultimate need for a campus, acquisition of sites in advance of authorization to start a campus may be justified in carefully restricted circumstances, as found by the council, such as where land may not subsequently be available without excessive cost or where there may be special opportunity to obtain the land. (Adopted by the council, November 10, 1964.)

This policy is affirmed by this committee and is seen as essential if advance site acquisition is not to become a vehicle for removing, in fact, if not in law, actual authorization recommendation powers from the Coordinating Council. With these qualifications and within this framework the committee agrees in principle with advance acquisition of college campus sites.

STRUCTURE OF JUNIOR COLLEGE DISTRICTS

ASSEMBLY BILL 2883 (1963)

Recommendations

1. The committee believes that at the present time there is no demonstrated need for new state legislation which would mandate the type of district structure within which junior colleges operate.

2. The committee finds that legislation such as is proposed by Assembly Bill 2883 does not accomplish, in the case of all California junior colleges, the desired end of creating separate boards of education to handle junior college matters exclusively.

3. We urge unified and high school districts which operate junior colleges to give special consideration to the several different needs and functions of junior colleges within their jurisdictions, to insure that California's higher education objectives are well served.

Findings

On December 7 the committee met to hear testimony on Assembly Bill 2883 by Assemblyman Dymally. Witnesses represented faculty and administration within the junior college system.

The committee finds that under the present law junior colleges may be operated under any of the following structural circumstances:

- (a) A separate junior college district with its own governing board.
- (b) A unified district or high school district with a governing board responsible for grades K through 14 or 9-14.
- (c) A unified or high school district and a separate junior college district under a common governing board and administration.

No portion of the Education Code requires either separateness of districts or governing boards. Today the majority of junior colleges are operated as in (a) with some seven districts in one of the other categories.

The provisions of A.B. 2883 were intended to eliminate governing structures other than as in (a). The bill requires that after a fixed date all junior colleges shall be operated by a separate junior college district. The bill does not explicitly require the formation of a separate junior college district governing board, as would be necessary to eliminate the structure in (c), but we infer from its intent and from proponents of the bill that this was intended.

The committee concludes that at the present time state mandation of separate junior college districts with separate governing boards is not advisable. We have arrived at this conclusion by measuring the goal of "separation" against two standards: the *educational* advantages for our young men and women in the community junior colleges and the *financial* advantages of separation on a statewide basis. We do not find that either of these standards has been demonstrated to require state mandation of separation at the present time.

Proponents of A.B. 2883 complained that because members of the governing board were elected to serve in an office that demands knowledge of and interest in a system of grades K through 14, junior colleges often are the least represented segments of the system on a particular board and that because that board must serve so many segments, junior college problems were often subordinated to those of other segments. We do not believe this contention was adequately supported and we find it particularly weak in light of the glowing terms in which the educational quality of such junior colleges as Long Beach and Los Angeles were described. Proponents of the bill admitted that at the present time there was no local pressure for reformation of the junior college structure, and if the issue were put to a vote the present system would be favored overwhelmingly.

In terms of better financing of junior colleges and more certain control over the utilization of moneys that might be afforded by a separate junior college district, the committee finds that such was not sufficiently shown to require state mandation. In fact, we believe that separation might unnecessarily increase administrative costs because of the proliferation of administrative personnel that would be required to manage a separately structured district. Although it was alleged that the junior college in one district was losing a large amount of funds because of unproven allocation of costs to the junior college segment and an unfair distribution of funds to the junior college out of all that went to the unified district, the com-

mittee cannot find that was in fact true; the committee was not shown any facts or figures which demonstrated this loss of funds. Furthermore, we were not shown in what ways the present unified structure was financially disadvantageous from an *educational* point of view.

Other disadvantages cited by proponents of the bill, for example, whether elevating a high school teacher to the junior college teaching ranks in order to remove him from the high school system was a justifiable action by a common governing board, do not, we believe, justify this particular legislative action. These things are more a matter of local concern and should be worked out with local governing boards and district officials. In terms of the criteria we have adopted and which we note above, we do not believe the state's concern for sound educational policies and finances is endangered.

We think it relevant to point out also that we do not refrain from a favorable recommendation on this bill because, as was argued by opponents of the measure, the structure of the educational segments in any particular community is purely a matter of local concern and control. We reject the thesis that "local autonomy" demands that the issue of an independent junior college district be left to the local voters. If the structure were inadequate to serve the needs of the students, was not functioning in accordance with sound educational policies, or not operating up to the standards which the Legislature has determined that junior colleges should accomplish, then we would not hesitate in recommending to the Legislature a structure for the junior college segment which we believe would accomplish those goals.

VOCATIONAL EDUCATION

HOUSE RESOLUTIONS NO. 29 AND 94 (1963)

Recommendations

1. The committee urges school districts to make maximum use of federal funds available under the newly enacted Vocational Education Act of 1963. We understand approximately \$7.6 million is being made available to California school districts in the current school year as a result of this legislation.

2. The committee recommends that careful review be given to existing credential requirements for teachers of vocational education with a view to eliminating unnecessary academic requirements for these individuals. Every attempt should be made to induce qualified tradesmen and skilled technicians from the private sphere of the economy to enter the public school system as vocational education instructors.

3. We suggest that each school district operating a vocational education program carefully evaluate the effectiveness of the training offered to determine whether it has a reasonable relation to the employment available in today's modern economy. To accomplish this end the committee recommends that the Legislature direct the Department of Education to establish minimum standards for programs of vocational education offered by the public school system.

4. In order to aid the able, vocationally oriented student the committee recommends that the Legislature authorize a system of scholarships to such individuals, based upon financial need, for the purpose of aiding them in obtaining vocational training in trade schools or in the terminal programs of the state's junior colleges.

5. The committee recommends clarification and implementation by the Legislature of the provisions of Senate Bill 1379 of the 1963 session, which provided permissive countywide vocational high schools, for the purpose of making feasible central county or regionwide vocational education

facilities. Careful study should be given to the possibilities of financing such centers through funds provided by the Vocational Education Act of 1963.

Findings

The committee heard testimony in Santa Barbara on House Resolution 29, by Assemblyman Quimby, relating to vocational education programs, and House Resolution 94 (Dannemeyer), calling for a feasibility study of public technical and vocational schools. We admit that we were pleasantly surprised to hear the representative of the State Department of Education state, in effect, that in his opinion vocational education in California is in excellent condition. Other than a recommendation that the committee recommend the constitution of a joint legislative committee on vocational education this witness had no recommendations to make to the committee regarding ways and means of improving or extending vocational education programs. Indeed, he summed up:

The program of vocational education in California's public schools, long the most extensive in the United States, has continued to expand in scope, size and the intenseness of activity. Increasingly called upon to bulwark the fast-changing economy and to provide stability to the state's total work force, vocational education is on the move. . . .

Overshadowing this surge of physical accomplishment, however, were two other factors even more important. The first was a significant rise in the status of vocational education. . . . The second factor might be termed a new awareness of the potential for vocational education in California, and a determination to achieve it.

In this witness's opinion, it appears that the new funds made available by the federal Vocational Education Act of 1963 (the Morse-Perkins Act), applied to the existing vocational education structure in California, will be all that is needed to insure that vocational education will rise to new heights of effectiveness. Apparently the view of the Department of Education in this regard is shared by representatives of industry and labor and by local school districts. None of these organizations wished to offer any suggestions or recommendations to this committee; few even desired to appear in order to enlighten the committee regarding their own programs for training workers or students.

The committee cannot agree that vocational education is in such an untroubled position. The mere application of substantial federal moneys, which certainly are to be welcomed, cannot insure that vocational education is relevant to today's rapidly changing and diversifying economy. Indeed, the committee finds it disturbing that the State Department of Education, responsible for supervision over the state's vocational education effort, apparently feels that increases in money, status and "awareness" alone guarantee meaningful programs in this field. All these elements are indeed valuable to vocational education; if, however, we are to construct truly sound programs it will be necessary to examine substantive items such as course content, the qualification of instructors and the attitudes of school administrators toward these programs.

The committee has attempted, through its staff, to examine possible faults in programs of vocational education presently being offered in this state. Our recommendations are directed toward several problem areas which we have observed; this list is not intended to be exclusive, nor is this report a thorough and exhaustive study of vocational education in California.

According to the testimony received, some \$7.6 million will be made available to California through the federal government for vocational education programs in 1964-65. The committee urges school districts, guided by the Department of Education, to make maximum use of these funds to improve and extend their programs. It is our understanding that these moneys are available through matching provisions. Careful study should be made of the possibilities of applying any normal year-to-year increases in present vocational education program expenditures toward the matching requirements, thus reducing the total new money which would otherwise be required of school districts if they are to qualify for federal funds.

The committee has heard comment from time to time regarding a shortage of qualified vocational education instructors. We suggest that there is, perhaps, not a shortage of qualified people but rather that it is unrealistic to require such stringent credential requirements of these individuals. Review should be made of the present credential requirements for vocational teachers to determine whether the supply of such persons might increase if these requirements were lowered.

Vocational education is, essentially, preparation for the world of work. If the programs thereby offered have little relation to this world and to the

job opportunities which it has to offer, the time of both student and teacher is wasted and funds are needlessly expended. Evidence is abundant throughout the country today that many vocational programs are not realistic in the sense that they do not offer training and education which is useful in the private sphere of the economy. California must share a part of this weakness. To cite one example, a recent study showed that one California city school system with four high schools in 1963-64 enrolled 3,325 students in drafting, auto shop, metal shop, machine shop, electricity, wood shop, print shop, crafts and blueprint reading. Not a single one of these subjects was a job-oriented course. Equipment was outmoded and obsolete techniques were being taught. Obviously, it is of little use to the student to learn skills in the high school print shop which are not used in the private printing plants of today.

To remedy this situation the committee urges each school district to carefully examine its vocational education program to determine whether it is job related. The Department of Education, to aid in this effort, might well be directed to establish minimum standards for various types of vocational education programs. As long as the state is committed to support school districts for all their activities, rather than for specific types of courses and methods of training, this responsibility must remain primarily with local authorities. We urge them to make careful review of their programs.

One area in which the Legislature *can* encourage vocational education is in the scholarship field. For many years the State of California has awarded scholarships for high academic achievement. With the exception of a specialized program for agricultural scholarships which was phased out recently, however, no financial encouragement has been given in past years for deserving and needy students who desire to obtain training which will qualify them to enter a specialized trade occupation. In view of the many excellent terminal and trade programs now being offered by California's junior colleges, and with the multiplicity of trade schools available in the private sector, we believe that such a program could be useful. We therefore recommend that a modest scholarship program be established, administered through the State Scholarship Commission, to aid needy vocationally oriented students in obtaining such training. Such a program should amply demonstrate the concern of the Legislature for effective vocational education and may well provide additional motivation to

vocationally oriented students to achieve well in school, and indeed to remain in school until graduation.

Finally, we note that legislation enacted in 1963 (S.B. 1379) provides for the establishment of countywide vocational high schools. Despite the obvious value of such a provision in allowing school districts to pool their resources in the establishment of a regional vocational education facility we are informed that as yet this measure has not been implemented in California. It appears to the committee that only through such a "pooling" can much of the expensive equipment and the scarce instructors be obtained at a reasonable cost. We note that elsewhere in the country such central vocational education facilities have proved most effective. One such example which has gained national prominence is the Bucks County Technical School in Pennsylvania. Here, six school districts jointly participate in a vocational school which offers courses to 10th- through 12th-grade pupils in subjects such as candymaking, cosmetology and appliance repair. Obviously, such subjects train individuals for occupations for which there is presently a ready market. Pupils attending the Bucks County School attend for several weeks, then attend their regular academic high school classes. In this way general education is not sacrificed for technical, vocational training. Evidence exists that this experiment in a regional, purely technical school has been highly successful in the improvement of the motivation of students who otherwise could become school dropouts and in the provision of realistic, job-related educational programs.

The Bucks County School is treated here merely as an example of the type of vocational program which can be made available on a regional, or countywide, basis. The committee believes that the existing authorization provided by S.B. 1379 should be implemented and made financially feasible. Amendments to this bill may well be required in this implementation. Thorough study should be made of the possibilities of obtaining federal Vocational Education Act funds for this purpose, as well as financing such a facility through a transfer of funds apportioned by the state and received for a child who resides in a school district but who attends the countywide facility to the county superintendent of schools. The committee believes that significant improvements can be made in vocational education in California through an implementation of this law.

APPENDIX A

ASSEMBLY CONCURRENT RESOLUTION 45

by Assemblyman Bee

Relative to a study of public elementary and secondary education and creating the Joint Interim Committee on Public Elementary and Secondary Education.

WHEREAS, Several interim legislative investigations have proposed policies and plans for improving public education in California; and

WHEREAS, Local community members elect district and county boards of education to determine local public school policies and plans; and

WHEREAS, The classroom teacher must instruct children in accordance with state and local policies and plans; and

WHEREAS, The development of "A Master Plan for Higher Education" is resulting in improved structure and excellence in higher education; and

WHEREAS, The entire structure of public elementary and secondary education in California needs study for improvement; now, therefore, be it

Resolved by the Assembly of the State of California, the Senate thereof concurring, As follows:

1. The Joint Interim Committee on Public Elementary and Secondary Education is hereby created and authorized and directed to ascertain, study and analyze all facts relating to the subject of the entire structure of public elementary and secondary education in California; the clarification of the role of the State Board of Education, the county boards of education, and local district boards of education, relating to responsibility and authority for the fiscal controls of the public schools; the clarification of the role of the individual classroom teacher in policy determination for public education; the clarification of the role of classroom teacher, school administration, and governing bodies for the improvement of instruction; the clarification of the roles and manner of selection of the State Superintendent of Public Instruction, the staff of the State Department of Education, and county superintendents of schools; and the establishment of a Master Plan for Public Elementary and Secondary Education, including but not limited to the operation, effect, administra-

tion, enforcement and needed revision of any and all laws in any way bearing upon or relating to the subject of this resolution, and to report thereon to the Legislature, including in the reports its recommendations for appropriate legislation and a "Master Plan for Public Elementary and Secondary Education."

1.5. The Joint Interim Committee on Public Elementary and Secondary Education is also hereby authorized and directed to ascertain, study and analyze all facts relating to the subject of the duties, powers and responsibilities of the county board of education and the county superintendent of schools, including the interrelation thereof to the State, to the county, and to local school districts, and including a means of establishing an adequate structure of fiscal responsibility for the office of the county superintendent of schools and the county boards of education which would recognize the three-way division of their responsibilities to the State, the county, and the local school districts and yet place the county board of education in a relationship to fiscal matters appropriate to the political importance of that body, including but not limited to the operation, effect, administration, enforcement and needed revision of any and all laws in any way bearing upon or relating to the subject of this resolution, and to report thereon to the Legislature, including in the reports its recommendations for appropriate legislation.

2. The committee shall consist of the members of the Assembly Interim Committee on Education and the members of the Senate Fact Finding Committee on Education. Vacancies occurring in the membership of the committee shall be filled by the appointing power.

3. The committee is authorized to act during this session of the Legislature, including any recess, and after final adjournment, with authority to file a final report not later than the fifth legislative day of the 1967 Regular Session.

4. The committee and its members shall have and exercise all of the rights, duties and powers conferred upon investigating committees and their members by the provisions of the Joint Rules of the Senate and Assembly as they are adopted and amended from time to time at this session, which provisions are incorporated herein and made applicable to this committee and its members.

5. The committee has the following additional powers and duties:

(a) To select a chairman and a vice chairman from its membership.

(b) To contract with such other agencies, public or private, as it deems necessary for the rendition and affording of such services, facilities, studies and reports to the committee as will best assist it to carry out the purposes for which it is created.

(c) To cooperate with and secure the cooperation of county, city, city and county, and other local law enforcement agencies in investigating any matter within the scope of this resolution and to direct the sheriff of any county to serve subpoenas, orders and other process issued by the committee.

(d) To report its findings and recommendations to the Legislature and to the people from time to time and at any time, not later than herein provided.

(e) To do any and all other things necessary or convenient to enable it fully and adequately to exercise its powers, perform its duties, and accomplish the objects and purposes of this resolution.

6. The sum of nine thousand five hundred dollars (\$9,500) or so much thereof as may be necessary is hereby made available from the Contingent Fund of the Senate and Assembly for the expenses of the committee and its members and for any charges, expenses or claims it may incur under this resolution during the 1964-1965 fiscal year, to be paid from the said contingent funds equally and disbursed, after certification by the chairman of the committee, upon warrants drawn by the State Controller upon the State Treasurer.

I. INTRODUCTION

On September 3, 1964, the Assembly Interim Committee on Government Organization was activated, and the present committee members appointed, to study several important measures which had been assigned for interim study pursuant to House Resolution No. 500 adopted June 21, 1963.

This report contains the findings, conclusions and recommendations of the committee on the first of these subjects—the integration of the revenue collection functions of California state government within a central revenue department. Assembly Bill No. 3009 introduced by Assemblyman Milton Marks in the 1963 session was the specific proposal referred to the committee for interim study.

For more than 35 years committees of the Legislature and special study commissions have consistently recommended reorganization of California's structure for tax administration. The last major study by a legislative committee was undertaken 10 years ago, and the present committee has been concerned with reviewing the previous recommendations in the light of more recent developments.

The committee received valuable assistance in the conduct of this study from Governor Edmund G. Brown; Director Hale Champion and the staff of the Department of Finance; Hon. Paul Leake, Member

of the Board of Equalization, Third District; Hon. John W. Lynch, Member of the Board of Equalization, Second District; Herbert F. Freeman, Executive Secretary, Board of Equalization; Hon. Alan Cranston, State Controller; Ralph I. McCarthy, Deputy State Controller; and Martin Huff, Executive Officer, Franchise Tax Board.

It is significant that this is the first study of consolidation of revenue administration which has had the complete cooperation and positive support of the state officials with major responsibilities for tax collection. Each of these officials stated to the committee his belief that the proposed unification would result in substantial economies.

In order to more accurately assess the present structure for tax administration, background chapters have been prepared by the committee staff to provide a brief review of its history and development (Chapter III); an outline of the existing structure (Chapter IV); a survey of developments in other states (Chapter V); and a cross section of the findings and recommendations of previous studies (Chapter VI).

Public hearings were held on the subject matter of AB 3009 (1963) in Sacramento on October 6, 1964, and in Los Angeles on December 10, 1964. The committee expresses its appreciation for those witnesses who contributed to a better understanding of this complex problem.

The committee also wishes to acknowledge the contribution of Legislative Analyst A. Alan Post, whose continued support of revenue unification is well known.

II. SUMMARY

DEVELOPMENT OF REVENUE ADMINISTRATION

The product of 115 years of taxation in California is an administrative structure that has developed to meet specific fiscal crises. While there are historical reasons for the present assignment of tax collection responsibilities among several agencies, there is little over-all administrative rationale to the current structure.

THE TREND IN OTHER STATES

The trend of state tax administration is toward the consolidation of functions within a central revenue agency which is administered by a director appointed by the Governor. States which have established unified revenue administration have experienced a decline in the costs of administration.

Thirty of the 50 states administer the major taxes under no more than two agencies. All of the states which have both the sales and income taxes, except California, administer these under one central agency.

CONSENSUS OF PAST STUDIES

For more than 35 years legislative committees and special commissions have consistently recommended unification of revenue collection.

This consensus has been supported by each of our present state officials with tax administration responsibilities.

ECONOMIES OF CONSOLIDATION

The most serious disadvantage of the present administrative structure is that it has perpetuated inefficient and uneconomical use of personnel and facilities. The committee concludes that significant economies will result from consolidation of the major state tax programs.

TAXPAYER CONVENIENCE

The distribution of tax collection responsibility among several agencies presents a complicated picture to the taxpayer. An individual taxpayer is faced with the confusing situation of having to deal with as many as four separate agencies in the payment of his state taxes and in some instances having to deal with more than one agency in the payment of a single tax.

RESPONSIBILITY TO THE CHIEF EXECUTIVE

The present structure for tax administration violates the principle of concentrating responsibility for administration of the executive branch in the chief executive, results in duplication of certain activities and facilities, and hampers coordinated enforcement of all revenue laws.

TAX APPEALS

One of the essentials of good tax administration is an adequate appeals process. The committee concludes that the tax appeals procedure should be established independently from the administrative functions of tax collection to insure a clear separation of authority.

COMMITTEE RECOMMENDATIONS

The committee makes the following recommendations concerning California's structure for tax administration:

1. That a Department of Revenue be established with responsibility for the statutory state tax collection functions presently exercised by the State Controller, the Board of Equalization, and the Franchise Tax Board.
2. That the Department of Revenue be administered by a Director of Revenue appointed by the Governor with Senate confirmation and removable by the Legislature for cause.
3. That the Board of Equalization be designated as the board of tax appeals to review the decisions of the Department of Revenue.
4. That we move toward the establishment of an effective system of self-assessment of the inheritance tax. A first step should be self-assessment of those assets which have a fairly exact and easily ascertainable market value.
5. That the Director of the Department of Revenue submit progress reports to the Legislature on the internal organization of the department; and that the Legislative Analyst be directed to undertake an intensive review of the operations and organization of the Department of Revenue.

III. THE DEVELOPMENT OF REVENUE ADMINISTRATION IN CALIFORNIA

By the time California was admitted into the Union on September 9, 1850, the First Legislature had already met, approved the necessary laws for the commencement of government operations and adjourned. The enactment by the Legislature of a comprehensive revenue measure in March of that year marked the beginning of state tax administration¹ in California.

The principal feature of the revenue act was a direct state tax on general property.² This tax served as the major source of state revenue until 1911, and became the primary source of problems of tax administration for that 60-year period.

As provided by statute, the county assessors were to determine the value of all taxable property within their respective counties and both the state and county taxes were to be collected by the county treasurers who were allowed a percentage of the state tax collected. The county treasurers proved unable to collect the property tax for 1850³ and

¹ For a detailed analysis of the development of taxation and tax administration in California from statehood to 1935 see William C. Fankhouser, *A Financial History of California*, University of California Publications in Economics, Vol. 3, No. 2, 1913, and Marvel M. Stockwell, *Studies in California State Taxation*, Publications of the University of California at Los Angeles in Social Sciences, Vol. 7, 1939.

² *Statutes of 1850*, Chapter 17.

³ Fankhouser, p. 146.

accordingly an act was passed the following year transferring to the county sheriff of each county the duties of tax collector.⁴

The fact that the state tax rate was applied to property valued locally provided an inducement to local officials to under-assess property in their respective counties in order to enable the property owners in those counties to pay a smaller share of the state tax. The system of competitive undervaluation which resulted has been referred to as "one of the worst in the United States."⁵

An additional problem involved in the collection of the state's share of the property tax was the expense to the state in the form of fees paid to local officials for tax collection. In 1867, State Controller George Oulton criticized this system of collection, indicating that the state expended about 20 percent of the receipts from the property tax for payment of fees. Controller Oulton recommended revision of the revenue laws and the creation of a board of equalization.⁶

THE FIRST STATE BOARD OF EQUALIZATION

By 1869, the practice of underassessment had reached such proportions that Governor H. H. Haight advocated the establishment of a state equalization board to equalize assessments between the various counties. Legislation creating a board, composed of the State Controller and two members appointed by the Governor, was adopted in response to the Governor's recommendation.⁷

The board was hampered in its earliest efforts to enforce the law by a lack of cooperation on the part of county officers. In 1874, the California Supreme Court ruled that the board's statutory power to equalize assessments was in violation of the constitutional requirement that property be assessed by an officer elected by those whose property he was to assess. The court held that the process of equalization was a function of assessment since to change the valuation of a county resulted in a new assessment.⁸ This decision and subsequent removal of the supervisory control which the board had exercised resulted in "a rapid degeneration into the old conditions of underassessment."⁹

A CONSTITUTIONAL BOARD OF EQUALIZATION

With the adoption of California's second Constitution in 1879, the Board of Equalization was given constitutional status and its authority to equalize the assessment of property in the various counties was restored.¹⁰

The board was to consist of one member elected from each of the congressional districts then existing with the Controller as an ex officio member. A constitutional amendment was adopted in 1884 which authorized the Legislature to redistrict the state into four districts " . . . as nearly equal in population as practical. . . ."¹¹

¹⁰ *Constitution of 1879*, Article XIII, Secs. 9, 10.

¹¹ *Constitution of 1879*, Article XIII, Sec. 9. The only redistricting which has been undertaken took place in 1923 establishing the four equalization districts as they exist at present.

From 1881 to 1910, the board frequently exercised its authority to equalize assessments and increased or decreased the valuation of property in various counties.¹²

Following adoption of the new Constitution, the Legislature, in 1880, also authorized the board to assess the property of all railroads which operated in more than one county in the state¹³ and this law was later amended to provide that the State Controller collect the board-assessed tax on railroad property. This established a pattern of joint administration by the Board of Equalization and the Controller which was subsequently followed with the adoption of other taxes.

In 1892, the fee system of collecting the property tax was again criticized. Controller E. P. Colgan called the attention of the Legislature to the deficiencies of the system,¹⁴ and the following year a bill was approved abolishing all commissions and fees paid by the state to local officials for their services in assessing property, auditing the assessments, and collecting and paying over the ad valorem property tax.

THE INHERITANCE TAX OF 1893

In that same year inheritance taxation was introduced into California. The tax was to be collected by the county treasurers, who were allowed a percentage of the tax collected.¹⁵ By the provisions of this act the fee system which had been abolished for the property tax was reintroduced. In 1909 the Controller was authorized to appoint an inheritance tax deputy to assist in the administration of the tax, and in 1911 the law was further amended to authorize the Controller to appoint an inheritance tax appraiser in each county¹⁶ who would receive prescribed fees for his appraisals. This general pattern of administration has continued to the present.

THE TAX REFORM OF 1910

In response to widespread criticism of the revenue system in California, the Legislature created a Commission on Revenue and Taxation in 1905 to recommend a plan for revision and reform of the existing system.¹⁷ The special tax commission condemned the efforts to obtain equalization of the property tax.¹⁸ The commission was interested in securing separation of sources of state and local revenue under which it believed that equalization by a state board would no longer be necessary.¹⁹

The unanimous recommendations of the commission, frequently referred to as the "Plehn Plan," proposed that the state abandon the property tax to the counties and municipalities and adopt a series of gross earnings and franchise taxes on various classes of corporations. The result would be a separation of the sources of revenue available to state and local governments.

¹⁴ Fankhouser, p. 294.

¹⁵ *Statutes of 1893*, Chapter 168.

¹⁶ *Statutes of 1911*, Chapter 395.

¹⁷ As organized the commission consisted of Governor Pardee, Professor Carl L. Plehn (a noted expert on taxation), and two Members of the Senate and Assembly.

¹⁸ *Report of the Commission on Revenue and Taxation*, 1906, p. 10.

¹⁹ *Ibid.*, p. 11.

However, the constitutional amendment proposed by the Legislature to carry out the recommendations of the commission was defeated in 1908.²⁰ A second commission was appointed²¹ and the plan was revised to meet the objections raised during the election campaign. After receiving the commission's report²² the Legislature met in extraordinary session one month prior to the election of 1910 and approved the necessary constitutional amendment for submission to the voters. At the election of 1910, the plan was approved.

The passage of this amendment marked a shift from local administration of state taxes to state control. Under the new system the state received the largest part of its revenue from a gross receipts tax on public service corporations; a gross premium tax on insurance companies; a capital stock tax on banks; and an inheritance tax. The rates were applied on the theory that each class bore some relationship to property value, but it was this theory that resulted in difficulty in adjusting relative tax burdens.

The pattern of joint administration of state taxes, which had been established earlier, was expanded with the adoption of the provision for assessment of the new taxes by the Board of Equalization and collection by the Controller.

THE HIGHWAY USER TAXES OF 1923

The need for additional revenue to finance a growing state highway system resulted in the passage of several state taxes on automobiles and their operation. These new sources of revenue established the principle that "the highway user was the receiver of benefit, and therefore the proper taxpayer."²³

Early efforts to register motor vehicles had proven ineffective and so a flat registration fee for privately owned motor vehicles was instituted by the Motor Vehicle Act of 1923.²⁴ Commercial motor transportation was first taxed under the Motor Vehicle License Tax Act of 1923.²⁵ The Board of Equalization licensed each vehicle operated and payment was made to the Controller on the basis of gross receipts. The most productive in support of highways and the easiest of these highway user taxes to administer was the Motor Vehicle Fuel Tax Act of 1923.²⁶ Responsibility for licensing and assessing the tax was assigned to the Board of Equalization with collection the responsibility of the Controller.

REVENUE REFORM AND THE DEPRESSION

As early as 1917, a special State Tax Commission had recommended the abandonment of the system of separation of sources. The commission noted that the system had failed as a revenue producer at its original rates and its provisions for adjustments in rates were faulty.²⁷

²⁰ Fankhouser, p. 372.

²¹ As members of the commission, Governor Gillett appointed Senator J. B. Curtin and Professor Plehn.

²² *Report of the Commission on Revenue and Taxation, 1910.*

²⁴ *Statutes of 1923*, Chapter 266.

²⁵ *Ibid.*, Chapter 341.

²⁶ *Ibid.*, Chapter 267.

²⁷ *Report of the State Tax Commission of the State of California, 1917*, p. 9.

A California Supreme Court decision²⁸ invalidating the application of the Corporation Tax Law of 1915 to foreign corporations, emphasized the general dissatisfaction with that method of taxation. The 1927 Legislature repealed this act and authorized an extensive study of the system of separation of sources by the California Tax Commission.²⁹ As a result of the commission's study³⁰ a constitutional amendment was submitted to the voters in 1928 changing the concept of corporation taxation by permitting taxation of banks and general corporations on the basis of net income.

FRANCHISE TAX COMMISSIONER

The adoption of the Bank and Corporation Tax Act of 1929³¹ marked a significant departure from the separation of sources which had characterized tax history since 1911. The creation of the new office of Franchise Tax Commissioner also marked a departure from the accepted pattern of assigning new taxes to the Board of Equalization and the Controller with shared administrative responsibilities. This was the first time since the adoption of the *Constitution of 1879* that a new agency for administering taxes had been set up.

The Franchise Tax Commissioner was appointed by a committee consisting of the Controller, the Director of Finance and the Chairman of the Board of Equalization.

The California Tax Commission submitted its final report in 1929. The commission concluded that the faults of the system of separation of sources are "serious and fundamental" and that it should be abandoned.³² In addition to its recommendation that the uniform business franchise tax on all corporations be enacted,³³ the commission recommended the return of public utilities to the local tax rolls,³⁴ and the adoption of a personal income tax.³⁵ All of the commission's recommendations were conditioned upon a fundamental reform of the administrative structure for revenue collection. The commission's report was reviewed by a Joint Legislative Committee on Taxation in 1931, which disagreed with the basic proposals³⁶ and no additional changes were made.

THE RILEY-STEWART PLAN

By 1933, however, the effects of the financial depression upon a tax system which had fundamental defects demanded immediate changes. The measure which was enacted by the Legislature in that year was known as the "Riley-Stewart Plan."³⁷

A constitutional amendment incorporating the major changes in the tax system was submitted to the voters and adopted at a special election held in June 1933. Under this plan the separation of sources was abandoned. Public utility property was returned to local tax rolls

³⁶ Joint Legislative Committee on Taxation, *Report*, 1931, p. 34.

³⁷ Named after State Controller Ray L. Riley and Board of Equalization Member, Fred E. Stewart.

which involved the resumption of equalizing assessed values of all property in counties throughout the state. In addition, the counties' responsibility for financing public schools was assumed by the state in an effort to relieve the burden on the property tax. An attempt was also made to limit state and local government expenditures.

As a result of the enactment of the Riley-Stewart Plan, the 1933 Legislature was faced with the addition of public school costs to the existing budget deficit. In response to this crisis several new revenue measures were enacted. The most important of these was the retail sales tax.³⁸ Administration of the tax was assigned to the Board of Equalization with the burden of collection upon the retailer.

After having been forbidden since 1909, horseracing at which betting is allowed was permitted with the passage of a constitutional amendment at the special election in June 1933. A license tax was adopted on all parimutuel wagering.³⁹ A board, composed of three members appointed by the Governor, was created to govern horseracing and to collect the revenue. A tax on alcoholic beverages,⁴⁰ to be administered by the Board of Equalization as assessor and enforcer, with the Controller as collector, was also enacted.

A tax on personal income,⁴¹ which had been advocated by the 1929 commission to "supply the missing third leg to the tax stool and provide a logical unity to the system"⁴² was adopted in 1935. Administration of the tax was assigned to the Franchise Tax Commissioner. The adoption of the use tax⁴³ was intended to extend the coverage of the sales tax to property purchased outside California for use in the state. A third tax enacted in 1935 resulted from difficulties in administering the local personal property taxes on motor vehicles. To meet this problem a motor vehicle in lieu tax was enacted⁴⁴ and assigned to the Department of Motor Vehicles which had been established in 1931. Another change in 1935 was the enactment of the Unemployment Insurance Law⁴⁵ to be administered by the newly created Department of Employment.

In 1937, the diesel (use fuel) tax⁴⁶ became a supplement to the gasoline tax in the field of highway user taxes. This tax was to be administered in the same manner as the gas tax. A private car tax⁴⁷ replaced the state-assessed, but locally collected, property taxes on privately owned railroad cars with complete administrative responsibility given to the Board of Equalization. The Franchise Tax Commissioner was assigned the duty of administering the corporation income tax⁴⁸ enacted to supplement the franchise tax. Two years later the gift tax⁴⁹ was added to counteract avoidance of the inheritance tax and administration was assigned to the Controller.

⁴⁷ *Ibid.*, Chapter 283.

⁴⁸ *Ibid.*, Chapter 765.

⁴⁹ *Statutes of 1939*, Chapter 652.

With the enactment of the major state taxes of the 1930's the revenue system of California was finally established in the form which has existed with only minor changes to the present.

THE FRANCHISE TAX BOARD

With the adoption of the civil service amendment to the Constitution in 1934⁵⁰ every officer and employee of the state was included in the civil service system except elective officers and officers appointed by the Governor. Since the Franchise Tax Commissioner was neither an elective officer nor an officer appointed by the Governor, he became the only civil service employee responsible to no one for his actions.

A legislative investigation in 1948 of the office of the Franchise Tax Commissioner revealed inefficiency and mismanagement and "widespread practice of employees . . . soliciting and performing outside employment which is incompatible with their duties as state employees."⁵¹ The 1949 Legislature transformed the office of the Franchise Tax Commissioner into that of the Franchise Tax Board consisting of the State Controller, the Director of Finance, and the Chairman of the State Board of Equalization.⁵² The Franchise Tax Board appoints an executive officer to whom is delegated the responsibility for directing the activities of the staff of the agency.

The enactment of the Uniform Local Sales and Use Tax Law of 1955⁵³ established a new pattern of state revenue administration through cooperation with local governments for the collection of state-administered local sales and use taxes. By the latter part of 1960 all cities and counties of the state used the Board of Equalization machinery for collecting their sales tax.

In 1959, the cigarette tax⁵⁴ was enacted as part of a program to meet a major budget deficit. This tax was added to the revenues administered by the Board of Equalization.

The most recent tax enacted was the subscription television tax.⁵⁵ It became operative in 1963, but was repealed by an initiative constitutional amendment approved by the electorate in November 1964.

SUMMARY

The product of 115 years of taxation in California is an administrative structure that has developed to meet specific fiscal crises. While there are historical reasons for the present assignment of tax collection responsibilities among several agencies, there is little over-all administrative rationale to the current structure.

IV. THE PRESENT STRUCTURE FOR TAX ADMINISTRATION

Administration of most California revenue laws is divided among three major tax collection agencies: the State Controller, the Board of Equalization and the Franchise Tax Board.¹

STATE CONTROLLER

The State Controller is an elected constitutional officer. As enumerated in the Constitution, the Controller's duties are limited to drawing warrants² and serving on designated constitutional boards.

The Controller has been assigned responsibilities in the administration of most state taxes. (See the organizational chart on the following page for an outline of the existing responsibilities for tax administration.) He serves as Chairman of the Franchise Tax Board and as a member of the Board of Equalization.

The Controller has direct administrative responsibilities for the collection of the gasoline tax (motor vehicle fuel license tax), the truck tax (motor vehicle transportation license tax), and the insurance com-

¹ For a review of the organizational structure of these agencies see William Hauck, *The Current Organizational Structure of the Franchise Tax Board, Board of Equalization and State Controller of California*, April 30, 1964. A Coro Foundation study, it was conducted under the auspices of the California State Commission on Government Organization and Economy.

² *Constitution of 1879*, Article IV, Sec. 22.

panies tax and assessment of these taxes is made by the Board of Equalization. The petroleum and gas production assessment and the subsidence abatement assessment are made by the Department of Conservation and have been assigned to the Controller for collection. Administration of these tax collection activities has been placed in the Tax Collection and Refund Division in the Controller's office. In addition, the division is responsible for refunds of the tax on fuels used for non-highway purposes.

The Controller through his Inheritance and Gift Tax Division is also responsible for administration of the inheritance and gift taxes. While inheritance taxes are fixed by the local superior court in which the estate of the particular decedent is being probated, the decision of the court is based upon valuations made by inheritance tax appraisers assigned by the court from the panel of appraisers appointed by the Controller. Probate and inheritance tax fees amounted to \$3,035,000 and \$142,000 respectively during 1963.

The county treasurer in each county receives the taxes fixed by the court and also participates in the administration of the inheritance tax by examining safe deposit boxes, issuing consents to transfer property and transmitting collections to the State Treasurer. The county treasurers receive 3 percent of their collections as a commission. The Controller's office estimates the 1964-65 commissions at \$670,000.

The Controller is also responsible for supervision of redemption and tax deed procedures. The Tax Deeded Land Division acts as a coordinating agency and assists local officials in returning tax-deeded property to local tax rolls. Until redeemed or sold by the county tax collector, title to tax-deeded property is held by the state.

In addition to serving as a member of the State Board of Equalization and the Franchise Tax Board, the Controller is a member of the Reciprocity Commission, the Reapportionment Commission, the San Francisco Harbor Finance Board, the State Highway Finance Board, the State Park Finance Board, the Unemployment Relief Finance Committee, the State Board of Control, the Pooled Money Investment Board, the State Teachers' Retirement Investment Board, the Veterans Finance Committee, the Committee to Fix Interest on Registered War-rants, the State School Building Finance Committee, the Harbor Improvement Board Committee, the California Water Resources Development Finance Committee and the California Exposition and Fair Executive Committee.

THE BOARD OF EQUALIZATION

The State Board of Equalization was created under the *Constitution of 1879*. It is composed of five members elected for four-year terms. One is elected from each of the four equalization districts of the state and the fifth is the State Controller, who serves as an *ex officio* member. Each of the four full-time members is responsible within his district for administration of the laws for which the board as a whole has statewide responsibility.

The board administers several major state taxes, values public utility property for purposes of local property taxation and equalizes average levels of locally assessed property in each of the 58 counties.

The state taxes which have been assigned to the board are administered by the Department of Business Taxes. The business taxes constitute over half of the total state revenues.

The most important of these taxes is the retail sales and use tax which is the largest source of state revenue (amounting to 30.54 percent of the total during the 1963-64 fiscal year). The board administers the diesel fuel tax (use fuel tax), and is responsible for the licensing and assessment provisions of the gasoline tax (motor vehicle fuel license tax) and the truck tax (motor vehicle transportation license tax) which are collected by the Controller. The assessment of the insurance company tax is a constitutional function of the board. The assessment is based upon information provided by the Insurance Commissioner.

Following the repeal of prohibition the board was designated as the agency responsible for liquor control functions. When these duties were transferred to the Department of Alcoholic Beverage Control in 1955, the board retained the administration of the excise taxes on alcoholic beverages. The board is also responsible for the cigarette tax. Another function of the Department of Business Taxes is the collection of local sales and use taxes for all California cities and counties as an integral part of the collection of the state levy. During the 1963-64 fiscal year \$287 million were returned to the 58 counties and 383 cities.

The state is divided into 10 districts for purposes of business tax administration. Each of these districts consists of a group of counties within an equalization district.

The constitutional duties of the board for equalization of county assessment levels is administered within a Department of Property Taxes. The department also assists local assessors in establishing assessment standards, administers the private (railroad) car tax, and has the constitutionally assigned function of valuing public utility property for local purposes.

FRANCHISE TAX BOARD

California's second largest revenue agency is the Franchise Tax Board. The three members of the board are the State Controller, the Chairman of the Board of Equalization and the Director of Finance. An executive officer appointed by the board is directly in charge of the agency's operations.

The Franchise Tax Board administers the bank and corporation franchise tax, the personal income tax and the corporation income tax which account for about one-third of the total state tax and license revenues.

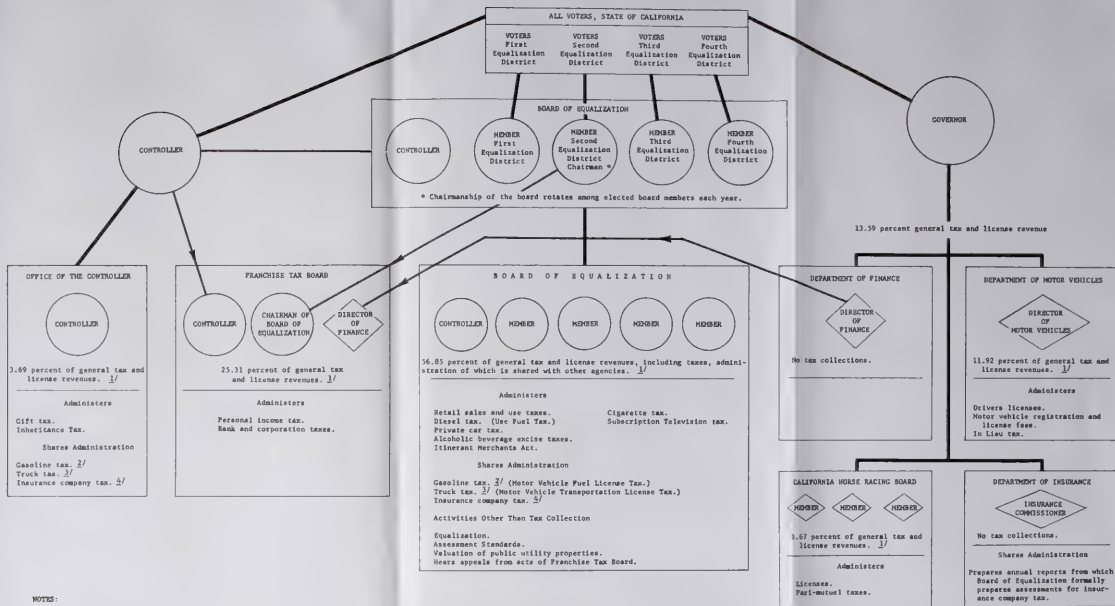

The board is divided into two organizational divisions: the Operations Division and the Administrative Division. The Operations Division consists of two regional offices (San Francisco and Los Angeles) and the headquarters office (Sacramento).

OTHER AGENCIES ADMINISTERING STATE TAXES

The Department of Employment has important tax administration responsibilities in the collection of payroll taxes for unemployment and disability payments. The department administers the provisions of the Unemployment Insurance Code which, in conjunction with the

MAJOR OFFICES FOR REVENUE ADMINISTRATION IN CALIFORNIA

June 30, 1964

NOTES:

1/ Tax collection percents based on general tax and license revenue, Annual Report June 30, 1963.

2/ The Board of Equalization and the Controller share in administering the gasoline tax as follows:
Board of Equalization--licensees distributors, determines amounts of tax due, audits taxpayers' accounts and is broadly responsible for compliance with the provisions of the act.
Controller--responsible for collections of the tax and handles refunds.3/ The Board of Equalization and the Controller share in administration of the Truck tax as follows:
Board of Equalization--licensees taxpayers, determines amounts of tax due, conducts audits and is broadly responsible for compliance with provisions of the tax act.
Controller--responsible for collection of the tax.4/ The Department of Insurance, the Board of Equalization and the Controller share administration of the insurance company tax as follows:
Board of Insurance--prepares annual reports from which the Board of Equalization prepares assessments.
Board of Equalization--formally determines amount of tax due from statistical data supplied by Department of Insurance.
Controller--responsible for collection.

- Position held by virtue of holding another office
- Elected official
- ◇ Appointee of the Governor (non-civil service)

Federal Social Security Law, provides a program of unemployment benefits.

The Department of Motor Vehicles is also a major revenue collecting agency. Taxes and fees collected by the department amount to more than 11 percent of the total taxes administered by state agencies. In addition to registration fees, the department collects the vehicle license fee ("in lieu" tax).

The California Horse Racing Board administers laws governing horseracing on which there is parimutuel wagering. The board consists of three members appointed by the Governor. Collection of the parimutuel license tax is supervised by the board. The tax is largely self-assessed and the state's share is transmitted daily to the State Treasurer.

Virtually every state agency collects some revenue either through issuing licenses or charging fees for certain services. The total of fees collected in 1962-63 was equal to approximately 20 percent of General Fund revenues for that year.³

For an outline of the revenue produced from taxes administered by state agencies see Table 1 on the following page.

³ Assembly Interim Committee on Revenue and Taxation *Fees and Licenses*, July 1964, p. 74.

TABLE 1
OUTLINE OF TAXES ADMINISTERED BY STATE AGENCIES ¹

V. TAX ADMINISTRATION IN OTHER STATES

The history of taxation in the majority of states closely parallels the California experience. A significant difference has been the reluctance in this state to follow the movement to reorganize revenue administration.

The first centralized tax agency was established in 1891 in Indiana as a result of a movement for tax reform.¹ Only six states had established permanent state tax departments by 1900. The remainder of the states assigned functions of revenue administration to existing elective officials. The increasing demands for state services accompanying the shift from a rural to an urban economy placed new demands on tax administration in the various states. The majority of states continued to assign new taxes to existing tax agencies, usually on the basis of administrative leadership or the workload of the respective agencies. In some cases, new state agencies were created to administer particular taxes. Following the fiscal crisis of the 1930's, various states adopted

¹ Harley L. Lutz, *The State Tax Commission*, (Cambridge: Harvard University Press, 1918) p. 149.

plans for centralized tax administration. These improvements closely paralleled the state government reorganization movement.²

Today, the majority of states have adopted centralized administrative structures for tax collection. Considering the seven major sources of revenue utilized by the states (income, sales, gasoline, motor vehicle, tobacco, death and alcoholic beverages), 10 states have all of these taxes administered by one central agency. (See Table II.) Twenty additional states administer these taxes under two agencies. The second agency usually has the responsibility of taxes on motor vehicles in connection with other administrative responsibility relating to automobiles (14 states). Only six states have as many as four agencies administering the seven major state taxes. With the exception of California these are relatively small states (Delaware, Florida, Nebraska, North Dakota and Oregon).

In summary, 30 of the 50 states administer the major taxes under no more than two agencies. In 28 of these states, the central tax agency administers all but one of the major tax sources.

Another aspect of centralized administration of taxes was presented to the committee by Elton McQuery,³ Western Representative of the Council of State Governments in response to a question from Assemblyman Marks concerning revenue collection in the larger states.

MR. MCQUERY: The 10 most populous states according to 1962 population figures are California, Florida, Illinois, Massachusetts, Michigan, New Jersey, New York, Ohio, Pennsylvania and Texas.

For those states, California has four agencies; Florida has four agencies; Illinois, three; Massachusetts, two; Michigan, three; New Jersey, two; New York, two; Ohio, two; Pennsylvania, one; and Texas, three.

I'd like to direct your attention to the three largest revenue producers (income tax, sales tax, and gasoline tax). These are the three largest producers of state tax revenue.

For those three tax sources, taking again the 10 most populous states, California and Pennsylvania are the only two states that levy all three of those taxes. California has two agencies administering those three taxes. All of the other top 10 states in terms of population have a single agency administering those three major tax producing sources.

Now with respect to all other states, and again those three major sources, there are 27 states that levy all three. Twenty-two of those 27 have a single agency. Twenty other states levy two out of the three, and 15 of those 20 have a single agency. Of the 47 states which administer two or three of the major tax sources, 37 have centralized administration within a single agency.

The major taxes which are most frequently administered by the dominant tax agency are the income and sales taxes. California is the only state which has both of these revenue sources where each is ad-

² For a more extended review see A. E. Buck, *Reorganization of State Government*, (New York: The Columbia University Press, 1938).

³ Unless specifically cited by footnote, statements quoted herein were presented to this committee at public hearings held in Sacramento on October 6, 1964, or Los Angeles on December 10, 1964.

The latter include mileage taxes, gross receipt taxes and special taxes on a weight or capacity basis, but exclude motor fuel use taxes imposed on carriers.

ministered by a separate agency.⁴ Mr. McQuery also presented some information concerning the top administrative structure of the state tax agencies:

MR. McQUERY: Mr. Chairman, I don't have detailed information regarding the internal organization of all the state revenue collecting agencies, however, the material that I have here reflects that in 40 of the 50 states, the major tax collecting agencies are agencies headed by a single official rather than by a commission. And in all but a half dozen states, the responsible administrative officials are appointed by the Governor with legislative approval or by the Governor alone.

Assemblyman Bagley questioned Mr. McQuery concerning central administration of death taxes.

ASSEMBLYMAN BAGLEY: I note from the chart . . . that in all of the states which have to some extent a centralized department of revenue . . . the death tax administration falls within that single operation and is not spun off into some other area. . . .

MR. McQUERY: I believe that is generally true . . . in two states, Louisiana and Maryland, death taxes are collected locally . . . and in one other state⁵ the Attorney General, collects death taxes.

Generally speaking, the death tax is collected by the major collection agencies in those states where there is a major collection agency.

Another aspect of revenue administration is the appeals process. Among the various states efforts have been made to provide an independent review of the decisions of the revenue department. Presently, 15 states have independent agencies concerned exclusively with the review of tax rulings by state or local officials or both.⁶ (See table III below.)

In summary, the trend of state tax administration is toward the consolidation of functions within a central revenue agency which is administered by a director appointed by the Governor. States which have established unified revenue administration have experienced a decline in the costs of administration.

VI. PREVIOUS COMMENT

Integration of revenue collection functions is by no means a new concept. Since 1929, special commissions and legislative committees have consistently recommended unification of revenue administration. Findings and recommendations selected from these studies provide a comprehensive commentary on California's tax administrative structure.

Even before the 1933 Legislature adopted the major changes embodied in the Riley-Stewart Plan which forms the basis of our present revenue system, the California Tax Commission criticized the lack of centralization in the state's tax administrative machinery and recommended:

"That the elective State Board of Equalization be abolished and that in its place a permanent professional tax commission be established consisting of three members appointed by the Governor with powers to administer state taxes."¹

During the period from the 1930's to the present these selected comments have been made by special commissions and committees of this Legislature:

¹ California Tax Commission, *Final Report*, Sacramento, March 5, 1929, pp. 130-131.

Committee on State Organization—1941²

Since no state officer had originally been set up as a tax collector, the responsibility for the collection of new taxes was assigned either to one of the existing officers, boards or departments that had been created for a fundamentally different purpose, or to some new agency, created to administer that particular tax. The existing situation is the result of a long series of separate decisions. Undoubtedly some of the assignments were originally made for purely political or personal reasons that have long ceased to apply. The present allocating of duties has no logic or principle behind it.³

To simplify the organization, eliminate duplication, make allocation of official responsibility more definite, and permit greater economy and effectiveness in the process of collection, the committee recommends: That a Department of Revenue be created, administered by a single executive, who shall be known as the Director of Revenue and who shall be appointed by the Governor, with the consent of the Senate, on the basis of proper qualifications; that the department shall have charge of state revenue collections and state tax administration, shall collect all state taxes and revenues. . . .⁴

Senate Interim Committee on State and Local Taxation—January 1947

The complexity of the tax system of the state and the distribution of the administration of this system among several different agencies, leads the committee to recommend that the question of consolidating all revenue administrations in one agency be studied with a view to determining whether such consolidation would result in greater economy and efficiency in state government as well as greater convenience to the taxpayer.⁵

Assembly Interim Committee on State and Local Taxation—January 1947

A reorganization of the state's tax administrative set-up should facilitate the assessment and collection of state taxes and lend greater convenience to the taxpayer.⁶

Senate Interim Committee on Governmental Reorganization—January 1951

1. The multiplicity of revenue agencies leads to duplication of effort, complicated procedures, higher costs of government, and confusion to the taxpayer.

2. The advantages of an integrated state revenue system are many and compelling. States which have led the way in developing an integrated system uniformly agree that it is far superior in every way to the diffused revenue system existing in California.⁷

² The committee was also known as the Interim Committee of Twenty-five of the California Conference on Government and Taxation. The study grew out of a statewide conference called by Governor Frank H. Merriam in 1936 and was based on the reports of Griffenhagen and Associates, 1936-1938.

³ Committee on State Organization, *Final Report*, 1941, p. 50.

⁴ *Ibid.*, p. 51.

⁵ Senate Interim Committee on State and Local Taxation, *Report*, Part I, II, January 1947, pp. 58, 393.

⁶ Assembly Interim Committee on State and Local Taxation, *Report*, January 1947, p. 17.

⁷ Senate Interim Committee on Governmental Reorganization, *Second Partial Report*, January 1951, p. 53.

Assembly Interim Committee on Governmental Reorganization—March 1951

A department should be established for the administration of the revenue of the state, with a director appointed by the Governor, subject to confirmation by the Senate, and holding office at the pleasure of the Governor. The department should be organized according to function of revenue administration rather than according to kind of taxes. One division should examine and assess all taxes. Another division should collect all taxes. There should be a central research set-up to study and report on tax policies and practices.

There should be a board attached to, but independent of Department of Revenue, to hear appeals from all assessments and decisions of that department. This board should consist of members with overlapping terms, appointed by the Governor with the concurrence of the Senate. As an alternative the Board of Equalization could be made a board of tax appeals, with all of its executive functions removed.⁸

Senate Interim Committee on Governmental Reorganization—March 1953

A Board of Tax Appeals should be established to provide a means of impartial determination of appeals from tax assessments.

The State Board of Equalization now hears appeals from decisions of its several tax assessment divisions and also hears appeals from the administrative decisions of the Franchise Tax Board. Since two members of the Franchise Tax Board are also members of the State Board of Equalization, this board, in effect, hears appeals from its own decisions. The Board of Tax Appeals should also have the authority to hear appeals from county boards of equalization on questions involving the valuation of property for tax purposes.⁹

Subcommittee of the Assembly Interim Committee on Government Organization—February 1955

California's present administrative structure is characterized by overlapping, duplication, financial waste, and diffusion of activities and responsibilities. It is a hodgepodge of boards and elective and appointive officials and is not truly responsible to the Governor, the Legislature, or the people. Such adequacy of tax administration as we have in California is in spite of, rather than because of "organization."

California's revenue administration structure should be organized to provide a reasonably efficient, economical, understandable, and responsible vehicle for administering our tax laws. This can be accomplished best by placing the administration of major state taxes in a Department of Revenue headed by a Director appointed by the Governor, confirmed by the State Senate, removable by the Legislature for cause, and, therefore, responsible to the Governor and the Legislature, and through them to all of the people.¹⁰

⁸ Assembly Interim Committee on Governmental Reorganization, *First Partial Report*, March 1951, pp. 34, 35.

⁹ Senate Interim Committee on Governmental Reorganization, *Third Report*, March 1953, p. 9.

¹⁰ Report of the Subcommittee of the Assembly Interim Committee on Government Organization, *The Need for a Department of Revenue in California*, February 8, 1955, p. 9.

Executive Committee of the Task Forces—November 1959

The grouping of like functions together for purposes of executive management is one of the premises on which the agency concept rests. We are unable to find any cogent reason why this principle should not apply with equal force and persuasiveness to revenue functions.

Accordingly, we recommend the creation of a revenue department within a Revenue and Management Agency.¹¹

¹¹ *Report to the Governor on Reorganization of State Government by the Task Forces*, November 1959, p. 18.

VII. THE NEED FOR A CENTRAL REVENUE DEPARTMENT

Administration of revenue laws is basic to the operation of state government and is a principal responsibility of the executive branch. And yet California's first Constitution did not include any provision for tax administration. When new tax levies were adopted a method of collection was improvised for the particular tax.

As a result of this pattern of development there is no central agency with responsibilities for tax collection. There is no single administrator who can be held responsible by the Governor, the Legislature, or the people for the administration of revenue laws. And there is no one tax agency to which a taxpayer may pay all of his state taxes. Instead, tax administration has been divided among a number of officers, boards and departments. The Board of Equalization is a five-member constitutional body with four members elected by district and the State Controller as an ex officio member. The Franchise Tax Board consists of the Chairman of the Board of Equalization, the State Controller, and the Director of Finance who is appointed by the Governor. The State Controller is a constitutional officer elected by the voters. The Department of Motor Vehicles and the Department of Employment are administered by directors who are appointed by the Governor. The Cali-

fornia Horse Racing Board consists of three persons appointed by the Governor for fixed terms. It is generally agreed that this diffusion of tax collection responsibility has several detrimental effects.

ECONOMIES OF CONSOLIDATION

The most important disadvantage of the present administrative structure is that it has perpetuated inefficient and uneconomical use of personnel and facilities. Every state official with major responsibilities for tax administration presented testimony to the committee indicating that substantial savings would be realized through unification of most tax collection functions.

Governor's Proposal

At the first public hearing of the committee, in Sacramento on October 6, 1964, Governor Edmund G. Brown submitted a proposal (prepared by the Department of Finance) for consolidating tax collecting agencies (see Appendix A). In his letter accompanying the report the Governor stated:

"I hope your committee shares my wish that the needed consolidation of the revenue administration of this state be achieved. The details are less important than the objectives, and I know that . . . the committee will explore all possible means of accomplishing the basic purpose."

With reference to the possibilities of savings through a consolidated tax agency, the Department of Finance's report states: "It is significant that in every state where a consolidation has occurred, there have been significant reductions in the collection costs per dollar of tax return."

Board of Equalization Plan

At the request of the committee, the Board of Equalization presented a proposal for consolidation of major revenue responsibility (See Appendix C). This report included detailed estimates of savings which would result from bringing together the revenue programs of the Board of Equalization, the Franchise Tax Board and the State Controller.

Appearing before the committee in Los Angeles on December 10, 1964, Board of Equalization Member John W. Lynch¹ discussed potential savings in response to a question by Assemblyman Marks:

CHAIRMAN MARKS: I assume that you do agree with the general principle that a consolidation of tax collection functions would save the State of California money?

MR. LYNCH: It would. It would save a great deal of money. It would be more efficient and more economical. No one on the board quarrels with that.

CHAIRMAN MARKS: And that would apply regardless of whether or not tax collection functions are consolidated under the Board of Equalization or under some other agency.

¹ Unless specifically cited by footnote, statements quoted herein were presented to this committee at public hearings held in Sacramento on October 6, 1964, or Los Angeles on December 10, 1964.

MR. LYNCH: That is true. Any consolidation would be more efficient, more economical.

Mr. Martin Huff, Executive Officer of the Franchise Tax Board, told the committee that he agreed that the areas cited by the Board of Equalization lend themselves to savings and further commented:

MR. HUFF: My only criticism would be that in the specifics of their analysis, due to a total lack of understanding of our needs and problems, they have advanced the wrong reasons and in my judgment have substantially understated the potential for savings.

Proposal by the Legislative Analyst

The committee also received a specific reorganization plan prepared by the office of the Legislative Analyst proposing the consolidation of tax functions into a Department of Revenue (See Appendix B). A similar recommendation was made to the Legislature in 1943 in the first formal report of the Legislative Auditor.² Legislative Analyst A. Alan Post testified to the economies of consolidation:

MR. POST: I think it's perfectly clear, and I would say that without being able to put specific price tags on it, that there would be a significant efficiency and economy achieved by the state by a consolidation of what is, at the present time, a very complex hodgepodge of tax administering agencies.

The "Little Hoover" Commission Report

The Commission on California State Government Organization and Economy (more commonly known as the "Little Hoover" Commission) submitted a report to the Governor and the Legislature on December 28, 1964, concluding a comprehensive review of state tax administration (See Appendix F). The commission reported:

"The use of qualified personnel employed . . . in such matters as the administration of functionally integrated systems of tax appraisals, audits and collection through consolidated field offices and shared housekeeping and staff services will do much toward the effective implementation of a uniform tax collection policy. This commission is convinced that taxpayer convenience as well as economy and increased efficiency can result from the establishment of a Department of Revenue as proposed, when organized and operated in accordance with modern revenue management principles."

Estimates of Savings

It is impossible to predict with any precision the specific savings that would result from consolidation without making detailed recommendations as to the internal structure of the consolidated agency. The Board of Equalization made specific recommendations when they itemized savings in administrative costs by consolidating legal functions, electronic data processing, collections, fiscal functions, personnel and training, cashiering, mailing, supply and use of temporary help. The board estimated that total savings gained through consolidation of the revenue programs of the Board of Equalization, the Franchise Tax

² The title of the office was changed to Legislative Analyst in 1957.

Board and the State Controller would be at least \$1,517,412. They also indicated in their report that, "the conservative projection of savings by no means represents the total eventually possible as the consolidated agency learns from experience the further improvements and economies which are possible through integrated operations."³

Past recommendations for unification of revenue administration were challenged by officials of the various tax administering agencies who testified that consolidation would not produce savings. In contrast, each of the present state officials stressed the possible economies which could be realized through central revenue administration.

In the final analysis, proposals for consolidation must be based on generally recognized opportunities for savings and increased efficiency. The committee concludes that significant economies will result from consolidation of the major state tax programs.

CONSOLIDATION vs INTEGRATION

Consolidation of the administration of different taxes into a central agency, must also reflect consideration of the integration of activities common to more than one tax. As Clara Penniman and Walter W. Heller point out in their authoritative study of state income taxation, "consolidation may go no further than merely housing a number of taxes under a single administrative roof. Integration implies a marital relation among taxes."⁴

In other words, consolidation of different taxes into a central agency makes possible integration of activities common to more than one tax. Such an integrated structure was recommended to the Legislature in 1947 by the Assembly Interim Committee on state and local taxation:

"The administration of revenue laws should be reorganized along functional lines. That is, the section or division which is responsible for the assessment of one tax should be concerned with all taxes. The board which hears appeals for one tax should hear appeals for all taxes. And the division or office which collects one state tax should collect all state taxes."⁵

Integration of Staff Services and Line Functions

The savings estimated by the Board of Equalization which would result from consolidation of their operations with those of the Franchise Tax Board are based on integration of staff services—personnel, budgeting, legal purchasing, accounting. The board proposal also provides for joint use of electronic data processing systems. Although the board contemplates further savings from experience with "integrated operations," Board of Equalization member Lynch told the committee that under the board's proposal Franchise Tax Board operations would remain as a separate unit:

MR. LYNCH: The Franchise Tax Board is an efficient, going concern. Under our proposal, it would remain just as it is, because

³ Board of Equalization, *A Proposal for Consolidation of Major California State Revenue Responsibility in One Agency*, December 1964, p. 7.

⁴ Clara Penniman and Walter W. Heller, *State Income Tax Administration*, (Chicago: Public Administration Service, 1959) p. 46.

⁵ Assembly Interim Committee on State and Local Taxation, *Report*, January 1947, p. 50.

there would be savings in staffing and so forth. But for the most part, it would remain practically as it is, as another division under us.

Such an approach does not emphasize the importance of savings through integration of line functions in the area of assessment and collections. While it is conceded that integration of these activities require detailed planning, the potential for savings through greater efficiency and economy of operation is impressive.

Penniman and Heller, for example, suggest improvements in administration are possible through freer exchange of the information collected for each tax. With reference to the income and death taxes they point out:

"Death tax returns permit checks on the decedent's property income, on fees reported by attorneys and executors, and on appraisal values which serve as bases for capital gain or loss on inherited property. Income returns provide an excellent index of the size and composition of a decedent's estate and furnish information on ownership of bearer securities and other elusive holdings. Even more important are the 'either or' situations in which dual authority is required to prevent evasion."⁶

Cooperative agreements have been arranged between the present tax collection agencies for the exchange of information for several purposes including the prevention of evasion of taxes, and the committee is encouraged at the prospect of greater utilization of this procedure through a consolidated operation.

The 1955 Legislative Study

The organizational structure proposed by Kroegeer and Associates for the 1955 Assembly committee study of revenue administration was based upon the function of tax administration rather than according to particular taxes:

"We propose that the department be organized according to function rather than according to purpose. Stated another way, we propose that the employees be utilized in such a way that they will each concentrate on doing a certain thing with respect to all taxes rather than doing a number of things with respect to one tax, or doing one thing for one tax which is then duplicated by someone else doing the same thing for another tax."⁷

At the time of the 1955 study the Franchise Tax Board was divided into two tax divisions and seven administrative divisions. Today the board is divided into just two divisions: Administration and Operations. While the Board of Equalization was divided into eight separate divisions in 1955, today it is divided into a Department of Business Taxes, a Department of Property Taxes and an Administrative Services Division. These significant changes have taken advantage of functional organization and as a recent survey of the structure of these agencies observed:

⁶ Penniman and Heller, p. 46.

⁷ Subcommittee of Assembly Interim Committee on Government Organization, *The Need for a Department of Revenue in California*, February 1955, p. A-11.

"One is strongly led to suspect that the findings of the Subcommittee of the Interim Committee on Government Organization provided the impetus for self-evaluation and change."⁸

In their report to the committee, the Board of Equalization indicates, with reference to further reorganization on a functional basis, that:

"Many of the possible economies that have been claimed possible in years past have been realized as a result of a major reorganization of the Board of Equalization which was initiated in 1959. As a result business taxes were organized on a functional basis rather than by purpose and functions common to several tax programs were consolidated."⁹

While it is apparent that the tax administrative functions of the state's principal revenue agencies are now organized to a large extent on an integrated basis, it has been contended that additional savings will be possible by consolidation of these agencies into a central revenue department so that further integration of operations is possible. *The committee concludes that further savings should follow additional integration of tax collection functions with proper planning to insure that the present level of administration will be maintained.*

TAXPAYER CONVENIENCE

Many of the prior studies of California tax administration have pointed out that another effect of the distribution of tax collection responsibility among several agencies is the complicated picture it presents to the taxpayer.

A taxpayer engaged in a small business, for example, pays his sales tax to the Board of Equalization, his corporation income tax to the Franchise Tax Board, his unemployment and disability insurance taxes to the Department of Employment, his registration fees for commercial vehicles to the Department of Motor Vehicles and so on.

To add to this complexity, several taxes are jointly administered by more than one agency. The Insurance Commissioner and the Board of Equalization have joint responsibilities in the assessment of the gross premiums tax on insurance companies and the tax is then collected by the State Controller.

Legislative Analyst A. Alan Post commented on this complexity:

MR. POST: I would make the case that it would be beneficial to the public to be able to go to one tax agency, and to know that you could get your tax business done there, rather than having the present complex decision of knowing whether to go, with respect to one tax to the Controller, another to the Board of Equalization, and then to another agency, and so forth. This is just bad business from the standpoint of the public and the public's time is wasted by the present system and there's no doubt about it."

⁸ William Hauck, *The Current Organization Structure of the Franchise Tax Board, Board of Equalization and State Controller*, April 30, 1964, p. 3.

⁹ Board of Equalization, *A proposal for Consolidation of Major California State Revenue Responsibility in One Agency*, December 1964, p. 19.

Board of Equalization Chairman John W. Lynch testified to the magnitude of the confusion:

MR. LYNCH: We will be harassed from January the 1st until April the 15th by people coming into our office wanting assistance with their state income tax returns, wanting the form . . .

CHAIRMAN MARKS: Maybe the taxpayers are being harassed too.

RESPONSIBILITY TO THE CHIEF EXECUTIVE

Under the California Constitution, the Governor is responsible for the enforcement of all laws.¹⁰ The present structure for revenue administration violates the principle of concentrating administration of the executive branch under the chief executive. In addition to having several tax agencies, the responsibility for administration is shared by various elective and appointive officials.

Legislative Analyst A. Alan Post discussed the division of responsibility among several administrators:

MR. POST: I would contend that this is a dangerous way to organize, because as in the case of liquor administration, as in the case of other scandals in other states, the real problems come about primarily in those cases where nobody was responsible because everybody appeared to be responsible.

Effective Administration

Sound organization and competent personnel are basic to effective administration of revenue laws. While it is possible for a capable staff to overcome many problems in organization, sound organization cannot be expected to replace the requirement of capable personnel.

A recent study of state sales tax administration, commented on the effectiveness of California's Board of Equalization: "... California is widely regarded as the only state that has attained a nearly optimum level of efficiency in administration of the tax," and indicates that this is possible because, "the generally high standards of state administration in California have facilitated the maintenance of high standards in tax administration."¹¹

Penniman and Heller make a similar comment about the Franchise Tax Board:

"The unconsolidated agency which is obviously doing an effective job—e.g., the California Franchise Tax Board, administering only the individual and corporate income tax—remains a thorn in the side of students of administration. Does effectiveness here result primarily from a high quality and relatively large staff *in spite of* California's organization iconoclasm?"¹²

The Executive Officer of the Franchise Tax Board, Martin Huff, told the committee that the fact California tax administration is one of the most efficient in the nation should be viewed in relative terms:

¹⁰ *Constitution of 1879*, Article V, Sec. 8, "He shall see that the laws are faithfully executed."

¹¹ John F. Due, *State Sales Tax Administration*, (Chicago: Public Administration Service, 1963), p. 20.

¹² Penniman and Heller, p. 35.

MR. HUFF: With minor exceptions, the standards in most states are not sufficiently high to give us much of a feeling of pride in using them as yardsticks. The high standards that have been set in California are despite its organizational structure—and not because of it. They are the direct result of the general high standards of administration found throughout California state government and of the efforts of the highly competent technical staffs in the two tax administration units.

Specific Proposals

The several proposals placed before the committee varied as to the top administrative structure of the consolidated tax agency. The plan submitted by the Governor called for the creation of a California Tax Commission consisting of the Controller, Director of Finance and the Treasurer. This commission would head the proposed Department of Revenue and would appoint the executive officer. Under the proposal presented to the committee by the Board of Equalization the administration of taxes would be consolidated under the present board. The Legislative Analyst and others recommended administration by a single director appointed by the Governor.

Legislative Analyst A. Alan Post stressed the advantage to the public through concentration of responsibility under the Governor:

MR. POST: Another benefit that I think . . . would accrue to the public is that if you have . . . an organization that is responsible directly to the elected chief executive of the state, the Governor, you would know who was truly responsible for tax administration.

Penniman and Heller make a similar comment on the top administrative structure:

“As several tax agencies operate to fragment the total tax administrative effort, so a multiple executive head fragments administrative effort and diffuses responsibility within a particular department.”¹³

This conclusion is also reached by John Due:

“In terms of usually accepted standards for good administration, a state tax agency should be headed by a single administrator appointed by, and responsible to, the Governor.”¹⁴

The question of a single director was considered by the committee. Board of Equalization Member Lynch indicated the proposal for a director would be weak because, “as an appointee of the Governor, there would be no control by the taxpaying electorate.” Legislative Analyst Alan Post responded to that statement:

MR. POST: This in effect . . . says that the elected Governor when he appoints an administrative official is cutting off this function that is under his supervision from the public. It means that . . . all of the administrative agencies of the state should be under elected administrators and that the role of the Governor and the Legislature, as elected officials, responsible and responsive to the public

¹³ Penniman and Heller, p. 36.

¹⁴ Due, p. 18.

and providing surveillance over the public functions would be needless. . . .

Some additional problems that would result from consolidation under the existing Board of Equalization were outlined by the Legislative Analyst:

MR. POST: . . . I think with respect to the objective of the centralized administration that, whereas there is a high degree of centralized administrative control in the Franchise Tax Board at the present time, consolidation with the Board of Equalization . . . would be a step backward in the sense that it would take this more efficient centralized operation and subject it to the deficiencies in our State Board of Equalization organization with its 10 districts, with the pattern of organization which has to conform to the elective districts of the state.

Martin Huff testified that adapting the Franchise Tax Board to the Board of Equalization would result in "fragmentation of our present structure into one that ignores economic areas, the worst example of which is the serving of the San Francisco Bay area by three separate equalization districts."

The possibility of an additional problem was pointed out by Alan Post. He noted that as of July 1, 1962, the Third Equalization District had 7.6 percent of the population while the Fifth Equalization District had 57.8 percent of the population, and suggested that redistricting might be required.

It has been argued that placement of tax collection responsibility under a single director encourages the development of a "tax czar" who would not be responsive to the taxpayer. This contention does not reflect objective analysis. No one is contending, for example, that the members of the Board of Equalization are "tax czars," and yet their authority for tax administration is extensive. A director would certainly have no more authority than the members of the board now exercise. It should be realized that poor administration of tax functions is possible under any administrative structure. In the case of a multi-membered body—particularly a constitutionally elected one—it is difficult to fix responsibility for poor administration. A director serving at the pleasure of the Governor and removable by the Legislature for cause would be responsive to the Governor and the Legislature and through them to the people. This structure offers a clearly defined, and easily understood channel to protect the taxpayer from arbitrary actions by a tax administrator. The committee feels confident, however, that California will continue to be served by capable tax officials.

With respect to the responsiveness of tax administrators to the electorate the Executive Officer of the Franchise Tax Board noted:

MR. HUFF: It is a political reality that the people of the state hold the Governor and no one else responsible for proper tax administration whether he actually has the authority over tax administration or not.

TAX APPEALS

One of the most important functions of tax administrators is the determination of tax liability. Because these day-to-day administrative functions take on the aspect of judicial determinations, the necessity of an adequate appeals process is essential to good tax administration.

The present procedure has frequently been criticized because two of the three members of the Franchise Tax Board also sit on the Board of Equalization and in this capacity hear appeals from the Franchise Tax Board's decisions. In addition, the Board of Equalization hears appeals from the decisions of its own staff on board-administered taxes.

While no evidence was presented to the committee that the Board of Equalization decisions were not equitable, it was contended that the present structure presents a confused hearing procedure and violates, "the usual Anglo-American philosophy of justice in which the taxpayer has the privilege of appealing to some impartial agency outside the sphere of influence of those whose decisions are being appealed."¹⁵

On the subject of the appeals procedure Legislative Analyst Post made the following recommendation:

MR. POST: Now, originally, when we did the research for other committees of the Legislature we had recommended, and we would still recommend as a model form of organization, that the tax appeals board be one which would be appointed by the Governor. I am prepared, however, to say that . . . it would seem to me that there would be no harm whatsoever done to have the present Board of Equalization reconstituted as a Board of Tax Appeals and a Board of Equalization.

The committee concludes that the tax appeals procedure should be established independently from the administrative functions of tax collection to insure a clear separation of authority easily understood by every taxpayer.

INHERITANCE TAX ADMINISTRATION

For many years the method of assessment and collection of the inheritance tax has been the subject of serious discussion. The present system of local administration of the tax as part of the probate process has both its critics and ardent supporters. Criticism has centered on two main points: the fee system and the present method of appointing inheritance tax appraisers.

The Fee System

Inheritance tax appraisers are allowed to collect probate appraisal fees and inheritance tax fees for their services in valuing estates. It has been pointed out that these fees are assigned to the appraiser by the probate court based on values determined by the appraiser and are not related to the work involved in conducting the appraisal. In the case of those estates consisting primarily of assets which have an easily ascertainable market value, the relation of the work involved to the compensation received is difficult to justify.

¹⁵ Martin Huff quoting from the 1955 Report of the Subcommittee of the Assembly Interim Committee on Government Organization, *The Need for a Department of Revenue in California*.

Appointment of Appraisers

When the Legislature adopted the inheritance tax in 1893, it was decided to take advantage of the existing probate process for determining the amount of tax due the state. Since there was no state officer with tax collection responsibilities tax functions were assigned to one of the existing state officials and as a result of an expansion of the inheritance tax in 1911, the Controller was directed to appoint an inheritance tax appraiser who was to serve as one of the three probate appraisers appointed by the court. In practice the courts came to assign only the inheritance tax appraiser.

The appointment of appraisers by the Controller has been severely criticized because there is no legal or formal requirement for competence in appraising. Because the appraisers serve at the pleasure of the Controller there is extensive turnover accompanying a change in Controllers. In the absence of any standards for qualification as an appraiser or for appraisal operations, it is contended that the inevitable result is lack of uniformity in inheritance tax appraisals.

Alternatives to the Present Method

An alternative to the present system of administering the inheritance tax, presented to the committee by the Board of Equalization, proposed that this function be assigned to the board, and performed at a lesser cost by a staff of civil service appraisers within the board's existing Property Tax Department. The board also proposed the transfer of the civil service staff of the Controller's Inheritance and Gift Tax Division to the board's Property Tax Department. The board estimated savings of \$899,000 would result from the transfer of the appraisal functions. An estate tax of one-tenth of 1 percent was proposed as a substitute for the fees now received by appointed appraisers for the probate appraisals.

Legislative Analyst A. Alan Post proposed self-assessment of the inheritance tax (See Appendix G) and indicated that this method could be adopted with a minimum of changes in the existing inheritance tax and probate process. The principal change would be that the estate prepare its own inventory, value the assets, complete the tax return and submit it to the Department of Revenue for examination and audit. Under this proposal the valuation for inheritance tax purposes would serve also for probate, and the court would continue to have final jurisdiction over setting the tax and serving as an appeal body for any disputes. This method would not affect the existing delinquency dates, the discount period or rate, the statutory attorney or executor fees. The Legislative Analyst indicates that under the self-assessment method the Inheritance and Gift Tax Division would have to modify its operations to coincide more closely to those of the Franchise Tax Board.

Another aspect of this proposal would be the elimination of the county treasurers from participation in administration of the tax. Presently, the county treasurers inventory the contents of safe deposit boxes, receive the payment of the inheritance tax for transmission to the state and issue consents to administrators and executors of estates to dispose of certain assets. If this method of collection was enacted the Legislative Analyst estimates that there would be gross

savings in the amount of \$1,160,000: from county treasurer commissions (\$670,000); gift tax appraisal fees (\$20,000); inheritance tax appraisal fees (\$170,000); and, interest from earlier receipt of taxes (\$300,000). From these savings it is estimated that between \$500,000 and \$750,000 per year would be deducted for additional personnel and equipment so that the estimated net savings would range between \$400,000 and \$650,000 per year.

If the probate appraisal fees for inheritance tax appraisers were abolished the estates would save over \$3,000,000 annually. Legislative Analyst Post commented on this point in response to a question by Assemblyman Bagley:

ASSEMBLYMAN BAGLEY: One approach, and apparently the approach you are recommending, would be that the State of California not collect these appraisal fees, but simply forgive appraisal fees—forgive the estate from paying the fee. Would you . . . comment on that . . . ?

MR. POST: The question of whether you retain the present fee as a probate, or on the other hand, eliminated the fee and passed this benefit on to the taxpayer is obviously a clearcut policy issue for the Legislature. We had felt that it might be desirable to treat this as a benefit to the taxpayer. On the other hand, I would point out . . . that I think this is still a fee which can be regarded as a probate fee because it serves that purpose and . . . I have no reason to believe that it would not be accepted in every sense under our proposal as . . . the appraisal would be accepted as a probate appraisal.

Another proposal received by the committee was recommended by the Commission on California State Government Organization and Economy (See Appendix H). The commission recommended a modified self-assessed method for administering the inheritance and gift tax with the executor or the attorney continuing to prepare the inventory of the entire estate and actually valuing for tax and probate purposes the assets which have a fairly exact and ascertainable market value (cash, stocks, bonds, mortgages, securities, insured personal property and some chattels) and establishing the value of all real property that has a current assessed value of \$6,250 or less (the appraisal value would be deemed to be four times the amount of the current assessed valuation). The commission recommended the continuation of present appointed inheritance tax appraisers to appraise the value of real property with an assessed valuation of over \$6,250 and specialized personal property such as jewelry, antique furniture, paintings and closely held businesses and certain other chattels for which the determination of market value requires specialized knowledge.

The commission estimates that if this proposal had been in effect in 1963, the state would have received approximately \$1,150,000 in probate and inheritance appraisal fees. The Legislative Analyst informed the committee that, in his opinion, this estimate was too conservative and the state's share of the probate and inheritance fees would be nearly \$2,000,000. The commission also suggests the savings of \$670,000 in inheritance tax commissions paid county treasurers and \$300,000 in interest value from earlier receipts of the tax, less the costs of administration and collection now provided by the county treasurers.

COMMITTEE RECOMMENDATIONS

The committee makes the following recommendations concerning California's organizational structure for tax administration:

1. *That a Department of Revenue be established with responsibility for the statutory state tax collection functions presently exercised by the State Controller, the Board of Equalization and the Franchise Tax Board.*

A Department of Revenue so established would be responsible for the administration of more than 85 percent of state taxes. The tax collection and refund activities of the State Controller with respect to the gasoline tax, the truck tax, the insurance companies tax, the petroleum and gas assessments and subsidence abatement assessments would be transferred to the Department of Revenue. In addition, the administration of the inheritance and gift tax would also be transferred.

The following state taxes which have been assigned to the Board of Equalization would be administered by the Department of Revenue under the committee proposal: the retail sales and use tax (including the collection of local sales and use taxes); the diesel fuel tax; and the cigarette tax. The department would also be responsible for the licensing and assessment provisions of the gasoline tax and the truck tax. Among other things this would bring together functions of the highway tax program which are now split between the Controller and the Board of Equalization.

All operations involved in the administration of the personal income tax, corporation income tax, and the bank and corporation franchise tax would be transferred to the new department and the Franchise Tax Board would be abolished.

Although it is not imperative to achieving the major benefits from consolidation, the constitutional duties of the Board of Equalization for the administration of the alcoholic beverage excise taxes and the assessment of the insurance tax should be incorporated in the Department of Revenue. These sources account for approximately 5 percent of total state revenues and a constitutional amendment is necessary to transfer Board of Equalization duties with respect to these taxes to the Department of Revenue.

2. *That the Department of Revenue be administered by a Director of Revenue appointed by the Governor with Senate confirmation and removable by the Legislature for cause.*

The administrative duties which would be assigned to the Director of Revenue are now split among several administrators. The director would carry out all of the responsibilities presently performed under the general supervision of the three-member Franchise Tax Board; the duties with respect to business taxes presently under the direction of the Board of Equalization; and the Controller's tax collection and refund and inheritance and gift tax operations. Administration of these taxes by a Director of Revenue would serve to clearly fix the responsibility for tax administration under the chief executive.

3. *That the Board of Equalization be designated as the board of tax appeals to review the decisions of the Department of Revenue.*

The Board of Equalization presently hears appeals from the decisions of its own staff with respect to the present board-administered state taxes, and is also designated as the appeal body for Franchise Tax Board decisions. Assigning the responsibility for hearing appeals from the decisions of the Department of Revenue to the Board of Equalization would not be a significant departure from the present procedure. However, with the transfer of the state tax duties of the Board of Equalization to the Department of Revenue it is possible to provide a clear separation of administrative and appeals functions.

4. *That we move toward the establishment of an effective system of self-assessment of the inheritance tax. A first step should be self-assessment of those assets which have a fairly exact and easily ascertainable market value.*

The essential element of the committee's proposal with reference to the inheritance tax is consolidation of the administrative functions with the Department of Revenue. This would permit certain economies through consolidation of staff and facilities and make possible integration of information received through inheritance tax administration with other taxes, notably with the income tax.

At the same time, the committee is concerned with achieving savings in costs of government and greater efficiency in administration of taxes whenever it is possible to do so. In this respect, the system of complete self-assessment of the inheritance tax, as outlined by the Legislative Analyst, offers impressive savings. The committee's recommendation for self-assessment of those assets which have a fairly exact and easily ascertainable market value (cash, stocks, bonds, mortgages, securities, insured personal property and real property with a current assessed value of less than \$6,250) provides a basis for further study of the integration of self-assessment for these assets with the probate process.

Partial self-assessment would also remove one of the principal objections by eliminating the appraisal, and therefore the fees, for recording the value of assets such as stocks which are a matter of common knowledge. Under the committee's proposal the inheritance tax would be paid directly to the state. This would eliminate the county treasurers' duties with respect to receipt of the tax and payment to the state. It is also suggested that the inheritance tax commissions paid to county treasurers be eliminated. Since the county treasurers would no longer inventory safe deposit boxes, a new method of performing this function would have to be found. The Legislative Analyst's proposal that bank officials receive a nominal per box fee is a possibility. The convenience to the taxpayer of having local officials available for these purposes could be retained through the personnel in the field offices of the Department of Revenue.

An important policy decision for the Legislature is involved in the adoption of any self-assessment proposal. Placing all or part of the appraisals for an estate on a self-assessed basis alters the present justification for the inheritance and probate fees. If the probate fees were abolished for the valuation of assets that are self-assessed this would result in savings to the estate. On the other hand, the appraisal is audited by the state and still serves as the appraisal for the probate court: by retaining the fees for self-assessed assets there would be ad-

ditional revenue to the state without an additional increase in expense to the estate. A third alternative would be the adoption of an estate tax to correspond to the fee now received by the appraiser.

While this committee's study is concerned with inheritance tax administration as it relates to consolidating tax functions and other committees of the Legislature are dealing with the whole subject of inheritance tax administration, additional deficiencies in the present system were noted. A continuing criticism of the appointment of appraisers by the Controller has been that there is an apparent lack of standards or qualifications. It has been suggested that a formal set of qualifications be adopted by the Controller and approved by the Legislature to serve as a standard for judging appraisers. Provision could also be made for review of the operations of inheritance tax appraisers by authorizing an audit by the Auditor General.

5. *That the director of the Department of Revenue submit progress reports to the legislature on the internal organization of the Department; and that the Legislative Analyst undertake an intensive review of the operations and organization of the Department of Revenue.*

A major reorganization of tax administration as proposed by the committee will present practical problems in establishing a Department of Revenue in accord with legislative intent. It is imperative that the Legislature have available a means of continuing oversight of the operations and organizational problems of the department. Too often the criteria adopted by the Legislature in approving reorganization of the executive branch are not relied on as a basis for continuing review.

For this reason the committee recommends that the Director of the Department of Revenue submit reports to the Legislature on his progress in establishing an internal administrative structure for the new department and on the savings achieved through consolidation. In addition, the committee recommends that the Legislative Analyst be directed to report to the Legislature on the operations and organization of the department.

While it is not intended that the Legislature prescribe a detailed organizational structure for executive departments, the effectiveness of the structure should be a matter of continued review to insure that legislative intent is carried out, to anticipate additional organizational needs and to provide an additional criteria in evaluating expenditures.

A NOTE ON TAX FUNCTIONS NOT INCLUDED IN THE DEPARTMENT OF REVENUE

Since this study has been concerned with consolidation of the administration of state taxes, the committee does not recommend any change in the constitutional responsibility of the Board of Equalization for equalizing county assessment levels and valuation of public utility property for local tax purposes. Similarly, the Controller's responsibility for supervision of delinquent and tax-deeded properties would not be changed.

In addition, the administration of some state taxes are closely integrated with other administrative functions and consolidation within the Department of Revenue would be of questionable value. These in-

clude the private (railroad) car tax administered by the Board of Equalization, the taxes and fees collected by the Department of Motor Vehicles, the payroll taxes collected by the Department of Employment, the parimutuel license tax collected by the Horse Racing Board, and the revenue collected by virtually every agency through issuing licenses or charging fees. Additional study should be undertaken after the Department of Revenue has been established to determine the feasibility of further consolidation of some of these functions.

VIII. ADDITIONAL COMMENTS

HON. JESSE M. UNRUH
*Speaker of the Assembly
and Members of the Assembly:*

With reference to the report of the Interim Committee on Government Organization, I would like to make these additional comments.

I agree with the committee report as it relates to the necessity of consolidating revenue collection functions of the State of California, and agree with the proposal to create a Department of Revenue. Parenthetically, it would seem equally acceptable to lodge the various revenue collecting functions in the already existing structure of the State Board of Equalization. Either the creation of a new Department of Revenue, under the Governor, or a consolidation under the State Board of Equalization would be acceptable.

I must register disapproval, however, of one concept outlined in the report. The method of assessing and collecting state inheritance taxes has been the subject of much public discussion over the years. Within the last several years, more and more public attention has been brought to bear on the real deficiencies which presently exist in the present system. The committee is cognizant of these deficiencies and has recom-

mended that we "move toward the establishment of an effective system of self-assessment of inheritance tax." I have no quarrel with that objective, and on the contrary, endorse the objective.

However, a proposal which is made as a "first step" toward this objective would be unworkable. This proposal can be best characterized as a weak, unworkable compromise which should not, at this point, be given committee approval. Though the committee unanimously favored the Department of Revenue concept, committee opinion was varied and uncertain regarding the committee recommendation on inheritance tax appraisers. The proposed self-assessment of part of the assets of an estate (cash, stocks and bonds, etc.) is, in and of itself, not unpalatable, but to allow the existing system to continue for the purpose of appraising all other assets, would be unworkable.

While significantly cutting the income of the presently appointed appraisers, which is salutatory, this proposal would do nothing to insure attracting qualified appraisers to do the admittedly more complicated work of appraising other properties which would not be subject to self-assessment. These would include properties such as timber rights, oil and other mineral rights, large real estate holdings, closely owned businesses and the like. For the appraisal of this type of property, obviously the most qualified appraiser is needed and desired. Under the modified self-assessment plan, however, the existing appraisers would receive less income but would be called upon to do only the complicated appraisal above-mentioned. This, it is submitted, would lead to a breakdown of the entire system were we to attempt a continuation of the present system of political appointed appraisers within the context of the proposed modified self-assessment system.

Much more desirable, and much more worthwhile as an initial attempt toward real reform, would be a system of complete self-assessment as proposed by Legislative Analyst, A. Alan Post. Under such a system all estate properties would be self-assessed by the executor of the estate and a return filed with the State of California. An auditing and supervisory staff would then review these returns with a view toward correcting, if necessary, the appraisals made of the more complicated valuation properties. Under such a system, the presently existing body of inheritance tax appraisers, with their staff, would be entirely unnecessary. It should be pointed out that such a system is now working well in other states, Massachusetts being the best example.

There would be no risk of escaping taxation because of a failure to list any of the estate properties by the executor. In order to attain transfer of the properties to the heirs in any estate, it would be necessary, obviously, to physically list all of those properties to be transferred. Secondly, there would be little risk that properties would be undervalued by this system of self-assessment. When property is transferred by probate, that property acquires a new tax basis. That new basis is then used for the purpose of calculating later capital gains, upon sale, and later depreciation which can be deducted by the heir or devisee. Therefore, in the vast majority of instances, the estate, including the heirs, will want a relatively high value placed upon the properties which are to be distributed so that there will not be a risk

of substantial capital gain at a later date, and so that substantial depreciation deductions can be taken from year to year after distribution of the assets.

All in all, it would seem that we should make a major attempt during the 1965 session to effect a complete reform of our present inheritance tax appraisal system. Certainly, there will be practical questions which must be considered during the legislative course of any proposal. It is submitted, however, that this practical question can be met when encountered, and should not be anticipated in advance to the extent that a proposal for reform is watered down, weakened, and submitted on a basis where the workability of the proposal can be seriously questioned.

Sincerely,

WILLIAM T. BAGLEY

HON. JESSE M. UNRUH

Speaker of the Assembly

and Members of the Assembly :

I agree with the committee that there will be important savings through consolidating tax administration. However, I believe that this can best be accomplished within the Board of Equalization.

Sincerely,

TOM CARRELL

HON. JESSE M. UNRUH

Speaker of the Assembly

and Members of the Assembly :

I concur in the findings and recommendations of the committee with reference to the need for a Department of Revenue. It is my feeling that the specific recommendation for modified self-assessment of the inheritance tax would prove unworkable.

Sincerely,

HARVEY JOHNSON

APPENDICES

APPENDIX A

October 2, 1964

THE HONORABLE MILTON MARKS
Member of the Assembly
State Capitol
Sacramento, California

Dear Milt:

I sincerely appreciate your invitation to have a representative of my office appear before the Assembly Committee on Government Organization during its consideration of the recommendations relating to the establishment of a Department of Revenue. As you know, the administration has submitted a proposal to the Commission on California State Government Organization and Economy for its analysis and evaluation. I hope that proposal and the anticipated report by the commission may be the basis for further study by your committee and appropriate legislative action.

The commission will make its report available to me, the committee and the Legislature, and I may have further observations to make at that time. For the present, however, I have nothing to add to the proposal made to the commission, a copy of which is enclosed.

I hope your committee shares my wish that the needed consolidation of the revenue administration of this state can be achieved. The details are less important than the objective, and I know that both the commission and the committee will explore all possible means of accomplishing the basic purposes.

EDMUND G. BROWN
Governor
State of California

A GENERAL PROPOSAL FOR THE CONSOLIDATION OF TAX-COLLECTING AGENCIES IN THE STATE OF CALIFORNIA

The organization of California's state government is outstanding among the states. Good principles of public administration have been followed, particularly in the development of strong departments for major state functions, headed by Governor-appointed directors. In 1961, the state government's organization was enhanced with the implementation of an agency plan which further consolidated similar functions and provided the Chief Executive with a more manageable organization.

While California's government organization is far superior to that of most other states, much remains to be done in the field of tax administration. Tax organization in California is complex as well as con-

fusing. Collection responsibility for the state's major taxes is spread among several state organizations as shown on the first chart (Exhibit I) attached to this proposal.

Six agencies collect the state's major taxes: The Board of Equalization, the Franchise Tax Board, the Controller, the Department of Motor Vehicles, the Department of Employment, and the Horse Racing Board. Because of this dispersal of responsibility, taxpayers must deal with a number of state tax agencies. Not only is responsibility for the collection of taxes dispersed, but in some cases, several agencies handle different parts of the work involved in administering a particular tax.

This complex organization and diffused responsibility cannot be attributed to any grand design. Like many governmental organizations, the various California tax agencies grew in response to particular needs, but without much foresight or logic.

"Since no state officer had originally been set up as a tax collector, the responsibility for the collection of new taxes was assigned either to one of the existing officers, boards, or departments that had been created to administer that particular tax. The existing situation is the result of a long series of separate decisions. Undoubtedly some of the assignments were originally made for purely political or personal reasons that have long since ceased to apply. The present allocation of duties has no logic or principle behind it." (Committee of Twenty-five-Keesling Committee, *Final Report*, 1941, page 50).

Certainly the topic of consolidation is not a new one. Since the 1927 Tax Commission study, there have been at least 15 separate studies by outside agencies or legislative committees that have recommended some consolidation of the major tax agencies as a sound organizational objective. In addition, the Legislative Analyst has been consistent in his recommendations for a consolidation of tax administration organizations into a Department of Revenue.

The primary advantages of reorganizing revenue administration in California into a Department of Revenue are:

1. To fix more clearly the responsibility for results in tax administration.
2. To make possible more uniform tax policy and administration.
3. To promote greater efficiency and productiveness in tax administration.
4. To reduce and simplify contacts between taxpayers and the State.

Probably the most famous of the previous studies on revenue consolidation was the 1955 Weinberger subcommittee's *The Need for a Department of Revenue in California*. This report recommended the creation of a Department of Revenue with a director appointed by the Governor to administer most of the taxes now under the Board of Equalization and the Franchise Tax Board. The Board of Equalization would have been left with the private car tax and the constitutionally assigned alcoholic beverage excise taxes and assessment of insurance companies. The controller would have retained the inheritance and gift taxes, while the Department of Motor Vehicles, the Depart-

ment of Employment, and the California Horse Racing Board would have been unaffected. Under the Weinberger proposal, the Franchise Tax Board would have ceased to exist. The report also advocated the establishment of a three-member Governor-appointed Tax Appeals Board to hear appeals from the acts of the Department of Revenue. The second chart attached to this proposal (Exhibit II) outlines this organization. Bills to implement the provisions of the Weinberger report were introduced in the 1955 General Session, and in subsequent general sessions, but with no success.

Another important proposal for a consolidated tax agency was contained in the December 1959 *The Agency Plan for California* (Governor's Committee on Organization of State Government). This proposal would have created a Revenue Department headed by a director appointed by the Governor, and succeeding to all activities of the Franchise Tax Board, all tax administration activities of the State Controller, and all tax administration activities of the Board of Equalization, with the exception of those which have been assigned by the Constitution (Alcoholic Beverage Excise Taxes, and Insurance Company Assessments). In this proposal, the Board of Equalization would have become the Board of Tax Appeals for all taxes collected by the Revenue Department. These organizational proposals are illustrated by the third chart attached to this proposal (Exhibit III). Although the *Agency Plan* does not deal with the point specifically, presumably this proposal would have extended civil service status to Inheritance Tax Appraisers. There was no success in implementing any of these recommendations.

While most of the impetus for consolidation has come from sources outside the tax administering agencies, most of the inertia has developed from within these agencies. The 1955 Weinberger report was damaged by testimony to the effect that consolidation would not produce savings of any significant size, but would actually result in a loss of revenue. It is difficult to discuss specific economies when a reorganization is proposed, since it is impossible to precisely identify sources of savings before the reorganization goes into effect. There are certainly possibilities at least insofar as combining some supportive or staff services. It is significant that in every state where a consolidation has occurred, there have been significant reductions in the collection costs per dollar of tax return.

The strongest argument against consolidation is the fact that California's tax administration has long been recognized as outstanding among the states. The fact that we have been able to provide an excellent tax administration in spite of a clumsy organizational structure is a tribute to the dedication and high principles of the individuals working within this organization rather than to the organization itself. However, it is difficult to appraise how well the California system is working when it is so diffused. It must be recognized that the past history of tax agency reorganization has usually had a parallel history of scandal. There is not the slightest indication of scandal in the present California situation, but good administrative practice would dictate establishment of sound organizational structure.

The advantages of tax agency consolidation encourage us to advance a two-part proposal for the reorganization of the tax administration structure in California. The first part of the proposal can be accom-

plished through legislative action alone. The second step may or may not follow, but would require a constitutional amendment. Neither of these steps affect taxes administered by the Department of Motor Vehicles, the Department of Employment, or the Horse Racing Board. These would be matters for additional consideration by the Commission on California State Government Organization and Economy, but it is believed that there is no basis for separating the revenue collection responsibilities of these agencies from their other, closely allied functions.

Organization charts which illustrate both parts of this proposal are being prepared. They will be furnished to the Commission on California State Government as soon as possible.

PROPOSED TAX AGENCY REORGANIZATION

Part 1

- A. Create a "California Tax Commission" consisting of the Controller, Director of Finance, and Treasurer. This commission would head the proposed Department of Revenue (see "B" below) and would appoint the Executive Officer of the Department of Revenue (to whom any administrative functions could be delegated), as well as the panel of inheritance tax appraisers for each county. In addition, this commission would adopt all tax rules and regulations for Department of Revenue administered taxes, and establish the bank tax rate. The Controller would serve as permanent chairman of the California Tax Commission.
- B. Create a "Department of Revenue" (see "A" above) to succeed to all tax administration duties of the Franchise Tax Board, the State Controller, and all statutory tax administration duties of the State Board of Equalization. The taxes administered by this new department would include the personal income tax, the bank and corporations taxes, the gift tax, the inheritance tax, the retail sales and use taxes, the diesel tax, the private car tax, the cigarette tax, the subscription television tax, the gasoline tax (refunds would remain in the Controller's Office because of the warrant procedure), the truck tax, and the insurance company tax (collection only).
- C. The Franchise Tax Board would cease to exist.
- D. The Board of Equalization would retain the tax administration duties assigned by the Constitution (alcoholic beverage excise taxes and insurance company assessments) as well as responsibility for equalization, assessment standards, and valuation of public utility properties. In addition, the Board of Equalization would, ex officio, become the Board of Tax Appeals for all taxes administered by the Department of Revenue. At present the Board of Equalization hears appeals on taxes under its own administration and that of the Franchise Tax Board (two members sit on both boards—the State Controller and the Chairman of the Board of Equalization). The proposed organization removes this objectionable arrangement and, in addition, provides a clear administrative appeal procedure.

The second part would require a constitutional amendment and would have the effect of shortening the executive ballot. However, it is not

dependent upon the first part, nor, for that matter, is the first part dependent upon the future constitutional revision proposed in the second part.

Part 2

- A. Create a "California Tax Commission" identical to that proposed under Part 1, A, with the same responsibilities.
- B. Create a "Department of Revenue" to succeed to all tax administration duties of the Franchise Tax Board, the State Controller, and the Board of Equalization. If the Department of Revenue were already in existence, as proposed under Part 1, B, this would mean the shift of the Alcoholic Beverage Excise Taxes and the Assessment of Insurance Companies from the Board of Equalization to the Department of Revenue.
- C. The Franchise Tax Board would cease to exist.
- D. Create a separate Board of Tax Appeals made up of the individuals who are members of the State Board of Equalization, with the Controller as an ex officio member. However, as the present Board of Equalization incumbents retire, they would be replaced, not by election, but with appointments by the Governor from four separate regions determined on a population basis. In addition to hearing appeals on all taxes administered by the Department of Revenue, this board would formally determine equalization, assessment standards, and valuation of public utility properties. However, the administrative work behind these determinations would be done by the Department of Revenue.

The foregoing constitutes an outline of a reorganization proposal for the consolidation of tax collecting agencies in California. It is offered in the hope that it will be helpful in the important work of the Commission on California State Government Organization and Economy. The staff of the Department of Finance is available to assist in the development of this proposal.

APPENDIX B

PROPOSED STRUCTURE FOR A DEPARTMENT OF REVENUE AND A TAX APPEALS AND EQUALIZATION BOARD IN CALIFORNIA

Prepared by
Office of Legislative Analyst
September 8, 1964

Administer

1. Retail sales and use taxes
2. Personal income tax
3. Bank and corporation taxes
4. Alcoholic beverage excise taxes
5. Cigarette tax
6. Diesel tax (use fuel tax)
7. Gasoline tax (motor vehicle fuel license tax)
8. Truck tax (motor vehicle transportation license tax)
9. Insurance company tax (present Board of Equalization and Controller duties)
10. Inheritance tax
11. Gift tax
12. Private car tax
13. Subscription television tax

Other Activities

1. Assessment standards
2. Tax-deeded lands
3. Valuation of utility properties short of final determinations
4. Equalization activities short of final determinations.

1. Hear appeals from acts of Department of Revenue.
2. Make final equalization determinations.
3. Make final public utility valuation determinations.

Pertinent Points

1. A constitutional amendment is required to abolish the Board of Equalization and to eliminate loose ends such as the alcoholic beverage excise tax and assessment of the insurance tax.

2. Even if it is desired to retain the elective Board of Equalization, a constitutional amendment would be necessary to eliminate the loose ends noted above.
3. We make no recommendation as to the internal organization of the new department. The proper top structure (i.e., a director appointed by and responsible to the Governor), assisted by the management and organizational services available, and with the approval of the Legislature, should be free to work out the internal details of integration, responsibility and geographic distribution to meet the requirements of effective administration.
4. It is assumed that the inheritance appraiser activity would be incorporated into the new department with civil service personnel, comparable to tax administration personnel concerned with all other taxes in the new department.
5. It is contemplated that the Tax Appeals and Equalization Board would have a minimal staff directly under it, because the new Department of Revenue would be responsible for developing all factual data and providing all clerical and technical effort which would be essential to (1) appeals hearings, (2) equalization determinations and (3) public utility valuation determinations. The board therefore would be limited to a "personal" staff consisting of an executive secretary and minimal clerical persons.

APPENDIX C

December 2, 1964

HON. MILTON MARKS, *Chairman*
Interim Committee on Government Organization
State Capitol
Sacramento 14, California

Dear Mr. Marks:

Herewith is the Board of Equalization proposal to consolidate revenue functions under the Board if a change in the state's tax administrative structure is decided upon.

Our report is submitted to your committee in accordance with your request.

Very truly yours,

PAUL R. LEAKE
Chairman

CONSOLIDATION OF MAJOR CALIFORNIA STATE REVENUE PROGRAM RESPONSIBILITY IN ONE AGENCY—THE STATE BOARD OF EQUALIZATION

I. INTRODUCTION

This is a plan for bringing together within the state's principal revenue agency—the Board of Equalization—the administration of the remainder of California's major revenue programs not already part of board operations: the total operations of the Franchise Tax Board (income and franchise taxes); the State Controller's tax collection functions (highway and related taxes); and the inheritance and gift tax operations of the state (now involving both the State Controller's office and local jurisdictions).

A conservative estimate of eventual saving resulting from the initial changes proposed is \$358,412 through consolidation of the Franchise Tax Board and State Controller highway tax collection operations under the Board of Equalization, and an additional \$1,159,000 through the board's administration of the inheritance and gift tax functions. The total saving gained through board consolidation of these three operations would be at least \$1,517,412.

In reaching this conservative estimate, several likely sources of additional budgetary gain under consolidation have not been included. These include a possible one-half to one million dollar increase in inheritance tax revenue under more exacting appraisal standards. (This does not include another possible \$300,000 which could be gained in interest if the state received directly the inheritance tax money now held by the counties for up to 60 days.) There is also no estimate of the very probable savings which would result from improvements in organization,

programs, and systems after the shakedown period of integration and after the opportunity for additional study in depth.

The Board of Equalization is already responsible for the various business taxes (sales and use tax, highway taxes audit, etc.) which form the majority of the state revenue dollar. The Board of Equalization is already responsible for the state's property tax programs. Grouping within one agency the administration of all major tax programs has been the virtually unanimous recommendation of past study groups and of executive and legislative advisers. The Board of Equalization proposal is in accord with this consensus in favor of efficiency and economy. The board plan advances the further proposition that the quality of tax administration by the board is a recognized fact which argues most strongly for continued experienced Board of Equalization direction under the consolidation plan.

Much past discussion has invariably centered about the composition of any proposed consolidated agency's top policy-executive structure. This is well summarized in the comment in the January 1947 report of the Assembly Interim Committee on State and Local Taxation (page 46):

"In brief, the choice lies between an elective administrative board, an appointive administrative board and an appointive administrator. Each plan has advantages and disadvantages. These must be studied carefully and if any change is to be effected, due consideration must be given to the interests of the state, the taxpayers and the general public. Finally it must be determined that suggested changes will improve the administration of state taxes and not accomplish the reverse. There is nothing to be gained from changes made only for the sake of change."

The Board of Equalization plan supports that philosophy. Its advocacy of the first alternative—*elected board administration* of an integrated agency—can quite naturally be attributed in part to pride in its internationally recognized successful tax operations. Without by any means claiming infallibility, the board believes (and documents with facts in this plan) that its structure has already proved itself in tax administration. This pragmatic test of good organization appears too often lacking in previous proposals to establish a State Revenue Department.

II. MAJOR GOALS AND ADVANTAGES OF BOARD OF EQUALIZATION CONSOLIDATED TAX AGENCY PLAN

As an administrative body, the existing Board of Equalization offers unique characteristics supporting its proposed direction of a consolidated tax agency:

A. *Service to the public*

As a constitutional and elective board, sensitive to the public, the Board of Equalization, is immediately responsible (and responsive) to the taxpayer's problems in every part of the State.

This most important consideration cannot be given secondary ranking in any search for a program intended to supply maximum economy and efficiency.

In addition to this atmosphere of responsiveness at the top level, the Board of Equalization's existing widespread network of officers provides for rapid, direct local service throughout California. This establishes the base for eventual one-stop information and assistance services to the taxpayer, who now must visit three locations—and finds only Board of Equalization offices convenient to him if he is outside the larger metropolitan centers.

B. *Savings in administrative costs*

Under the proposed plan administration would be in an agency with a recorded reputation for economical operations. In the face of a growing workload—both in addition of new tax programs and in sheer volume of business—the total authorized positions in the Board of Equalization's business tax operations (where by far the majority of the board's employees are engaged) are *fewer* than they were 10 years ago. There is only one more position authorized for the entire Board of Equalization than there was 10 years ago. Business tax costs are now only 1.15 percent of revenues produced by the board's administration of business tax programs. (See chart following Section VI.)

The Board of Equalization proposes the application of the proved approaches used in achieving this record to an integrated agency which adds the present Franchise Tax Board's functions, the State Controller's highway tax collection, and the inheritance and gift tax operations. An objective and conservative analysis of the economies resulting from this combination shows substantial minimum savings when compared to the cost of the present separate operations. These savings are detailed in a following section.

C. *Public confidence and acceptance*

Much of the earlier opposition to proposals for an integrated tax agency has been attributed to public fear of centralizing authority for the state's tax collections in a single, Governor-appointed administrator, far removed from the taxpayer and reachable only through the office of the Governor—which is already overburdened with a vast number and variety of responsibilities in addition to tax problems.

The existing Board of Equalization offers an elective body, responsible directly to the taxpayer, and devoting full time to one concept: fair and equitable tax administration.

The board provides the unique advantage of an *administrative* body which is *elective* and therefore particularly accessible and sensitive to individual taxpayers and to the public in general.

D. *Continuity of tax operations and local relationships under an experienced and demonstrably successful leadership structure*

The Board of Equalization has shown a continuing record of accomplishment based upon knowledge and experience in tax administration—covering both business and property taxes and both state and local operations. The concluding section of this document details the record. No other body offers this comprehensive background in all tax areas and the immediate ability to administer the additional

programs of income and franchise taxes, the collection phases of highway taxes, and the inheritance and gift taxes.

Unlikely any other agency, the board already plays a predominant role in California's total state *and* local tax picture. As one example, acting on a cooperative, contractual basis for local jurisdictions, it collected during the past fiscal year \$287,000,000 in *local* sales and use taxes alone, which were transmitted directly to local jurisdictions. Of particular import, the board's activities were directly contributory to the collection of some \$2.8 billion dollars in local property taxes. This has been accomplished through such activities as direct board assessment of utilities, intercounty equalization determinations (a constitutional responsibility), and assistance to county assessors in achieving appropriate assessment standards.

More detail on the unmatched part played by the Board of Equalization in the state's total state-local revenue picture is presented in Section VII, Exhibit B.

E. *Achievement of a consolidated agency without constitutional revision*

Unlike other plans, the Board of Equalization proposal would gain the benefits of consolidation by *legislative* action rather than by the costly, cumbersome, and inflexible route of constitutional amendment. All other plans have required a splitting of various tax functions between some proposed new central agency and a truncated Board of Equalization, pending completion of the complex constitutional amendment processes which would be required to consolidate tax programs under any body other than the Board of Equalization.

F. *Elimination of need for a superimposed tax appeals board*

Past proposals for a substitute appointee or body in lieu of the present Board of Equalization have included the resultant need for a separate new tax appeals board. By continuing the present elective board structure, there is no need for a superimposed tax appeals board. It is estimated that such an additional board would cost some \$400,000 to \$500,000 a year for board members and their legal and other staff.

The Board of Equalization now provides to all taxpayers full opportunity for a fair and impartial hearing in controversies relating to board-administered taxes. The board has shown in its handling of income and franchise tax appeals that it is fully competent in this area of taxation. The board has amply demonstrated its policy of giving each taxpayer a full opportunity to present the facts and arguments in support of his case. The record of the board shows clearly that it is not a body which tends to approve automatically the tax determinations recommended by the staff. The board makes its own decisions based on its own evaluation of the case presented by the taxpayer. This assures the taxpayer a fair hearing.

G. *Opportunities for board to contribute to personal income and corporation franchise tax programs*

The existing larger network of offices under the Board of Equalization would make possible immediate advantages to the current Franchise Tax Board programs. An example is the already-established

Equalization compliance system, which puts Board of Equalization fieldmen in approximately four times the number of locations in which there are now Franchise Tax Board offices, greatly increasing collection opportunities.

The established Board of Equalization statewide staff development and training programs—recognized as among the best in state service—would be made available to Franchise Tax Board employees under a consolidated agency, as would the increased promotional opportunities in a larger agency.

II. Compatibility with the inheritance and gift tax program

The existing Property Tax Department of the Board of Equalization already has related functions in real and tangible personal property appraisal as part of its day-to-day work. The required skills and experience are thus already available as a foundation for addition of the inheritance and gift tax operations to the board structure.

I. Opportunities for economies through consolidation of highway tax activities

As part of its own regular processes, the Board of Equalization already covers the major parts of the various highway tax programs. By consolidation, substantial gains can be achieved through such means as combining EDP processes and use of the board's already-existing, widespread collection system operating out of established offices throughout the state.

III. ECONOMIES OF CONSOLIDATION—SAVINGS OF \$1,517,412

Policy

This report predicts only those savings which are supported by sound and valid reasons stemming from conservative analysis. Future growth of the state and the specific tax programs finally consolidated are critical factors in eventual actual savings. This approach is in contrast to some earlier studies having many findings which are now considered by most unbiased analysts as without foundation in fact.

The projected savings under the proposed Board of Equalization plan cannot be attributed to the first year under the new plan. Savings take time; it would be the intention and expectation of the board that savings resulting from consolidation would be realized through attrition. This policy should avoid the inevitable loss of morale which would result from any wholesale layoffs or demotions.

On the other hand, the conservative projection of savings by no means represents the total eventually possible as the consolidated agency learns from experience the further improvements and economies which are possible through integrated operations.

Method

Savings are cited by agency and function. Where eliminated positions are cited as savings, both salary and overhead costs attributable to the positions are shown as a summary figure. In computing savings, the midstep in the salary range of a position was used and, except where otherwise specified, a 20-percent allowance was applied to salaries to cover all other costs.

The standard 20-percent addition allows for actual savings made possible by the elimination of a position. It includes costs of service rendered by Finance, General Services, Controller, Treasurer, Personnel Board, Attorney General, Secretary of State, and the Legislature, as well as the state's contributions to employee retirement and health and welfare benefits. It also includes costs of operating expense such as space, equipment, supplies, and travel expenses.

A summary of the estimated savings is shown below. Following that is a more detailed account of the sources of savings.

SUMMARY OF ESTIMATED SAVINGS

A. *Transfer of Franchise Tax Board Functions to Board of Equalization*

Legal	\$ 31,996
Electronic data processing	123,145
Collections	53,282
Fiscal	11,204
Personnel and training	5,602
Cashiering	22,408
Mailing	16,057
Supply	16,806
Temporary help	29,385

\$ 309,885

B. *Transfer of State Controller Tax Collection Functions to Board of Equalization*

Headquarters	\$ 31,521
Field	17,006

48,527

C. *Transfer of Inheritance and Gift Tax Functions to Board of Equalization*

Inheritance tax appraisal	\$739,000*
County treasurers' services	420,000†

1,159,000

Total estimated savings \$1,517,412

* \$899,000 less an estimated \$160,000 of appraisers' expenses now charged against estates which it is assumed will be absorbed by the state. In addition, from \$500,000 to \$1,000,000 further revenue is likely from changes in appraisal practices.

† In addition, approximately \$300,000 could be gained in interest on inheritance tax funds now remitted by counties at bimonthly intervals.

SAVINGS IN FRANCHISE TAX BOARD PROGRAMS

Legal \$31,996

From a functional standpoint, the main effect in the legal area would be to consolidate the handling of all legal functions under the Board of Equalization.

Administrative routine for the several tax programs would require approximately the same total legal services under the Board of Equalization as now needed by the separate agencies. This type of work includes answering inquiries from taxpayers or the staff; interpreting

laws, rules, and regulations; assistance in collections; counseling services for tax administrators; etc.

Under the proposed consolidation plan it is probable that appeals to decisions made with respect to laws now administered by the Franchise Tax Board can be handled on a less formalized basis since it would no longer be necessary to transmit an appeal from one agency to another. Thus, it would be expected that the handling of an appeal case would be simplified with a reduction in work, such as the elimination of duplicate legal review, and less formalized documentation (briefs, summaries, background data, etc.). It is estimated that this reduction of work would eliminate at least two legal positions and produce a savings of \$31,996.

Electronic Data Processing **\$123,145**

Consolidation of this function would make it possible to reduce the cost of handling it for two main reasons.

First, two common electronic data processing systems could be secured with identical configurations including printing and card handling facilities and switchable tape drives. Operation of the equipment would be planned for two shifts to take advantage of additional lower rental charges. As a result it is estimated that machine utilization of each of the two EDP systems would approximate $1\frac{1}{2}$ shifts. This would leave enough reserve capacity so that increased machine use for special jobs or emergency situations could be handled with a third shift of personnel.

This plan would make it possible for one crew to operate both systems on each shift. It would also provide flexibility so that either system could be enlarged for a specific job by shifting equipment (such as tape drives) from one to another. This flexibility would increase system capacity and facilitate work scheduling. It is estimated that annual EDP machine costs could be reduced approximately \$50,000 and that a reduction of five positions (\$39,484) in the staff handling the EDP equipment could be made.

Second, it would be possible to achieve greater utilization of electric accounting machine (EAM—punchcard processing) equipment. This would be accomplished by operating the equipment on a two-shift basis and by releasing equipment not needed after consolidation. This action would make possible using state-owned equipment on a second shift at no additional cost (no rental charge) and using rented equipment for the second shift at half the cost of the first shift. It is estimated that annual EAM machine costs could be reduced approximately \$13,000 and that a reduction of three positions (\$20,661) in the staff handling the EAM equipment could be made.

Total estimated savings for this function are \$123,145.

Collections **\$53,282**

Consolidation of this function in headquarters and field would make it possible to reduce the cost of handling collections for several reasons.

A single contact could be made by the headquarters and field staff with any taxpayer owing liability for more than one tax, such as sales and income.

More frequent and earlier contact with taxpayers for tax matters other than franchise and income taxes would make it possible to view

an account for possible franchise and income tax liability and take appropriate action before normal revelation of the liability.

In headquarters, consolidation of the handling of liabilities for the same taxpayer would be possible, such as release of liens, preparation of writeoffs, and collection aid services. This would make possible a savings of two clerical positions. Another clerical position could be saved by consolidation of accounts receivable file maintenance.

A substantially larger headquarters collection organization would also result. One additional clerical position could be saved through a reduction in the need for clerical supervision made possible by consolidation of similar functions under subunit heads.

The widespread network of board field offices that would be available, and the staff assigned to them, would make possible a more decentralized, concentrated, specialized, and accelerated collection effort. A substantially larger technical staff would also be available to work on a consolidated field collection program particularly for franchise and income taxes. For these reasons it would be possible to handle the field collection program with four fewer technical (compliance or enforcement) positions.

The total estimated position savings for handling of the collection function on a consolidated basis is eight, which total \$53,282.

***Fiscal Functions* \$11,204**

The combined administration of the consolidated tax programs would result in the preparation of one budget instead of two. Consolidation of accounting, purchasing, and other fiscal functions would also be possible.

It is estimated that this reduction of work would eliminate two positions in a headquarters consolidated fiscal organization for the reasons given. The amount of savings would be \$11,204.

***Personnel and Training* \$5,602**

Consolidation of personnel and training functions would make it more economical to handle documentation of normal personnel transactions. Increased specialization and standardization would also be possible in a larger unit. For these reasons the functions could be handled with one fewer position and produce a savings of \$5,602.

***Cashiering* \$22,408**

Integration of headquarters cashiering functions would make possible a greater utilization of the consolidated staff. Some leveling of peak and valley workloads would also be possible. As a result the headquarters cashiering functions could be performed with two fewer positions.

Under the proposed plan duplicate field offices would be eliminated and all Board of Equalization personnel would be housed at one location in each area. Action would also be taken to extend franchise and income tax payment services to areas other than the 17 where they are now available.

As a result cashiering functions can be consolidated and decentralized. The field cashiering functions could then be performed with two fewer positions.

In summary it is estimated that consolidation of cashiering functions would eliminate four positions for a savings of \$22,408.

Mailing \$16,057

The Board of Equalization operates a highly specialized headquarters mail room with a permanent staff on a year-round basis. It also operates stuffing, decollating, folding, inserting, and addressing equipment. Consolidation of this staff with staff performing similar functions for franchise and income taxes should make possible greater utilization of the staff and equipment and reduce the need for temporary help.

The estimated position savings for handling of headquarters mail and related functions on a consolidated basis is three, for a savings of \$16,057.

Supply \$16,806

The Board of Equalization operates a headquarters supply unit which stores and distributes forms and office supplies to headquarters and field offices. It also performs duplicating services, including assembling forms and bulletin releases. In addition, other miscellaneous services are provided.

Consolidation of this staff with staff performing similar functions for franchise and income taxes should make possible greater utilization of the staff and equipment and enable the consolidated unit to operate with one fewer position.

Stocks of supplies and forms are now maintained in various field offices of the Board of Equalization and Franchise Tax Board. Copying and other miscellaneous services are also provided. Under the proposed plan all personnel would be housed at one location in each area and staff would be deployed to additional offices. As a result the field supply and other related services could be performed with two fewer positions.

In summary it is estimated that consolidation of supply and related functions would eliminate three positions for savings of \$16,806.

Use of Temporary Help \$29,385

The Franchise Tax Board 1964-65 budget contains approximately 264 authorized positions classified as temporary. Of this total 21 are assigned for field use and 243 for headquarters use.

Spreading of income and franchise tax workload to staff located in more field offices and housing of all personnel at one location in each field area would make it possible to utilize the consolidated permanent staff to a greater extent and reduce the need for temporary help. It is estimated that the need for temporary positions could be reduced the equivalent of two positions in field offices.

In headquarters consolidation of electronic data processing, cashiering, mail, and other functions where temporary help is used, as well as increased utilization of the staff performing these integrated functions, should result in a modest reduction of the equivalent of five positions in the use of temporary help.

In summary it is estimated that the use of temporary help can be reduced an equivalent of seven positions for a total saving of \$29,385.

**SAVINGS IN STATE CONTROLLER'S TAX COLLECTION PROGRAMS
(Other than Inheritance and Gift Taxes)**

Headquarters Collections..... \$31,521

Consolidation of the headquarters Controller's tax collection functions and the Board of Equalization business tax collection functions would result in savings for several reasons.

The Administrative Service Division of the board is already handling moneys collected from most of these taxpayers. The additional workload as a result of the consolidation could be absorbed at a savings of two positions.

If the technical aspects of the collection activity, which are those functions dealing with analysis of posting, correspondence, and special collection action, were performed in a substantially larger consolidated section, with standardized procedures and increased specialization, the same functions could be performed with one fewer position.

The elimination of interagency duplication and standardization of procedures in the preparation of billings and correspondence would make it possible to absorb these activities in a consolidated section with one fewer position.

Consolidation of these functions would make possible the absorption of the supervisory responsibilities and result in the saving of one additional position.

The total savings in absorbing the Controller's headquarters tax collection function is five positions, which total \$31,521.

Field Collections..... \$17,006

The Controller's statewide field collection staff is located in only three district or regional offices. This results in a great deal of travel expense and time to contact and collect from delinquent taxpayers. Consolidation of this function would bring the field collection activities into a large and well-dispersed field organization and make it possible to save much of this expense and time.

Consolidation of this activity would also save duplication of effort which now exists because two agencies are contacting the same taxpayer for different tax programs.

A substantially larger technical staff would be available to work on an integrated field collection program which could absorb a portion of the collection activities now performed.

For the above reasons it is estimated that consolidation of the Controller's field collection program would eliminate three positions for a savings of \$17,006.

**SAVINGS IN STATE CONTROLLER AND COUNTY INHERITANCE
AND GIFT TAX PROGRAMS**

Inheritance and Gift Tax Appraisal Function..... \$899,000

(See Section VII, Exhibit E, Analysis of Appraisal Function)

The inheritance tax appraisers' primary source of compensation is from fees charged against probated estates. They also receive small sums for appraising properties in connection with the gift tax, etc., and a small amount from the state for filing inheritance tax reports. Their gross income from fees and expenses charged against estates alone plus their payments for filing inheritance tax reports amounted

to \$3,130,874 in 1963 and is projected for 1964-65 as approximately \$3,367,000. It is estimated that a staff of 202 employees would be required to perform the appraisal function in the Board of Equalization consisting of

Property Tax Department	
Field operations	
150 property appraisers (including supervision)	
18 clerks	
Inheritance and Gift Tax Division	
(new positions to be added to the 109.5 already authorized for this division)	
24 examiners	
10 clerks	

The total annual cost in the Board of Equalization for salaries, operating expenses, and equipment would be approximately \$2,468,000. When compared with the projected cost of about \$3,367,000, the estimated annual savings are \$899,000. (See Section VII for details of these computations.)

Inheritance and Gift

***Tax Legal and Examination Functions*..... (no estimated savings)**

The Inheritance and Gift Tax Division of the Controller's office has a staff of 109.5 in positions which may be grouped as follows:

Attorneys	22
Inheritance and gift tax examiners	20
Accountants and auditors	11
Stenographers, typists, and clerks	54
Other	2.5
Total	109.5

The division's 1964-65 budget, exclusive of commissions to county treasurers (\$670,000) and inheritance tax appraisers' report fees (\$170,000) totals \$1,045,082.

No substantial savings are to be anticipated from transfer of the work now performed by the Inheritance and Gift Tax Division to the Board of Equalization. It seems probable that association with a larger agency wholly devoted to tax administration would afford advantages, but it is impossible to translate these advantages into estimated savings.

***County Treasurer's Inheritance Tax Function*..... \$420,000**

The county treasurers participate in the administration of the inheritance tax by examining safe-deposit boxes, issuing consents to transfer property, making tax collections, and transmitting collections to the State Treasurer. For these services they receive 3 percent of their collections up to certain statutory maxima. The Controller's office estimates the 1964-65 commissions at \$670,000, a sum which is about six-tenths of one percent of anticipated revenues.

If the Board of Equalization were to take over the work now performed by the county treasurers, it would be done through the board's network of 60 offices at relatively little expense. It is estimated that the total annual cost of administering this function in the Board of Equalization would not exceed \$250,000. The savings would, therefore, amount to at least \$420,000 annually.

The counties also benefit by being allowed under the law to hold the money for 90 days without penalty. We are informed that the counties do not take full advantage of the law and actually remit

collections to the State Treasurer at bimonthly intervals, holding no money longer than approximately 60 days. If the state can earn $3\frac{1}{2}$ percent on its investments of General Fund moneys, interest foregone on the anticipated 1964-65 collections of \$105 million could amount to as much as \$900,000 were the counties to take full advantage of the law and \$300,000 were they to take full advantage of the 60-day practice.

Certain Other Economies Are Not Now Feasible

Earlier studies included other kinds of savings which are not found in this proposal since, as previously stated, this proposal predicts only those savings which can be supported by sound and valid reasons stemming from conservative analysis.

ONE AUDIT FOR ALL TAXES

One of these is based on the theory that it is advantageous to make one audit of a taxpayer's records for all taxes. This theory was explored recently by an interagency committee using a representative sample of tax returns, and, based upon the results, it was not possible to predict any savings through general implementation of such a plan.

Board of Equalization experience has proven that where auditing needs and processes are generally similar, such as in sales, transportation, and use fuel taxes, the theory of one audit has merit where feasible and practical. Conversely, it has also found that it is advantageous to train a specialized staff to audit separately for beverage, cigarette, and gasoline taxes.

Under this proposal the question is raised as to whether it would be advantageous to make one audit for income and franchise taxes as well as others, such as sales tax. This could not be accepted as a standard practice for several reasons.

Under this theory it would be necessary to train the bulk of the audit staff to check a taxpayer's records for all taxes. As a result one auditor could not possess the same skills and knowledge that an auditor specializing in one or related laws could attain. Where an audit was made for more than one tax, particularly those taxes where needs and processes are not similar, the time necessary to complete the audit could increase.

Another factor is the basic difference in audit needs. Information required for auditing the taxes administered by the Business Tax Department is generally found in the taxpayer's records or is based upon returns filed or other information in the taxpayer's file. For income and franchise taxes, however, a majority of the data needed for auditing are obtained from Internal Revenue Service reports, information returns from California employers, and a comparison of federal and state tax returns through the use of EDP methods.

Audit processing is also a basic difference in many respects. The same records would not generally be used. In some instances records for one tax (such as sales) may be found at one location while records for income tax may be found at another. The handling of relations with taxpayers dealing in multistate operations would be difficult with respect to income tax and questions of allocation of income. The timing of the audit would be difficult to establish with returns due for various intervals, particularly for taxpayers filing income tax returns on a yearly basis. Timing would also be a problem in auditing a taxpayer

closing out a business subject to sales tax, for example, where it would be desirable to review the records for possible sales tax liability as soon as possible and not wait for information needed for income tax auditing.

The close relationship that exists between the federal government and the state with respect to income and franchise taxes is also a valid reason for not integrating auditing of these taxes with others. The state tends to follow changes in federal law provisions. These changes have been of sufficient volume and complexity in recent years that specialization in auditing would seem highly desirable.

None of the above reasons should be interpreted as endorsing a policy of no coordination of efforts between tax programs. All auditors would receive training in all tax programs to permit recognition of audit needs in programs outside their basic responsibility. A planned procedure would continue to exist for exchanging information between one program and another in those instances where the state's interests are in jeopardy.

Further Decentralization of Headquarters Staff and Operations

Headquarters functions were examined and none could be readily identified for change to field responsibility. This is not to say that some decentralization would not be possible in the future after some experience has been gained from consolidation of all taxes as proposed.

Research shows that considerable decentralization has taken place in the Board of Equalization since 1958. Functions decentralized include refunds of sales and highway cash deposits, responsibility for final audit review, handling of undelivered tax return mail, complete control of highway tax clearances, sales and highway taxes registration record control, complete responsibility for collection control and followup of dormant accounts, establishment and control of installment payment proposals, delinquent return control for vendor use fuel tax accounts, business and area coding, highway tax audit selection, etc.

The installation of electronic data processing equipment in 1961 gave the board reason to centralize the processing of data. Consequently, any thoughts to decentralize such operations as alpha files, accounts receivable control files, and other control records has been discouraged.

FURTHER REORGANIZATION ON A FUNCTIONAL BASIS

Many of the possible economies that have been claimed possible in years past have been realized as a result of a major reorganization of the Board of Equalization which was initiated in 1959. As a result business taxes were organized on a functional basis rather than by purpose and functions common to several tax programs were consolidated. The savings occurred over a period of years and were used to handle increasing workloads.

IV. MAJOR FEATURES OF THE BOARD OF EQUALIZATION PLAN FOR A CONSOLIDATED REVENUE AGENCY

General

The proposed master plan provides for gathering together under the overall supervision of the established Board of Equalization—

already the state's principal tax administration body—the remainder of California's major tax programs.

The Board of Equalization already administers all or the major elements of the following tax programs:

- State sales and use tax
- Local sales and use tax
- Gasoline tax
- Use fuel tax
- Motor vehicle transportation tax
- Cigarette tax
- Alcoholic beverage tax
- Private (railroad) car tax

The Board of Equalization also *assesses* the insurance company tax.

Under this proposal, the following tax programs—now split wholly or partially to other agencies—would be brought under integrated direction:

From the Franchise Tax Board—all operations:

- Personal income tax
- Corporation income tax
- Bank and corporation franchise tax

From the State Controller's office—all the following highway and other tax *collection* programs (the Board of Equalization is already responsible for all phases of the highway tax programs except collections and one type of gas tax refund):

- Gasoline tax
- Motor vehicle transportation tax
- Insurance company tax (now split between the Insurance Commissioner, the Board of Equalization, and the State Controller)—

Plus two relatively minor programs from the administrative standpoint:

- Petroleum and gas assessments
- Subsidence abatement assessments

From the State Controller's office *and* local jurisdictions:
The inheritance and gift taxes

This logical consolidation of tax administration under an experienced, full-time, constitutional, elective board combines usual advantages (economy, efficiency) of grouping allied functions in one agency with the unique advantage of recognized knowledgeable leadership from a democratically chosen body immediately responsible to the taxpayer. The proposed consolidated agency is shown in Section VII, Exhibit A.

The foundation for adding the additional taxes has already been established successfully within the existing Board of Equalization organization.

Income and Franchise Tax Operations

It is proposed that the Franchise Tax Board operations be added as a third tax department (major division), equivalent to the existing Business Tax Department and Property Tax Department. This new

major segment would be headed by an Assistant Executive Secretary, Income and Franchise Tax, paralleling the top organization of the other two tax departments of the Board of Equalization. Such operations of the present Franchise Tax Board such as personnel, fiscal, general services, etc., not directly tied to income and franchise tax subject-matter techniques, would be combined in central staff services for the total new agency.

Because of differences in audit requirements, income and franchise tax audits would—at least initially—be carried on in the field under a chain of command stemming from the proposed head of the new department, rather than integrating the field crews under the district tax administrators now responsible for the Board of Equalization's present business taxes programs. However, for purposes of economy and coordination, common housing would be provided. Later experience may show basis for further integration.

State Controller's Tax Collection Operations

The great majority of the direct tax collection activities of the State Controller's office (mainly in highway taxes) stem from work already performed within the Board of Equalization, and, in a real sense, represent fragments missing from a total board operation. These activities of the State Controller's office can be added readily to present board operations without organizational change. The board already has the necessary systems, plus a much greater deployment of field personnel to enhance the collection effort.

It is not proposed that the State Controller's tax refund operation be assumed by the board, as this has been considered an appropriate, standard function for a State Controller's office.

Inheritance and Gift Tax Operations

The appraisal element is now carried out by persons chosen by local courts from panels compiled by the State Controller. Appointees (who are not state employees) receive fees from estates based upon their appraisals.

It is proposed that this function be assigned to the Board of Equalization and performed at lesser cost by a staff of civil service appraisers to be located within the board's existing Property Tax Department. Organizational changes to provide for proper deployment and direction of the department's expanded field force are included in the plan, resulting in an organization more closely resembling that of the present Business Tax Department and the proposed Income and Franchise Tax Department. An estate tax is proposed to correspond to the fee now received by appointed appraisers.

It is also proposed that consideration be given to the board's assuming certain work in inheritance tax administration now carried out on a commission basis by county treasurers. This includes opening and listing the contents of safe-deposit boxes, issuing consents to transfer property, and making tax collections and transmitting collections to the State Treasurer. The widespread network of Business Tax Department offices makes this a logical function for performance at less cost by the board's field compliance personnel.

The State Controller's inheritance and gift tax organization includes a civil service staff in an Inheritance and Gift Tax Division. It is pro-

posed that this unit be transferred to the board's Property Tax Department as a major staff unit, with whatever further redeployment of personnel within the agency as is found advantageous.

Implementation Plan

Putting into effect the proposed plan would of course require appropriate legislation. The Board of Equalization will be prepared to present its proposals in bill form for consideration. Attached is a *partial* draft of proposed legislation. A draft of the remaining proposed legislation required to accomplish the board's total proposal (including the transfer of inheritance and gift tax functions) is now in preparation.

Programs Not Included in Plan

Any consideration of a consolidated state tax agency must take into consideration all current revenue-producing organizations.

As has been the case in past considerations, the analysis leading to this present Board of Equalization proposal has given thought to the following activities which deliberately are *not* in the board proposal. These include the following:

- Department of Employment payroll tax
- Horse Racing Board fees
- Department of Motor Vehicles registration and license fees
- Motor vehicle auto use tax
- ABC liquor license fees
- The various licensing or certification fees connected with businesses and professions (contractors, engineers, etc.)

Although past study group recommendations have varied in specific detail, there has been general agreement that these revenue activities would be a questionable addition to a consolidated tax agency—at least pending further experience with integrated administration of the basic grouping proposed.

The tax, license, or fee activities of the group of agencies not included in the plan can generally be characterized as auxiliary to their fundamental operations, but closely linked from the public service, reference, control, or recordkeeping standpoint to those fundamental operations. Separation of the revenue collecting from the primary operational activities in these agencies would seem to create more problems in coordination and in multiplication of contacts required of either the taxpayer or the agencies than consolidation would appear to offer superficially in paperwork savings.

These programs which are not proposed for consolidation differ from those which are proposed as part of an expanded Board of Equalization operation—for example, the Franchise Tax Board operation. That operation is totally one of tax administration and is proposed for movement as a whole to a consolidated agency. No splitting of programs is involved. In the case of the State Controller's functions proposed for transfer, these are incidental *tax* operations which are not allied to primary responsibilities of that office. In the highway tax field, the proposed transfer of functions brings together related operations which are now split.

The Department of Employment's payroll taxes for unemployment and disability benefits have been discussed in some past reviews as

possibly more suited to a consolidated agency than the others in the group not recommended for consolidation. The Board of Equalization plan does not include the Department of Employment's tax functions for several reasons which are considered compelling:

1. The same records which are used for the computation of payroll tax—the records of individual wages—are also used to determine employee benefit rights. This very close relationship of functions would make most cumbersome any arrangement whereby the Department of Employment would have to check constantly with the Board of Equalization to determine audit findings and then apply these to Employment's benefit operations.
2. The amount of tax due from the employer is affected by the amount of benefits paid. Here again there is a close interrelationship between tax operations and benefit operations.
3. The Department of Employment operates its tax functions under federal budgetary regulations. A problem is presented by anticipated federal refusal to support any pro rata charge to the employment tax programs of any consolidated audit and collection program placed under the Board of Equalization. The federal program is not built on the selective sampling concept, designed by the Board of Equalization to provide concentration of audit time on the most likely predicted sources of tax change while covering a representative group of various types of businesses. Audits in the Department of Employment are initiated directly by followup on employee claims for benefits not supported by employer tax returns. It is believed that the federal government would not, therefore, support a charge against payroll tax revenue for audit costs incurred in routinely checking payroll records for employment tax conformity while the auditor may be reviewing firm records for sales tax (or other) purposes.

The allocation of partial payment tax receipts would also present serious problems under a program of federal involvement. The federal government could assert priority rights under a common fund approach.

V. DETAILED STATEMENT OF THE THREE MAIN ELEMENTS OF THE BOARD OF EQUALIZATION ORGANIZATIONAL PLAN FOR A CONSOLIDATED REVENUE AGENCY

A. *Transfer of Franchise Tax Board Operations*

1. *A New Department of Income and Franchise Taxes Would Be Established Within the Board of Equalization*

The Board of Equalization already operates with two tax departments (major divisions): business tax and property tax. The creation of a third tax department, responsible for administration of income and franchise taxes, would be in keeping with the organizational structure of the board. All three departments, as well as the existing staff management functions (legal, personnel, internal audit, etc.) and the Administrative Service Division, would report to the executive secretary. His office would coordinate the activities of the three tax departments.

The Department of Income and Franchise Taxes would be headed by an assistant executive secretary in the same manner as the existing assistant executive secretaries in charge of business and property taxes. His office would be provided with needed top-level assistants to ensure continued successful accomplishment of the objectives and programs of the department.

The Department of Income and Franchise Taxes would be responsible for handling present activities of the Franchise Tax Board, with the exception of central management and administrative services which would be combined with similar activities already performed in the board and other functions as described in Sections 3, 4, 5, and 6.

2. *Headquarters and Field Audit and Attendant Support Operations Would Be Separated*

The Board of Equalization business tax organizational structure is now divided into headquarters and field components. Pending further study, the new Department of Income and Franchise Taxes would be organized in a similar manner.

A position would be designated in charge of field operations and would be responsible for activities performed in the 16 field offices, including those located in New York and Chicago. His office would be provided with staff assistance necessary to ensure accomplishment of field activities.

A second position would be designated in charge of headquarters operations (such as operational accounting, files, typing pool, etc.) and would be responsible for audit and attendant support activities performed in the headquarters office. He would not be responsible for the investigations function which would report directly to the assistant executive secretary in charge of the department.

It is possible that study may reveal that some of the functions initially assigned to the department should be integrated or consolidated with like or similar functions performed in the Department of Business Tax or Administrative Service Division.

3. *Management Functions Would Be Combined With Similar Activities Already Performed in the Board of Equalization*

Both the Franchise Tax Board and the Board of Equalization have common management services which would be combined. They are administrative analysis, legal, personnel and training, and tax service information.

Internal audit services now provided in the Board of Equalization would be expanded to cover the operations of the Department of Income and Franchise Taxes.

This action would result in all management functions named being available to all three tax departments of the Board of Equalization. Each of these management services would report to the executive secretary, who would be responsible for their direction and coordination (See Exhibit A).

4. *Electronic Data Processing Operations Would Be Integrated With Those of the Board of Equalization*

The substantial data processing programs required by the two currently separate agencies would supplement each other and provide improved services at a reduction in cost. The combined operation would be part of the Administrative Service Division.

5. *Other Administrative Service Functions Would Be Combined With Similar Activities Already Performed in the Board of Equalization*

Both the Franchise Tax Board and the Board of Equalization have common administrative services which would also be combined. These include research and statistics, fiscal, administrative accounting, mail, cashier, supply, duplicating, addressograph, and general housekeeping services.

The consolidated functions would be the responsibility of the Administrative Service Division.

6. *The Handling of Collections Would Be Integrated With the Business Tax Collection Program*

The collection programs of both business and income and franchise taxes would be consolidated. Headquarters collection units would be integrated and placed under a single head. Field collection personnel would handle matters for both tax departments.

7. *Field Personnel Would Be Housed at the Same Location as Business Tax Personnel*

Duplicate offices would be eliminated. This would be accomplished by developing a plan for housing all Board of Equalization personnel at one location in each area.

Action would be taken to extend income and franchise taxes services to areas other than the 17 where they are now available.

It is considered necessary, at least at the outset, to have separate lines of authority for business tax personnel and for income and franchise tax personnel. While personnel would work under separate supervisors, one department would be designated as in charge of general housekeeping services at a field office. This form of operation may lead to a later conclusion that full operational integration is desirable at the district level, with one district administrator in overall charge of both programs in the district.

B. Transfer of State Controller Tax Collection Operations

1. *The Controller's Tax Collection Functions Would Be Integrated With the Existing Collection Program of the Department of Business Tax*

The existing Department of Business Tax already operates a headquarters and field collection organization similar to, but substantially larger than, the existing collection organization of the Controller. The collection functions of the Controller would be consolidated with this organization in both headquarters and field. This action can be achieved by expanding the collection organization of the Department of Business Tax to handle the added staff and responsibilities.

2. *The Field Collection Program Would Be Extended*

The existing field collection program is handled by a staff located in three field offices. Action would be taken so that the program could be handled by board staff in additional offices.

3. *Management and Administrative Service Functions Would Be Performed by Existing Board of Equalization Units*

Management functions such as administrative analysis, legal, internal audit, personnel and training, and tax service information would be performed by existing units reporting to the executive secretary.

Administrative service and housekeeping functions would be performed by the Administrative Service Division. These would include mail, cashier, supply, duplicating, fiscal, EDP, and research and statistics.

C. *Transfer of Inheritance and Gift Tax Operations*

1. *The Method of Administering Inheritance and Gift Tax Would Be Changed*

The inheritance and gift tax administration is now handled by three groups: (1) the inheritance tax appraisers, appointed by the Controller, of which there are one or more in each county with a total of about 150; (2) the 58 county treasurers; and (3) the Inheritance and Gift Tax Division of the Controller's office with a combined legal, tax examiner, and clerical staff of about 110.

Under the Board of Equalization the inheritance tax appraisal work would be performed by civil service appraisers. Under a proposed estate tax, the state would receive the equivalent of the fees now received by appointed appraisers. The county treasurers' inheritance tax functions, which include examining and listing contents of safe-deposit boxes, issuing consents to transfer property, making tax collections and transmitting collections to the State Treasurer, would be performed by board employees. The existing Inheritance and Gift Tax Division would be integrated with the Board of Equalization.

2. *Most of the Inheritance and Gift Tax Work Would Be Integrated With the Board of Equalization Property Tax Department*

With the addition of a large number of appraisers to the board's staff, it would seem desirable to organize the work of the Property Tax Department by function rather than by program. An organization closely paralleling that of the Business Tax Department would then become feasible for the Property Tax Department. All appraisals would be performed by property tax field offices under a chief of field operations.

3. *A New Inheritance and Gift Tax Division Would Be Established in the Property Tax Department*

Inheritance tax appraisers under the existing law are responsible for the preparation of inheritance tax reports and much of their employee cost appears to be incurred in connection with

this duty. The Inheritance and Gift Tax Division reviews all reports. It appears that it would be more efficient to prepare the reports centrally under the supervision of inheritance and gift tax examiners using appraisals prepared in the field by appraisers. Inheritance tax appraisals and support documents would, therefore, be sent for processing to the new Property Tax Department Division of Inheritance and Gift Tax.

The existing Inheritance and Gift Tax Division attorneys, except as they might be assigned to administrative duties in the new division, would be taken, along with the functions they perform, into the board's legal staff.

4. *The County Treasurers' Inheritance and Gift Tax Function Could Be Integrated Into the Board's Business Tax Organization*

Upon direction by the Legislature to the board to take over the county treasurers' inheritance tax duties, these duties would be assigned to the Business Tax Department because of its larger number of offices and its staffing with compliance personnel well qualified to perform the work.

VI. RECORD OF THE BOARD OF EQUALIZATION IN TAX ADMINISTRATION

The accomplishments of the State Board of Equalization in tax administration constitute an outstanding record of progress and increasingly effective use of the resources of state government. They prove conclusively that thorough and impartial execution of our revenue laws can be achieved in combination with good management and economy of operation.

In another section of this report reference is made to the board's dominant position in the California revenue structure. The fact that it has responsibility for 60 percent of all state taxes and license fees is cited and the dollar volume of tax receipts from various sources is summarized. In order to view these facts in proper perspective, it is necessary to consider also the means by which they have been achieved.

During the past 10 years the board's workload has increased steadily through expansion of established tax functions and addition of entirely new programs. Yet, despite this growth in workload and responsibility, the board is now operating with a smaller number of authorized business tax positions and with approximately the same number of total authorized positions as in July 1955.

The total number of business tax positions authorized on July 1, 1955, was 2,001, compared with only 1,884 positions on July 1, 1964. These figures show a reduction of 117 positions, or 5.8 percent, for the period reviewed.

Total authorized board positions (business tax, property tax, administration, etc.) as of July 1, 1955, were 2,327. By comparison, total positions authorized in the 1964-65 budget are 2,328. Thus, the many new functions added during this 10-year period are being handled virtually without any staff increase.

In sharp contrast to the comparative personnel data, the board's workload has increased in many ways. Some examples will serve as illustrations.

In the 1955-56 fiscal year there were slightly fewer than 315,000 sales and use tax accounts and outlets, but by 1964 the total had increased to 378,000 for a gain of 20.4 percent. Other business tax accounts also increased, though in smaller numbers.

During the 1955-56 fiscal year, total board-administered taxes brought in about \$932,200,000. For the fiscal year ended June 30, 1964, total revenues were \$1,600,000,000, exclusive of local sales and use tax collections.

In addition to the growing workload for existing business taxes, two entirely new programs of great importance were added during the period under review. These programs were:

1. State-administered local sales and use taxes, assigned to the board under the Bradley-Burns Uniform Local Sales and Use Tax Law, enacted in 1955.

The first few local ordinances for state-administered taxes became effective in April 1956 under procedures developed by the board to integrate the administration of these new taxes with state sales and use tax procedures. As the success of the plan became apparent, more and more local jurisdictions were added, until all California cities and counties were included by late 1960.

As previously indicated, total *local* sales and use taxes collected during the fiscal year ended June 30, 1964, were \$287,000,000. These funds were all properly accounted for and allocated accurately to California's 58 counties and 383 cities with a minimum of administrative cost since local jurisdictions were charged only 1.53 percent for 1963-64 collections. This cost is down 0.12 of a percentage point from the figure of 1.65 percent for the 1956-57 year.

2. The cigarette tax was added as a completely new program in 1959. It required new operating procedures and involved different types of enforcement measures than those in effect for other business taxes.

Although the cigarette tax accounts for approximately \$72,000,000 in revenue annually, it was added to the board's duties without any increase in authorized staff.

The board's impressive record in property tax administration gives clear evidence of the important services to California in this vital sector of public finance. Property taxation is the cornerstone in the fiscal structure of local government and collections from this source now approach \$3 billion annually—a figure almost three times as great as that of a decade ago.

This tremendous increase underscores the need for board services in the field of assessment standards, intercounty equalization of assessment levels, and the assessment of public utility properties for local tax purposes. Property tax administration has been extended and brought into closer cooperation with local taxing jurisdictions through establishment of several additional field offices. Programs have been enlarged in significant areas, and improvements have been developed throughout the Property Tax Department to increase the value of its services to the entire state.

Yet, needed growth and improvement have been accomplished with only a slight increase in personnel. The total property tax staff of 167 positions, exclusive of fully reimbursed contract mapping services, is only about 15 percent over that of July 1955.

Operating efficiency of the Board has been improved steadily through vigorous efforts in several directions, including the following which are of prime importance:

1. Through careful reviews and analyses of the board's organization, operations, and costs many important improvements have been developed.

In 1959 a major reorganization was initiated as a result of a boardwide survey conducted principally by the board's own staff. Through streamlining and consolidation of functions, it was possible to handle the increasing workloads and to operate more effectively without increasing total staff.

2. Improvements in systems and procedures, including the installation of an electronic data processing system in 1961, have contributed greatly to operating efficiency in many important ways.

These improvements have led to increased productivity of the board's personnel and to substitution of mechanical processes for hand labor in many repetitive clerical operations.

3. Development of a comprehensive training program was commenced in 1960 to improve the working skills of board employees at all levels. The cumulative benefits from this program are reflected in increased productivity and have aided in carrying out the board's increasing responsibilities without added staff.

Operating Cost Ratio

The board's record of meeting increasing workloads without additional staff can be demonstrated in various ways, but one of the most significant measures is found in the 1.15 percent ratio of total operating costs to total board-administered revenues for the 1963-64 fiscal year (see chart on following page).

This enviable record has been attained even though board services to taxpayers have been expanded through an extensive network of field offices to provide as much assistance as possible to taxpayers. In planning its field organization every effort has been made to combine good service with efficient deployment of staff.

In summary, the record of the State Board of Equalization in tax administration is one of increasing service to California without corresponding increases in personnel requirements to meet its responsibilities. It is a record of continuous effort to provide competent administration at the lowest practical cost consistent with adequate service to taxpayers. The record is clear and fully substantiated; it is not only a history of past performance, but an index of the board's ability to meet any future obligations with equal competence.

State Board of Equalization
BUSINESS TAXES REVENUES & COSTS BY PROGRAM
1963-1964 YEAR

Total B.T. Revenue \$1,777,410,399
Total B.T. Cost 20,453,494
(1.15 % of Revenue)

NOTE: In addition, the Board's Department of Property Taxes administers and collects the Private Car Tax which amounted to \$1,846,205.

APPENDIX D

Controller of the State of California

Sacramento

December 4, 1964

HON. MILTON MARKS, *Chairman*

Assembly Committee on Government Organization
235 Montgomery Street
San Francisco 4, California

Dear Milt:

Thank you for your letter of December 1 regarding the hearing of your committee in Los Angeles on December 10. By this time I assume you have received the Board of Equalization's proposal regarding consolidation of tax administration.

I support the proposal for a Revenue Agency consolidating the administration of state taxes in the State Board of Equalization, although I would prefer the plan proposed by the Governor for a Revenue Agency headed by a three-member tax commission composed of two elected officials and a representative of the Governor.

My support applies to the broad, general outline of the proposal, and not to all details.

My support encompasses the inclusion of inheritance tax administration in the Revenue Agency, but under the present system of court-appointed inheritance tax appraisers rather than through a system of civil service employees of the taxing agency. The latter has not been proposed in any prior recommendation for a Department of Revenue (e.g., Weinberger Committee Report, or the 1947 Assembly Interim Committee Report cited in the board's proposal), and the Board of Equalization is split 3 to 2 on this aspect.

I fully agree with the unanimous view of the board and its staff that it would be necessary to impose a new estate tax to meet the salaries and costs of the employees expected to perform the appraisal operation. I fully disagree, however, that there is any necessity for adding this new estate tax—for the sole purpose of underwriting the cost of substituting civil service employees for the present court-appointed appraisers—on top of the many taxes that we already have and other new taxes that may be needed to meet the rising costs of state government.

I cannot concur with the purported "savings" alleged in the Board of Equalization proposal relating to the inheritance tax—because clearly there would be an expensive addition to the already overburdened state budget if employees of the taxing agency were to be substituted for the present appraisal system. Not only would a civil service system be more costly, but it would be necessary to levy a new estate tax to meet the costs. The new tax would be necessary because there no longer would be any valid or logical basis for requiring the heirs and

estates to pay the appraisal costs. At present the appraisers are constituted as referees of the court and, since their appraisals are impartial and serve primarily for probate purposes, the fees are a part of the costs of probate administration. As employees of the taxing agency on the other hand, their interests would be necessarily adverse to those of the taxpayer, and it would be manifestly unfair—and bad tax policy—to require taxpayers to pay the salaries of the tax agents in addition to the tax itself. No tax law that I know of requires the taxpayer to do this—not the sales tax, the income tax, nor the federal estate tax. It would be an added cost of taxpayer compliance. Moreover, it would not relieve heirs and estates of paying costly fees for their own appraisals.

The Board of Equalization's proposal fails to arrive at the true cost involved if civil service employees were to undertake the appraisal workload. It fails to use appraisal workloads (I am attaching a summary of the workload data), or established performance standards in the several different appraisal operations being performed by state employees—including the intercounty equalization program of the State Board of Equalization. Instead of using this readily available professional approach, the proposal backs into the problem by an indirect "guessing" manner which is without any valid basis. It camouflages rather than faces up to the appraisal workloads, or the cost of performing such workloads through the use of state employees. Even if it were a valid approach, substantial blocks of "cases" have been omitted.

In effect, the proposal suggests that state employees could make the appraisals at less than one-fourth of the performance standards presently required by the board's own civil service employees for appraisals in the intercounty equalization program. Inevitably inheritance tax appraisals made by the board would differ from its own appraisals under the other program—and would frequently differ from assessed values adjusted in accordance with the ratio which the board establishes for a given county based on the board's own appraisals under the intercounty equalization program. This would automatically place the board in an incompatible position—and one that would give rise to innumerable controversies which would be time consuming, aggravating and expensive to taxpayers, to the probate courts and to the state.

The further suggestion in the board proposal that present inheritance tax appraisals are too conservative is without basis, and is contrary to prior studies. Rather, inheritance tax appraisals are generally higher than assessed valuations adjusted in accordance with the ratio established for a given county by the Board of Equalization based on its own appraisals under the intercounty equalization program.

The unsupported statement in the proposal that the county treasurers' present inheritance tax activities could be administered by the board for \$420,000 less than the present county treasurers' commissions is not based on workloads or other meaningful data. Substantial workloads are being performed by the 58 county treasurers and would have to be analysed and costed before it could be determined whether there would be any savings—or in what amount.

While I believe that consolidation of tax administration will produce some economies, I do not necessarily agree with the estimates of purported savings in connection with the consolidation of other tax activi-

ties in the Franchise Tax Board and the Tax Collection Division. Further objective study is required here, too.

For the above reasons, I believe that the inheritance tax administration should continue on the present basis of court-appointed appraisers, and I urge more careful analysis of the proposal to transfer the county treasurers' inheritance activities to the proposed Revenue Agency.

Sincerely,

ALAN CRANSTON

INHERITANCE TAX APPRAISAL WORKLOAD

Grand totals	43,986	100	621,414	100	2,834.3	100

^a Appraised value greatly understates the total value of the property appraised. For example, if a decedent owned one-fifth undivided interest in an apartment building, the appraiser would value the building, say, at \$200,000. Then he would divide by 5, arriving at \$40,000, the "appraised value" listed for the particular estate. The disparity might be much greater for some types of property, such as stock in closed corporations.

^b Separate issues (not shares) each requiring separate valuation.

^c Based on 1959-60 value levels, not increased to reflect subsequent appreciation.

^d Less than 0.05 percent.

APPENDIX E

STATEMENT BEFORE ASSEMBLY GOVERNMENT ORGANIZATION COMMITTEE

Martin Huff, *Executive Officer*
California Franchise Tax Board
Los Angeles—December 10, 1964

I must first make it clear that the Franchise Tax Board has taken no official position on any of the proposals to reorganize revenue collection functions in state government. Therefore, any statements I make here today reflect my own personal opinions and not that of the board. On September 2, the State Controller, the Chairman of the Board of Equalization, and the Director of Finance appeared personally before the Commission on California State Government Organization and Economy and stated their views. While they were speaking in their own capacity, they do constitute members of the Franchise Tax Board. They did not agree on the details and specifics of how to consolidate, but the tenor of their remarks was that they did agree on the fundamental principle that consolidation, per se, is sound.

The present structure of tax administration in California grew like Topsy. It is awkward, and in absolute terms in many ways inefficient. I stress the word absolute, because California tax administration is, and historically has been, one of the most efficient and economical in the nation. This applies both to the Board of Equalization and the Franchise Tax Board. The authority for this statement is found in the two national studies in this field; the first, entitled "State Sales Tax Administration," by John F. Due, and the second, "State Income Tax Administration," by Clara Penniman and Dr. Walter W. Heller. This economy and efficiency is measured in relative terms, however. With minor exceptions, the standards in most states are not sufficiently high to give us much of a feeling of pride in using them as yardsticks. The high standards that have been set in California are despite its organizational structure—and not because of it. They are the direct result of the general high standards of administration found throughout California state government and of the efforts of the highly competent technical staffs in the two tax administration units.

If we attempt to examine the problem of organization objectively, I think most authorities in the field will agree with John Due, who in his book on "State Sales Tax Administration" states:

"Commissions, particularly elected ones, generally are considered unsuited for administrative responsibilities, and selection of the chief administrator by anyone other than the Governor violates the principle of concentrating responsibility for successful administration in the chief executive. As students of administration have long recognized, however, the formal organizational structure can only facilitate, not insure, effective administration, and competent, dedicated

persons can bring about successful administration despite faulty structure."

In this discussion, it is important that everyone be aware of how our department is presently organized. Our structure closely parallels that of the Internal Revenue Service in California. We are organized into two regions—Los Angeles and San Francisco—that correspond to their two districts. In the Los Angeles region there are seven branches and in the San Francisco region there are five branches. In addition there are eastern offices in New York and Chicago. Over five million individual tax returns are filed with us annually. This constitutes 70 percent of the total volume of returns filed nationwide with the Internal Revenue Service just prior to World War II. In addition, some 110,000 corporations file returns annually. In the year ended June 30, 1964, our audit and enforcement program netted \$41,000,000 in additional revenue at a cost of only \$6,500,000, or net revenue per dollar cost of \$6.30. This compares to the Board of Equalization's net revenue per dollar cost of \$1.65 for the same period. With that background, let us examine the Board of Equalization proposal in so far as it affects the administration of the personal income tax and the bank and corporation tax.

In terms of consolidation, per se, I certainly concur, that the areas of electronic data processing, fiscal functions, service and supply, and cashing are ones that lend themselves to savings. My principal criticisms would be that in the specifics of their analysis, due to a total lack of understanding of our needs and problems, they have advanced the wrong reasons and in my judgment have substantially understated the potential for savings.

I would not rule out the possibility of savings in the area of collections. Because of the wide disparity in staffing patterns, workload and delinquency source, however, savings will only be realized after a thorough study and advance planning that will insure that the revenue of the state is not being placed in jeopardy. The fact that our tax representatives carry a workload in excess of 500 accounts each as compared to the Board of Equalization workload of less than 150 accounts is merely one measure of the disparity in our respective approaches to the collections problem.

In the area of electronic data processing, the Board of Equalization projects a savings of \$123,000 based on two EDP systems with identical configurations. It is obvious that there has been no real study of the total problem. We converted from punched cards to magnetic tape in January of this year. We find that our present system will be operating two full shifts before the start of the next fiscal year. Our 1401 is presently running well into the third shift meeting an extended peak-load problem. The foreseeable needs of our department are such that having two systems available to do the work of both agencies would represent costs greater than would be entailed in the use of a single larger system. To meet our own projected needs, we have at the present time on file a letter of intent to acquire a more powerful but less costly system. More than likely, far greater savings could be realized in this area than has been projected by the Board of Equalization. Here again,

intensive study would be required and some conversion costs would be entailed.

The Board of Equalization proposal projects a \$32,000 saving in the appellate procedure by proposing less formalized hearings. Attempting to achieve savings in this area, represents a direct threat to the right of a taxpayer to have an adequate administrative remedy, before requiring that he take the costly and time-consuming route of litigation in the courts. When this remedy is lacking the taxpayer is subject to blackjacking because he feels it is futile to buck the powerful administrative machinery of the tax agency in a case too small to warrant litigation. Both agencies at the present time make provision for informal hearings and protests. These are handled by the Appeals and Review Section in our department. I understand they are handled by hearing officers and/or designated members of the legal staff at Equalization. I am sure the projected savings do not contemplate the elimination of this remedy. Under the present appellate procedure for personal income tax and bank and corporation tax cases, the taxpayer may be represented by counsel—or may represent himself, as he chooses. He may file a brief, but is not required to. An important protection to the taxpayer, however, is that he is entitled to receive a brief outlining our position. It is this latter step that is apparently the "formality" that it is proposed be abandoned. It is my understanding that this procedure is not used within the Board of Equalization on appeals taken to it from the actions of its own staff.

The fact that two of the three members of the Franchise Tax Board also sit on the Board of Equalization is a major defect in the present system. In this respect I would like to quote from the 1955 Assembly Interim Committee Report entitled "The Need for a Department of Revenue in California," commonly referred to as the Weinberger Report:

"The Board of Equalization is in the questionable position of hearing appeals from its own administrative policies and actions. This practice is contrary to the usual Anglo-American philosophy of justice in which the taxpayer has the privilege of appealing to some impartial agency outside the sphere of influence of those whose decisions are being appealed."

In attacking a separate Board of Tax Appeals proposal, the Board of Equalization has, in my opinion, substantially overstated the additional cost involved, since the establishment of such an independent board would merely mean the transfer of legal staff effort that is expended exclusively in this area at the present time. A minimum amount of additional cost might be incurred in providing protection to taxpayers in appeals from administrative actions under tax laws not presently covered. There would be additional cost for these legal staff services and the salaries of appeals board members. I believe that most students of government would support additional expenditures in this area to assure the taxpaying public of receiving independent administrative decisions on their tax appeals.

So much for the specific proposal of the Board of Equalization. Consolidation of tax collection functions in a Department of Revenue can result in greater efficiency and improved tax administration. These

results would not be evident overnight. Since personnel and physical facilities are involved, many economies could only be achieved over time. The principal difficulty in measuring potential economies resulting from consolidation is that separate tax collection empires have been allowed to develop over the years. It is obvious from the comments I made on the Board of Equalization's analysis that they do not have a detailed knowledge of our operations. The converse is also true. Even control and audit agencies having responsibilities in this area find it difficult to pick their way through the varied approaches to similar problems. As long as the artificial barriers remain standing, a reliable time table and cost saving projection would be difficult to develop. Despite this type of difficulty, it is important to note that cooperation does now exist between the various departments having revenue collection responsibilities but they are arms length relationships pursuant to formal agreements for the exchange of information.

At this point I would like to quote the views of Dr. Walter W. Heller, recently retired Chairman of the President's Council of Economic Advisors, and Miss Clara Penniman, in their book "State Income Tax Administration":

"The unconsolidated tax agency which is obviously doing an effective job—e.g., the California Franchise Tax Board, administering only the individual and corporate income tax—remains a thorn in the side of students of administration. Does effectiveness here result primarily from a high-quality and relatively large staff in spite of California's organizational iconoclasm? Would joining the income tax with other taxes in one agency strengthen the administration of the other taxes? Would it at the same time perhaps weaken rather than strengthen income tax administration by impairing morale, introducing politically disturbing factors, and so on? Unfortunately, we lack the precise instruments of measurement needed to apply the generally accepted principles and judgments in this area. Apparent advantages are easy to cite. But one hesitates to jeopardize demonstrable high-quality performance by reorganization moves."

As the administrator of one of the tax agencies involved, the path of least resistance would be to fight for the maintenance of the status quo. However, we live in one of the most dynamic times in history. California is in the vortex of unparalleled change and growth. It is in this context that we must reexamine our present tax organizations and modify or reorganize these structures in order to meet the tremendous tasks that will face this state in the coming decades.

In my opinion consolidation of statutory revenue collection functions into a single department responsible to a director appointed by the Governor is the logical answer to the need to meet this challenge. It is a political reality that the people of the state hold the Governor and no one else responsible for proper tax administration whether he actually has authority over tax administration or not.

As indicated before, a necessary adjunct to good tax administration is an appeals procedure that provides an adequate administrative remedy prior to the final step of resorting to the courts. Ideally this should be an independent qualified Board of Tax Appeals appointed for staggered terms by the Governor.

Whatever course the Legislature chooses to take, the staff of the present Franchise Tax Board will continue to strive to improve the administration of the personal income tax and bank and corporation tax by developing better operating methods so that the interests of the individual taxpayer and the taxpayers as a whole will be better served. We believe we can continue to do this in any of the organizational structures proposed so far except that of integration with the Board of Equalization. We believe that adapting their organization to ours would result in exposing our present system to Board of Equalization standards and philosophy that could lead to:

1. More elaborate and topheavy administrative supervision;
2. Lower audit return per dollar cost;
3. The rigidity and added expense of providing a high level of service far out of proportion to the number of people being served throughout their vast network of branches;
4. A vacancy factor ranging from 4.7 percent to 8 percent compared to our own experience of 0.4 percent to 3.0 percent;
5. Fragmentation of our present structure into one that ignores economic areas, the worst example of which is the serving of the San Francisco Bay area by three separate equalization districts;
6. Difficulty of maintaining uniform standards of administration because of the diffusion of authority to individual board members and their deputies. A concrete example of this is the varying policy toward security deposits as between the different equalization districts;
7. Gross inequity to the individual or corporate taxpayer who must bring his protest to the same board that is the administrative head of the tax collection organization.

In essence, adopting the Board of Equalization proposal would be turning the clock back. In my opinion this must be avoided.

Consolidation of revenue collection functions in California state government has been the subject of study and recommendation over a period of several decades. It is inevitable that this will eventually take place because the case for consolidation is a valid one. From the perspective of our department's mission, we may be able to meet and solve the problems of growth more effectively as presently organized. However, in my opinion, the larger interests of the state are better served by a consolidated revenue function reporting to the Governor.

APPENDIX F

Commission on California State Government Organization and Economy

Sacramento

December 28, 1964

HON. EDMUND G. BROWN
Governor, State of California

HON. HUGH M. BURNS
President pro Tempore,
and to Members of the Senate

HON. JESSE M. UNRUH
Speaker,
and to Members of the Assembly

Gentlemen:

In recognition of the importance of tax administration to the state government and to the individual taxpayer, the Commission on California State Government Organization and Economy in the spring of this year initiated a comprehensive review of the current organizational status of the state's principal revenue collection agencies. Subsequently in a letter to the commission in June, Governor Brown stated that, although there had been several major studies of state revenue administration in the past, he believed the time appropriate to consider again the possibility of consolidating all or most revenue collection activities within a single department. Accordingly, the commission added this important organizational consideration to its study agenda. This letter summarizes the findings and recommendations of that study.

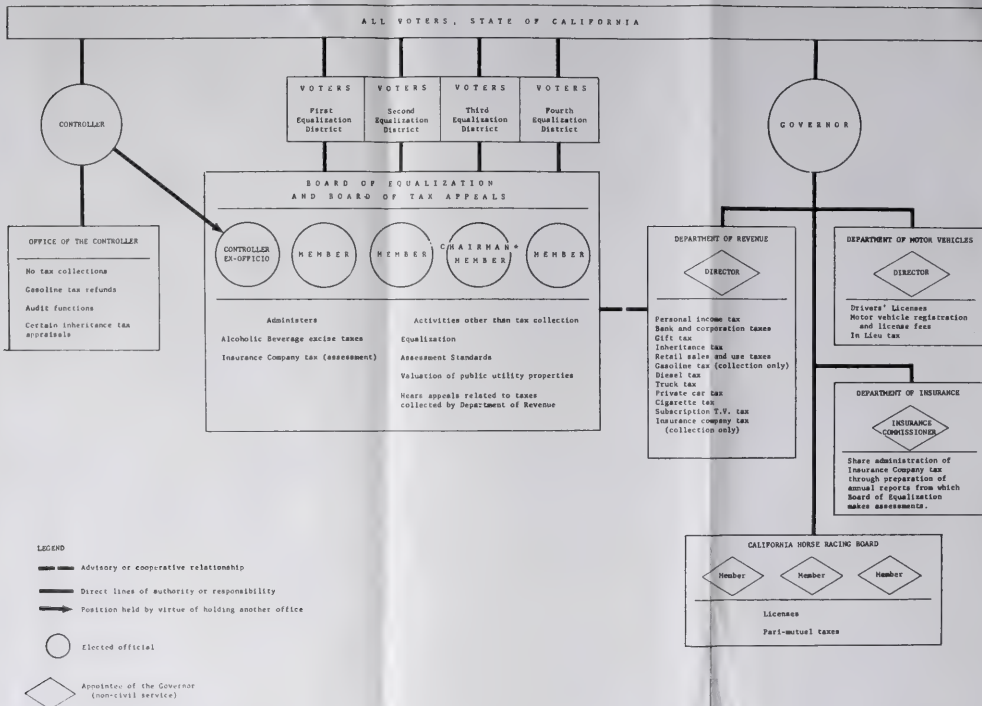

The issue of consolidation of revenue administration in the California state government is not new; the matter has a long history of continued study. These many studies have been remarkably consistent in their emphasis on the desirability of consolidating revenue administration in one organizational unit responsible to the state's Chief Executive—the Governor.

One of the first study groups to recommend a tax agency responsible to the Governor was the California Tax Commission authorized by the Legislature in 1927. Since that study, there have been at least 15 separate studies by outside agencies or legislative committees that have recommended some consolidation of the major taxing agencies as a sound organizational objective. In 1955 a subcommittee of the Assembly Interim Committee on Government Organization concluded that:

“California's revenue administration structure should be organized to provide a reasonably efficient, economical, understandable, and responsible vehicle for administering our tax laws. This can be accomplished best by placing the administration of major state taxes in a Department of Revenue headed by a director appointed by the Governor, confirmed by the State Senate, removable by the Legislature for cause, and, therefore, responsible to the Governor and the Legislature, and through them, to all of the people.”

This recommendation was repeated in substantially the same form in 1959 by the Governor's Committee on Organization of State Government and it has been reiterated by the Legislative Analyst in nearly every budget analysis report since 1943. .

ORGANIZATION FOR
REVENUE ADMINISTRATION IN CALIFORNIA
AS PROPOSED BY
COMMISSION ON CALIFORNIA STATE GOVERNMENT ORGANIZATION AND ECONOMY

* Chairman rotates annually among members.

December, 1964

Current testimony before this commission, as well as independent staff study, has substantiated the validity of the findings of those many past studies. It is clear that further documentation of the conclusive evidence on record would be repetitious—the logic of a Department of Revenue for California has been very well established. In addition, both the State Controller and the Chairman of the Board of Equalization stated their belief at the commission hearing on this subject on August 20, 1964, that the unification of revenue collection activities would result in economies and other benefits to the state government as well as to the individual taxpayer. Clearly, the time has come to set aside those considerations that have blocked constructive action in the past.

The commission now proposes the establishment of a strong Department of Revenue with a director appointed by and responsible to the Governor for state tax administration. Thus, the Legislature and in turn the people would be able to focus responsibility for the administration of the major revenue collection activities of the state government (see chart).

The August 19, 1964, proposal to the commission, prepared by the Department of Finance, has been reviewed as one alternative organizational arrangement of revenue collection activities. The members of the commission concur unanimously with the goal of consolidating most tax collection functions in one agency and for the provision of an independent tax appeals body. The suggested structural arrangement, however, does not provide an effective answer to one of the major shortcomings of the present unconsolidated revenue agency—that of diffused responsibility for revenue administration. The proposal of the Department of Finance would perpetuate the combination of boards and elective and appointive officials as responsible for the state's revenue collection program. Such a combination has been indicted as inefficient and unresponsive to taxpayers' needs by every previous study.

In the opinion of this commission, revenue *collection* is a ministerial act for which responsibility can and should be clearly and definitely established in the executive branch of the state government. Line authority and responsibility for this function, therefore, should be placed with a director appointed by the Governor who as the executive head of state government is finally responsible under the Constitution for the enforcement of all laws.

The Department of Revenue as proposed by this commission would succeed to all activities of the Franchise Tax Board and to all non-constitutionally assigned tax collection functions of the State Controller and the Board of Equalization. The revenue collection responsibility of the Department of Motor Vehicles, the Department of Employment, and the Horse Racing Board would remain unaltered. The Board of Equalization responsibility for insurance company tax assessment, alcoholic beverage tax administration, equalization determinations, public utility valuation determinations and assessment standards would also remain unchanged. The proposed organizational arrangement and functional assignment, which in basic concept is neither new nor unusual, is illustrated by the attached chart.

The commission proposal, which can be implemented without constitutional revision, also calls for the statutory assignment of the tax appeals function to the State Board of Equalization. In this way an

independent board of constitutional officers, responsible to the electorate, would serve in the important capacity of hearing appeals related to taxes collected by the proposed Department of Revenue.

We make no recommendations as to the internal structure of the new department. The director, subject to appropriate legislative approval, should be free to work out the internal details of integration of responsibility and geographic distribution to meet the requirements of effective administration. Commission recommendations relating to inheritance tax administration, however, are contained in a separate communication of this date.

The use of qualified personnel employed on a full-time basis in accordance with Article XXIV of the State Constitution in such matters as the administration of functionally integrated systems of tax appraisals, audits and collections through consolidated field offices and shared housekeeping and staff services will do much toward the effective implementation of a uniform tax collection policy. This commission is convinced that taxpayer convenience as well as economy and increased efficiency can result from the establishment of Department of Revenue as proposed when organized and operated in accordance with modern revenue management principles.

Respectfully,

HAROLD FURST, *Chairman*

Commission on California State Government Organization and Economy
 Sacramento

December 28, 1964

STATEMENT OF ASSEMBLYMAN MILTON MARKS

I have long favored the concept of a consolidation of the revenue-collecting agencies of the State of California and have introduced legislation to carry out this purpose. This legislation and alternative proposals relating to this subject are being studied by the Assembly Interim Committee on Government Organization of which I am the chairman. While I have participated in the discussions of this commission and support its endorsement of the principle of revenue consolidation, I feel it appropriate to await the January report of our Assembly Committee which might differ in certain particulars, and I am therefore not signing this report at this time.

December 7, 1964

COMMENTS ON THE SELF-ASSESSED METHOD OF ADMINISTERING THE CALIFORNIA INHERITANCE TAX

Under existing law the California inheritance tax is integrated with and becomes a part of the probate process. Instead of having two separate processes, the probate inventory, appraisal and other steps are used to compute and fix the inheritance tax. The probate court also has jurisdiction over and makes the final determination (subject to appeal) of the inheritance tax.

Probate appraisers' fees also constitute the main source of revenue to finance the *local* aspect of administering this tax. Inheritance tax fees and commissions, which are deducted from tax receipts, constitute a small part of the total local financing.

1963 Source of Receipts to Finance the Local Administration Costs of the California Inheritance Tax

Source	Recipients	Amount	Percent
Probate and related fees	Inheritance tax appraisers ----	\$3,035,000	78.9
Inheritance tax fees	Inheritance tax appraisers ----	142,000	3.7
Inheritance tax commissions	County treasurers -----	670,000	17.4
Total	-----	\$3,847,000	100.0

NORMAL PROBATE AND INHERITANCE TAX PROCEDURE— EXISTING LAW

1. As soon as possible after the death of the decedent, the probate court appoints the executor (or administrator) of the estate.

The inheritance tax appraiser is appointed by the probate court at about the same time.

2. One of the first acts of the executor is to see that the notice to creditors is published in the appropriate legal newspaper.

3. The attorney for the estate usually prepares the inventory of the assets, and it is common practice for him to attach a list of "suggested values" for all items on the inventory. (Valuations may have significant income tax implications.)

4. The inventory is submitted to the inheritance tax appraiser who determines the values of each item therein. On many occasions the appraiser, in practice, merely accepts the "suggested values" submitted by the attorney for the estate.

Probate Code Section 600 provides that the completed inventory, together with the values assigned by the appraiser, should be submitted to the clerk of the probate court by the executor within three months after the latter's appointment. However, time extensions are frequently granted.

5. The next step is for the estate's attorney to submit the following information to the inheritance tax appraiser so that the latter will be able to compute the tax liability:

- a. Inheritance tax affidavit (Form 22—which is the equivalent of the tax return except that no tax computations are included).
- b. Community property affidavit.
- c. The will and all codicils.
- d. Copy of any trust instrument.
- e. Any other pertinent information.

6. If the estate has a value of over \$300,000, then an informal conference among the estate's representatives, the appraiser and the Inheritance and Gift Tax Division will normally be held.

7. The appraiser then submits his proposed report, including the tax computations, to the Inheritance and Gift Tax Division for examination and audit. This is an informal arrangement not required by law.

8. After the appraiser receives information from the department approving his report, or at his own discretion, he transmits a copy of the report to the estate's attorney. Then, depending upon local practice, the appraiser files his report within the next several days with the probate court.

If no objection is filed within 10 days after filing the report, the appraiser procures an order from the court to fix the tax liability.

9. Within the 10-day period mentioned above, the executor, attorney for the estate, any beneficiary, or the Inheritance and Gift Tax Division, may file an objection to the appraiser's report. When such objection is filed, the probate court holds a hearing within a short time period and decides the issues. This court's decision is final unless overturned by a higher tribunal.

10. After the tax liability is fixed by the court, the executor has the responsibility to see that the taxes are paid to the local county treasurer. After receiving a statement from the Controller's office noting payment of the taxes, the assets are distributed to the heirs.

11. Section 14793 of the Revenue and Taxation Code provides that the county treasurer shall pay inheritance tax receipts to the State Treasurer within 90 days of their receipt. However, in practice, most of the larger counties transfer these receipts bimonthly.

A PROPOSAL: MAKE THE CALIFORNIA INHERITANCE TAX SELF-ASSESSED

Summary

The essence of this proposal is to:

- A. Eliminate the patronage inheritance tax appraisers.
- B. Abolish the probate fees for appraisers.
- C. Eliminate the county treasurers from participating in the administration of this tax.
- D. Provide that the executor (or administrator) and the attorney for the estate shall have the responsibility for preparing the estate's inventory (same as present), value the assets (instead of suggested values), compute the tax (new function), and submit the tax return to the Inheritance and Gift Tax Division for examination and audit.

- E. Retain the procedure whereby the probate courts have final jurisdiction over setting the tax, deciding questions of law and valuation, and serving as an appeal body for any disputes between the estate and the Inheritance and Gift Tax Division.
- F. Have the valuations and processes for inheritance tax purposes serve also for probate matters. This is just the reverse of existing procedure.

The self-assessment method that we are proposing can be adopted with a minimum of changes in the existing inheritance tax and probate processes. Our proposal *would not* affect the existing delinquency dates, the discount period or rate, the statutory attorney or executor fees which are based on the value of the estate, the status or jurisdiction of the probate courts, and most other features of these two processes. The main changes that would be made are that inheritance tax appraisers and the county treasurers would no longer participate in the administration of this tax.

Under the self-assessment method the Inheritance and Gift Tax Division would have to modify its operations to coincide more closely to those of the Franchise Tax Board. Its operations would have to be more centralized rather than depending upon semiautonomous regions as at present; additional auditors, examiners, and appraisers would be needed to verify returns and valuations, and the agency probably would have to adopt a limited branch office organization to carry out its duties. Since county treasurers would no longer inventory the contents of safe deposit boxes, new personnel would have to be found to perform this function, and we suggest that the task be assigned to bank officials who would receive a nominal fee of say \$3 per box, to compensate them for their effort.

The timing of the changeover to the self-assessment method is important. We suggest that the starting date be January 1, 1966, which would allow all parties concerned time to prepare for the new system while phasing out the old program on a gradual basis.

It is essential to remember that one of the basic features of this self-assessment method is that values and legal determination made by the Inheritance and Gift Tax Division, and approved by the court for inheritance tax purposes, even though no tax liability exists, would also be used for probate purposes. This single standard would avoid duplication of effort and costs to the estates.

The following material summarizes the probate and tax procedures under the self-assessment method.

NORMAL PROBATE AND INHERITANCE TAX PROCEDURE—SELF-ASSESSMENT PROPOSAL

1. The probate court would continue to appoint the executor or administrator.
2. The executor would still have the responsibility of notifying creditors.
3. The attorney for the estate would prepare the inventory of assets and also estimate the value of all items therein.
4. The attorney would also prepare the tax return, compute the tax liability and attach all pertinent documents such as the community property affidavit, trust agreements, the will, etc. The

- return and accompanying documents would be sent to the Inheritance and Gift Tax Division for examination and audit.
5. A reasonable time period should be allowed for completing this return, say within one year after the death of the decedent with extensions allowed for cause.
 6. A time limit probably should be placed upon the Inheritance and Gift Tax Division to either accept the valuations, etc., in the return or to indicate areas of disagreement. Three months after the return is filed might be an acceptable period. Imposing such a limitation would prevent undue delays in settling estates.
 7. Any disagreement between the estate, its beneficiaries and the Inheritance and Gift Tax Division would be settled by the probate courts. No change is made in this feature.
 8. After the court establishes the tax liability, the executor would pay the taxes directly to the Inheritance and Gift Tax Division instead of the county treasurer.
 9. The estate would be distributed to the heirs after the court receives official notice from the Controller (Department of Revenue) that all taxes have been paid.

Financial Aspect of Self-Assessment

- A. The estates would save over \$3 million a year if probate fees for inheritance tax appraisers were abolished. In 1963, these probate and related fees amounted to \$3,035,000. The estates would have to pay for the inventorying of safe deposit boxes, which would be a new expense, but at a \$3 per box rate this would amount to about \$100,000 at present. Therefore, the net savings to estates would be \$2,935,000 at the 1963 level of activity, and over \$3 million by 1966.
- B. The State of California would experience gross savings of over \$1,160,000 per year by abolishing commissions paid to county treasurers, gift and inheritance tax fees paid to appraisers, and by receiving inheritance tax receipts at an earlier date. The components of these savings are as follows:

<i>Source</i>	<i>Amount</i>
County treasurer commissions.....	\$ 670,000
Gift tax appraisal fees.....	20,000
Inheritance tax appraisal fees.....	170,000
Interest value of earlier receipt of taxes.....	300,000
Total	\$1,160,000

From these gross savings, the state would have to deduct the cost of additional personnel and equipment to police the self-assessed return, and to give clearances or release of liens now handled by county treasurers. No reliable estimate of this extra cost is available at this time, but it probably would range between \$500,000 and \$75,000 per year. Therefore, the net savings to the state from a self-assessed method would probably range from about \$400,000 to \$650,000 per year.

Note that these calculations do not estimate the additional revenues the state probably would receive from better tax administration.

APPENDIX H

Commission on California State Government Organization and Economy Sacramento

December 28, 1964

HON. EDMUND G. BROWN
Governor, State of California

HON. HUGH M. BURNS
President pro Tempore,
and to Members of the Senate

HON. JESSE M. UNRUH
Speaker,
and to Members of the Assembly

Gentlemen :

In a separate recommendation of this date, this commission proposed the establishment of a strong Department of Revenue with a director appointed by and responsible to the Governor to administer most of the state taxes, including inheritance and gift taxes. In this plan we do not propose, however, that the inheritance tax appraisers become employees of the department. We believe that they should continue to be appointed independently by the State Controller from lists of appraisers meeting established qualifications and that their appraisals, as outlined below, be used by the department for inheritance tax application as well as by the courts for probate purposes.

We recommend that a modified self-assessed method of administering the inheritance and gift tax be placed into effect for certain assets. Such a system would provide that the executor (or administrator) or the attorney for the estate continue to have responsibility for preparing the inventory of an estate's assets. Instead of providing a list of "suggested values," however, as is present practice, we recommended that the executor or attorney actually value for tax and probate purposes *the assets which have a comparatively exact and ascertainable market value*. These include such assets as cash, stocks, bonds, mortgages, securities, insured personal property and some chattels. In addition, the attorney or executor would also be responsible for establishing the value of all *real property that has a current assessed value of \$6,250 or less*. The appraised value for this purpose would be deemed to be four times the amount of the current assessed valuation. In these instances estate-assessed values for tax purposes would also be used by the court for probate purposes.

The commission suggests that the determination of the market value of real property with an assessed valuation of over \$6,250 continue to be the responsibility of the appointed inheritance tax appraisers. These appraisers, as they are now, would also be responsible for establishing the value of such specialized personal property as jewelry, antique furniture, paintings and closely held businesses and certain other chattels for which the determination of market value requires specialized knowledge.

The adoption of an inheritance tax appraisal system involving both self-appraised and appraiser valuations will, of course, require a modification of the statutes establishing probate and inheritance tax procedures and appraisal fees. The system proposed contemplates that fees paid appraisers will be based only on the appraiser valued portion of the estate. Fees for the portion that would be self-appraised would be paid into the general fund thus allowing for more thorough audits and supervision without a net increase in the cost of administration.

According to data supplied by the State Controller the total value of the 44,150 decedents estates in 1963 was 3.15 billion dollars. Inheritance tax appraisers received \$3,197,000 in fees for establishment of estate valuations and for related services for these estates. We estimate that as a result of our recommendations, \$750,000 of the amount retained annually by appointed appraisers for the appraisal of assets whose market value is readily ascertainable would be directed instead to the state's general fund. Similarly, based upon data supplied by the State Controller, we estimate that application of the formula proposed above for the self-appraisal of certain real property would result in about a 75-percent reduction in the number and 40-percent decrease in dollar volume of individual real property appraisals required of inheritance tax appraisers. The fees for the appraisal of these smaller properties would also be paid into the state's general fund rather than to the individual inheritance tax appraisers. In 1963 such fees totaled about \$400,000.

Under our proposal fees would continue to be paid to inheritance tax appraisers for their appraisal of real property with value of over \$25,000, and for the specialized appraisals referred to above. A conservative application of the commission proposal in 1963 would thus have provided approximately \$1,150,000 in probate and inheritance appraisal and related fees to the state and \$2,000,000 in such fees to the inheritance tax appraisers.

We also suggest that established tax liability be paid directly to the state rather than to the local county treasurer as at present. This procedure will permit the saving of \$670,000 in inheritance tax commissions (1963) as well as provide an additional \$300,000 in interest value through earlier receipt of taxes. Alternative arrangements, of course, will have to be made for the administrative and collection services now provided by the county treasurer.

In summary, based upon 1963 data the proposed system of inheritance tax administration would provide the following amounts to the State of California:

<i>Source</i>	<i>Amount</i>
County treasurer commissions -----	\$ 670,000
Probate, Inheritance tax and related fees -----	1,150,000
Interest value of earlier receipt of taxes -----	300,000
Total -----	<u>\$2,120,000</u>

From these amounts, the state would have to deduct the cost of additional legal and other professional personnel needed to audit the self-assessed returns, resolve conflicts, inventory the contents of safety deposit boxes, give clearance or release of liens now handled by county treasurers, and generally to increase the effectiveness of the inheritance

tax administration program. We estimate that the net income to the state from the system as proposed herein would be in excess of \$1,500,000 per year in addition to providing additional revenue from improved tax administration which would result from the attendant strengthening of the Inheritance and Gift Tax Division.

This proposal, in the judgment of the commission, effectively meets past criticisms and deficiencies in the administration of the inheritance tax program and at the same time satisfies the requirements of the estate, the probate court and the state government in an efficient and equitable manner.

PREFACE

“The right to know” is a phrase commonly used in support of the premise that the public’s business should be conducted openly. Publicity of government actions has historically been a central concept of democracy. Without publicity the individual is incapable of rendering informed decisions. The preamble to the Ralph M. Brown Act is a rather remarkable legal statement of this philosophy:

“In enacting this chapter, the Legislature finds and declares that the public commissions, boards and councils and other public agencies in this State exist to aid in the conduct of the people’s business. It is the intent of the law that their actions be taken openly and that their deliberations be conducted openly.

“The people of this State do not yield their sovereignty to agencies which serve them. The people, in delegating authority, do not give their public servants the right to decide what is good for the people to know and what is not good for them to know. The people insist on remaining informed so that they may retain control over the instruments they have created.” (Gov. Code, Sec. 54950)

This report is an attempt to evaluate as objectively as possible the accessibility to the public of meetings and records of government agencies.

INTRODUCTION

The Assembly Interim Committee on Government Organization was constituted on September 3, 1964, to study several important measures which had been assigned for interim study pursuant to House Resolution No. 500 of the 1963 Regular Session. This, the second interim report of this committee, reviews the accessibility to the public of meetings and records of public agencies—the right of the people to be informed about the activities of the public agencies which serve them. Assembly Bill No. 2334, introduced by Assemblyman Milton Marks, requiring all state boards and commissions and local legislative bodies whose meetings are required by law to be open to the public to also conduct open meetings of committees and subcommittees; House Resolution No. 564, offered by Assemblyman William T. Bagley, directing a study of the accessibility of public records to the public; and Assembly Bill No. 1716, introduced by Assemblyman Tom Carrell, authorizing radio and television coverage of meetings of government agencies were the specific measures referred to the committee for interim study.

The findings, conclusions and recommendations contained in this report are presented in four sections—The Ralph M. Brown Act: Open Meetings of Local Legislative Bodies (Chapter I); Open Meetings and State Agencies (Chapter II); Public Records and the Right of Inspection (Chapter III); The News Media (Chapter IV).

Public hearings were held in San Diego on December 3, 1964, in Los Angeles on December 11, 1964, and in San Francisco on December 14, 1964. The committee wishes to acknowledge the contribution of the many competent witnesses who appeared before it and to those who submitted correspondence. Their testimony contributed to a better understanding of this important subject and assisted the committee in reaching the conclusions and recommendations contained in this report.

The committee also wishes to acknowledge and express its appreciation for the excellent work done by the committee staff in the conduct of the study and the preparation of this report in the limited time available. These members include: Judson Clark, committee consultant; Alma Ricker, committee secretary; Doris Barnby, secretary; and Ed Crane of the Assembly Legislative Reference Service, who served as research assistant to the committee through the cooperation of the Reference Service's director, E. Lester Levine.

I. THE RALPH M. BROWN ACT

Open Meetings of Local Legislative Bodies

FINDINGS

1. The enactment of California's Open Meeting Law in 1953 has had a beneficial effect in promoting public knowledge of the deliberations and actions taken by local legislative bodies. Local public officials, almost without exception, have indicated support for the Ralph M. Brown Act and expressed the belief that it has served the public interest.

2. Interpretations of the intent of the law have varied considerably on fundamental questions, however, and as a result the effectiveness of the Brown Act has been hampered. In the absence of judicial consideration, interpretation has been rendered, for the most part, by city attorneys, county counsels, the Legislative Counsel and the Attorney General. As a result, the Legislature has assumed a significant role in reconciling differences in interpretation through the process of amendment.

3. The principle difficulty in interpreting the Brown Act involves the definition of "meeting." It is clear that the Legislature intended a broader interpretation of meeting than had existed in earlier case law so that actions and deliberations of local public agencies would be open to the public.

4. Certain interpretations of the law offer "loopholes" which can be used by public officials who wish to circumvent the spirit of the law and take action on controversial issues out of public view. As a result of conflicting interpretations it is difficult for those who are seriously attempting to comply with the Brown Act to understand its provisions.

RECOMMENDATIONS

1. It is strongly recommended that the Brown Act be amended to indicate as clearly as possible that it is the intent of the law that all discussion, deliberation and action taken by the members of a local legislative body are required to be open to the public unless for specific reasons public policy requires confidentiality.

2. It is recommended that the Brown Act also be amended to provide that committee meetings of a local agency are to be open to the public whether or not the committee consists of a quorum of the members of the legislative body. If an interested citizen is not allowed to be present at a committee meeting he is denied the opportunity of becoming informed.

3. It is further recommended that the right of a public officer or employee to request a public hearing rather than an executive session on complaints or charges be clarified to require 24-hour advance notice in writing to such officer or employee of his right. If this procedure is not followed any action taken should be void.

4. It is recommended that the Brown Act be amended to permit the legislative body of a local agency to hold an executive session with its counsel if such consultation relates to litigation in which the agency is a party. This would provide protection of the public interest in litigation without providing a means to evade the open meeting principle.

5. Finally, it is recommended that the Attorney General prepare an analysis of the provisions of the Brown Act for distribution to the public.

THE PRINCIPLE OF OPEN MEETINGS

A popular Government, without popular information, or the means of acquiring it, is but a Prologue to a Farce or Tragedy; or, perhaps both—James Madison ¹

Public knowledge of the deliberations and actions taken by government agencies is essential to the democratic process. The people must remain informed "so that they may retain control over the instruments they have created."² This theory of public knowledge and public responsibility is the basis of the principle of open meetings.

It is clear that this principle was not recognized in English common law. As a result, the general rule of law applicable is that in the absence of any provision of law requiring public meetings, the public does not have a right of access to legislative and administrative proceedings of public bodies. In his authoritative report to the American Society of Newspaper Editors, Harold L. Cross observed on this point:

The right of access to legislative and administrative proceedings, to the extent to which it exists, is of strikingly modern origin, was denied and was of dubious legal validity in England and in the United States throughout the 18th century, has had an essentially political-legislative journey through life, and still depends in substantial respect on custom and public opinion rather than legislative or judicial declaration.³

Some authorities have maintained that there is a foundation for the right of access in the federal and state constitutions. United States District Court Justice Leon R. Yankwich has commented on this point:

The adoption in the federal and state constitutions of the guarantee of freedom of speech and press and of the other democratic rights led to the recognition of the right of access and publication of the activities of public men and public bodies. At the present time, the right of the people to have information as to the activities of persons chosen in a democratic way is thoroughly established and cannot be challenged.⁴

Proponents of the theory of a constitutional right of access generally recognize that this right, like the more traditional right of free speech, is not absolute and is subject to the limitations that might be necessary in the public interest.

CALIFORNIA'S OPEN MEETING LAW

The Assembly Interim Committee on Judiciary undertook a study in September 1952, initiated by its chairman, Assemblyman Ralph M. Brown, to "study and investigate 'loopholes' in the laws of this state, through which public boards, commissions, agencies and officials have suppressed information, the property of the public."⁵ The hearings held by the committee were primarily concerned with the practices of local governments in conducting closed meetings. "Your Secret Government," a series of articles by Michael Harris, was published in the *San Francisco Chronicle* at about this time focusing public attention on abuses at the local level.⁶ As a result of this and other testimony the committee concluded that:

There is a genuine and compelling need for legislative action of a nature designed to curb this misuse of democratic process by public bodies who would legislate in secret. Unless for proper security reasons, the public has the right to be present and to be heard during all phases of legislative enactment by any governmental agency. This right is a source of strength to our country and must be protected at all costs.⁷

Assembly Bill No. 339 introduced by Assemblyman Brown was supported by the California Newspaper Publishers Association and the League of California Cities. The bill was adopted by the Legislature and signed into law by Governor Earl Warren on July 2, 1953.⁸

As enacted, the Brown Act required that "*all meetings of the legislative body of a local agency shall be open and public, and all persons shall be permitted to attend any meeting of the legislative body of a local agency . . .*" (Section 54953, Government Code). Legislative body was defined as "the governing board, commission, directors or body of a local agency, or any board or commission thereof" (Section 54952), and local agency was defined as "a county, city, city and county, town, school district, municipal corporation, district, political subdivision, or any board, commission or agency thereof, or other local public agency" (Section 54951).

This was not a completely new statement of law as it applied to most legislative bodies. It has been pointed out that the principle of open meetings had been recognized in the earliest law of the state. Richard Carpenter, General Counsel for the League of California Cities has observed:

The Brown Act was primarily a restatement of the law as it existed prior to 1953 and in fact from the formation of the first cities under the Constitution of 1849. Every charter we have examined requires council meetings to be public and the statutes under which general law cities operated also required meetings to be public. . . .⁹

⁵ Assembly Interim Committee on Judiciary, *Progress Report to the Legislature*, January 1953, p. 13.

⁶ This series of articles was reprinted in full in the committee report, pp. 27-48.

⁷ Assembly Interim Committee on Judiciary, *Progress Report*, p. 61.

⁸ *Statutes of 1953*, Chapter 1588.

⁹ Opinion issued September 19, 1961.

A similar observation has been made with reference to counties. Stanford D. Herlick, County Counsel of San Bernardino County, has noted that county boards of supervisors have been governed by open meeting requirements "since shortly after the entrance of this state into the Union in 1850."¹⁰ To state, however, that the Brown Act was "but a reiteration of extant principles"¹¹ is contrary to both the intent and the application of the law.

In Section 54950 it is declared to be the intent of the law that "actions be taken openly" and "deliberations be conducted openly." It is clear, both from the language of this section and from the report of the Assembly Interim Committee on Judiciary, that the Legislature intended a broader interpretation of the public meeting principle than had existed in the practices of local agencies and in prior case law.

In the committee's *Progress Report to the Legislature* certain practices used by legislative bodies to evade the requirements of a public meeting were cited, including the following:

There is another "loophole" in the existing law through which governmental bodies have been secretly meeting and transacting business. They are meetings generally held before the official public meeting, under the guise of a variety of names, such as executive sessions, meetings of the committee of the whole, work sessions, and others.¹²

The committee report cited specific instances of the use of these caucuses or prepublic meetings and observed: "At gatherings such as these, deliberations and determinations regarding matters affecting the public were made. The subsequent public meetings were mockery, a mere formality and a repetition of matters already decided at the prepublic meetings."¹³

The Judiciary Committee also expressed dissatisfaction with the interpretations of the courts in upholding the legality of meetings which are theoretically open to the public because the door to the room in which the meeting is held is unlocked.¹⁴

In order to discourage the practice of conducting closed meetings, a provision was included in the Brown Act requiring notice to the public of any meeting not held at the regularly scheduled time and place (Gov. Code, Section 54956). An open meeting is open only in theory if the public has no knowledge of the time and place at which it is to be held. Existing law at the time of passage of the Brown Act only required that notice be sent to members of the legislative body in order to prevent secret action by a majority. The new notice provision clearly recognized the public's right of access to all meetings of the governing body of the local agency.

Another purpose of the new law was to provide uniform coverage for all local legislative bodies. Prior to its enactment many local legislative bodies were not covered by open meeting legislation. For example, elementary school boards were not required to hold public meetings, whereas they were mandatory for high school boards.

THE BROWN ACT AND GOOD GOVERNMENT

The contention has not infrequently been made that the Brown Act has hampered effective local government. One such indictment was levelled by Santa Monica City Attorney Robert G. Cockins. In an address delivered before the City Attorney's Department of the League of California Cities, he contended that following the Brown Act to the conclusion suggested by some interpretations "means that the councilmen must appear and deliberate on matters concerning which they have no more knowledge than what is revealed by the sketchy statement appearing on the agenda. When it comes time for a debate they know nothing of the factual situation behind the matter and they appear stupid."¹⁵ City Attorney Cockins maintained that "men of good conscience and substance" will not run for office under these circumstances and as a result cities will have as councilmen "incompetents, professional politicians, and retired persons, and good government will have suffered a severe blow."¹⁶

The fact that the Brown Act is popularly called "the secret meeting law" has such "odious implications," City Attorney Cockins told his colleagues, that "anyone who has the temerity to criticize it is branded in the public eyes as a crook and one who believes that the people are so stupid that they should be presented with nothing but the accomplished fact."¹⁷ Fortunately this attitude is not shared by the vast majority of local officials. As Richard Carpenter, executive director of the League of California Cities, has stated "The Brown Act has had tremendous educational value, both in respect to the public and to public officials. There have been some who try to avoid its provisions but they are rare exceptions."¹⁸

Dr. Albert G. Pickerell, University of California Professor of Journalism and a recognized authority on California's Brown Act, informed the committee of a study he is conducting:

DR. PICKERELL: . . . I undertook a survey to try to begin to get some assessment or some evaluation of the effect of the Brown Act, some analysis of just how it has worked.

We have had it in California for a decade now and it seemed to be, perhaps, time to sample various levels of public officials, newspaper editors and others to get some impression of where the problems are and how, in general, the act has worked.¹⁹

To carry out this objective Dr. Pickerell drew 100 communities to get a statewide sample both as to size of community and geographic distribution and then sent questionnaires in each of these communities to

¹⁷ *Ibid.*

¹⁸ San Francisco *Chronicle*, July 1, 1963, quoted in article by Michael Harris titled "10 years of the State Secrecy Ban."

¹⁹ Unless specifically cited by footnote, statements quoted herein were presented to this committee at public hearings held in San Diego on December 3, 1964, in Los Angeles on December 11, 1965 and in San Francisco on December 14, 1964.

city councilmen, boards of supervisors and city attorneys. Questionnaires were also sent to the district attorney and county counsel in each of the 58 counties. Based on the responses to this questionnaire, Dr. Pickerell stated:

DR. PICKERELL: The interesting thing that I get from this survey is that apparently we have done a fairly good job of educating public officials on the acceptance of the basic philosophy of the Brown Act.

Dr. Pickerell indicated that he asked city councilmen and school board members to comment on the following statement: "On occasion, the Brown Act may hinder 'efficient' conduct of the city's (or district's) affairs. However, on balance, the act serves the public interest since a democratic form of government can operate effectively only if there is opportunity for the public to be informed fully on the conduct of public business." Only five school board members and four city councilmen indicated that they disagreed with the statement. The great majority indicated that they are in support of the purpose of the Brown Act. A similar question was asked of city attorneys, county counsels and district attorneys to get some evaluation of whether the Brown Act has interfered with local legislative functions and hindered efficient administration of the city's affairs. Only seven out of 54 indicated agreement with the statement that it had interfered with administration.

The questionnaire sent to newspaper editors asked: "As a general rule do local legislative bodies in your area observe the Brown Act?" Only one editor indicated "seldom," 51 editors indicated that they usually do and 13 indicated that they always do.

Despite the objections which have been raised by a vocal few, no evidence was presented to the committee that the Brown Act has obstructed local government. Local public officials, almost without exception, indicated their support for the Brown Act and expressed the belief that it has served the public interest.

OPEN MEETINGS IN THEORY AND PRACTICE

More than 10 years have passed since the enactment of the Brown Act. The consensus in support of the open meeting principle would suggest that there have been few problems of application of the law. However, from the time of enactment the Brown Act has been a source of controversy.

Since passage in 1953, the courts have been called upon to decide very few cases on the application of the Brown Act. Interpretation of the provisions of the law have been rendered, for the most part, by various city attorneys and county counsels, the Legislative Counsel and the Attorney General. These interpretations have varied considerably on fundamental questions concerning the application of the law. As a result, the Legislature has assumed a significant role in clarifying the intent of the Brown Act through the process of amendment. The act has been amended by the Legislature in nearly every session since it was adopted.

CONFLICTING INTERPRETATION

One of the first issues raised upon passage of the Brown Act illustrates the problems of conflicting interpretations of the meaning of the law and the process of legislative review. The question at issue was whether the act applied to charter cities and counties. Under California law, cities which are chartered pursuant to Article XI, Sections 6 and 8 of the California Constitution are granted plenary powers over "municipal affairs." Section 6 specifically provides that cities and towns organized under charters framed and adopted by authority of the Constitution are empowered to make and enforce all laws and regulations with respect to municipal affairs "subject only to the restrictions and limitations provided in their several charters." The provisions of Article XI, Section 7½, authorizes any county to frame a charter for its own government and these provisions have been held to confer upon counties similar authority as to the local and county affairs as is conferred upon cities.²⁰

At the time the Brown Act was before the Legislature the Legislative Counsel advised Assemblyman Ralph Brown that Assembly Bill No. 339 would not apply to meetings of charter cities and counties:

"While there is no precise meaning to 'municipal affair,' it has frequently been held to embrace all the internal affairs of a city, . . . we have been able to find no cases which indicate that any matter as closely related to the administration of a city or county as the conduct of the meetings of its legislative body has ever been considered other than a municipal affair."²¹

Associate Counsel for the League of California Cities, Lewis Keller agreed with this opinion:

²⁰ *Reuter v. Board of Supervisors*, 220 Cal. 314.

²¹ Legislative Counsel, Opinion No. 11251, to Assemblyman Ralph M. Brown, May 29, 1953.

"If the open character of council meetings is not a 'municipal affair' there is very little left of the home rule principle in California."²²

The Attorney General reached the contrary conclusion that the Brown Act was applicable to chartered cities:

"We recognize that the structure and method of operation of local governments have long been considered to be a matter of primary concern to the local level. There are, however, certain aspects to the meetings of city council which are of statewide concern.

The Secret Meeting Law was adopted by the 1953 Legislature after an investigation of practices of local agencies throughout the state. The incidents reported to the committee, and the abuses which this legislation was designed to prevent, took place in all kinds of public agencies—school boards, county boards of supervisors, housing authorities, sanitation district boards, all provided examples of secret meetings of public bodies. The evil was not confined to nonchartered cities. The abuses were shown to have existed on a statewide scale. They were and are a matter of statewide concern."²³

In June 1956, the Legislative Counsel reversed the earlier opinion of that office and concluded "that the real objective of the bill was the preservation of the right of citizens of the State to have the public's business conducted openly, and that the subject was not a purely municipal affair, but would be considered by the courts to be a matter of statewide concern. On this basis we have concluded that the Government Code sections added by the enactment of the 1953 legislation are applicable to chartered cities."²⁴

In 1959, the Legislature approved Senate Bill No. 115, by Senator John W. Holmdahl, which clarified the definition of "local agency" by indicating that it was applicable to counties or cities "whether general law or chartered." While there still have not been any final interpretation by the courts on the question of whether or not the Legislature can constitutionally require the legislative bodies of chartered cities to hold public meetings, the intent of the Legislature has been clearly expressed and it is probable that a court would hold that "the exercise of the sovereign power of the state in a matter of statewide interest may override any charter provisions to the contrary."²⁵

ADLER v. CULVER CITY

The only appellate court decision and the most significant judicial interpretation of the Brown Act was rendered by the District Court of Appeals in *Adler v. Culver City* (1960).²⁶

²⁵ Stanford D. Herlick, County Counsel, County of San Bernardino, Opinion issued February 9, 1962.

²⁶ 184 Cal. App. 2d 763.

In that decision the court ruled that the provisions of the law did not apply to a dinner meeting held by the Culver City Planning Commission. The central question decided by the courts was that the definition of "legislative body" (Government Code Sec. 54952) does not apply to a subordinate agency, such as a zoning commission, created by charter. Noting that the Culver City Planning Commission was not a legislative body, but an advisory one, the court concluded that the Brown Act did not apply.

The court stated that the language of the Brown Act "was not directed at anything less than a formal meeting of a city council or one of its subordinate agencies."

The court added:

If it were, no practical line could be drawn. The members of the planning commission and the city council (whether the full number or only two or three members) would be impeded in conducting informal discussions among themselves, thus exchanging information, would be handicapped in viewing property upon which they are about to legislate, would be unable to confer with real estate experts or with their planning director or with informed individuals having qualifications to speak upon municipal problems.

According to *Adler*, "meeting" in a statute requiring meetings to be held open to the public refers only to those formal meetings of the legislative body which are required by law to be held for the transaction of official business.²⁷

The court also concluded that violation of the Brown Act was a misdemeanor and that it was necessary to give strict construction to its provisions in determining possible violation of the law. The court indicated that this was a case where only one penalty was applicable and therefore violation of the Brown Act would not invalidate the actions of the legislative body. The court further indicated that civil action could not be taken to enforce the provisions of the law.

THE 1961 LEGISLATION

The 1961 Legislature approved two bills in response to the court's decision in the *Culver City* case. Assembly Bill No. 127, introduced by Assemblyman Frank Luckel, was approved by both houses of the Legislature and vetoed by Governor Edmund G. Brown.

The bill specified that "planning commissions, library boards, recreation commissions, and other permanent boards or commissions of a local agency" were covered by the Brown Act.

The bill also included a provision making any member of the legislative body who attended a meeting in violation of the provisions of the Brown Act guilty of a misdemeanor and specified that any interested person could commence an action by mandamus or injunction for the purpose of stopping or preventing violations or threatened violations of the Brown Act. A new section was added making void all actions taken at any illegal meeting. "Action taken" was defined as a "collective decision made by a majority of the members of a legislative

²⁷ The court held that *Turk v. Richard*, 47 So. 2d 543, which gives such an interpretation of the word "meeting," correctly reflects the spirit of the Brown Act.

body, a collective commitment or promise by a majority of the members of legislative body to make a positive or negative decision, or an actual vote by a majority of the members of a legislative body when sitting as a body or entity, upon a motion, proposal, resolution, order or ordinance."

Governor Brown, in vetoing Assembly Bill No. 127, expressed his concern with the provisions making void actions taken in violation of the act:

I believe that this bill would seriously imperil the finality of all local legislative decisions. The bill provides that any action taken in a nonpublic meeting, defined in the bill as a "collective decision . . . or a collective commitment or promise . . . is void." Presumably this would also mean that any such decision merely ratified at a public meeting would also be void. As a result disgruntled persons unhappy with the decision of the local legislative body would attack it, whether with merit or not, in court, thereby delaying and obstructing all action. The consequences for bond resolutions, for example, could be paralyzing.²⁸

A second bill amending the Brown Act was introduced by Assemblyman John A. Busterud. Assembly Bill No. 363 extended the definition of legislative body to include "any board, commission, committee or other body on which officers of the local agency serve in their official capacity as members and which is supported in whole or in part by funds provided by such agency."

On May 9, 1961, Assembly Bill No. 363 was amended in the Senate to include those provisions of Assembly Bill No. 127 to which the Governor had not expressed any objection. The bill in this form was adopted by the Legislature and signed into law by the Governor.

Following passage of this legislation, the Attorney General commented:

We believe that there is little, if any, strength left to *Adler v. Culver City*. Contrary to *Adler*, the law now specifically applies to advisory boards such as planning commissions. Contrary to *Adler*, the law now prohibits secret gatherings at which a majority of the members of the legislative body agree, or agree to agree. In the light of these 1961 amendments to the Brown Act, we have substantial doubt whether a California court would maintain that a majority of the members of a local legislative body, without complying with the statutes, could nevertheless meet together in a so-called "informal," "study," "discussion," "informational," "factfinding" or "pre-council" gathering for the avowed purpose of discussing items of general importance irrespective of whether the individual members of the legislative body intend or do not intend "action" at such a gathering.²⁹

DEFINITION OF MEETING

The principle source of contention in interpreting the Brown Act involves the definition of "meeting." While the Brown Act specifically provides that all meetings of the legislative body of a local agency shall

²⁸ Assembly Journal, May 5, 1961, p. 3430.

²⁹ 42 Ops. Atty. Gen. 62.

be open and public. Assembly Bill No. 339 as finally adopted by the Legislature did not contain a definition of "meeting." However, the bill as amended in the Senate on May 27, 1953, attempted to define a meeting as:

. . . any called or arranged-for meeting of the governing body of any local agency at which matters for it or any pending meeting of such are discussed or at which time any test or other vote is taken whether by voice vote or rollcall at such meeting.

These lines were deleted from the bill in the version finally approved by the Legislature.

The difficulty of defining the phrase "all meetings . . . shall be open and public" can best be demonstrated by reference to the conflicting interpretations rendered by the courts and various attorneys since passage of the Brown Act. One of the first opinions to discuss this question was issued by the Attorney General. In that opinion the Attorney General cited the Utah Supreme Court decision in *Acord v. Booth* (1908) 93 Pac. 734, in which the court considered the practice of conducting meetings of city bodies as a committee of the whole where there is a statutory requirement that meetings be public:

The statute would be robbed of nearly all of its force if it were construed to mean that the sessions of the city council would be open only so long as it transacted its business under the strict rules applicable to legislative bodies, but when it relaxes those rules so as to make debate and discussion freer it could close the doors against the public.³⁰

The Utah Supreme Court responded to the argument that no public business could be conducted in such a committee: "To this the contention that no public business could actually be completed and no ordinances adopted or passed in the committee of the whole, and that the yeas and nays must be recorded so that anyone may know just how each councilman casts his vote is no answer. No one need to be present to ascertain the councilman's vote. These are matters of record, and may be ascertained at any time." The court contended that the purpose of the Utah statute was "not that the public might know how the vote stood, but the purpose evidently was that the public might know what the councilman thought about the matters in case they expressed an opinion upon them. Moreover the public [has] the right to know just what public business is being considered, and by whom and to what extent it is discussed."

In concluding that the so-called "council conferences" should be open to the public the Attorney General of California indicated:

To bar or restrict . . . the public from free access to those meetings of the city council in which deliberations or determinations affecting the public are made is to bar them from the very core of the council meetings.

In support of this conclusion the Attorney General cited the findings of the Assembly Interim Committee on Judiciary which led them to recommend passage of Assembly Bill 339.

³⁰ 27 Ops. Atty. Gen. 123.

The Legislative Counsel in an opinion to Assemblyman Sheridan Hegland indicated that the Brown Act clearly and unambiguously requires legislative bodies of local agencies to conduct their business in open and public meetings. He further stated:

"... the only escape from the statutory requirement would be to construe the word 'meeting' in such a manner as to embrace only meetings where formal action on public business is taken, and to exclude 'informal meetings' at which public business is discussed but not acted upon. We do not believe such a narrow construction of the word 'meeting' as used in the statute under discussion is justified... Moreover, the Legislature had specifically declared that it is the legislative intent not only to require that the 'actions' of legislative bodies, but also the 'deliberations' of such bodies be conducted openly."³¹

In a later opinion the Legislative Counsel was asked whether a conference between members of a city council and various city officials concerning a proposed city budget was required to be open to the public. Their opinion also takes into consideration the report and recommendations of the Assembly Interim Committee on Judiciary and indicates: "... the practice of holding secret deliberations, opening the doors to the public upon conclusion of the deliberations and permitting the public to witness only the final voting, is precisely the procedure... constituting an abuse to be corrected by the legislation... ." The Legislative Counsel further states: "We do not believe that the fact that no official action was taken by city council as such should be construed as excusing such conferences."³²

In the first judicial interpretation, Superior Court Judge Leon T. David upheld this broad definition of "meeting." In a specific case involving nonpublic meetings held by the Santa Monica City Council, Judge David ruled:

I am of the opinion that all meetings of the Council or of the boards of the city at which public business is transacted or considered or deliberated are public meetings at which all members of the public are entitled to hear and to be heard...³³

A later decision provided a contrary ruling however. In *Gray v. City of Rialto*, San Bernardino County Superior Court Judge Jesse W. Curtis, Jr., interpreted Section 54950 of the Government Code as:

"... a declaration of policy which I think means that no formal action can be taken with respect to any city matters except at a public meeting held as required by the provisions of the Government Code and before any such formal action be taken, a reasonable amount of deliberation and discussion should be had with respect thereto at a public meeting so that the public may be informed of what is proposed and the reasons for it. I think further

³¹ Ops. Legislative Counsel, Opinion to Assemblyman Sheridan Hegland, as published in *La Mesa Scout*, Issued May 17, 1956, Cited in Albert G. Pickerel and Edward L. Feder, *Open Public Meetings of Legislative Bodies—California's Brown Act*. (Bureau of Public Administration, University of California: 1957 Legislative Problems.)

³² Ops. Legislative Counsel No. 2599, June 22, 1956, to Assemblyman Harold K. Levering, and Opinion No. 2923, August 4, 1956, to Assemblyman Brown.

³³ *Minter v. San Monica*, Los Angeles County Superior Court, Opinion No. 663, 318, September 6, 1956.

that this section anticipates public argument and debate, but certainly . . . was never intended to make illegal any and all discussions and deliberations by members of the city council except that carried on in a duly called or regularly held public meeting."

In support of this decision Judge Curtis stated that it is the duty of a city councilman to "discuss and deliberate freely concerning city problems with his constituents, and other city officials, other city councilmen, and in fact any other person who can be of help; and such discussions and deliberations should take place whenever and wherever expedient." He then went on to indicate that when and where these deliberations and discussions should take place was a matter of discretion of the city official and cited prior case law to the effect that courts will not intervene in the exercise of such discretion unless it is fraudulent or so palpably unreasonable and arbitrary as to indicate an absence of discretion as a matter of law.³⁴

The difficulty of defining "meeting" is central to the disagreement over the application of the Brown Act. Those who support a strict definition of the term "meeting" maintain that it only applies to formal meetings where action is taken. This is the definition which existed in case law prior to passage of the Brown Act and has not been modified by court decision. The Legislature has on several occasions attempted to clearly indicate that a broader definition of meeting is intended than had existed in prior case law. The addition in 1961 of Section 54952.5 to the Government Code defining "action taken" as a "collective decision made by a majority of the members of a legislative body, a collective commitment or promise by a majority of the members of a legislative body to make a positive or a negative decision or an actual vote by a majority of the members of a legislative body when sitting as a body or entity, upon a motion, proposal, resolution, order or ordinance" has broadened the definition of meeting.

The committee concludes that it is highly unlikely that "meeting" can be defined precisely enough to include all occasions when members of a legislative body, whether meeting formally or informally, are discussing public business which will result in official action, and at the same time not apply to casual gatherings involving members of the legislative body.

DISCUSSION SESSIONS

One of the areas of confusion as to the application of the Brown Act has been whether the Legislature intended "all meetings" to apply to discussion sessions. Most city attorneys and county counsels have concluded that the legislative body may meet in closed session so long as "a collective commitment or promise" is not made by a majority of the members. Stanford D. Herbick, County Counsel of San Bernardino County, has so concluded and further noted that no notice is required of these meetings. By this interpretation the legislative body may meet in closed session to discuss a subject so long as no decision is reached. The difficulty of merely "discussing" subjects in closed sessions was illustrated by a Central Valley publisher, in a letter to the members of his city council, discussing the Brown Act and the difficulty in trans-

³⁴ *Gray v. City of Rialto*, San Bernardino County Superior Court, Memorandum Order No. 87481, March 14, 1957.

acting public business outside of a regular meeting at "precouncil" sessions. He noted that in a recent session "downstairs" the city council considered the following topics:

1. Discussed replacement of two planning commissioners.
2. Discussed the golf course site in relation to the fact that the owner wanted to sell 20 acres gross, including a road of about 0.7 of an acre which you didn't want to buy. It was pointed out that condemnation would take at least a year and that it was easier to go along with him in order to save time. You did agree, however, that you would probably go through condemnation if it involved a park site acquisition which would be developed at some future date.
3. Discussed how much money should be allowed for your expenses to attend the league meeting in Los Angeles and agreed on \$150.
4. Talked over the water line to Grant Subdivision and also reviewed the sewer line to Thompson and the water line to Trade-way.
5. Looked at a petition to the council on opposition by local merchants to the planning commission's sign policy. It was pointed out that it wasn't even a law as yet, and you also discussed the legality of the ICD ordinance in relation to signs being an "addition to structure" and admitted that it might be shaky from a legal standpoint.³⁵

The publisher further commented that "despite the mayor's claim that 'his hands are clean,' it is our contention that there are some clear violations of the Brown Act in the above. Some of the discussion was not repeated in the regular meeting and one item did not, we believe, come up at all at your upstairs meeting." He informed the council that he hoped the letter would be understood in the spirit in which it was intended and concluded:

The tendency to conduct negotiations away from the public view—the golf course is a good example—is, I think, a very disturbing trend and one that is not conducive to good government.

It is not enough to say that we have a city government composed of well-intentioned men who would do nothing to harm the public welfare. It is important to recognize that such practices tend to become built-in and we can have no assurance that subsequent city councils are as well-intentioned and as devoted to the public good as you might be.³⁶

Some city councils have publicly disagreed on the advisability of conducting closed study sessions. One of the members of the Palm Springs City Council reported that the press is frequently excluded from study sessions. Councilwoman Mary Carlin argued that "action taken in council meeting on major issues often is cut and dried . . . with the real discussion on the topic taking place in study or work sessions."³⁷

³⁵ Letter dated November 11, 1964, in the files of the California Newspaper Publishers Association.

³⁶ *Ibid.*

³⁷ *Riverside Press Enterprise*, January 26, 1965.

A member of the City Council of El Cajon, Councilman Hal Whelphy, charged that members of the council meet at lunch each Thursday at the Elks Lodge with the city manager. Councilman Robert Cornett, who attended the meetings argued that many city councils hold premeeting conferences; "I enjoy spending a few extra hours a week getting myself informed. Also, I feel that we are fortunate if a department head happens to be there."³⁸

Jack Craemer, Managing Editor of the *Independent Journal* of San Rafael cited another case where secret "discussion" meetings were brought to the attention of the public.

MR. CRAEMER: . . . for some time up until a year ago it was the unadvertised and actually unknown practice of the Mill Valley City Council . . . to have quite frequent meetings in the office of one of the members in San Francisco. . . . These were in fact . . . deliberations of the business that related and affected the people of Mill Valley and these deliberations were absolutely unknown to the people of Mill Valley and it was always a cause of wonder to the reporters of our newspapers covering the Mill Valley City Council how they could make these decisions with so little discussion and subsequently we found out there was discussion, there was deliberation, but it was not so the public could see it.

City Attorney, Leland H. Jordan, of the City of Mill Valley was asked to render a formal opinion on these meetings of the Mill Valley Council. In an opinion issued October 18, 1963, he stated:

It is my understanding that subcommittees consisting of two or three councilmen have, on occasion, met during the day at the office of one of the councilmen in San Francisco. It has been charged that such meetings are illegal because held outside the Mill Valley City limits and because advance public announcement has not always been given.³⁹

City Attorney Jordan indicated agreement with the decision of the District Court of Appeal in *Adler v. Culver City* that the Brown Act does not apply to a gathering held solely for the purpose of investigation or information gathering. He further indicates disagreement with the opinion of the Attorney General that the effect of the 1961 amendments was to overcome the *Adler* decision. Referring to the addition of the misdemeanor penalty for taking action in violation of the act (Government Code Section 54959) and the definition of "action taken" (Section 54952.6) City Attorney Jordan states:

It would appear patently foolish for the Legislature to provide a penalty for attendance at a gathering of a majority of the members of the legislative body at which action is taken and to provide no penalty for attendance at gatherings which are solely of an informative nature if such attendance is, in both instances, a violation of the Secret Meeting Law. I conclude that the Secret Meeting Law only applies to those meetings at which action (as defined in the law) is taken, and not to informal gatherings at which no action is taken but which are only informative or investigative in nature.⁴⁰

³⁸ San Diego *Evening Tribune*, December 8, 1964.

³⁹ Leland H. Jordan, City Attorney, City of Mill Valley, issued October 18, 1963.

⁴⁰ *Ibid.*

Interpreting the Brown Act in the manner suggested by Mill Valley City Attorney Jordan to condone secret precouncil meetings clearly violates the principle of open meetings embodied in the law. To ignore the stated intent of the law that "deliberations be conducted openly" on the subterfuge that the criminal penalty only applies to council members who take action at secret meetings, serves to excuse the specific conduct by local officials which prompted the Legislature to enact the law.

Another form of meeting which has resulted in controversy is the "luncheon" meeting. The Attorney General has issued an opinion that regularly held luncheon meetings by the members of one or more city councils with representatives of certain civic associations where the avowed purpose of such meetings is to "discuss items of area importance such as location of school facilities, water supply, sewage disposal and beach erosion" are subject to the Brown Act (see Appendix C), but the Attorney General further specified that this conclusion should not be construed as holding that mere attendance by a majority of members of a city council or other local agency governing bodies at luncheon meetings or dinners such as are frequently given by civic or fraternal organizations would constitute a meeting of the local agency subject to the Ralph M. Brown Act.⁴¹

COMMITTEE RECOMMENDATION

1. It is strongly recommended that the Brown Act be amended to indicate as clearly as possible that it is the intent of the law that all discussion, deliberation and action taken by the members of a local legislative body are required to be open to the public unless for specific reasons public policy requires confidentiality.

While the committee recognizes that the vast majority of local public officials are seriously trying to uphold the principle of the Brown Act, it is apparent that the abuses revealed by the 1953 report of the Assembly Interim Committee on Judiciary still exist. The committee further recognizes that there is no sure way of enforcing the principle of open meetings. Certain interpretations of the law, however, offer "loopholes" which can be used by public officials who wish to circumvent the spirit of the law and take action on controversial issues out of public view. At the same time the conflicting interpretations which result make it difficult, if not impossible, for those who are seriously attempting to comply with the Brown Act to understand its provisions.

It is the conclusion of this committee that the Legislature in adopting the Brown Act did not intend to limit the law's application to those meeting at which official action is taken. Regardless of the form these meetings may take, the "briefing sessions," "work session," "luncheon meeting," or "executive meeting" these discussion meetings should be open to the public unless for specific reasons the law requires confidentiality.

Most local legislative bodies have adopted the practice of holding these meetings as public sessions. They are usually conducted in an informal manner with the appropriate administrative officials present to supply necessary information to the elected officials. The committee

⁴¹ Ops. Atty. Gen. No. 63/82.

recognizes the value of these sessions, not only to the members of the legislative body, but also to the public by providing access to the information upon which decisions are based. Most local governments schedule these meetings on a regular basis so that there is no problem as to notice to the public.

MEETINGS OF COMMITTEES

The application of the Brown Act to committees of the local agency presents another area of disagreement. The Attorney General reviewed this question (see Appendix D) and concluded:

Local agencies may and do perform much of their work through committees. Public agencies usually have a number of standing committees and frequently appoint special committees to investigate and report concerning specific matters. Such committees are mere instrumentalities of the governing agency and their determinations are *not* the determinations of the agency. The agency may not delegate its powers to a committee. Only when and if the agency ratifies and approves the act of one of its committees does it become the act of the agency.

* * * * *

In interpreting the extent to which the secret meeting law applies to committees and subcommittees of local public agencies we are, of course, guided by Section 54950. That section is designed to insure the people's right to attend meetings of local legislative bodies, not only at the time those bodies take "action" but also, and perhaps more importantly, at the time those bodies conduct their deliberations. The section is designed to insure full public deliberation before action.

* * * * *

Ordinarily, a committee is composed of less than a quorum of the legislative body that has created it. In those cases the findings of such a committee have not been deliberated upon by a quorum of the legislative body and the necessity as well as opportunity, for full public deliberation by the legislative body still remains. Thus the public's rights under the secret meeting law are protected. Therefore, meetings of committees of local agencies *where such committees consist of less than a quorum of the members of the legislative body are not covered by the act.* (Emphasis added.)⁴²

The Attorney General indicated that there is a serious question as to the application of the law to committees composed of a quorum or more of the legislative body. The device commonly known as a committee of the whole may not be used to avoid the open meeting requirement (27 Ops. Atty. Gen. 123). The Attorney General further noted that a committee meeting composed of more than a quorum of the creating agency may be a subterfuge designed to evade the requirement of the law and the extent to which full public deliberation before action will "probably be greatly lessened in view of the fact that a quorum of the agency will already have deliberated upon the matter."⁴³ The Attorney General therefore concluded:

If a committee composed of the majority or more of the members of a legislative body of a public agency gather together and de-

⁴³ *Ibid.*

⁴² Ops. Atty. Gen. No. 58/168, December 21, 1958.

liberate for the purpose of determining an action to be taken at a subsequent meeting of the agency such a meeting would be held to be violative of the Secret Meeting Law.⁴⁴

Assembly Bill No. 2334 (Marks—1963 Regular Session), which was referred to this committee for interim study, makes it clear that the Brown Act applies to committees and subcommittees of the local legislative body by adding Section 54953.1 to the Government Code to read:

54953.1. All meetings of any committee or subcommittee of a legislative body, whether or not composed of a quorum of the members of the legislative body, shall be open and public, and all persons shall be permitted to attend any meeting of such committee or subcommittee, except during consideration of the matters set forth in Section 54957.

The committee has received numerous statements of opposition to this addition to the Government Code on the basis that it would seriously hamper effective local government. Mr. Richard Carpenter, General Counsel of the League of California Cities, in a communication to various cities informing them of the interim committee hearings on this subject, stated:

It is our view that the Brown Act should not be made applicable to committees of less than a quorum of the council inasmuch as these committees cannot take any action and, in addition, the practical problems involved in giving notice of such meetings prior to being able to hold such a committee meeting would seriously hamper both the public business and the work of committees. We hope that a strong protest will be made against the enactment of any such measure.⁴⁵

The objection of cities to the proposed addition to the Brown Act was expanded upon by Mayor Burton E. Jones of the City of South Pasadena who appeared before the committee in Los Angeles on December 11, 1964, representing the 76 municipalities of the Los Angeles County Division of the League of California Cities:

MAYOR JONES: Under the provisions of AB 2334, a subcommittee of a city council which can make no decision for the city would be subject to provisions of the Brown Act and would in effect be hampered to such an extent in the giving of notices prior to such meetings that the good work of individual members of the Legislature in gathering background information for council discussion would be lost.

The fact that the provisions of the proposed legislation would be applicable to cities of all sizes poses particular problems Mayor Jones told the committee:

MAYOR JONES: For example, one city in Los Angeles County has developed numerous committees that meet continually during the week to review matters that will be presented to the council during their regular meetings. This is essential to this community

⁴⁴ *Ibid.*

⁴⁵ Richard Carpenter, General Counsel, League of California Cities, letter issued November 24, 1964.

because they do not have a city manager or chief administrative officer who can do this type of research or investigation.

The fact that notice is not required of meetings when held at regularly scheduled times and places was noted by Chairman Marks, who asked Mayor Jones why these meetings could not be held on a regularly scheduled basis.

MAYOR JONES: My answer, I think, would have to be that as a businessman myself, it was not always possible for me in the pursuit of my municipal activities to schedule part of my business day at a set time every week for minor subcommittee meetings.

CHAIRMAN MARKS: I can see, Mayor, but you are talking to legislators who also have other occupations. . . . I think your primary responsibility is to your public duties.

Resolutions from various cities were received by the committee outlining objections to extending application of the Brown Act to committees of the local legislative body as proposed by AB 2334. A typical objection was that the Brown Act should not be made applicable to such committees of less than a quorum "inasmuch as these committees act only in an advisory capacity only and cannot take any official action."⁴⁶ A resolution adopted by the City of Oceanside noted that "Committees are many times called upon to meet in less than 24 hours which would not be possible if notice had to be given as required by the Brown Act. . . ."⁴⁷

The City of Azusa noted that the proposed legislation would be "seriously detrimental" and "impede much of the important work of a municipality which can properly be delegated to a committee. Also, if enacted, its application would add to the ever-increasing costs of government, while seemingly serving no useful purpose."⁴⁸

The City of West Covina also indicated that there were problems in providing notice in sufficient time. "As the mayor constantly assigns projects for research and analysis to one or two councilmen, this would seriously hamper public business. The law, as it now exists, prohibits one or two councilmen to make or express an opinion that would be binding to the whole council. We urge you therefore to recommend against this proposed addition in order to protect home rule and enable us to make an honest effort to obtain answers to our many problems."⁴⁹

The City Council of the City of Santa Cruz informed the committee the proposed measure would "seriously impair the proper operation of local governments. A city council cannot possibly undertake all of the necessary discussion and investigation of matters which come before it in public session. Councilmen almost invariably are employed in other time consuming activities, by which they earn their livelihood. When they are appointed to committees they must frequently arrange for committee meetings on the spur of the moment, or whenever opportunity arises. Since they cannot possibly take any action at such meetings, and certainly would be no more prone to arrive at a personal decision than if they were individually investigating a matter, it seems

⁴⁶ City of Vernon, Resolution No. 2751.

⁴⁷ City of Oceanside, Resolution No. 64-141.

⁴⁸ City of Azusa, letter from Louis G. Memmishiemer, Mayor, December 11, 1954.

⁴⁹ City of West Covina, letter from Dr. Norman G. Snyder, Mayor, December 11, 1964.

that this would be an unduly restrictive provision with little or no corresponding benefit to the public. In addition, such a regulation would create an opportunity for unfounded harassment of members of legislative bodies. Even a casual meeting of two members of such a body for lunch would provide an opportunity for a crank to make an unfounded claim of unlawful meeting, which claim might be very difficult to disprove."⁵⁰

This problem of two members of a legislative body becoming involved in a casual meeting was illustrated by Mr. Jack Merlman of the County Supervisors Association, who presented the following illustration to the committee:

MR. MERLMAN: . . . say on five-man boards you have a subcommittee of two supervisors, for example, who would be—say a subcommittee to explore the need for a new county hospital or wing—and supposing one of the rural counties' two supervisors are out hunting, they are friends or something, and then one of them says when we get back we can sit on the porch and talk about this county hospital matter, we are both on the subcommittee. Query—they might say that, in the purest of intent, their meeting was open and if any citizen would have come up he would have been enjoined to sit there, but couldn't the press say that by its very remoteness it, in effect, was not a public meeting?

Robert Formhals representing the School Boards Association stated that this is already a problem.

MR. FORMHALS: Sometime ago I was in Los Angeles in the City Administration Building conferring with two members of the Los Angeles Board of Education about California School Board Association business. We went to lunch. There is a cafeteria that seats probably five or six hundred individuals. We sat down at the table and across from us was another of the Los Angeles Board of Education, . . . A fourth member approached the table and all three said no, no, no, because for four members to be seated at this same table might have laid them open to all sorts of harassment—legal and political—on the part of various people who were disgruntled with various activities.

Ben Martin, representing the California Newspaper Publishers Association, referred to the situations described by Mr. Merlman and Mr. Formhals and told the committee:

MR. MARTIN: We would never propose that you pass a law that said members of the city council could never have lunch together, I think that is stretching the law a little bit too far.

With specific reference to the case cited by Mr. Merlman involving two supervisors discussing county business on a hunting trip, he indicated:

MR. MARTIN: Now I did not think that would be a violation of the Brown Act unless they were going into great detail in discussing that hospital, and who should build it and how much it should cost and where it should be located and if they do that, they are

⁵⁰ City of Santa Cruz, letter from Norman S. LeZim, Mayor, December 10, 1964.

guilty of a gross injustice, both morally and legally for sitting on somebody's front porch discussing that without having the facts and figures at their disposal, without having engineers and architects and land surveyors and hospital planners, people get too concerned about how this Brown Act applies to every little thing they do and it was never intended to prevent them from having lunch with friends.

The City Attorney of the City of Beverly Hills, Allen Grimes, commented on the reason for the opposition of cities to the extension of the Brown Act:

MR. GRIMES: . . . I don't think these cities are hiding anything in their opposition to committees being public. I think they have a fear that this may get more cumbersome, more difficult to operate.

CHAIRMAN MARKS: I am sure that they are not trying to hide anything but I . . . think government is . . . cumbersome and it probably would be, in many respects, simpler if people could meet privately and discuss everything. But I think that would be contrary to our whole system that the public is entitled to know what goes on by public officials on public business.

Opposition to making committees public was not unanimous. The City of Long Beach indicated support for the provisions of AB 2334.⁵¹ Supervisor Kenneth Hahn of the Los Angeles County Board of Supervisors appeared before the committee hearing in Los Angeles on December 11, 1964:

SUPERVISOR HAHN: I served in the City Council of Los Angeles for three terms. I have conducted committee hearings as a member of the city council as well as a member of the board of supervisors. I feel that coverage of committees of a legislative body is essential as well as the body itself because . . . many times the bills are decided or the law is decided in the committee and the body itself ratifies the committee report. . . .

Councilman Robert Debs of the City of Palo Alto appeared before the committee in support of the Brown Act and the inclusion of committees as proposed by AB 2334:

COUNCILMAN DEBS: It is my opinion that the Brown Act is the major protection the California voter has. If it were not for the Brown Act . . . the voter . . . and the press would probably know very little of what is going on because it is a more efficient way to operate, a closed hearing is much more efficient if one wants to operate in a very efficient manner.

COMMITTEE RECOMMENDATION

2. The committee recommends that the Brown Act be amended to specify that committee meetings of a local agency are to be open to the public whether or not the committee consists of a quorum of the members of the legislative body. If an interested

⁵¹ City of Long Beach, letter from Margaret L. Heartwell, City Clerk, January 29, 1965.

citizen is not allowed to be present at a committee meeting he is denied the opportunity of becoming informed.

It is important for the public to have access to the deliberations of its city councils, boards of supervisors and other local legislative bodies. In many cases important discussion takes place in committee meetings even though final action is not taken and the public's right to know about these deliberations should be clearly stated.

It has been contended that requiring committee meetings be open to the public *would hamper local government because it would require notice every time two or more members are assigned responsibilities to investigate a subject and report back to the full membership.* In response to this contention the committee notes that there is no disagreement that the Brown Act presently applies to committees consisting of a quorum. Since the great majority of local legislative bodies consist of five members, *a committee of three or more members are required under the present law to give the notice required under the Brown Act.* The practical effect of requiring open committee meetings would be to make public committee meetings consisting, in most cases, of two members. In addition, notice is only required if the meetings are not regularly scheduled and the notice provision of the Brown Act only requires notice be given to those newspapers, radio and television stations which have requested notice. *If these meetings are regularly scheduled and so provided for by the full body notice is not required.*

The extension of the provisions of the Brown Act to committees would not change the law in any way with respect to casual meetings, such as luncheons or other social gatherings. No one contends that the Brown Act now applies to such gatherings of a quorum of the legislative body and it is not suggested that there be any change in this respect.

It has also been argued that *city councilmen or supervisors cannot make the advance arrangements necessary to give notice when they are carrying out some minor administrative or factfinding duty.* It should be noted that these duties do not require a meeting since they are primarily individual responsibilities. It is far easier for a councilman to carry out a responsibility, such as site inspection, individually when his schedule permits and notice would not be required. Furthermore, a quorum of the members of a legislative body are often assigned to look into the same subject (site inspection) under the present law, and as a practice many local officials undertake this on an individual basis as their own personal schedule permits.

To the contention that *it is not necessary that meetings of committees and subcommittees of less than a quorum be open to the public because they cannot take action,* the committee concludes that this is no answer because the Brown Act directs that the "deliberations" leading to decisions by the local legislative body be "taken openly" so the people may remain informed. With the increasing demands on local government there is a greater reliance on committees. If an interested citizen is unable to be present at these committee meetings he is denied the opportunity of understanding the committee recommendation and the subsequent decision of the full body.

PERSONNEL SESSIONS

The sole exception to the open meeting requirement provided in the Brown Act is Section 54957 of the Government Code permitting the legislative body to hold an executive session "to consider the appointment, employment, or dismissal of a public officer or employee or to hear complaints or charges brought against such officer or employee by another public officer, person or employee . . ." The provision also provided that the officer or employee may request a public hearing.

In *Cozzolino v. City of Fontana* (1955) 136 Cal. App. 2d. 608, the court upheld the action of a city council in dismissing a police officer at an executive session as provided in Section 54957 of the Government Code. The appellant in this case made the contention that the action of the city council was not sufficient since it was not taken at an open and public meeting as required by Section 36808 of the Government Code. This section was the open meeting provision which had existed prior to the enactment of the Brown Act providing that "meetings shall be public." This provision, however, was superseded by the Brown Act which permits a closed session to consider the dismissal of an officer or employee "unless such officer or employee requests a public hearing." The appellant did not contend in this action that he had requested or was denied a public hearing.

In 1959 then Attorney General Stanley Mosk called the attention of Assemblyman Ralph Brown, to the fact that "under the law where an employee is entitled to private inquiry, notice of the time need not be given to the public and press." The Attorney General further stated "It is my personal view that this conclusion may well lead to evasion of the Secret Meeting Law by local agencies using 'personnel matters' as a vehicle for dealing with other problems." The Attorney General concluded:

I do feel that legislation is necessary to clear up the possibility of evasions that are inherent in Government Code Section 54957 as presently constituted. Either the permission for private sessions for employment and personnel problems should be eliminated entirely, or an addition to this section should require public notice of the meeting, together with a specific agenda, in order to assure that no problems other than personnel matters are to be considered.⁵²

During the 1959 session Assemblyman Brown amended Assembly Bill No. 1287 by Assemblyman Luckel to provide that the local agency could hold executive sessions "during a regular or special meeting." In support of this provision Assemblyman Brown indicated:

This is necessary in order to insure that there is no confusion as to the time a legislative body can hold an executive session. It has

⁵² Letter from Hon. Stanley Mosk, Attorney General, to Hon. Ralph Brown, Speaker of the Assembly, March 31, 1959, (in the files of the Assembly Legislative Reference Service).

been claimed by some that an executive session was neither a special nor regular meeting and therefore did not require notice.

Years ago when this act was passed, it was my intention that an executive session could only be held during either a special or regular meeting. There was no doubt about it at that time and there is no doubt about it now. The recent activities of some local governmental agencies prompted the Attorney General to suggest that possibly some clarifying additional language was needed. My amendments should take care of this situation whenever any doubt arises in the future as to the meaning of the Brown Act.⁵³

Another question raised concerning executive sessions was whether the governing board of a local legislative body could meet in closed session to consider potential candidates for appointment to a vacancy on the board. Legislative Counsel ruled that such an executive session would not be in violation of the Brown Act:

There is nothing in the provision authorizing executive sessions which makes any distinction between officers appointed by a legislative body over whom the body will have control and supervision, and officers appointed by a legislative body to fill vacancies in its own membership. The obvious purpose underlying the authority to hold such executive sessions is to permit complete freedom of discussion with the minimum of embarrassment both to the members of the legislative body and to the person being discussed by them, and this can best be achieved by excluding the public from the meeting. We have no doubt that the Legislature in authorizing executive sessions for consideration of personnel matters intended it to apply in cases of all officers or employees by legislative bodies.⁵⁴

Meetings may be closed to the public, however, only while the legislative body is considering the appointment, employment or dismissal of particular individuals, or is hearing complaints or charges brought against particular officers or employees. This opinion by the Legislative Counsel was issued in response to a question by Assemblyman Brown which stated that a county board of supervisors had instituted a "personnel meeting" held at a regular time each month with the heads of all county departments present. In noting that exceptions to the general rule of a statute are strictly construed (*National City v. Fritz* (1949), 33 Cal. 2d. 635), Legislative Counsel indicated:

We do not believe that provisions of Section 54957 permitting executive sessions can be construed to authorize closed meetings of the board of supervisors with the department head for either a general discussion of personnel matters or a discussion of any other problems or policies relating to county business.⁵⁵

The Attorney General has reached a similar conclusion that under the Brown Act private sessions are permissible only in matters "dealing with particular individuals and that meetings where *general* personnel

⁵³ Letter from Hon. Ralph M. Brown, Speaker of the Assembly, to Hon. Edmund G. Brown, Governor, May 15, 1959 (in the files of the Assembly Legislative Reference Service).

⁵⁴ Ops. Legislative Counsel No. 3782, to Hon. Ralph M. Brown, May 5, 1960.

⁵⁵ Ops. Legislative Counsel No. 7103 to Hon. Ralph M. Brown, January 19, 1961.

problems are considered" must be open to the public. The Attorney General does indicate however that it is not necessary to vote in an open meeting on matters discussed in executive sessions held pursuant to Section 54957 of the Government Code. The authority for this conclusion is based on *Cozzolino v. City of Fontana*, 1956 Cal. App. 2d. 608.⁵⁶

At a hearing of this committee in Los Angeles on December 11, 1964, Mr. Donald W. Odell, an attorney, indicated that there was some further problems in interpretation of the Brown Act. He presented the following situation to the committee:

MR. ODELL: In 1960 . . . I represented a client in San Diego in a matter where the governing board of the school district had decided to dismiss him and met at noon in the superintendent's office at a meeting called 24 hours in advance so that they complied with both the Government Code sections and the Education Code, but the agenda item which was published for the meeting and was particularly on the call of the meeting provided "discuss and act on personnel." My client and I had no knowledge whatsoever that the meeting was to take place. A decision was made at the time to dismiss him. He did not have the opportunity to appear before the board.

At that time, I became aware of a problem that I believe still exists in the code and that is that although a special meeting is called and the law does provide that there shall be specified in the call of the meeting what business is to be transacted at the meeting, it is quite indefinite, in my opinion, as to what specification is necessary to advise a person or the public in the call of a meeting on the agenda, . . . And I believe that the law should be amended in some way in which the employee involved would be apprised that his individual case is to be considered at this special meeting.

CHAIRMAN MARKS: Do you think that the board should be required to indicate to the employee involved prior to having the closed hearing on personnel that he has a right to a public hearing?

MR. ODELL: Yes, I definitely do. . . . I know that the purpose of executive session is to handle the personnel matter quietly and out of the public view and there are good public reasons for this. Perhaps . . . giving the notice could be met by merely giving the notice to the employee personally. . . .

A related problem is the fact that the legislative body may take action in an executive session. As a result there is no record available to the public of any action which may have been taken to discharge an employee.

The question of notice of executive personnel sessions has been a subject of contention. Allen P. McCombs, Publisher of the *Chino Champion* questioned the action of the San Bernardino County Board of Supervisors in not giving notice as required for an executive session to appoint a member of the planning commission.⁵⁷ San Bernardino County Counsel, Stanford Herlick responded that "in the absence of

⁵⁶ Ops. Attorney General Opinion No. I.L. 61-93, August 23, 1961.

⁵⁷ Letter from Allen P. McCombs, Publisher, *Chino Champion* to Stanford D. Herlick, County Counsel, County of San Bernardino, September 27, 1964, in files of the California Newspaper Publishers Association.

a regular meeting of the board of supervisors, the chairman could appoint the planning commissioner so long as the board of supervisors approved the appointment. At the time of the actual appointment, however, there were two members of the board of supervisors at the courthouse in addition to the chairman. They met in chambers at a meeting which was open to the public and consummated the appointment. It is clear that this action merely constituted the appointment by the chairman. Our advice was that the approval of the board would have to be consummated at a regular meeting in open session."⁵⁸

Although there have been some problems relating to executive personnel sessions, they have resulted for the most part from a misunderstanding of the provisions of the law. For example, Richard Carpenter, General Counsel for the League of California Cities, has noted that some city officials have been confused in thinking that closed sessions for personnel purposes included general discussion of salary.⁵⁹

The San Diego City Council held such a closed meeting at a breakfast session with the Civil Service Commission to discuss executive salaries.⁶⁰

Deputy Mayor Ivor de Kirby reported that the council "erred" in not announcing the meeting called at the request of the commission for a progress report on a study of salaries in the unclassified branch of civil service.

The law specifically states that executive sessions shall be held "during a regular or special meeting" (Section 54957, Government Code). This requirement should be strictly observed.

COMMITTEE RECOMMENDATION

3. The committee recommends clarifying changes in the Brown Act to specify that the officer or employee be given 24-hour written notice of his right to have a public hearing, rather than an executive session, to discuss personnel matters affecting him. In addition, the committee recommends that when this procedure is not followed, any action taken is void.

Presently the Brown Act provides that an employee who is the subject of a closed personnel hearing may request a public hearing if he so desires. The purpose of this section is to protect an individual from unjust charges which if aired in public could seriously injure his reputation. The right to a public hearing is designed to protect the employee from unjust action by the legislative body in a closed meeting without allowing the individual in question to be present. The whole purpose of the section is to protect the individual. The committee concludes that the further protection afforded to an officer or employee by requiring 24-hour written notice of an executive session is consistent with this purpose.

⁵⁸ Letter from Stanford D. Herlick, County Counsel of San Bernardino County, to Dr. Albert Pickeral, Professor of Journalism, University of California (letter in committee files).

⁵⁹ San Francisco Chronicle, July 1, 1963, quoted in article by Michael Harris titled "10 years of the State Secrecy Ban."

⁶⁰ San Diego Union, April 9, 1964.

PENDING LITIGATION

Although the Brown Act only provides for executive sessions to discuss personnel matters relating to a specific individual, some interpretations of the law have indicated that other matters may be discussed in executive sessions. One such exception is a meeting of the legislative body to discuss matters with its attorney. In an opinion issued October 4, 1960, the Attorney General ruled that the Brown Act "does not require conferences between a city council and a city attorney held solely to discuss litigation pending, proposed or anticipated, to be open to the public where a public discussion of such matters would redound to the benefit of the city's adversary and to the detriment of the public."⁶¹

In support of this position the Attorney General indicated:

City councils are engaged regularly in deliberating or acting upon ordinances, resolutions, etc., where the legal implications of the subject matter are as important for a proper decision as factual or other information in order to form an intelligent and proper decision. Thus, the city attorney may be called upon to explain the legality or legal implication of a proposal before the council. In such instances the public has a right to know all of the factors considered by the council, including the legal advice, if any, received. The public is entitled to know all of this in order to insure that representatives are in what it considers to be the public good. It is the sense of the Brown Act that such types of meetings be open to the public.

However, there is no indication in the language used in the Brown Act that its purpose is to grant in any fashion an advantage to an adversary of the people. It is one thing to require public meetings so that the public be informed about the deliberations as well as the actions of its representatives and quite another to deliberately give an advantage to an adversary of the people by extending the word "meeting" used in the act to include every conference between a city council and its city attorney which, if open, would not be to the people's interest but to the interest of the people's adversary. It would seem that before interpreting the sections to include such a conference the Legislature should clearly say so in unequivocal language.

An example of the kind of situation that the Attorney General had in mind was an action involving condemnation of property, when a city attorney finds it necessary to discuss with the city council the maximum amount the council is willing to pay for property and litigation. Other examples include discussion concerning settlement of litigation against the city for court claims which might entail the discussion of trial strategy and the strength and weakness of the case.

⁶¹ Ops. Atty. Gen. No. 59/180, issued October 4, 1960.

The Attorney General concluded that "In the normal relation between a city council and a city attorney where the city council seeks the legal advice of the city attorney as to the legal effect of matters pending before the city council, such meetings must be open to the public. However, in those unusual limited situations in the nature of consultation over litigation between the city council and the city attorney, as exemplified above, where obviously the public interest would suffer should an open meeting be held, the Brown Act does not require the conference to be open to the public. It must be emphasized, however, that the exception drawn here is a narrow one and that any subterfuge or evasion of the purpose of the act should not be tolerated."⁶²

Most city attorneys and county counsels have similarly concluded that the governing board may meet in closed session with its attorney to discuss matters involving litigation. These opinions, however, have not always imposed the limitations expressed by the Attorney General. Legislative Counsel, on the other hand, has ruled: "If a quorum of the council is present and the public is excluded the meeting will be in violation of the Brown Act."⁶³

Legislative Counsel noted that a discussion between the city attorney and less than a quorum of the members of the legislative body is probably not a "meeting" within the meaning of the law in accord with the opinion of the Attorney General (32 Ops. Atty. Gen. 240). Legislative Counsel further stated:

It might be contended that the attorney-client relationship exempts the meeting of the councilmen with the city attorney from the requirement that council meetings be open to the public. While it is the duty of an attorney "to maintain inviolate the confidence, and at every peril to himself to preserve the secrets, of his client" (B. & P.C. Sec. 6068) the fallacy in the reasoning that the attorney-client relationship justifies a secret city council meeting between the councilmen and the city attorney lies in the assumption that the city councilmen and the city attorney, who are public servants, shall have an attorney-client relationship exactly like that of a private citizen and his attorney.

A private citizen is free to discuss confidential matters at any time with his attorney, and when he does the attorney has a duty under the law to keep secret the communications between them. In contrast to the citizens right of action, however, the Brown Act clearly states the intent of the law that the action and deliberations of legislative bodies of local agencies must be conducted openly, and that the people, in delegating authority, do not give their public servants the right to decide what is good for the people to know and what is not good for them to know (Government Code, Section 54950). To this end it is provided that *all* meetings of such bodies shall be open to the public (Government Code, Section 54953) with a single exception being made in personnel matters (Government Code, Section 54957). Neither in the Brown Act or the sections dealing with a city attorney (Government Code, Sections 41801-41803) is there any exception authorized for meetings

⁶² *Ibid.*

⁶³ Ops. Legislative Counsel No. 1126 to Hon. Ralph M. Brown, December 15, 1959.

of the city council and the city attorney to discuss legal matters relating to the city.⁶⁴

The existence of the attorney-client relationship as it applies to city attorneys and other city officers has been referred to in the court's decision in *Holm v. Superior Court* (1954), 42 Cal. 2d. 500, and again in *Jessup v. Superior Court* (1957), 152 Cal. App. 2d. 102. In these decisions the court held that reports and photographs prepared by city agents relating to personal injuries or deaths occurring with a city-operated facility were held to be confidential communications to the city attorney and certain other city officers and thus it was not required that they be disclosed to persons preparing litigation against the city. In referring to these decisions the Legislative Counsel indicated: "We do not believe that the limited decisions of these cases can be said to impliedly authorize secret meetings between the legislative body of a city and the city attorney. Any action of a city council is a potential source of litigation, since someone adversely affected or even merely disgruntled may contest it in the court." ⁶⁵

During the course of the interim study a number of instances came to the attention of the committee whereby local legislative bodies held closed meetings because the subject matter involved might lead to litigation.

For example, on the day of the committee meeting in San Diego, on December 3, 1964, the members of the committee were informed, by an article in the *San Diego Union* titled "More Secret Tax Talks Set," that the San Diego City Council had scheduled a closed door meeting for the following Tuesday to discuss a phase of their hotel room tax. The article indicated that City Attorney Edward Butler believed that the proposed discussion could involve litigation. Gene Williams, editor of the *San Diego Evening Tribune* and representative of the Copley Press, testified before the committee on this point:

MR. GENE WILLIAMS: I didn't come here to criticize or to try to suggest that the committee do any specific thing in relation to the law. I think, in general, all of us in the press and radio have felt that the Brown Act has been a great step forward in making it possible for the public to get the information that they are entitled to from these public boards. However, there is one point in the Brown Act that isn't specifically covered at the present time, although the Attorney General has made a ruling in respect to it, and that relates to litigation, as to when it is proper for a council or board to hold a secret session to discuss litigation. . . . You have referred to one of them this morning that is highly questionable, I believe.

CHAIRMAN MARKS: Did you or any other representative of the press request access to the meetings of the city council on this particular subject?

MR. GENE WILLIAMS: Yes. I reported it.

CHAIRMAN MARKS: And you were refused admittance? And you believe that their meetings are, as you say, highly questionable under the present conditions?

⁶⁴ *Ibid.*
⁶⁵ *Ibid.*

MR. GENE WILLIAMS: Well, I think there is question because the law is not specific to what they can or cannot do.

The San Diego City Council is reported to have conducted other closed meetings because "possible litigation" was involved. On September 24, 1964, the city council held an unannounced secret meeting to discuss purchase of the San Diego Transit System. The *Evening Tribune* reported that the meeting was so closely guarded that even Councilman Allen Hitch wasn't notified. When he arrived and found the meeting underway he declined to enter until it was over. City Attorney Ed Butler said he interpreted the nature of the meeting to be justified because it "touched upon possible studies looking toward negotiations or possible acquisition of the existing transit system and because the details involve possible ultimate condemnation."

COMMITTEE RECOMMENDATION

4. The committee recommends that the legislative body of a local agency be permitted to hold an executive session to consult with its counsel only if such consultation relates to litigation in which the agency is a party when public disclosure of the matters considered would be detrimental to the public's interest.

The Brown Act does not provide for such consultation and the courts have not been requested to rule on this point. It has been determined by the courts that there is an attorney-client relationship between the legislative body of a local agency and its counsel. The courts have not held that the local legislative body may hold a closed session in order to consult with its counsel on "possible future litigation." Such an interpretation would permit an executive session on almost any subject because virtually every action a local agency takes could lead to litigation.

However, the local agency should not be required to reveal facts and strategy concerning litigation in which the agency is a party in an open and public meeting. Such a procedure would benefit a particular individual who is adversary of the local agency and the public interest would not be served. The amendment recommended by the committee provides protection of the public interest in litigation without providing a loophole through which the law may be circumvented.

LAND ACQUISITION

Another subject which has sometimes been referred to as a reason for holding executive sessions is discussion relating to land acquisition. The reason for closed meetings on site acquisition is frequently that legal matters are involved which the legislative body must discuss with counsel in executive session. In addition, the point is often made that public discussion of the price which the agency is willing to pay for a parcel of land gives an unfair advantage to a private party.

Mr. Alexander Bodi, editor of the *Palo Alto Times* and president of the Northern California Professional Chapter of Sigma Delta Xi, discussed with the committee the reason the permissible executive sessions under the Brown Act had not been extended to cover acquisition of land.

MR. BODI: This came up fairly recently at a meeting I attended at which the speaker was Ralph Brown, who drafted the original Brown Act. . . . I asked Justice Brown, at that time, . . . whether the land acquisition was left accidentally from the original Brown Act, or whether it had been done deliberately, and if it had been done deliberately what the thinking was. He said it had been deliberately done, if I quote him correctly, that it had not been an oversight, but the feeling at the time was that there was a little bit of difference two private parties negotiating for the purchase of land and a public agency negotiating for land with a private party. And the difference in this is that the public agency has the right to condemnation which a private person would not have.

Mrs. Agnes Robinson and Mr. Horace Anderson, members of the Board of Trustees of the Palo Alto Unified School District, presented a resolution to the committee on behalf of the Palo Alto Unified School District Board of Education favoring an amendment to the Brown Act to allow preliminary discussion of land acquisition and sale of properties in executive session. Mrs. Robinson told the committee:

MRS. ROBINSON: I believe . . . that consultation with county counsel on litigation of land acquisition, demands privacy in order to protect the public's interest against such persons as the Attorney General terms "the adversary of the people." But in all conscience, I cannot see how the Brown Act, as it now stands, permits such closed discussion . . . when it indicates . . . that it shall only be construed not to deny closed session in a case of national emergency or personnel matters. . . .

* * * * *

I want to make it clear that the more I read the Brown Act, the more I believe in what it says it wants to do, any exemption should be very narrow and very specifically worded, I think.

Assemblyman Harvey Johnson recited his experience as a board member and addressed a question to Mrs. Robinson:

ASSEMBLYMAN JOHNSON: I have had considerable experience in this field as a board member, in fact, about 16 years' experience. We never had a closed meeting. We didn't find it in our area that it was bad to have open meetings. Actually if anything happened the values went down as far as the district was concerned. Now my question, have you had actual experience or is this a fear that you are expressing?

MRS. ROBINSON: Well, this was an experience . . . which directly involved how much money to pay for the land. It was not a question of where to buy the land or what land to buy. It was the bargaining . . . I guess it is the bargaining point that we are talking about in this kind of thing.

Board member Anderson recited the specific circumstances in the condemnation under discussion:

MR. ANDERSON: In this particular case, the transaction has been completed. . . . This was a negotiation with Stanford University. The particular piece of property needed was for an addition to a school site that had been originally purchased through friendly condemnation from Stanford University.

● * * * * *

Stanford University had its appraisal which came in . . . appreciably higher than the appraisal that we had. We started negotiating at the original purchase price for the additional land and found out that that was not going to be acceptable, but finally did negotiate a price that was less than our appraisal, so that this tract that we bought, we saved approximately \$10,000 per acre. Had our appraisal been discussed in open meeting and the original appraisal been brought into open meeting, we would have then started our negotiation with Stanford at our appraisal price which then would have had a closing cost probably of \$5,000 to \$10,000 difference in what we paid. So there was a substantial saving to the district. . . .

ASSEMBLYMAN JOHNSON: . . . I still feel that even in this situation, I don't see that you would have to reveal your appraisal. You could make an offer which is what you did in preliminary negotiations. I don't see what difference there is in that, privately or in an open meeting.

The fact that problems have resulted from executive sessions on land acquisition was pointed out by Mr. Bodi:

MR. BODI: Suppose that public mention of the site under consideration is made. I think political history unfortunately is filled with instances where private parties have gained from the information leaked out deliberately or accidentally on preliminary land planning. So what is the public interest to allow: to perhaps throw the whole thing in the open with the realization that you can always go to condemnation; or hold sessions with the realization that there are five members of the school board, plus several staff members who have access to it who could be a little bit uncautious at times, perhaps, in mentioning the site they are considering. . . .

The committee recommends no change in the law with respect to land acquisition. It has been argued that information as to the location of future acquisition by the public agency, if made available in a public meeting, will raise the purchase price. This is balanced by leaks of information from closed meetings as to future site acquisition to the advantage of particular individuals. Attempts have repeatedly been made since 1953 to amend the Brown Act to allow discussion of land acquisition in closed meetings and they have always been rejected by the Legislature.

PENALTY PROVISIONS

In *Adler v. Culver City* the court pointed out that although there were no specific enforcement provisions in the Brown Act that general provisions provided for enforcement. In that decision the court ruled that a violation of the Brown Act would not invalidate action taken and that the proper penalty for violation of the act was a misdemeanor. The court also held that private persons, though taxpayers, had no right to declaratory relief or injunction to enforce the provisions of the Brown Act. As a direct result of this decision AB 363 of the 1961 session added Section 54959: "Each member of the legislative body who attends a meeting of such legislative body where action is taken in violation of any provision of this chapter, with knowledge of the fact that the meeting is in violation thereof, is guilty of a misdemeanor." Section 54960 was also added to the Government Code: "Any interested person may commence an action either by mandamus or injunction for the purpose of stopping and preventing violations or threatened violations of this chapter by members of the legislative body of the local agency."

The addition of these provisions have largely been ineffective in insuring compliance with the Brown Act. The criminal penalties imposed for attending a meeting in violation of any provision of the act require a presumption of innocence by the courts and therefore lead to a strict construction of the provisions of the law.⁶⁶ In addition, the courts are required to follow the presumption that official duty has been regularly performed⁶⁷ (*Walker v. City of San Gabriel*, 20 Cal. 2d 879).

The courts have been reluctant to find a violation on the part of a public official if the action taken can be found to be within his discretion unless it is so "palpably unreasonable and arbitrary as to indicate an abuse of discretion as a matter of law" (*City and County of San Francisco v. Boyd*, 22 Cal. 2d 685).

The difficulty of establishing a violation of the Brown Act is further complicated by the fact that the misdemeanor section requires that the public official have "knowledge" of the fact that the meeting is in violation of the law. This fact led the Los Angeles County Grand Jury to report that it is "almost impossible from a legal point of view to develop facts upon which an accusation could be returned, with any honest expectation that it could be sustained in court."⁶⁸ The grand jury urged the Legislature to amend the Brown Act by "removing the language requiring the prosecution to show that accused knew he was violating the law and so intended when he committed the alleged violation."⁶⁹

Alternatives to the present criminal penalties have been considered by the Legislature. In 1961, the Legislature approved and the Governor vetoed legislation making null and void actions taken in viola-

⁶⁶ Code of Civil Procedure, Section 1963.

⁶⁷ *Ibid.*

⁶⁸ "Statement by the 1963 Los Angeles County Grand Jury on the Brown Act," printed in the Assembly Journal, June 20, 1963, p. 5917.

⁶⁹ *Ibid.*

tion of the act. In his veto message Governor Brown indicated that such a provision could "imperil the finality" of decisions of local agencies. Earlier case law had held that actions taken contrary to open meeting laws were void. In *County of El Dorado v. Reed*, 11 Cal. 130, the court held that failure of a board of supervisors to notify the district attorney and the public of a meeting to take action was in violation of the open meeting law governing boards of supervisors and the act was void (see also *County of San Luis Obispo v. Hendricks*, 71 Cal. 242; *People v. Dunn*, 89 Cal. 228; *Baumgartner v. City of Hawthorne*, 104 Cal. App. 2d 512).

The mandamus proceedings have also failed to provide meaningful relief for the public to prevent violation of the open meeting principle embodied in the Brown Act. In the more-than-ten-year period since passage of the law there have only been a few cases where the courts have granted declaratory relief.

SUMMARY

Based on a review of the provision of the Ralph M. Brown Act the committee has recommended several amendments which serve to clarify the confusion which presently exists as a result of contradictory interpretations of the intent of the law. These recommendations are consistent with the purpose of the Brown Act and limit closed sessions only to those cases where it is justified in the public's interest.

The committee further suggests that the Attorney General prepare an analysis of the Brown Act to be made available to the public so that each citizen may have a better understanding of California's open meeting law.

However, there is no sure way of enforcing the principle of open meetings. In the final analysis it depends on the good faith of public officials to conduct the people's business openly. As Los Angeles County Counsel Harold Kennedy has pointed out "... a meeting or gathering may be open to the public whether or not it is required by the Brown Act. Unless there is a compelling reason for a closed meeting, the spirit of the act, if not its letter, requires that all deliberations, discussions and actions be taken in public."⁷⁰

⁷⁰ Harold W. Kennedy, County Counsel, County of Los Angeles, "The Effect of the Brown Act on the Operation of Boards of Supervisors, Planning Commissions and Similar Public Bodies" an address delivered to the Southern California Planning Congress, May 10, 1962.

APPENDIX A

THE RALPH M. BROWN ACT

Sec. 54950. Declaration, intent: sovereignty

In enacting this chapter, the Legislature finds and declares that the public commissions, boards and councils and the other public agencies in this State exist to aid in the conduct of the people's business. It is the intent of the law that their actions be taken openly and that their deliberations be conducted openly.

The people of this State do not yield their sovereignty to the agencies which serve them. The people, in delegating authority, do not give their public servants the right to decide what is good for the people to know and what is not good for them to know. The people insist on remaining informed so that they may retain control over the instruments they have created. (Added Stats. 1953.)

Sec. 54950.5. Short title

This chapter shall be known as the Ralph M. Brown Act. (Added Stats. 1961.)

Sec. 54951. Local agency, definition

As used in this chapter, "local agency" means a county, city, whether general law or chartered, city and county, town, school district, municipal corporation, district, political subdivision, or any board, commission or agency thereof, or other local public agency. (As amended Stats. 1959, c. 1417.)

As used in this chapter, "legislative body" means the governing board, commission, directors or body of a local agency, or any board or commission thereof, and shall include any board, commission, committee, or other body on which officers of a local agency serve in their official capacity as members and which is supported in whole or in part by funds provided by such agency, whether such board, commission, committee or other body is organized and operated by such local agency or by a private corporation. (As amended Stats. 1961, c. 1671.)

Sec. 54952.5. Legislative body as including permanent boards or commissions of local agencies

As used in this chapter, "action taken" means a collective decision made by a majority of the members of a legislative body, a collective commitment or promise by a majority of the members of a legislative body to make a positive or a negative decision, or an actual vote by a majority of the members of a legislative body when sitting as a body or entity, upon a motion, proposal, resolution, order or ordinance. (Added Stats. 1961, c. 1671.)

Sec. 54953. Meetings to be open and public; attendance

All meetings of the legislative body of a local agency shall be open and public, and all persons shall be permitted to attend any meeting

of the legislative body of a local agency, except as otherwise provided in this chapter. (Added Stats. 1953, c. 1588.)

Sec. 54953.3. Conditions to attendance

A member of the public shall not be required, as a condition to attendance at a meeting of a legislative body of a local agency, to register his name and other information, to complete a questionnaire, or otherwise to fulfill any condition precedent to his attendance. (Added Stats. 1957, c. 85.)

Sec. 54954. Time and place of regular meetings; holidays, emergencies

The legislative body of a local agency shall provide, by ordinance, resolution, by-laws, or by whatever other rule is required for the conduct of business by that body, the time for holding regular meetings. Unless otherwise provided in the act under which the local agency was formed, meetings of the legislative body need not be held within the boundaries of the territory over which the local agency exercises jurisdiction. If at any time any regular meeting falls on a holiday, such regular meeting shall be held on the next business day. If by reason of fire, flood, earthquake or other emergency, it shall be unsafe to meet in the place designated, the meetings may be held for the duration of the emergency at such place as is designated by the presiding officer of the legislative body. (Added Stats. 1953, c. 1588.)

Sec. 54955. Adjournment; adjourned meetings

The legislative body of a local agency may adjourn any regular, adjourned regular, special or adjourned special meeting to a time and place specified in the order of adjournment. Less than a quorum may so adjourn from time to time. If all members are absent from any regular or adjourned regular meeting the clerk or secretary of the legislative body may declare the meeting adjourned to a stated time and place and he shall cause a written notice of the adjournment to be given in the same manner as provided in Section 54956 for special meetings, unless such notice is waived as provided for special meetings. A copy of the order or notice of adjournment shall be conspicuously posted on or near the door of the place where the regular, adjourned regular, special or adjourned special meeting was held within 24 hours of the time of the adjournment. When a regular or adjourned regular meeting is adjourned as provided in this section, the resulting adjourned regular meeting is a regular meeting for all purposes. When an order of adjournment of any meeting fails to state the hour at which the adjourned meeting is to be held, it shall be held at the hour specified for regular meetings by ordinance, resolution, by-law, or other rule. (As amended Stats. 1955, c. 760; Stats. 1959, c. 647.)

Sec. 54956. Special meetings; call; notice

A special meeting may be called at any time by the presiding officer of the legislative body of a local agency, or by a majority of the members of the legislative body, by delivering personally or by mail written notice to each member of the legislative body and to each local news-

paper of general circulation, radio or television station requesting notice in writing. Such notice must be delivered personally or by mail at least 24 hours before the time of such meeting as specified in the notice. The call and notice shall specify the time and place of the special meeting and the business to be transacted. No other business shall be considered at such meetings by the legislative body. Such written notice may be dispensed with as to any member who at or prior to the time the meeting convenes files with the clerk or secretary of the legislative body a written waiver of notice. Such waiver may be given by telegram. Such written notice may also be dispensed with as to any member who is actually present at the meeting at the time it convenes. (As amended Stats. 1955.)

Sec. 54957. Executive sessions; exclusion of witnesses

Nothing in this chapter shall be construed to prevent the legislative body of a local agency from holding executive sessions during a regular or special meeting to consider the appointment, employment, or dismissal of a public officer or employee or to hear complaints or charges brought against such officer or employee by another public officer, person or employee unless such officer or employee requests a public hearing. The legislative body also may exclude from any such public or private meeting, during the examination of a witness, any or all other witnesses in the matter being investigated by the legislative body.

Nothing in this chapter shall be construed to prevent any board, commission, committee, or other body organized and operated by any private organization as defined in Section 54952 from holding executive sessions to consider (a) matters affecting the national security or (b) the appointment, employment or dismissal of an officer or employee or to hear complaints or charges brought against such officer or employee by another officer, person, or employee unless such officer or employee requests a public hearing. Said body also may exclude from any such public or private meeting, during the examination of a witness, any or all other witnesses in the matter being investigated by the legislative body. (As amended Stats. 1957; Stats. 1959; Stats. 1961.)

Sec. 54958. Application of chapter

The provisions of this chapter shall apply to the legislative body of every local agency notwithstanding the conflicting provisions of any other state law. (Added Stats. 1953.)

Sec. 54959. Penalty for unlawful meeting

Each member of a legislative body who attends a meeting of such legislative body where action is taken in violation of any provision of this chapter, with knowledge of the fact that the meeting is in violation thereof, is guilty of a misdemeanor. (Added Stats. 1961.)

Sec. 54969. Mandamus or injunction

Any interested person may commence an action either by mandamus or injunction for the purpose of stopping and preventing violations or threatened violations of this chapter by members of the legislative body of a local agency. (Added Stats. 1961.)

APPENDIX B**OFFICE OF THE ATTORNEY GENERAL**

State of California

STANLEY MOSK

Attorney General

OPINION

of

STANLEY MOSK
Attorney General

No. 63/79

RICHARD L. MAYERS,
Deputy Attorney General

The Honorable ALAN SHORT, *Senator from the Twentieth District*, has requested an opinion on the application of the Ralph M. Brown Act (otherwise known as the Secret Meeting Law, Gov. Code §§ 54950 et seq.) to "briefing sessions" held prior or subsequent to regular, special or adjourned public meetings of a city council.

The conclusions are:

With exceptions noted in the opinion, the meetings of a city council with the city manager, assistant city manager, city attorney and planning director are subject to the open meeting requirements of the Ralph M. Brown Act. The public has a right to notice of and attendance at such meetings irrespective of whether the individual members of the council intend or do not intend to take "action" at such gatherings.

ANALYSIS

Our opinion has been requested concerning the application of the Ralph M. Brown Act (otherwise known as the Secret Meeting Law, Gov. Code §§ 54950 et seq., and hereinafter referred to as the Act or the Brown Act) to the following situation:

"For at least the past 12 years, it has been the practice of the Lodi City Council, together with the City Manager, Assistant City Manager, City Attorney and Planning Director to gather 30 minutes prior to the scheduled and announced public meeting in the City Manager's conference chambers (a small room adjoining the City Council Chambers). This gathering has been for the purpose of discussing (1) personnel problems, (2) current litigation, (3) placement of items on the agenda which came to the attention of the City Manager after the formal agenda had been mailed, (4) matters of real property negotiation in which the City of Lodi currently was involved, and (5) a general review of the formal agenda for the purpose of providing information to the City Council members.

"The regular meetings of the City Council are provided by ordinance. The so-called 'briefing sessions' also are held prior to spe-

cial and adjourned public meetings of the City Council. At no time has any formal notice of the 'briefing sessions' been made to the public nor members of the City Council. The press (two newspapers of general distribution) has been invited to attend the 'briefing sessions' but seldom does. The door to the conference room, although not locked, is always closed during the 'briefing sessions'.

"Items No. 3 and No. 5, above, usually are repeated during the public meetings. Items No. 1, No. 2, and No. 4 usually are discussed sufficiently so that City Manager is able to reach an understanding of the viewpoint of the City Council regarding the involved issues. I do not recall that any formal action has been taken during these 'briefing sessions'. It is a fact, however, and an admission of the City Manager, that the City Council often has bordered on the reaching of a decision during these 'briefing sessions'. It is impossible to say whether or not any individual City Council members has ever reached a decision in his own mind on the basis of these meetings."

Government Code Section 54950 states as follows:

"In enacting this chapter, the Legislature finds and declares that the public commissions, boards and councils and the other public agencies of this State exist to aid in the conduct of the people's business. It is the intent of the law that their actions be taken openly and that their deliberations be conducted openly.

"The people of this State do not yield their sovereignty to the agencies which serve them. The people, in delegating authority, do not give their public servants the right to decide what is good for the people to know and what is not good for them to know. The people insist on remaining informed so that they may retain control over the instruments they have created."

Government Code Section 54953 provides as follows:

"All meetings of the legislative body of a local agency shall be open and public, and all persons shall be permitted to attend any meeting of the legislative body of a local agency, except as otherwise provided in this chapter."

(All section references are to the Government Code.)

In 1958 this office in 32 Ops.Cal.Atty.Gen. 240 held that the provisions of Section 54953 apply to all meetings of the legislative body of a local agency and that this requirement could not be avoided by the use of devices such as a committee of the whole or "nonmeetings" held under the guise of a variety of names such as executive sessions, work sessions, study sessions, briefing sessions, or the increasingly popular breakfast, luncheon or dinner sessions. The opinion quoted from the report of the Assembly Interim Committee on Judiciary whose study led to the passage of the Secret Meeting Law. This study indicated that the holding of such "nonmeetings" constituted a loophole in the existing law through which governmental bodies have been secretly meeting and transacting business. The report pointed out that "[a]t gatherings such as these, deliberations and determinations regarding matters

affecting the public [are] made. The subsequent public meetings [are a] mockery, a mere formality and a repetition of matters already decided in the pre-public meetings." Quoted from 32 Ops.Cal.Atty.Gen. at 243. As a result of this report, Section 54950 states, "It is the intent of the law that their actions be taken openly *and that their deliberations be conducted openly.*" (Emphasis added.)

ADLER V. CITY COUNCIL

In 1960, in the only appellate case dealing with the Brown Act, the District Court of Appeal in *Adler v. City Council*, 184 Cal.App.2d 763, held that the statute did not apply to anything less than a formal meeting of a city council or one of a city's subordinate agencies.

The court put forth three reasons in support of this conclusion:

A. The meetings involved were those of a planning commission. A planning commission, said the court, was not a legislative body but was purely advisory and thus it was not covered by the provisions of the statute. The court noted that previously a measure designed to extend the definition to include advisory committees had been introduced in the Legislature (A.B. 2181) and had failed passage. The court indicated that it approved the exclusion of planning commissions by stating "Counsel for respondents observed that 'the sound reason for not including such Commissions is that they are only advisory, have no legislative powers and whatever they do may be completely disregarded or overruled by the governing body' ". 184 Cal.App.2d at 772.

B. The court pointed out that after the informal dinner meetings of the planning commission, avowedly public meetings were held by the City Council which "full complied with the terms of the (Brown) act". Thus, said the court, no harm was done by the informal meetings of a planning commission which was a purely advisory body in any event. 184 Cal.App.2d at 775.

C. The court asserted that government could not operate if the statute were interpreted so as to apply to informal meetings. The court stated that "[t]he members of the planning commission and the city council (whether the full number or only two or three members) would be impeded in conducting informal discussions among themselves, thus exchanging information, would be handicapped in viewing property upon which they were about to legislate, would be unable to confer with real estate experts or with their planning director or with informed individuals having special qualifications to speak upon municipal problems." 184 Cal.App.2d at 770-771. The court rested much of its analysis on the decision of the Florida Supreme Court in *Turk v. Richard*, 47 So.2d 543 (1950), wherein the Florida court held that there could be no "meeting" unless the members of the council "formally come together, in the manner required by law, for the purpose of joint discussion, decision and action with respect to municipal affairs" For, said the Florida court, "the unofficial agreements of all or a part of the members of the council are ineffectual and without binding force". 47 So.2d at 544. Adopting this narrow interpretation of the word "meeting", the District Court of Appeals in *Adler* said that the only meetings referred to in the Brown Act are " 'formal assemblages

of the council sitting as a joint deliberative body as were required or authorized by law to be held for the transaction of official municipal business.' " 184 Cal.App.2d at 773.

THE ADLER DECISION AND THE 1961 LEGISLATURE

At the legislative sessions immediately following the *Adler* case, the Legislature enacted many amendments to the Brown Act plainly designed to counteract and overcome this and other aspects of the decision in *Adler v. City Council*. The 1961 Legislature (by Chapter 1671) broadened the scope and application of the act in the following ways:

1. It specifically disapproved *Adler's* restrictive interpretation of the word "meeting" as confined only to formal meetings by recognizing that criminally prohibited legislative action may be taken at gatherings that fall far short of the "'formal assemblages of the council sitting as a joint deliberative body' ". This was made clear when the Legislature enacted section 54952.6, which provides as follows:

"As used in this chapter, 'action taken' means a collective decision made by a majority of the members of a legislative body, a collective commitment or promise by a majority of the members of a legislative body to make a positive or a negative decision, or an actual vote by a majority of the members of a legislative body when sitting as a body or entity, upon a motion, proposal, resolution, order or ordinance."

and the adoption of section 54959 which provides as follows:

"Each member of a legislative body who attends a meeting of such legislative body where action is taken in violation of any provision of this chapter, with knowledge of the fact that the meeting is in violation thereof, is guilty of a misdemeanor."

2. It specifically repudiated that portion of the *Adler* decision which held that the act was not meant to apply to planning commissions or other bodies of an "advisory" nature. The Legislature specifically brought within the definition of the term "legislative body", and thus within the application of the Brown Act, "planning commissions, library boards, recreation commissions and other permanent boards or commissions of a local agency". Sec. 54952.5, as added by Stats. 1961, ch. 1671, p. 3637. In addition, the Legislature added to the definition of "legislative body"—"any board, commission, committee, or other body on which officers of a local agency serve in their official capacity as members and which is supported in whole or in part by funds provided by such agency, whether such board, commission, committee or other body is organized and operated by such local agency or by a private corporation". Sec. 54952, as amended by Stats. 1961, ch. 1671, p. 3637.

3. It made mandamus and injunction available to all interested persons for the purpose of enabling them to stop or prevent violations or threatened violations of the act. Sec. 54960, as added by Stats. 1961, ch. 1671, p. 3638.

4. It defined the term "action taken" and provided a criminal penalty for knowing conduct in violation thereof by members of a legislative body. Secs. 54952.6 and 54959.

5. It made clear that the law was intended to apply to chartered cities, as well as general law cities, by amending section 54951.

THE EFFECT OF NOT AMENDING SECTION 54953

In the measure which initially embodied most of the suggested changes (A.B. 127) was a proposed amendment to section 54953 which then provided as follows:

"All meetings of the legislative body of a local agency shall be open and public, and all persons shall be permitted to attend any meetings of the legislative body of a local agency, except as otherwise provided in this chapter."

The proposed amendment would have added the following language:

"Meetings shall be open even if held solely for the purposes of discussion, and no action is to be taken or no decision is to be made on the subject under consideration."

The then existing language of section 54953 had previously been interpreted as including discussion sessions within the term "meetings" See 27 Ops.Cal.Att'y.Gen. 123 (1956); see also 32 Ops.Cal.Att'y.Gen. 240 (1958); 33 Ops.Cal.Att'y.Gen. 32 (1959); 36 Ops.Cal.Att'y.Gen. 175 (1960); *Minter v. Santa Monica*, Los Angeles Superior Court No. 663318. But see, *Gray v. City of Rialto*, San Bernardino Superior Court No. 87481; see also Opinion of Legislative Counsel to Honorable Frank Luckel, No. 811, January 6, 1956. These interpretations had been placed in doubt by the decision in the *Adler* case. The proposed amendment to section 54953 was dropped from the bill at the first of several committee hearings held on the measure. There is no legislative record indicating the reason for this deletion. (Although the language was formally deleted by action of the Assembly, the passage of such suggested committee amendments pursuant to a committee recommendation to "amend and re-refer to the Committee" (Assembly Journal, 1961, Vol. 1, p. 1109) is recognized to be a perfunctory act that cannot properly be interpreted as evidencing any intent on the part of the Assembly as a whole in the absence of subsequent legislative action on the particular provision.) After several amendments in both the Assembly and the Senate the bill, although passed by both houses, was vetoed by the Governor. See the Governor's Veto Message concerning A.B. 127, Assembly Daily Journal, May 8, 1961, p. 3430.

After the veto of A.B. 127 all of the provisions of that bill, except for that portion objected to by Governor Brown—namely, the provision making void any action taken at non-public meetings—were inserted by amendment into A.B. 363 and were then passed by the Legislature and signed by the Governor. Stats. 1961, ch. 1671.

It has been contended that the failure of the 1961 Legislature to include discussion sessions within the definition of the word "meetings" constitutes, in effect, an affirmative authorization for cities' and counties' agencies to bar the press and public from meetings held for discussion and information purposes.

Interpreting statutes on the basis of what the Legislature did not do is a hazardous venture at best. See generally "The Effect on Unsuccessful Attempt to Amend a Statute", 44 Cornell L.Q. 336 (1958). It is a method of statutory construction resorted to only when statutory language is ambiguous. See, e.g., *People v. Knowles*, 35 Cal. 2d 175, cert. den. 340 U.S. 879 (1950); *In Re Ryan's Estate*, 21 Cal. 2d 498 (1943); *County of Los Angeles v. Frisbie*, 19 Cal. 2d 634 (1942). As previously indicated, section 54953 provided that all meetings of the legislative body of a local agency shall be open and public except as otherwise provided in this chapter (namely, in section 54957 relating to executive sessions for personnel matters). The term "all meetings" was previously interpreted as encompassing more than just meetings at which formal action was taken. There is no need to refer to legislative history where the statutory language is clear. "The plain words and meaning of a statute cannot be overcome by a legislative history, which, through strained processes of deduction from events of wholly ambiguous significance, may furnish dubious bases for inference in every direction." *Ex Parte Collett*, 337 U.S. 55, 61 (1949), and numerous cases therein cited adhering to this canon of construction. This is particularly true when it is recognized that all of the amendments to the Brown Act and particularly those adopted in 1961 immediately following the *Adler* case consistently and regularly strengthened and enlarged the application of the act.

It seems improbable that a Legislature which adopted such amendments also managed, by *not* enacting a proposed amendment, to authorize the holding of secret meetings for "discussion and information".

We believe that there is little, if any, strength left to *Adler v. Culver City*. Contrary to *Adler*, the law now specifically applies to charter cities. Contrary to *Adler*, the law now specifically applies to advisory boards such as planning commissions. Contrary to *Adler*, the law now prohibits secret gatherings at which a majority of the members of the legislative body agree or agree to agree. In the light of these 1961 amendments to the Brown Act, we have substantial doubts whether a California court would persist in maintaining that a majority of the members of a local legislative body, without complying with the statute (and, specifically, sections 54953, 54953.3, 54954, 54955 and 54956), could nevertheless meet together in a so-called "informal", "study", "discussion", "informational", "fact finding" or "pre-council" gathering for the avowed purpose of discussing items of general importance irrespective of whether the individual members of the legislative body intend or do not intend to take "action" at such a gathering. We suggest that the adoption of sections 54952.6 and 54959 suffices to negate any such holding.

THE RIGHT TO NOTICE AND ATTENDANCE AT MEETINGS IS NOT DEPENDENT ON WHETHER "ACTION" IS TAKEN

The phrase "action taken" is defined for purposes of the act in section 54952.6 (quoted above). The only other reference to the phrase "action taken" occurs in section 54959 which provides as follows:

"Each member of a legislative body who attends a meeting of such legislative body where action is taken in violation of any pro-

vision of this chapter, with knowledge of the fact that the meeting is in violation thereof, is guilty of a misdemeanor." Added Stats. 1961, ch. 1671, p. 3638.

These provisions with respect to "action taken" relate only to the imposition of criminal penalties on members of legislative bodies. They are separate and distinct from those provisions of the Secret Meeting Law that give to the people the right to notice of and attendance at all meetings of the legislative body of every local agency. They are distinct from section 54960 which gives to any interested person the legal authority to stop or prevent violations or threatened violations of the statute. These rights are not dependent upon those statutes imposing criminal liability on agency members. They rest on the provisions of section 54953 and may be protected and enforced through mandamus and injunction as set forth in section 54960 which provides:

"Any interested person may commence an action either by mandamus or injunction for the purpose of stopping or preventing violations or threatened violations of this chapter by members of the legislative body of a local agency."

A comment in a Harvard Law Review article entitled "Open Meeting Legislation: The Press Fights for the 'Right to Know'," (1962), plainly outlines the problems involved should such legislation be interpreted so as to permit secret meetings provided only that no action is taken.

"On their face these statutes seem to present public officials with an invitation to frustrate the purpose underlying open meeting laws; the body can give full consideration to possible courses of action behind closed doors and then convene in public simply to take formal action on decisions already made. And it is difficult to see how the courts could prevent such evasion without resorting to arbitrary distinctions between those executive sessions contemplated by the legislature and those which contravene the statute's policy if not its literal terms. In leaving public officials with broad discretion to decide when their deliberations shall be kept secret, these statutes give salutary recognition to the undesirability of precluding officials from ever meeting privately to gather information or carry on preliminary consultations. But they fail to ensure the public an open meeting in which the officials conduct full discussions of the issues, resolve any differences, and come to a conclusion". 75 Harv. L. Rev. at 1210

We find no statutory authority for excepting "informal" sessions from the application of the Secret Meeting Law. Section 54950 provides now, as it did prior to *Adler*, that "the people, in delegating authority, do not give their public servants the right to decide what is good for the people to know and what is not good for them to know". The statute still provides that "it is the intent of the law that their actions be taken openly and that their deliberations be conducted openly".

The right of the people to have notice of and to attend all meetings of a local agency and thus keep informed as to the conduct of the members of the legislative body of a local agency is not dependent

upon the fact that the members of that body do or do not intend to take "action" as that word is defined in section 54952.6.

Meetings of a city council with the city manager, assistant city manager, city attorney and planning director for pre-meeting briefing sessions are subject to the open meeting requirements of the Brown Act unless the subjects under discussion involve matters coming within the provisions of section 54957 or are the subject of then current or pending litigation within the narrow limits carefully outlined in 36 Ops.Cal.Atty.Gen. 175 (1960). Thus discussions of the City Council involving the placement of items on the agenda, real property negotiation, in the absence of actual litigation or presently threatened litigation, as well as the review of the formal agenda for the purpose of providing information to the City Council members should be held in open and public meetings subject to the formal requirements of the Brown Act.

APPENDIX C

OFFICE OF THE ATTORNEY GENERAL

State of California

STANLEY MOSK

Attorney General

OPINION

of

STANLEY MOSK
Attorney General

RICHARD L. MAYERS
Deputy Attorney General

No. 63/82

The Honorable JOHN A. MURDY, JR., *Senator, Thirty-fifth District*, has requested our opinion concerning the application of the Ralph M. Brown Act.

The conclusions are:

The Ralph M. Brown Act otherwise known as the Secret Meeting Law, Government Code secs. 54950 et seq.) governs regularly held luncheon meetings by the members of one or more city councils with representatives of certain civil associations where the avowed purpose of such meetings is to discuss items of area importance such as location of school facilities, airport facilities, water supply, sewage disposal and beach erosion. This conclusion should not be construed as holding that mere attendance by a majority of the members of a city council or other local agency governing body at luncheons or dinners such as are frequently given by civic or fraternal organizations would constitute a meeting of the local agency subject to the Ralph M. Brown Act.

ANALYSIS

In 42 Ops.Cal.Atty.Gen. 61 (1963), we held that the Ralph M. Brown Act applied to meetings of a public agency even though the individual members of the agency attending the meeting did not take or even intend to take "action" at such gatherings. This opinion dealt specifically with meetings of a city council with its city manager, city attorney and planning director.

In the instant case, we are presented with questions relating to the application of the Ralph M. Brown Act to meetings of a somewhat different character, namely, regularly scheduled meetings by the members of the city councils of two incorporated cities with representatives of "certain civil associations" of unincorporated communities nearby. The meetings are held alternatively in San Juan Capistrano and San Clemente at a restaurant. A majority of the members of the city councils of both cities generally attend these luncheon sessions. You have stated that "the purpose of these meetings has been to achieve better relations between the communities and, while largely social, those attending the sessions have discussed items of area importance such as location of school facilities, airport facilities, water supply, sewage disposal and beach erosion." You state that the discussions of these matters "are completely informal, no decisions are made, nor are there any agreements to make any decisions."

Although the question as presented states as a fact that no decisions or agreement to make any decisions are made at these informal luncheon sessions, we cannot assume that this is the general rule with respect to meetings of a similar nature held by other public agencies under similar circumstances. We believe that the very nature of such meetings, indeed, perhaps their true purpose and design, is to provide a forum for the free exchange of information and ideas on items of area importance with a view towards obtaining a general consensus which in turn will provide the bases for fruitful "action" by the legislative bodies. Such a luncheon meeting with representatives of a local chamber of commerce, for example, is just as conducive to the forming of decisions (informal and perhaps even unexpressed) as the dinner meeting between the planning commission and the shopping center builder that was the subject of *Adler v. City Council*, 184 Cal.App.2d 763 (1960). As pointed out in the aforementioned opinion 42 Ops.Cal.Atty.Gen. 61 (1963), such meetings were brought within the ambit of the Ralph M. Brown Act by the 1961 session of the Legislature.

Because of the admitted importance to the people in the area of the matters discussed at such meetings by a majority of the members of the legislative body (when meeting at a regularly established time and place), we believe that the provisions of the Ralph M. Brown Act apply to such meetings and that the public is entitled to notice of and the right to attend such meetings.

This opinion should not be construed as holding that the mere social attendance by a majority of the members of a city council or other local agency governing body at a luncheon or dinner, such as are frequently given by the Rotary, Kiwanis, Lions, Optimists, Elks, Moose, or other fraternal organizations, would constitute a meeting of such city council subject to the Ralph M. Brown Act. However, where, as in this case, the city council regularly schedules attendance as a group

at a luncheon wherein the specific purpose is to discuss items of importance to the governmental entity such as location of school facilities, airport facilities, water supply, sewage disposal, and beach erosion, such gatherings constitute meetings within the meaning of the Ralph M. Brown Act.

APPENDIX D

OFFICE OF THE ATTORNEY GENERAL

State of California

EDMUND G. BROWN

Attorney General

OPINION
of
EDMUND G. BROWN
Attorney General
RICHARD L. MAYERS
Deputy Attorney General

No. 58/168

The Honorable J. WILLIAM BEARD, *Senator, 39th District*, and the Honorable ARTHUR L. LOCKIE, *District Attorney of Imperial County* have requested our opinion as to the application of the secret meeting law (Gov. Code secs. 54950-54958), to committees of local agencies.

The conclusions may be summarized as follows:

1. The secret meeting law does not apply to special committees or subcommittees of local agencies where such committees consist of less than a quorum of the members of the legislative body that has created it.
2. The press may require 24 hours advance notification of any special meeting of a whole public agency. Such notice is not required as to any regular or adjourned regular meeting.
3. The minutes of regular or special meetings of a public agency are public records.

ANALYSIS

The first question presented is:

"1. Are meetings of the committees, commissions and boards or city councils and the county board of supervisors open to the public?"

Government Code section 54951 (all section references hereinafter are to the Government Code unless otherwise stated) provides as follows:

"As used in this chapter, 'local agency' means a county, city, city and county, town, school district, municipal corporation, district, political subdivision, or any board, commission or agency thereof, or other local public agency."

Section 54950 provides as follows:

"In enacting this chapter, the Legislature finds and declares that the public commissions, boards and councils and the other public agencies in this State exist to aid in the conduct of the people's business. It is the intent of the law that their actions be taken openly and that their deliberations be conducted openly.

"The people of this State do not yield their sovereignty to the agencies which serve them. The people, in delegating authority, do not give their public servants the right to decide what is good for the people to know and what is not good for them to know. The people insist on remaining informed so that they may retain control over the instruments they have created."

Section 54952 provides as follows:

"As used in this chapter, 'legislative body' means the governing board, commission, directors or body of a local agency, or any board or commission thereof."

Under the above cited sections it is clear that meetings of local public agencies, such as county boards of trade (sec. 26104) or area, county, or city planning commissions (secs. 65090 et seq. 65300 et seq.) are subject to the provisions of the statute.

We are asked if meetings of committees of a local agency are covered by the statute. Local agencies may and do perform much of their work through committees. Public agencies usually have a number of standing committees and frequently appoint special committees to investigate and report concerning specific matters. Such committees are mere instrumentalities of the governing agency and their determinations are *not* the determinations of the agency. The agency may not delegate its powers to a committee. Only when and if the agency ratifies and approves the act of one of its committees does it become the act of the agency (See McQuillin, *Municipal Corporations*, sec. 13.51). A good general discussion of this subject is contained in 37 *American Jurisprudence* section 53, pages 667-668, wherein the text writer states:

"A municipal council cannot delegate to one of its own committees or to any other municipal officer the power to decide upon legislative matters properly resting in the judgment and discretion of the council, or, as held by some authorities, to one member of such governing body. . . . The members of the council are chosen by the people to represent the municipality and they are charged with a public trust and the faithful performance of their duties; and the public is entitled to the judgment and discretion, in all matters where such elements enter into transactions in behalf of the municipality, of each member of the body upon which authority to act is conferred. But unless the council is restricted by its charter or some statute from so doing, it has been held that it may refer matters coming before it to a committee in order that they may examine the subject matter and collect the facts pertaining thereto and make report thereon for the fuller information of the entire council."

Section 54953 provides that:

"All meetings of the *legislative body* of a local agency shall be open and public, and all persons shall be permitted to attend any meeting

of the legislative body of a local agency, except as otherwise provided in this chapter." (Emphasis added.) Thus, only meetings of the legislative body of a local agency are required to be open and public.

Section 54957 provides for executive sessions to consider the appointment, employment or dismissal of a public officer or employee or to hear complaints or charges brought against such officer, or employee by another public officer, person or employee unless such officer or employee requests a hearing. Unless otherwise specifically noted the subsequent discussion will not apply to the exceptions contained in section 54957.

In interpreting the extent to which the secret meeting law applies to committees and sub-committees of local public agencies we are, of course, guided by section 54950. That section is designed to insure the people's right to attend meetings of local legislative bodies, not only at the time those bodies take "action" but also, and perhaps more importantly, at the time those bodies conduct their deliberations. The section is designed to insure full public deliberation before action. The value of a full deliberation by the members of the legislative body was well set forth in *School-Dist. No. 42 v. Bennett*, (Ark. 1890) 13 S. W. 132 at page 133:

"... Duties are cast upon boards composed of a number of persons, in order that they may be discharged with efficiency and wisdom arising from a multitude of counsel. This purpose cannot be realized without conference between the members of the board, with reference to the matters intrusted to them, before they take action thereon. After conference the board will often escape unwise measures to which each of the members, acting separately, would have committed themselves, either from haste, immature consideration, the demands of private engagement, or an unwillingness to shorten the allotted span of life under the entreaties of an importunate agent. The public select each member of the board of directors, and is entitled to his services. This it cannot enjoy if two members can bind it without receiving, or even suffering, the counsel of the other. Two could, if they differed with the third, overrule his judgment, and act without regarding it; but he might, by his knowledge and reason, change the bent of their minds, and the opportunity must be given him."

Ordinarily, a committee is composed of less than a quorum of the legislative body that has created it. In those cases the findings of such a committee have not been deliberated upon by a quorum of the legislative body and the necessity, as well as opportunity, for full public deliberation by the legislative body still remains. Thus the public's rights under the secret meeting law are protected. Therefore, meetings of committees of local agencies where such committees consist of less than a quorum of the members of the legislative body are not covered by the act.

Where, however, the committee is composed of a quorum or more of the legislative body of a local public agency there is a serious question as to the application of the secret meeting law. Normally a quorum is a majority of the entire body. (Black's Law Dictionary, 4th Ed; See for example secs. 25005, 36810, Ed. Code sec. 312, *Nesbitt v. Bolz*, 13 Cal. 2d 677; *Porter v. Lassen County etc. Co.* 127 Cal. 261; 23 Ops. Cal.

Atty. Gen. 99; 28 Ops. Cal. Atty. Gen. 259; and 28 Ops. Cal. Atty. Gen. 365.) Code of Civil Procedure, section 15 provides that: "Words giving a joint authority to three or more public officers or other persons are construed as giving such authority to a majority of them, unless it is otherwise expressed in the act giving the authority." Similar provisions are found in Civil Code section 12 and Education Code section 4.

It is clear that the open meeting requirements may not be avoided by the use of the device commonly known as a committee of the whole (see 27 Ops. Cal. Atty. Gen. 123). The reason why the courts have not countenanced the use of the committee of the whole device is because the committee of the whole is composed of a quorum or more of the members of the legislative body of the agency, and the difference between sitting in committee of the whole and in regular session is one rather in name rather than nature (*State v. Common Council of City of Milwaukee*, (Wis.) 144 N. W. 1107, 1108). In fact such meetings may frequently be designed to evade the provisions of the secret meeting law. As we noted in our earlier opinion, the Assembly Interim Committee on Judiciary, whose studies led to the passage of this law, found that:

"Legislative bodies are evading the requirements of a public meeting by the following and commonly used subterfuges

"There is another 'loophole' in the existing law through which governmental bodies have been secretly meeting and transacting business. They are meetings generally held before the official public meeting, under the guise of a variety of names, such as executive session, meetings of the committee of the whole, work sessions, and others.

"At gatherings such as these, deliberations and determinations regarding matters affecting the public [are] made. The subsequent public meetings [are a] mockery, a mere formality and a repetition of matters already decided at the prepublic meetings.'" (Progress Report to the Legislature, 1953 Reg. Sess., by the Assembly Interim Committee on Judiciary, pp. 21-23).

Not only is there a possibility that a "committee" meeting composed of more than a quorum of the creating agency is only a subterfuge designed to evade the requirements of the law, but even where the local agency has created such a committee in utmost good faith the extent to which full public deliberation before action will be afforded by the agency will probably be greatly lessened in view of the fact that a quorum of the agency will already have deliberated upon the matter. As was pointed out by the Utah Supreme Court in *Acord v. Booth*, (Utah, 1908) 93 Pac. 734, 735-736 which was cited at length in 27 Ops. Cal. Atty. Gen. 123, "... It is quite true that, since a majority of the committee is also generally a majority of the whole body, any matter agreed to in committee of the whole will likely be agreed to when it comes before the main body. ..." Hence, if a committee composed of a majority or more of the members of the legislative body of a local public agency gather together and deliberate for the purpose of determining an action to be taken at a subsequent meeting of the agency such a meeting would be held to be violative of the secret meeting law.

No attempt is here made to pass upon or list all those public bodies which must comply with the secret meeting law. The word "committee" in the title of a public body does not automatically exclude it from the application of the law. In determining whether the law applies to a local agency it is necessary in each case to consider the manner in which the public body is created, whether by statute, charter, or ordinance and also the particular duties imposed upon and the functions performed by the particular body. The legal counsel for each agency in question should be consulted to determine the application of the secret meeting law to the particular agency.

The second question presented is:

"2. If the above are open meetings, may the press require 24-hour advance notification of the meetings under provisions of section 54946 of the Anti-Secrecy Bill?"

Section 54955 provides:

"The legislative body of a local agency may adjourn any regular, adjourned, regular, special or adjourned special meeting to a time and place specified in the order of adjournment. Less than a quorum may so adjourn from time to time. If all members are absent from any regular or adjourned regular meeting the clerk or secretary of the legislative body may declare the meeting adjourned to a stated time and place and he shall cause a written notice of the adjournment to be given in the same manner as provided in Section 54956 for special meetings, unless such notice is waived as provided for special meetings. When a regular or adjourned regular meeting is adjourned as provided in this section, the resulting adjourned regular meeting is a regular meeting for all purposes. When an order of adjournment of any meeting fails to state the hour at which the adjourned meeting is to be held, it shall be held at the hour specified for regular meetings by ordinance, resolution, by-law, or other rule."

Section 54956 provides as follows:

"A special meeting may be called at any time by the presiding officer of the legislative body of a local agency, or by a majority of the members of the legislative body, by delivering personally or by mail written notice to each member of the legislative body and to each local newspaper of general circulation, radio or television station requesting notice in writing. Such notice must be delivered personally or by mail at least 24 hours before the time of such meeting as specified in the notice. The call and notice shall specify the time and place of the special meeting and the business to be transacted. No other business shall be considered at such meetings by the legislative body. Such written notice may be dispensed with as to any member who at or prior to the time the meeting convenes files with the clerk or secretary of the legislative body a written waiver of notice. Such waiver may be given by telegram. Such written notice may also be dispensed with as to any member who is actually present at the meeting at the time it convenes."

Under the above sections the legislative body of a local agency, as defined and discussed above, is required by section 54956 to provide personal or written notice to each of its members, "... and to each local newspaper of general circulation, radio or television station requesting notice in writing. . . ." upon the calling of a special meeting. Such notice is not required as to any regular or adjourned regular meeting.

The third question presented is as follows:

"3. Are the minutes reflecting action taken at any legal meeting from which the public may be legally excluded open to inspection?"

Generally speaking the minutes of regular or special meetings of the legislative body of a local public agency are public records open to inspection of any citizen of the state (see Code Civ. Proc. secs. 1888, 1892, 1893 and Gov. Code sec. 1227). However, there are circumstances in which by statute and judicial decision it is recognized that disclosure of certain matters may be harmful to the public interest. (See 11 Ops. Cal. Atty. Gen. 41). Thus, Code of Civil Procedure section 1881 provides in part:

"There are particular relations in which it is the policy of the law to encourage confidence and to preserve it inviolate; therefore, a person cannot be examined as a witness in the following cases:

"5. A public officer can not be examined as to communications made to him in official confidence, when the public interest would suffer by the disclosure."

In the course of their fact-finding activities committees of a public agency may obtain information which would come within the privilege of subdivision 5 of section 1881. If the public interest would suffer by the disclosure the agency should invoke the privilege provided for by section 1881, subdivision 5 (*City and County of San Francisco v. Superior Court*, 38 Cal.2d 156, 161-164; 18 Ops. Cal. Atty. Gen. 231, 234).

Discussion of the particular documents falling into the category of public records is beyond the scope of this opinion. See *Coldwell v. Board of Public Works*, 187 Cal. 510, 519; 18 Ops. Cal. Atty. Gen. 231; 27 Ops. Cal. Atty. Gen. 194.

APPENDIX E

OFFICE OF THE ATTORNEY GENERAL
State of California
STANLEY MOSK
Attorney General

OPINION

of

STANLEY MOSK
Attorney General

T. A. WESTPHAL, JR.
Chief Assistant Attorney General

No. 59/180

The Honorable ERNEST R. GEDDES, *Assemblyman, Forty-ninth Assembly District*, has requested the opinion of this office on the following question:

Are all discussions between a city council and its city attorney required by the Brown Act to be open to the public?

The conclusions may be summarized as follows:

Meetings of a city council with its city attorney for the purpose of general discussion and consideration of problems confronting such body, including legal problems, fall within the purview of and are subject to the Brown Act. However, the public interest with which the Brown Act is concerned does not require conferences between a city council and its city attorney held solely to discuss litigation pending, proposed or anticipated, to be open to the public where a public discussion of such matters would redound to the benefit of the city's adversary and to the detriment of the public.

ANALYSIS

The question presented is of great importance and of widespread concern. Difficulties are encountered principally because the subject word of the Brown Act, the word "meeting", is not defined in the act. Therefore, in order to ascertain the legislative intent it is necessary to carefully examine the entire act, its history, and apparent purpose, in order to arrive at a conclusion.

The Brown Act is contained in Government Code sections 54950-54958, inclusive.

Section 54950 declares the policy of the act in the following language:

"In enacting this chapter, the Legislature finds and declares that the public commissions, boards and councils and the other public agencies in this State exist to aid in the conduct of the people's business. It is the intent of the law that their actions be taken openly and that their deliberations be conducted openly.

"The people of this State do not yield their sovereignty to the agencies which serve them. The people, in delegating authority, do not give their public servants the right to decide what is good for the people to know and what is not good for them to know. The people insist on remaining informed so that they may retain control over the instruments they have created."

Section 54953 reads: "All meetings of the legislative body of a local agency shall be open and public, and all persons shall be permitted to attend any meeting of the legislative body of a local agency, except as otherwise provided in this chapter."

The only exception to the last quoted section is found in section 54957. That section, as amended in 1959 (Calif. Stats. 1959, ch. 647, sec. 2, p. 2626) reads:

"Nothing contained in this chapter shall be construed to prevent the legislative body of a local agency from holding executive sessions during a regular or special meeting to consider the appointment, employment or dismissal of a public officer or employee or to hear complaints or charges brought against such officer or employee by another public officer, person or employee unless such officer or employee requests a public hearing. The legislative body also may exclude from any such public or private meeting, during the examination of a witness, any or all other witnesses in the matter being investigated by the legislative body.

Section 54958 states that: "The provisions of this chapter shall apply to the legislative body of every local agency notwithstanding the conflicting provisions of any other state law."

From the above quoted sections, and particularly section 54950, it follows that the paramount purpose or the public policy decreed by the act is to protect the public interest where public agencies are engaged in "the conduct of the people's business." The idea is expressed that the people should know the processes by which their representatives arrive at decisions resulting in action and that this requires not only that the actions be taken in meetings open to the public but also that the deliberations of their representatives should be conducted in meetings open to the public.

City councils are engaged regularly in deliberating or acting upon ordinances, regulations, etc., where the legal implications of the subject matter are as important for a proper decision as factual or any other information in order to form an intelligent and proper decision. Thus, the city attorney may be called upon to explain the legality or legal implications of a proposal before the council. In such instances the public has a right to know all of the factors considered by the council, including the legal advice, if any, received. The public is entitled to know all of this in order to assure that the representatives are acting in what it considers to be the public good. It is the sense of the Brown Act that such types of meetings be open to the public.

However, there is no indication in the language used in the Brown Act that its purpose is to grant in any fashion an advantage to an adversary of the people. It is one thing to require public meetings so that the public be informed about the deliberations as well as the actions of its representatives and quite another to deliberately give an advantage to an adversary of the people by extending the word "meeting" used in the act to include every conference between a city council and its city attorney which, if open, would not be to the people's interest but to the interest of the people's adversary. It would seem that before interpreting the sections to include such a conference the Legislature should clearly say so in unequivocal language.

Clearly, certain types of consultations or conferences, if open to all, would adversely affect the public interest. A good example is where the city is involved in litigation such as in an action involving the condemnation of property. It is common knowledge that expert appraisers seldom agree on the value of property. This is because to a large extent the opinions of humans are involved and man is influenced by many and different factors. It is also common knowledge that in such lawsuits settlements are made between cities and landowners as a result of simple bargaining. When a city attorney finds it necessary to discuss with the city council the maximum amount the council is willing to pay for property in litigation, must all such discussions and determinations be made in a meeting open to the public which would certainly be attended by the condemnee? The city has no corresponding right to sit in on a similar discussion between a landowner and his counsel, and indeed is prohibited from doing so by the attorney-client privilege. Another example is a discussion concerning possible settlement of litigation against the city for tort claims, which might entail discussion of trial

strategy, the strength and weakness of the case and witnesses to be relied upon.

It seems obvious that the public would suffer from granting such an advantage to the city's adversary. In fact, it would clearly appear to be contrary to the public interest for such conferences to be open to the public and therefore it is concluded that the Brown Act does not require such discussions over pending or prospective litigation between a city council and its city attorney to be open to the public.

Research reveals little by way of decisions of the court shedding light on the proper conclusion to the question presented. The appellate courts have not considered the question. Two superior judges have considered certain broad aspects of the problem. In *Minter v. Santa Monica* (Los Angeles Superior Court No. 663318), the presiding judge in a memorandum opinion dated September 6, 1956, expressed the view that all meetings of a city council or of the boards of a city at which public business is transacted, considered or deliberated are public meetings which all members of the public are entitled to attend and to be heard. However, in *Gray v. City of Rialto* (Superior Court, San Bernardino County No. 87481), the presiding judge in a memorandum dated March 14, 1957, concluded that section 54950 was never intended to make illegal any and all discussions and deliberations by members of a city council, except those carried on in a duly called and regularly held public meeting.

A study of the legislative history of the act is not helpful. As noted, the term "meeting" is not defined in the act. One version of the bill when the act was before the Legislature in 1953 included a definition of the term "meeting." However, the definition was subsequently stricken and did not become a part of the act as finally adopted (Pick-erell and Feder, *Open Public Meetings of Legislative Bodies—California's Brown Act*, 1957 Legislative Problems, No. 7, Bureau of Public Administration, University of California, Berkeley 49).

It is significant, however, that the rejected definition of "meeting" was extremely inclusive in that it included meetings "at which matters [before] it or any pending meeting of such agency are discussed. . . ." (3 S.J. 3217, 3559 [1953]; see also A.B. 339, 1953 Reg. Sess.). This rejection suggests a purpose to give a more moderate interpretation to the word "meeting."

In the 1957 Regular Session of the Legislature, A.B. 3518 was introduced to provide for executive sessions to consider ". . . the settlement of any claim, the appraisal or acquisition of property, preliminary reports from chief executive or administrative officers. . . ." However, this proposal was never acted upon even by the committee to which it had been referred (4 A.J. 6984 [1957]) so that the significance of the proposal is not apparent.

In the 1959 Regular Session the only proposal remotely affecting the problem was contained in Assembly Bill 2245. This bill contained a provision to amend the Education Code to permit a school board to hold executive sessions to consider the selection and purchase of school sites, provided that the final action must be taken in an open public meeting. This bill finally died in committee and therefore throws little light on the problem. The Legislature did, however, have the statute under consideration in other respects, but did not see fit to

resolve the problem or attempt to define "meeting" but contented itself with only a few minor amendments to sections 54955 and 54957 (Calif. Stats. 1959, ch. 647, p. 2626).

This office has consistently sought to uphold the purpose and spirit of the Brown Act. Thus, in 27 Ops. Cal. Atty. Gen. 123, it was held that so-called "council conferences" proposed to be held prior to council meetings could not be closed to all except those who sought permission to attend, gave their names, address, occupation, age and representative capacity and interest in the agenda (see also 32 Ops. Cal. Atty. Gen. 240; 33 Ops. Cal. Atty. Gen. 32).

In summary, it is our view that in the normal relation between a city council and its city attorney where the city council seeks the legal advice of the city attorney as to the legal effect of matters pending before the city council, such meetings must be open to the public. However, in those unusual limited situations in the nature of a consultation over litigation between the city council and its city attorney, as exemplified above, where obviously the public interest would suffer should an open meeting be held, the Brown Act does not require the conference to be open to the public. It must be emphasized, however, that the exception drawn here is a narrow one and that any subterfuge of evasion of the purpose of the act should not be tolerated (Gov. Code sec. 3060; *People v. Tice*, 144 Cal.App.2d 750 [willful misconduct of office]).

Ralph N. Kleps, Legislative Counsel

Sacramento, December 15, 1959

HON. RALPH M. BROWN
P.O. Box 1292
Modesto, California

BROWN ACT—No. 1126

Dear Mr. Brown:

QUESTION

You have asked whether there would be a violation of the Brown Act if a city council meets with the city attorney to discuss city business not involving personnel matters, and the public is excluded from the meeting.

OPINION

In our opinion, if a *quorum of the council is present* and the public is excluded the meeting will be in violation of the Brown Act.

ANALYSIS

Preliminarily, we should note that in speaking of meetings of the city council we are referring to meetings in which a quorum of the council is present. A discussion between the city attorney and less

than a quorum of councilmen is probably not a "meeting" within the meaning of the secret meeting law (see 32 Ops. Cal. Atty. Gen. 240). Our opinion, therefore, is limited to consideration of occasions at which a majority of the councilmen meet with the city attorney, and on those occasions we believe the meeting must be open to the public unless it is to consider the appointment or dismissal of, or possible punitive action against, a public officer or employee, which is the only exception allowed.

It might be contended that the attorney-client relationship exempts a meeting of the councilmen with the city attorney from the requirement that council meetings be open to the public. While it is the duty of an attorney "to maintain inviolate the confidence, and at every peril to himself to preserve the secrets, of his client" (B. & P.C. Sec. 6068) the fallacy in the reasoning that the attorney-client relationship justifies a secret city council meeting between the councilmen and the city attorney lies in the assumption that the city councilmen and the city attorney, who are public servants, share an attorney-client relationship exactly like that of a private citizen and his attorney.

A private citizen is free to discuss confidential matters at any time with his attorney, and when he does the attorney has a duty under the law to keep secret the communications between them. In contrast to the citizen's right of action, however, the Brown Act clearly states the intent of the law that the action and deliberations of legislative bodies of local agencies must be conducted openly, and that the people, in delegating authority, do not give their public servants the right to decide what is good for the people to know and what is not good for them to know (Gov.C., Sec. 54950). To this end it is provided that *all* meetings of such bodies shall be open to the public (Gov.C., Sec. 54953) with a single exception being made in respect to personnel matters (Gov.C., Sec. 54957). Neither in the Brown Act nor the sections dealing with the duties of a city attorney (Gov.C., Secs. 41801-41803) is there any exception authorized for meetings of the city council and the city attorney to discuss legal matters relating to the city.

The only other statute bearing on this subject is Section 1881 of the Code of Civil Procedure. Subdivision 2 of that section provides that an attorney cannot, without the consent of his client, be examined as to any communication made by the client to him, or his advice given thereon in the course of professional employment, and subdivision 5 provides that a public officer cannot be examined as to communications made to him in official confidence, when the public interest would suffer by the disclosure. These provisions allowing privileged communications, of course, apply only to the testimony of witnesses during trials or other legal proceedings, and in no way authorize a city attorney and the members of a city council to confer in secret on a city problem. In *Holm v. Superior Court* (1954), 42 Cal. 2d 500, and against in *Jessup v. Superior Court* (1957), 151 Cal. App. 2d 102, reports and photographs prepared by city agents relating to personal injuries or deaths occurring in connection with a city-operated facility were held to be confidential communications to the city attorney and certain other city officers, and were not required to be disclosed to persons preparing for litigation against the city in respect to the injuries or deaths. However, we do not believe the limited decisions of these cases can be said to

impliedly authorize secret meetings between the legislative body of a city and the city attorney. Any action of a city council is a potential source of litigation, since someone adversely affected or even merely disgruntled may contest it in the courts. To find in Section 1881 of the Code of Civil Procedure an implied authorization to exclude the public from a council meeting whenever the city attorney meets with it, we believe, is untenable and would not be accepted by a court in view of the clear language of the Brown Act with its express limited exception. We conclude, therefore, that since no exception is made for meetings of a city council with the city attorney, such meetings must be open to the public.

Very truly yours,

RALPH N. KLEPS
Legislative Counsel

By
(Mrs.) ROSE WOODS
Deputy Legislative Counsel

II. OPEN MEETINGS AND STATE AGENCIES

OPEN MEETINGS AND STATE AGENCIES

The Ralph M. Brown Act applies only to local legislative bodies. At the time Governor Earl Warren signed Assembly Bill No. 339, he indicated that he felt the bill should also apply to state agencies:

There isn't any reason at all why we should have a law for local government and then refuse to have the same thing for state government. I personally believe it would be a good thing to have a law for all branches of government, including the Legislature. Some of the worst things that have happened in government have stemmed from secrecy. It should be avoided.¹

During the 1955 Regular Session of the Legislature, Assemblyman Ralph Brown was the author of Assembly Bill No. 2034 which would have made the same open meeting requirements embodied in the Brown Act applicable to "every board, commission, agency, or authority of the state authorized to adopt any resolution, rule, regulation, or directive governing its conduct or for the enforcement of the powers and duties conferred upon it by law." Numerous amendments were proposed by various state agencies seeking exemption from the open meeting requirement and Assemblyman Brown announced he would drop the bill.

Following the 1955 session a subcommittee of the Assembly Interim Committee on Government Efficiency and Economy conducted a survey of the attitudes of officials representing state agencies regarding the extension of the open meeting requirement to their particular agency. Of the agencies responding to the questionnaire distributed by the committee, most indicated agreement with the principle of open meetings; however, the majority cited circumstances which made it necessary for their particular agency to hold meetings closed to the public.²

During the 1957 Regular Session Assemblyman Brown did not attempt to gain passage of an omnibus bill applicable to all state agencies. Instead, he introduced a series of bills amending the statutes governing various boards and commissions by requiring that they hold "all meetings open to the public." This general approach has been followed at each subsequent session of the Legislature by other legislators. Assemblyman Milton Marks, for example, has authored legislation requiring many additional state agencies to hold their meetings open to the public.

As a result of this method of applying the principle of open meetings to state agencies, legislative counsel indicates that a substantial majority of boards and commissions are now required by law to conduct their meetings open to the public. However, legislative counsel further indicates that there are some 61 state agencies which are not required to conduct public meetings. (See Appendix A.)

¹ Cited in Albert G. Pickerell and Edward L. Feder, *Open Public Meetings of Legislative Bodies—California's Brown Act* (Bureau of Public Administration, University of California: 1957, Legislative Problems No. 7), p. 23.

² For a complete listing of responses see Assembly Interim Committee Reports 1955-1957, Vol. 8, No. 5, *Report of the Assembly Interim Committee on Governmental Efficiency and Economy*.

THE CURRENT STUDY

The specific bill before the committee for study, Assembly Bill No. 2334 (introduced by Assemblyman Marks during the 1963 Regular Session), would require those agencies which conduct their meetings open to the public as a matter of law to hold committee meetings open to the public. In conducting this study the committee has not confined itself to the question of open meetings of committees, rather the present provisions of the laws governing the meetings of all state agencies have been reviewed to determine whether the existing law is adequate.

Initially, the committee surveyed the practices of state agencies through the distribution of a questionnaire. Those agencies not presently covered by open meeting legislation were asked the following questions:

- (a) Is it the practice of your agency to hold open meetings in the absence of specific statutory requirements?
- (b) Are there any compelling reasons for *not* requiring by statute that your agency hold open meetings?

To those agencies presently required by statute to conduct public meetings the following questions were asked:

- (a) Does your agency schedule open meetings for committees, subcommittees, and other groups smaller than a quorum?
- (b) Are there any compelling reasons for *not* requiring by statute that your agency follow such practices?
- (c) Considering your agency alone, do you perceive any *differences* between the meeting of the whole and meetings of committees, subcommittees, and other groups smaller than a quorum, which would serve as compelling reasons for limiting or qualifying the extension of the open meeting principle to the latter?

More than 200 state agencies responded to the questionnaire. Generally the responses revealed a marked change in attitude from the period when state agencies voiced such strong opposition to Assemblyman Brown's bill during the 1955 session. (See Appendix B.)

There were a few cases where agencies were confused as to whether or not they were required to hold open meetings as a matter of law. For example, the Board of Architectural Examiners indicates that it is their practice to "hold open meetings in the absence of statutory requirements." Section 5524.5 of the Business and Professions Code requires the board to conduct open meetings.

LICENSING AGENCIES

One of the areas where the need to retain confidentiality is presently recognized is in the statutes governing the meetings of the various licensing agencies. As a general rule, these boards which administer the licensing of persons engaging in certain businesses are permitted by law to hold executive sessions to deliberate on the decision

to be reached upon the evidence introduced in a proceeding conducted in accordance with the Administrative Procedure Act or to prepare, approve, grade or administer examinations.

One exception to this limited view was expressed in the response received from the Contractors' State License Board that meetings of committees should be closed in almost all cases because they "would be of little interest to the general public and would tend to invite participation in matters that could well result in unnecessary misunderstanding and confusion."

DELIBERATIVE CONFERENCES

Certain agencies are permitted by law to hold closed sessions to deliberate on the decision to be reached based upon the evidence introduced in formal proceedings, such as those proceedings conducted pursuant to the Administrative Procedure Act. One such agency is the Public Utilities Commission. Public Utilities Code Section 306 provides in part as follows:

" . . . Except for the commission's deliberative conferences, the sessions and meetings of the commission shall be open to the public and all persons shall be permitted to attend. . . ."

In the response by the commission to the committee questionnaire it was stated that at these conferences the commission "considers and issues decisions and orders." The commission response further stated that "such conferences are comparable to the conferences of the Justices of the Supreme Court in considering matters pending before the Court." The discretion given to the Public Utilities Commission to conduct closed sessions is rather broad because "deliberative conference" is not defined in that statute and the general order issued by the commission specifying the business which may be conducted in a deliberative conference could be applied to most business before the commission.

The Alcoholic Beverage Control Appeals Board and the Industrial Accident Commission indicated that their deliberative conferences following a public hearing should continue to be closed to the public. The Fair Employment Practice Commission also suggested that they be permitted to continue to deliberate in closed session following a public hearing and also keep confidential conciliation conferences conducted under the Fair Employment Practice Act and the Fair Housing Act.

SECURITY PROBLEMS

The Adult Authority, the Board of Trustees of the California Institution for Women, and the Youth Authority Board explained that many of their meetings are held within correctional institutions and that the security of the inmates requires restrictions on public attendance.

BOARD OF REGENTS

The Board of Regents of the University of California is not required by law to conduct public meetings. A constitutional amendment is necessary to require the board to conduct open meetings. During the 1959 Regular Session Assemblyman Ralph Brown introduced a con-

stitutional amendment to accomplish this purpose. However, when the Regents adopted bylaws requiring open meetings, Speaker Brown, an ex officio member of the Board of Regents, dropped the proposed amendment.

The bylaws governing the meetings of the board are as follows:

All meetings of the board shall be open and public and all persons shall be permitted to attend any meetings of the board except during executive sessions. The board may meet in executive session to consider and act upon only:

- (a) Matters involving interests of national security.
- (b) Matters relating to the conferring of honorary degrees and other honors and commemorations.
- (c) Matters involving gifts, devises and bequests.
- (d) Matters pertaining to the purchase or sale of real property prior to final decision thereon by the board in open session.
- (e) Matters involving litigation when discussion in open session concerning such matters might adversely affect or be detrimental to the public interest.
- (f) Personnel matters relating to the appointment, employment, compensation, or dismissal of officers and employees of the university.
- (g) Matters relating to complaints or charges brought against officers or employees of the university unless such officer or employee requests a public hearing. The board may also exclude from any such public or private meeting during the examination of a witness any or all other witnesses in the matter being investigated by the board.

With respect to the relationship of the bylaws of the Board of Regents and the provisions of the Brown Act, associate counsel for the Regents Mark Owens, Jr., commented:

MR. OWENS: I think you will note . . . there are only three sections which differ, to any extent, from the actual language of the Brown Act. These are sections (b), (c) and (d), and (e) of course is covered as a matter of general law.

Chairman Marks questioned Miss Marjorie Woolman, secretary of the Board of Regents, concerning a reported meeting on the Davis campus concerning the free speech activities of students on the Berkeley campus.

CHAIRMAN MARKS: It is my understanding that as far as the question of these students goes, that you did have a meeting—a closed meeting—and that you did consider the question of the students . . . is that correct? I have a newspaper article dated October 17 from Davis, stating that a meeting was held behind closed doors on the question of students and Dr. Kerr stated in answer to the question why the meeting was held behind closed doors, did state "because the subject involved personnel and students and therefore it was properly held in confidence."

MISS WOOLMAN: There was not a called meeting. There was a discussion, however, of some personnel problems, yes, but it was no called meeting.

CHAIRMAN MARKS: How many Regents were present?

MISS WOOLMAN: I wouldn't know.

CHAIRMAN MARKS: A majority?

MISS WOOLMAN: Yes.

CHAIRMAN MARKS: Do you think there is a difference between a called meeting and a meeting where it is not a called meeting?

MISS WOOLMAN: A distinction to this effect, that no action can be taken and one Regent can reopen anything that might have been said.

The committee feels that the public policy embodied in the Brown Act should apply to the conduct of the Board of Regents as a matter of law. While the Regents are required by their bylaws to conduct open meetings these provisions can be so liberally construed to cover almost any controversial issue which comes before the board. The bylaws do not require notice to the public and they may be revoked by the Regents at any time.

STATE COLLEGE TRUSTEES

Speaking on behalf of the Board of Trustees and the Chancellor of the California State Colleges, director of governmental affairs Les Cohen informed the committee that "In the short time the board has been in operation, it has achieved a fine record in conducting the public's business openly."

In response to the committee questionnaire, Mr. Cohen indicated:

In light of our fine record, it seems to me that the legislation proposed . . . is *totally unnecessary*, and, in fact, constitutes an unwarranted criticism on a board which has done so much to preserve the integrity of its public trust. We have not abused the authority given to us by the Legislature, nor do we intend to do so. We seriously question the advisability of requiring by statute that all committee meetings of the trustees be open and public. It is generally accepted that the public is entitled to information but not all information wherein the effect would be detrimental to the public interest. You gentlemen are well aware of the major areas involved, i.e., personnel, site selection, legal matters, and other matters which require frank discussions—for example, honorary degrees, etc. It is my understanding that no one objects to these matters being discussed in closed sessions.

Mr. Cohen informed the committee that if such legislation is deemed necessary, the trustees feel that the following exceptions to the open meeting requirement are necessary:

(a) Consideration of matters concerning site selection, where such committee or subcommittee is not authorized to take action on behalf of the state board or commission from which it was appointed, but only to recommend thereto, and must report any such recommendation at a public meeting.

(b) Consultation with an attorney employed by the agency of which the state board or commission was appointed is a part, where such consultation involves legal advice.

(c) Consideration of matters with respect to which such committee or subcommittee determines, by majority vote taken at a meeting open to the public, should, in the public interest, be considered in executive sessions; provided such committee or subcommittee is not authorized to take action with respect to any such matter on behalf of the state board or commission from which it was appointed.

OTHER AGENCIES

Certain other state agencies stated that there are compelling reasons for retaining confidentiality with respect to their meetings. The Franchise Tax Board, for example, points out that all their meetings are open to the public except in those cases where it might involve disclosure of a confidential tax return where public disclosure is forbidden by law.

The Colorado River Board of California informed the committee that "the extremely important and complicated legal aspects of Colorado River problems make it important that deliberations involving decisions in these areas be restricted information."

COMMITTEE RECOMMENDATIONS

The committee recommends the enactment of a comprehensive open meeting law applicable to all state agencies that is similar to the Ralph M. Brown Act for local legislative bodies.

This would eliminate much of the present confusion over whether or not specific boards and commissions are required by law to conduct their meetings open to the public. In addition, when new agencies are created they would automatically be covered by the law unless some specific justification exists for permitting executive sessions.

Presently, the open meeting statutes of the majority of state agencies which are covered by law simply state that "all meetings shall be open and public." As a result there are no uniform standards such as are specified in the Brown Act for holding open meetings. In some cases this limited language has hampered the operations of state agencies because it does not clearly indicate when closed meetings might be permissible, such as personnel sessions permitted by the Brown Act.

The committee concludes that a uniform open meeting law applicable to all state agencies that is similar to the Ralph M. Brown Act for local legislative bodies will be of significant benefit to the state agencies and the public.

APPENDIX A

STATE OF CALIFORNIA OFFICE OF LEGISLATIVE COUNSEL

Sacramento, California
October 19, 1964

Honorable Milton Marks
Russ Building
San Francisco 4, California

Public Meetings—No. 7288

Dear Mr. Marks:

Pursuant to your request we have prepared the enclosed list which designates which state agencies are, and which are not, required to hold open meetings.

You will notice that we broke this down into three categories: I. Those required to be open; II. Those required to be open with certain exceptions; and III. Those with no specific provision on whether they should have open or closed meetings. The statute reference in categories I and II are to the specific section on the meetings while the reference in III is to the section that creates the agency.

Very truly yours,

George H. Murphy
Chief Deputy Legislative Counsel

**State Boards Whose Meetings Are Required to Be Open to the
Public With Certain Exceptions—No. 1703**

(A) The following boards, which administer the licensing of persons engaging in certain businesses, may hold executive sessions to (1) deliberate on the decision to be reached upon the evidence introduced in a proceeding conducted in accordance with Chapter 5 (commencing with Section 11500), Part 1, Division 3, Title 2, of the Government Code, or (2) prepare, approve, grade or administer examinations. Variations from this are noted.

Board	Statute
Accountancy, State Board of.....	B. & P.C. 5017
(Only board members who are certified public accountants and the public member may hold executive sessions to prepare, approve, grade or administer examinations)

(B) The following boards have special provisions relating to their meetings, the pertinent parts of which we quote below.

Board	Statute
Education, State Board of	Ed.C. 111
111. All meetings of the board shall be open and public. Nothing contained in this section shall be construed to prevent the board from holding executive sessions to consider the employment or dismissal of an officer or employee of the board or of an agency over which the board has jurisdiction or to hear complaints or charges brought against such officer or employee by another officer, person, or employee unless such officer or employee requests a public hearing. The board may also exclude from any such public or private meeting, during the examination of a witness, any or all other witnesses in the matter being investigated by the legislative body.	
Franchise Tax Board	Gov.C. 15703
15703. All meetings of the board shall be open and public, except during executive sessions of the board if public disclosure of the subject under discussion or consideration is prohibited by law.	
Industrial Accident Commission	Lab.C. 114
114. * * *	
All meetings of the commission and of the commission panels shall be open and public, and all persons shall be permitted to attend any and all such meetings in their entirety, save and except such meeting or portion of a meeting of the commission or a panel as may be held, following receipt of all evidence, briefs and arguments, to judicially determine in a specific case the benefits, if any, to be awarded for injury or death sustained by an employee, or to determine the liabilities to be assessed against, or penalties to be imposed upon a particular employer.	
* * *	
Industrial Welfare Commission	Lab.C. 71.1
71.1. All meetings of the commission shall be open and public, except that the commission may hold executive sessions to deliberate on the evidence before the commission prior to the promulgation of any order pursuant to the authority conferred upon it by Section 1182 of the Labor Code.	
Municipal Water District Board of Directors	Wat.C. 71275
71275. All legislative sessions of the board, whether regular or special, shall be open to the public.	

Board

Statute

Planning Advisory Committee.....Gov.C. 65020.7

65020.7. The committee shall meet at the call of the chairman and at such places as the committee may designate. With the exception of those meetings, or portions thereof, devoted to a discussion of personnel matters, all meetings of the committee shall be open and public and all persons shall be permitted to attend any meetings of the committee.

Public Utilities Commission.....P.U.C. 306

306. The office of the commission shall be in the City and County of San Francisco. The office shall always be open, legal holidays and nonjudicial days excepted. The commission shall hold its sessions at least once in each calendar month in the City and County of San Francisco. The commission may also meet at such other times and in such other places as may be expedient and necessary for the proper performance of its duties, and for that purpose may rent quarters or offices. Except for the commission's deliberative conferences, the sessions and meetings of the commission shall be open and public and all persons shall be permitted to attend.

* * *

School district governing boards.....Ed.C. 966 and 967

966. Except as provided in Section 54957 of the Government Code or in Section 967, all meetings of the governing board of any school district shall be open to the public, and all actions authorized or required by law of the governing board shall be taken at such meetings and shall be subject to the following requirements:

(a) Minutes must be taken at all such meetings, recording all actions taken by the governing board. Such minutes shall constitute public records and shall be available to the public. Until the governing board adopts such minutes as the official minutes, such minutes shall be labeled the unadopted minutes. The official minutes shall also constitute public records and shall be available to the public.

(b) A list of items that will constitute the agenda for all regular meetings shall be posted at a place where parents and teachers may view the same at least 48 hours prior to the time of said regular meeting, and, in the case of special meetings, at least 24 hours prior to said special meeting.

967. Notwithstanding the provisions of Section 966 of this code and Section 54950 of the Government Code, the governing body of a school district may hold executive sessions to consider the expulsion, suspension, or disciplinary action in connection with any pupil of the school district, if a public hearing upon such question would lead to the giving out of information concerning school pupils which would be in violation of Section 10751 of the Education Code.

Before calling such executive session of the governing board of the district to consider these matters, the governing board of the district shall, in writing, by registered or certified mail or by personal service, if the pupil is a minor, notify the pupil and his parent or guardian, or the pupil if the pupil is an adult, of the intent of the governing board of the district to call and hold such executive session. Unless the pupil, or his parent, or guardian shall, in writing, within 48 hours after receipt of such written notice of intention, request that the hearing of the governing board be held as a public meeting, then the hearing to consider such matters may be conducted by the governing board in executive session. If such written request is served upon the clerk or secretary of the governing board, the meeting shall be public. Whether the matter is considered at an executive session or at a public meeting, the final action of the governing board of the school district shall be taken at a public meeting and the result of such action shall be a public record of the school district.

State College Trustees.....Ed.C. 23606

23606. All meetings of the trustees shall be open and public. Nothing contained in this section shall be construed to prevent the trustees from holding executive sessions to consider the employment or dismissal of an officer or employee of the trustees, nor to hear complaints or charges brought against such officer or employee by another officer, person, or employee unless such officer or employee requests a public hearing. The trustees may also exclude from any such public or private meeting, during the examination of a witness, any or all other witnesses in the matter being investigated by the trustees.

Board	Statute
Unemployment Insurance Appeals Board	U.I.C. 408 and 2713
408. Except as provided in Section 2713, all meetings, hearings, and proceedings of the Appeals Board shall be public and all decisions and orders shall be in writing.	

2713. In proceedings under this part the claimant, upon a showing of good cause, may request a closed hearing except that the last employer and each base period employer of the claimant shall be entitled to participate in any such hearing.

Commission of the Californias (Commission expires at end of 1965 session).....	Gov.C. 8700

APPENDIX B

RESPONSES TO COMMITTEE QUESTIONNAIRE BY STATE AGENCIES REGARDING OPEN MEETINGS

For convenience in comparing responses of various state agencies, the boards and commissions have been organized under generally related headings. In general, this classification approximates the organizations of units of state government within the agencies.

AGRICULTURE

Department of Agriculture

... We shall answer the questions separately for the Department of Agriculture, for boards or commissions over which the department has some supervisory authority and which are covered by open meeting legislation, and for such boards not covered by open meeting legislation.

Department of Agriculture

It is the practice of the department to hold open meetings in the absence of specific statutory requirements.

There are no compelling reasons for *not* requiring by statute, that the department hold open meetings. However, we believe it necessary to define meetings to exclude staff conferences or conferences with individuals or groups who desire to discuss some matters with members of the department staff.

Boards Not Covered by Open Meeting Legislation

There are several boards and commissions over which the department has some supervisory jurisdiction which are not covered by open meeting legislation. These boards are as follows:

Marketing order boards established under the California Marketing Act.

Program committees established under the Agricultural Producers Marketing Act.

Milk producer advisory boards under the Milk Stabilization Law.

The California Beef Council.

Meetings of the above named boards are open except that they follow the provision of the Brown Act with respect to executive sessions when discussions are held on personnel matters.

There are no compelling reasons for *not* requiring by statute that these agencies hold open meetings, except at times it is compelling that the boards be allowed executive sessions on personnel matters.

Board or Committees Related to the Department Covered by Open Meeting Legislation

These boards are:

District Agricultural Association Directors.

The Dairy Council of California.

The Livestock Identification Advisory Board.

The Livestock Health Committee.*

These agencies hold open meetings for committees, subcommittees and other groups smaller than a quorum.

We have no compelling reasons for not requiring by statute that these agencies follow such practices.

We do not see any difference between the meeting of the whole and meetings of committees or subcommittees or other groups which would serve as compelling reasons for limiting the open meeting principles.

* The Livestock Health Committee is inactive and has not met for several years. The authority for the committee will expire the 91st day after the 1965 Regular Session of the Legislature.

Two boards, the California Fish and Seafood Advisory Board and the California Table Grape Commission, authorized under the Agricultural Code, Chapter 20 and Chapter 21 respectively of Division 6, were never activated. These programs called for majority approval in assent and referendum procedures by persons affected. The vote was not sufficient to put either programs into effect.

Charles Paul
Director

Board of Agriculture

... The California State Board of Agriculture is covered by open meeting legislation, Section 40.1 of the Agricultural Code.

Meetings for committees, subcommittees and other groups smaller than a quorum are open meetings.

We do not know of any compelling reasons for not requiring by statute that the board follow such practices.

We do not perceive any differences between the meetings of the whole and the meetings of committees and other groups which would serve as compelling reasons for limiting the extension of the open meeting principles.

D. A. Weinland
Executive Secretary

Poultry Improvement Commission

... In response to your questionnaire ... may we report that all meetings of the California Poultry Improvement Commission are open to the public. Announcements of the meetings so state, and if visitors are present they are invited to speak if they so desire.

Committee meetings of the commission likewise are open to the public, and on numerous instances, leaders in the poultry industry are given special invitation to be present and to participate in the discussions pertaining to the work of the commission.

Emery A. Johnson
Superintendent

BUSINESS AND COMMERCE

Department of Alcoholic Beverage Control

... Generally speaking, all "meetings" or "hearings" held by this department are conducted under the provisions of the Administrative Procedures Act and are held open to the public. Excepted are meetings held by the department's staff to deliberate on decisions to be reached upon evidence introduced in proceedings held under said act. Not open to the public are meetings held by the department's staff to consider and resolve such procedural and enforcement problems which may confront the department during its normal course of operation. It would not be in the public interest to hold such meetings open to the public.

James O. Reimel
Director

Alcoholic Beverage Control Appeals Board

... The Alcoholic Beverage Control Appeals Board is not covered by the open meetings provisions of Government Code Section 11015. However, it is the practice of this agency to hold open meetings. The only meeting that appears applicable is the regular meeting of the board at which oral argument is presented on pending cases. These meetings are open to the public.

Charles P. Just
Chief Counsel

Banking Department

... Although not a general practice of the State Banking Department, the superintendent on occasion when deemed to be in the public interest has ordered public hearings on new bank and branch applications.

The Banking Law gives the superintendent discretionary powers in approving or denying a bank or branch application and enumerates matters to be investigated and conditions that must be met before approval is granted.

Due to the confidential nature of banking department records and information, as provided by statute, the scope of public hearings now conducted by the State Banking Department are limited by the superintendent to protect this confidentiality.

The decisions of the superintendent are reviewable by the courts for arbitrariness or abuse of discretion, and to require public hearings by statute would place considerable administrative and financial burdens on the Banking Department.

John A. O'Kane
Superintendent of Banks
By James Ahlf
Chief Deputy

Districts Securities Commission

... This agency is presently covered by open meeting legislation, and it does not schedule meetings for committees, subcommittees, or other groups smaller than a quorum.

T. P. Stivers
Executive Secretary

Horse Racing Board

... We are covered by open meeting legislation (B. & P. Code, 19431).

There are only three members on the board and they do not delegate to or operate through any subcommittee.

Charles L. Harman
Secretary

Department of Insurance

... This agency is not presently covered by open meeting legislation because it is headed by a single individual rather than a board or commission.

In general, this agency holds open meetings (although not required by statute) in all situations where this is practical and feasible.

There are many situations in which it appears to me open meetings would not be practical, or feasible, or in the public interest. Most of my time is devoted to making decisions of one kind or another, frequently with the aid of advice from staff deputies. If this agency were placed under a full open meeting rule, I could not meet with any member of my staff on any problem which might result in my making a decision without giving notice to the press and others. I sincerely believe a single-headed agency could not operate practically under such a system.

It would seem to me to be most difficult, if not impossible, to define in advance the situations in which open meetings would be practical and in the public interest.

Stafford R. Grady
Insurance Commissioner

Board of Investment

The Board of Investment is made up of the heads of the Department of Insurance, Department of Banking, Division of Savings and Loan, Division of Corporations and Division of Real Estate.

To date no funds have been budgeted for the operation of the board, and it meets to confer on mutual problems in the investment field. The meetings are open (often attended by representatives of the press and of the industry groups licensed by the various divisions and departments making up the Board of Investment). As presently constituted, we know of no compelling reasons why the board should not be required by statute to hold open meetings.

John E. Hempel
Chief Assistant Commissioner

Department of Professional and Vocational Standards

The department consists of 24 separate boards and 5 bureaus under the supervision and control of the director of the department.

Board of Accountancy

The Board of Accountancy is presently covered by open meeting legislation as set forth in Section 5017 of the Business and Professions Code.

... The board does appoint committees from its membership; however, almost without exception these are one-man committees who make certain studies or otherwise and report back to the board at a regular open meeting.

Sections 5020 and 5020.3 of the Business and Professions Code provides that the board may appoint administrative committees consisting of licensees who are not members of the board. These committees conduct investigations to obtain information and/or evidence relating to violations or alleged violations by licensees. The purpose of such investigations is to assist the board's investigators in the technical accounting aspects of violations of certain provisions of the Accountancy Act (As: 5100(d) of the Business and Professions Code—gross negligence in the practice of public accountancy; 5100(g) of the Business and Professions Code—willful violation of the rules promulgated by the board).

As many of the complaints are resolved by these committees as being unfounded or of such a minor nature that formal disciplinary action is not warranted, it is our feeling that a person accused, unjustly or otherwise, might suffer personal damage if these meetings were open to attendance by the public.

Section 5023 of the Business and Professions Code provides that the board may establish an examining committee composed of certified public accountants not members of the board to recommend to the board applicants for the certificate of certified public accountants.

This committee reviews the files of applicants who have passed the C.P.A. examination and who have applied for issuance of a certificate. As good moral character is a requirement many of the files contain confidential investigation reports, CII and FBI "rap sheets," as well as statements by the applicants relating to criminal arrests, convictions and loss of other licenses.

We doubt that it is in the public interest that this information be released to the public as would, or could, be the case if these meetings were open.

Other than meetings of the two administrative committees and the examining committee, we favor the open meeting principle.

Harvey Shadle
Executive Secretary

Board of Architectural Examiners

... It is the practice of the agency to hold open meetings in the absence of specific statutory requirements.

Frank B. Cronin
Executive Secretary

Athletic Commission

... The Athletic Commission is covered by open meeting legislation.

The Athletic Commission schedules monthly meetings at which a quorum is always present; no other meetings are scheduled.

Should the commission ever schedule meetings at which a quorum is not present, commission policy would be that such meetings would be public.

Jack W. Urch
Executive Officer

Board of Barber Examiners

Does your agency schedule open meetings for committees, subcommittees, and other groups smaller than a quorum?

"Yes."

Are there any compelling reasons for not requiring by statute that your agency follow such practices?

"No. (Except to prepare examination questions.)"

James D. Knauss
Executive Secretary

Cemetery Board

... The board does not meet except in regularly scheduled meetings open to the public. Subcommittees are formed solely for investigatory purposes and do not conduct meetings.

We feel that all meetings of our board are covered under current statutes.

James A. Lahey, CPA
Executive Secretary

Board of Chiropractic Examiners

... It is the practice of this agency to hold open meetings.

The only compelling reason for not requiring *the statute* is that the governing act is an initiative, therefore would require direct vote of the people.

Earl E. Pope
Executive Secretary

Board of Registration for Civil and Professional Engineers

... Our board operates under Section 6716.5 of the Business and Professions Code.

The only purpose for which committee meetings are held is to prepare, approve, grade or administer examinations. Executive sessions are permitted for these functions under Section 6716.5(b).

Logan N. Muir, Jr.
President

Contractors' State License Board

... Section 7008.5 ... of the Business and Professions Code provides: "All meetings of the board shall be open and public, except that the board may hold executive sessions to:

(a) Deliberate on the decision to be reached upon the evidence introduced in a proceeding conducted in accordance with Chapter 5 (commencing with Section 11500), Part I, Division 3, Title 2, of the Government Code.

(b) Prepare, approve, grade or administer examinations.

Pursuant to Section 7008 of the Business and Professions Code, the board appoints committees.

The committee meetings are not considered to be meetings of the board. They constitute less than a board quorum. Their purpose is primarily to consider recommendations and resolutions by the board at its regular meeting extending to specific areas of interest indicated by the various board committees. The objective is to expedite board business by analysis and clarification of issues prior to its regular and special meetings. It is believed much time, expense, and inconvenience is saved by these meetings, not only to the state, but to the construction industry (labor and management) and to the interested public. Committee meetings are usually informal in nature and generally are not open to the public; however, on occasion, particularly the meetings of the Committees on Rules and Regulations and Legislation, where informative data and opinions are desired, are open public meetings and wide notice of such a meeting is afforded the public, particularly the construction industry. This open committee meeting is a more formal type meeting than the usual committee meeting and an official transcript may on occasion be made.

The Contractors' State License Board believes its policy in holding certain closed committee meetings is a sound one—particularly when it extends to areas of personnel and departmental relations; finance and budget; prequalification and examination; public relations; and grievances, and on occasions others. Often such committees meet for the sole purpose of determining policy involving the normal day-by-day functions, policies and procedures of the agency. Open meetings on such matters would be of little interest to the general public and would tend to invite participation in matters that could well result in unnecessary misunderstanding and confusion in strictly agency matters. It is emphasized that all committee business (open and closed) is made a matter of public record and it is further emphasized that all committee business is generally "aired" in an open meeting of the board at its regular or special meetings. A public record of any committee meeting of the board (open or closed) may be brought before the board by any person at its regular meetings.

Leo B. Hoschler
Registrar of Contractors

Board of Dental Examiners

Does your agency schedule open meetings for committees, subcommittees, and other groups smaller than a quorum?

"Yes."

Are there any compelling reasons for not requiring by statute that your agency follow such practices?

"No."

Victor A. Hill
Executive Secretary

Board of Dry Cleaners

... Section 9534.5 reads: "All meetings of the board shall be open and public except that the board may hold executive sessions to: (a) Deliberate on the decision to be reached upon the evidence introduced in a proceeding conducted in accordance with Chapter 5 (commencing with Section 11500), Part 1, Division 3, Title 2, of the Government Code. (b) Prepare, approve, grade or administer examinations . . ."

Does your agency schedule open meetings for committees, subcommittees, and other groups smaller than a quorum?

"These meetings are also open to the public."

Are there any compelling reasons for not requiring by statute that your agency follow such practices?

"None—as provided for under Section 9534.5."

Considering your agency alone, do you perceive any differences between the meeting of the whole and meetings of committees, subcommittees, and other groups smaller than a quorum, which would serve as compelling reasons for limiting or qualifying the extension of the open meeting principle to the latter?

"Only pertaining to informing the public or interested parties that such a meeting will be held. If an emergency meeting is to be conducted, it would be very difficult to advise anyone who might want to attend the meeting in time."

David M. Hayes
Executive Secretary

Board of Funeral Directors and Embalmers

... All meetings of the board, including committee and subcommittee meetings regardless of their size, are open to the public, except as provided by Section 7605.5 of the Funeral Directors and Embalmers Law. This section reads as follows:

"All meetings of the board shall be open and public, except that the board may hold executive sessions to:

"(a) Deliberate on the decision to be reached upon the evidence introduced in a proceeding conducted in accordance with Chapter 5 (commencing with Section 11500), Part 1, Division 3, Title 2, of the Government Code.

"(b) Prepare, approve, grade or administer examinations."

... The consideration of matters that are still under investigation, in which public knowledge may hamper the investigation, should not be of public knowledge until the matter is resolved by a formal hearing or whatever other action as may be necessary. Any information given in confidence should not be divulged because this could seriously hamper the gaining of information from that source or other sources in the future, and therefore would not be in the public interest.

Leroy M. Perrin
Executive Secretary

Board of Guide Dogs for the Blind

Meetings of the board are governed by statutes of the Business and Professions Code, Division 3, Chapter 9.5, Sections 7206 and 7206.5.

The board does not schedule meetings for committees smaller than a quorum of the board.

D. R. Mendelson
Executive Secretary

Board of Medical Examiners

... The provisions of Section 2121 of the Business and Professions Code provide that all meetings of the Board of Medical Examiners shall be open and public except that the board may hold executive sessions to deliberate on the decision to be reached upon the evidence introduced in a proceeding conducted under the Administrative Procedure Act, and to prepare, approve, grade or administer examinations.

Meetings of committees of the board or groups smaller than a quorum of the board may be open meetings, depending on the purpose for which the committee was appointed. In the event the purpose of the committee was inspectional in nature, or for the consideration of applications, examination material, or confidential information, such meetings would not be open to the public. However, we wish to point out that no final action could be taken by any of the committees, but such committees would report their recommendations to the board at an open meeting where final action could be taken.

We believe that the above indicates compelling reasons for not requiring by statute that all committee meetings of the board be open to the public and indicate certain differences between the meetings of the board and the meetings and activities of committees of the board.*

Wallace W. Thompson
Executive Secretary

Board of Nursing Education and Nurse Registration

... The Board of Nursing Education and Nurse Registration under the provisions of the Administrative Procedure Act does go into executive session to deliberate on decisions concerning disciplinary matters. The executive session is also used for the construction, preparation and administration of the licensing examination. This security involves not only the board's security for the examination, but the contractual agreement with the National League for Nursing, American Nurses' Association and the Committee on State Boards of Nursing. These have established very specific security measures for the handling of the construction, preparation and administration of the State Board Test Pool Examination, which is a national examination used by the 50 states and identified by each for the purpose of their own licensure. Beyond these two exceptions, the Board of Nursing Education and Nurse Registration encourages members of the discipline of nursing and others concerned with nursing to attend the open public meetings. The board would not advertise meetings of committees and subcommittees investigating, studying and exploring preliminary considerations prior to the board acting upon these matters. These exploratory meetings are a means of early preliminary investigation for data gathering before the board would be able to act in the best interest of the public. The committee approach expedites the work of the board and holds confidential certain materials which are a necessary part of the operation in order that the public's best interest will be appropriately served. No board committee acts independently of the board; nor does it establish policy, but rather brings data to the board for the total board to consider. In this way, the public is well served in that when the matter is ready for open discussion before the board there is adequate information upon which the board may act. If the data is not sufficient, the board then instructs the committee to seek further information.

Miss Beverly C. André, R.N.
Executive Secretary (Acting)

Board of Optometry

... There is a statutory requirement that the meetings of the Board of Optometry shall be open and public. Section 3017.5 of the Business and Professions Code provides as follows:

"3017.5. All meetings of the board shall be open and public except, that the board may hold executive sessions to:

"(a) Deliberate on the decision to be reached upon the evidence introduced in a proceeding conducted in accordance with Chapter 5 (commencing with Section 11500), Part 1, Division 3, Title 2, of the Government Code.

"(b) Prepare, approve, grade or administer examinations."

* The committee received similar responses to these questions concerning meetings from the Physical Therapy Examining Committee, the Podiatry Examining Committee, and the Psychology Examining Committee. These committees are under the general direction of the Board of Medical Examiners.

Four members of the Board of Optometry constitute a quorum (Section 3010, Business and Professions Code). Committees or subcommittees of the board or other groups of members smaller than a quorum do attend meetings on behalf of the board but do not initiate these meetings.

There does not appear to be any compelling reason for not requiring that meetings scheduled by committees of the board be open and public. However, it is not believed that imposing such a requirement by statute insofar as the Board of Optometry is concerned would be necessary in the light of the public interest.

If the open meeting principle were extended to meetings of committees or subcommittees of the board, probably some limitation or qualification ought to be considered.

Committees of the board are appointed to study and investigate various matters such as technical modifications to the clinical and other sections of the examination of applicants, contemplated changes in the curricula of schools of optometry, proposals for legislation, and activities which may constitute the practice of optometry on the part of unlicensed persons or entities.

Ordinarily, the committees are comprised of but one or two members who work with the executive secretary. The member or members of a committee generally transmit any information or suggestions gathered by means of written correspondence to the office of the board. Committees of the board may attend meetings in which the board is invited to participate. Often this is the primary function of the committee. Generally the executive secretary also attends these meetings.

J. R. Patterson
Executive Secretary

Board of Pharmacy

... The Board of Pharmacy is presently covered by open meeting legislation except for exemptions provided by Section 4008.5 of the Business and Professions Code.

Does your agency schedule open meetings for committees, subcommittees, and other groups smaller than a quorum?

"Yes."

Are there any compelling reasons for not requiring by statute that your agency follow such practices?

"No."

Joseph F. Bottini
Executive Secretary

Board of Shorthand Reporters

Does your agency schedule open meetings for committees, subcommittees, and other groups smaller than a quorum?

"Yes."

Are there any compelling reasons for not requiring by statute that your agency follow such practices?

"Yes, due to the confidential nature and the intrinsic essence of the examination material and subject matters. Generally the subcommittee and other groups smaller than a quorum are formed for the purpose of preparing, administering or grading of examinations." *

William E. Barbeau
Executive Secretary

Board of Social Work Examiners

... This agency does schedule open meetings for committees, subcommittees and other groups smaller than a quorum.

For the Board of Social Work Examiners there do not appear to be any compelling reasons for the agency to require other than open meetings for these subcommittee groups, and the common practice has been for all such meetings to be open except for those exclusions which are specifically stated in the statutes at this time. There is one situation which might cause some difficulty, although it has not arisen in the past, and this is in cases where the board or a subcommittee is selecting

* The committee received similar responses to these questions concerning meetings from the Board of Examiners in Veterinary Medicine, the Board of Landscape Architects and the Yacht and Ship Brokers Commission.

or evaluating members of the staff. Under certain circumstances, it might be desirable to have these as executive sessions.

Charles H. Dickinson, RSW
Executive Secretary

Structural Pest Control Board

... This agency is covered by open meeting legislation as set forth in Section 8524.5 of the Business and Professions Code.

This agency does schedule open meetings for committees, subcommittees and other groups smaller than a quorum.

We are unaware of any compelling reasons why this procedure should not continue to be followed.

Macon Bonner, *Registrar*
/s/ E. C. Sizemore, *Deputy Registrar*

Board of Vocational Nurse Examiners

... The board has never attempted to keep subcommittee meetings closed except when disciplinary problems or examination questions are being discussed.

Our contract with the National League for Nursing to use their licensure examination prohibits review of the questions by other than board members.

Maryellen Wood, R.N.
Executive Secretary

Collection Agency Licensing Bureau

Within the Collection Agency Licensing Bureau there is an advisory board of collection agencies. The board's primary duties are to advise the director of the Department of Professional and Vocational Standards and the chief of the Collection Agency Licensing Bureau.

... The provisions of Section 6867 require that all meetings of the board "shall be open and public" ...

No meetings are held by the Collection Agency Advisory Board unless a quorum is present to conduct business. Such meetings are always open and public.

Harvey McAchren
Chief of Bureau

Bureau of Electronic Repair Dealer Registration

... It is my understanding that our agency is governed by open meeting legislation and all our meetings have been public.

Daniel J. Weston
Chief

Bureau of Furniture and Bedding Inspection

... I should like to refer you to Section 19035.9 of the Business and Professions Code relating to furniture and bedding.

19035.9. All meetings of the board shall be open and public, and all persons shall be permitted to attend any meetings of the board.

Does your agency schedule open meetings for committees, subcommittees, and other groups smaller than a quorum?

"Yes."

Considering your agency alone, do you perceive any differences between the meeting of the whole and meetings of committees, subcommittees, and other groups smaller than a quorum, which would serve as compelling reasons for limiting or qualifying the extension of the open meeting principle to the latter?

"Not at the present time."

Frank C. Freer
Chief of the Bureau

Board of Osteopathic Examiners

... Section 2121 of the Business and Professions Code provides that all meetings of the board shall be open and public, except that the board may hold executive sessions to deliberate on the decision to be reached upon the evidence introduced and to prepare, approve, grade or administer examinations.

Proposition No. 22, an amendment of the initiative act, was approved by the people at the election held on November 6, 1962, and became effective on that date. Under this amendment, physicians and surgeons holding a license under the Board of Osteopathic Examiners who secured a degree of doctor of medicine from an approved medical school in California were qualified to elect to practice under the jurisdiction of the State Board of Medical Examiners under the title of "M.D." Those doctors of osteopathy who chose to remain under the Board of Osteopathic Examiners may continue their practice as licensed, but the board no longer has the power to approve schools or grant new licenses. At this time the Board of Osteopathic Examiners has 422 licentiates.

In the past this agency did not schedule open meetings for committees or subcommittees.

The committee or subcommittee met to take under advisement the approval, or disapproval, of osteopathic schools; or to approve or disapprove applications for examinations.

(Mrs.) Lola Tankersley
Assistant Secretary

Public Utilities Commission

... The Public Utilities Commission is a constitutionally created tribunal. (Article XII, secs. 21-23a.)

Although not a judicial tribunal in a strict sense, it is nevertheless both a court and an administrative agency, legislative and judicial functions having been united in a single agency. Its orders in many instances are legislative-administrative in character, as in fixing rates or issuing certificates. However, the Supreme Court has said that the procedure by which the result is to be reached, the determination of controverted facts between private litigants and disputants, and the decision upon those controverted matters, "are strictly judicial."

Public Utilities Code Section 306 provides in part as follows:

"... Except for the commission's deliberative conferences, the sessions and meetings of the commission shall be open and public and all persons shall be permitted to attend. . . ."

At its "deliberative conferences" the commission considers and issues decisions and orders. Such conferences are comparable to the conferences of the justices of the Supreme Court in considering matters pending before the court.

All hearings in formal proceedings before the commission are open to the public. Normally hearings are held in the area affected by the subject matter of a proceeding. Notice of a hearing is given to the parties, and publication of such notice in newspapers is often required.

There are no meetings of committees or subcommittees of the commission.

Frederick B. Holoboff
President

Real Estate Commission

... The commission's primary function is advisory; . . . Section 10058.5 of the Business and Professions Code provides for open meetings of the commission.

The Real Estate Law also charges the commission with passing on the claims of equivalent experience or educational qualifications made by broker applicants who have not been engaged actively and full time as real estate salesman for two years.

A committee of at least three members of the commission reviews and passes on each such claim. The committee's deliberations on such claims are not open to the public. The matter of a particular applicant's qualifications is only of interest to the individual applicant. The application contains many questions that require information of a personal nature. These are primarily of an investigatory nature, and it is in the applicant's interest to maintain the application confidentially. Further, the large volume of such applications render effective notice to the public administratively impractical.

J. P. Mahoney
Chief Legal Officer

San Francisco World Trade Center Authority

"Inasmuch as this agency is presently covered by open meeting legislation (Section 3.11 Calif. Stats. 1959, Chapter 845) . . .

Our agency has not followed the practice of holding committee meetings, therefore the question of whether or not they should be open has not arisen.

I know of no compelling reasons for not requiring open meetings.

I think there can be reasons why a group smaller than a quorum should meet in private. One reason would be when dealing with certain personnel matters. Another reason would be to consider various factors concerning a matter which requires the airing of opposing views. If a committee smaller than a quorum is dealing with such a matter with a view toward making a recommendation to the authority, then I do not see where failure to have an open meeting of the smaller group would be detrimental. Only in such a manner could full and complete airing of views take place.

J. Monroe Sullivan
Executive Director

CORRECTIONS

Adult Authority

. . . Since 1944, as a matter of policy, the Adult Authority has opposed any "secret" or "star chamber" meetings. Our meetings are open in the sense that guests are invited, the only limitation being the hearing room size, the problem of security within the institutions, and the intimate or personal nature of the hearings. During the past year, our visitors have included numerous legislators, judges, law enforcement and other officials, and members of the general public.

The meetings are not "open" in the sense that the public at large is invited or permitted to attend. Adult Authority hearings are held inside the various institutions where the security of inmates and the protection of the public would be involved if such meetings were to become "open" by law and thus accommodate large segments of the public. Physical accommodations at the institutions are such that the "public" could not be present, as a practical matter.

Advance announcements of executive clemency meetings, usually held in San Francisco, including the time and place of such meetings, are forwarded to the press.

Fred R. Dickson
Chairman

Board of Trustees

California Institution for Women

. . . Hearings are held in state prisons under strict security conditions to prevent introduction of money and other contraband.

Facilities for open meetings are not adequate.

Visitors are already recommended—judges, attorneys, news media representatives, representatives of women's organizations and interested citizens for attending meetings. Through long experience we have found that the inmates appearing at these hearings where a large number of visitors are present have been affected in their ability to respond to questions and are not able to do themselves justice. For this reason we have restricted the number of visitors to a maximum of three at any one time.

The sensationalism involved in particular cases must be avoided in order to have a fair and impartial hearing.

Percy B. Crow
Executive Officer

Board of Corrections

. . . The Board of Corrections is not presently covered by open meeting legislation. The Board of Corrections firmly believes in the public's right to know how its business is conducted. It has been the practice of the board to hold open meetings even though this is not required.

It would be in the interest of the public to provide that executive meetings would be permitted in the discretion of the board when it is hearing dismissal charges against personnel (Section 6025 Penal Code and others) and when it is considering reports concerning crime conditions (6027 Penal Code) premature disclosure of which might jeopardize an investigation or reflect unfairly upon an

individual or group. These situations are infrequent. Occasionally a complicating condition is that the board sometimes meets within prisons or other correctional institutions in the course of its duty to correlate correctional programs.

Walter L. Barkdull
Executive Officer

Correctional Industries Commission

Does your agency schedule open meetings for committees, subcommittees, and other groups smaller than a quorum?

"Yes. The commission, until this year, made no use of committees or subcommittees and has had only one committee meeting to date."

Are there any compelling reasons for not requiring by statute that your agency follow such practices?

"No."

Walter L. Barkdull
Executive Officer

Governor's Narcotic Rehabilitation Advisory Council

... The meetings of the Governor's Narcotic Rehabilitation Advisory Council are not closed meetings. They are announced, however, only to members and others specifically required by law. Attendance of the general public at meetings should be carefully evaluated—especially in view of the following considerations:

(a) Meetings frequently require examination of privileged communications such as medical and psychiatric reports, etc.

(b) Some meetings are conducted at the California Rehabilitation Center itself and violation of the basic security of the institution, its residents and staff might be encountered in such meetings.

(c) When professional discussion and evaluation of the program is scheduled participation by nonprofessionals might impede the evaluation process.

This committee is a study, discussion, analysis and recommending committee. It has no other administrative or management responsibilities.

William F. Quinn, M.D.
Chairman

Youth Authority

... Meetings of the Youth Authority Board are closed; other meetings such as staff and operations meetings are open.

Meetings of the Youth Authority Board should not be required to be open for two reasons:

(1) The meetings are held for the purpose of discussing the treatment and/or disposition of the cases of Youth Authority wards.

(2) Court and other treatment records are used as a basis for decision of these cases.

Heman G. Stark
Director

EDUCATION

State Board of Education

... Education Code Section 111 requires meetings of the board, other than executive sessions to consider employment or dismissal of officers or employees of the board, to be open and public.

The board has 11 standing committees ... Except for the Appointments Committee, meetings of the board's committees are open to the public. Advance notice of the time and place of the meetings is given to the press and to persons who have indicated a desire for that information.

There appears to be no compelling reasons for not requiring such practices by statute.

The meetings of these committees are conducted more informally than meetings of the board. I have not observed that freedom of discussion has been materially inhibited by the presence of the press and members of the public. I presume that any legislation proposed would not be so stringent as to prohibit discussion of a

matter of board interest by telephone or by two or more members who might find themselves in each other's company during a meal or while in transit to or from a meeting.

Laurence D. Kearney
Administrative Adviser

State Department of Education

... Formal meetings within the department by statutorily created bodies are confined to those of the State Board of Education, the Curriculum Commission (and their committees), and the Committee of Credentials.

Meetings of the state board and Curriculum Commission are open to the public as required by law. Persons who wish to attend meetings of the Committee of Credentials are permitted to do so.

Dr. Everett T. Calvert

Board of Governors, California Maritime Academy

... Section 26007, Education Code, requires that all meetings of the board of governors shall be open and public, and all persons shall be permitted to attend any meetings.

The board of governors has meticulously observed the foregoing

E. N. Kettenhofen
Chairman

State Scholarship Commission

... The State Scholarship Commission is an agency covered by open meeting legislation and Government Code, Section 11015.

... as a matter of fact not many people have expressed interest in attending commission meetings. Common practice is for the commission to meet on a college campus and usually personnel from the administration and faculty will sit in at the commission meetings.

... The commission committees do not meet frequently. To the best of my knowledge no one other than a commission member has attended a committee meeting although they would be quite welcome.

Arthur S. Marmaduke
Executive Director

Coordinating Council for Higher Education

... The Education Code specifically states that all meetings of the council shall be open. It should be noted that there is no provision for executive sessions in regard to personnel matters as in the case of the State Scholarship Commission, the State Board of Education, etc.

The requirement for open meetings has been considered by the council to apply to meetings of its officially constituted committees, generally of five members each (council members total 15). While such committee meetings are generally working sessions, there seems to be no reason in our view that these meetings should not continue to be open to all those persons interested.

Willard B. Spalding
Associate Director
Educational Programs

State Teachers' Retirement System

... The State Teachers' Retirement Law already provides that all meetings of the State Teachers' Retirement Board and the State Teachers' Retirement Investment Board shall be open to the public. It has never been our practice to hold any closed-door executive meetings, and the board has not, as a matter of policy, operated through committees or subcommittees. I would understand that such committee or subcommittee meetings would also be open to the public.

Leo J. Reynolds
Executive Officer

Western Interstate Commission for Higher Education

... Since I joined the staff in 1960, all meetings of the commission and its executive committee have been open to the public. Occasionally an executive session has been held to discuss personnel matters.

Robert H. Kroepsch
Executive Director

EMPLOYMENT RELATIONS

Apprenticeship Council

... Chapter 4, Division 3, Sections 3091 and 3092 of the Labor Code of the State of California, provide that all meetings of the council shall be open to the public. ...

The California Apprenticeship Council has several subcommittees; none of these subcommittee meetings are closed.

In general, there appear to be no compelling reasons for not requiring by statute that all subcommittee meetings be open to the public. There might be two exceptions to this inasmuch as the council acts as an appellate body on decisions of the administrator under hearing procedures as established in the Labor Code. It might be possible that adverse parties, contesting before a hearing of the council, would not wish to reveal in public certain matters that are confidential to the contesting parties.

Charles F. Hanna
Chief

State Compensation Insurance Fund

... The sole function of the State Compensation Insurance Fund is to conduct a workmens' compensation insurance business on a fair and fully competitive basis with privately owned insurance companies. ...

Because the State Compensation Insurance Fund is a competitive insurance business its board of directors' meetings have been conducted in the same manner as those of its competitors.

It is our deep and abiding conviction that requiring the meetings of the board of directors to be open to the public would be inimical to the best interests of the State Compensation Insurance Fund, and, in a larger and broader sense to the State of California, and its citizens who are benefited by the Workmen's Compensation Law. ...

The matters dealt with by the fund's board of directors are of no interest to the general public. The views of the general public could be of no assistance to the board of directors in arriving at their conclusions. For example, the board must inform itself of general business trends, of significant trends in the workmen's compensation insurance field, of the business progress and effectiveness of the fund. This is accomplished through the medium of reports and discussions with the manager. The problems of individual corporate policyholders, involving intimate information concerning their business affairs and financial stability must be discussed with the board. If such discussions took place in public, rather than within the confines of the board room, these firms would transfer their business to a private carrier where a proper confidential business relationship could be assured. The board must concern itself with the fund's sound fiscal management. Investment of funds is an important phase of any insurance business. A review of an investment program must be continuously pursued—yet the opinions of the general public on such matters could serve no useful purpose.

T. Groezinger
Chief Counsel

Department of Employment

... The department does not hold formal meetings except with respect to the adoption, amendment, or repeal of regulations for the administration of the Unemployment Insurance Code. Regulation meetings are governed by Sections 305 through 308 of the Unemployment Insurance Code and Chapter 4.5 (commencing with Section 11371), Part 1, Division 3, Title 2, of the Government Code.

S. G. Goodman
Deputy Director

Governor's Advisory Council on the Department of Employment

... Section 355 of the Unemployment Insurance Code ... does not specifically require that the meetings of the advisory council must be open to the public. However, a number of our meetings have been public meetings in that notice of the meetings was given to the public. Even where we do not give a notice to the public, the public is not precluded from attending the meetings.

Sam Kagel
Chairman

Fair Employment Practice Commission

... The Fair Employment Practice Commission heartily endorses the policy of holding open meetings whenever possible. Therefore, so far as this commission is concerned, it is agreed that all of their meetings be public meetings, except in sessions where certain matters are considered and which are listed below:

1. *Conciliation conferences:*

These conferences are made confidential by both the FEP Act and the Fair Housing Act and, therefore, under the law, cannot be open meetings.

2. *Disposition of cases:*

In order to afford the respondent and complainant in our case matters some confidential protection, the commission has always followed the practice of not discussing these matters or disposing of them in public meetings. This has worked well and has made respondents more cooperative in resolving issues that arise out of cases. We would, therefore, recommend that the commission be allowed to continue to hold closed meetings for this purpose.

3. *Consultation with legal counsel:*

This merely embodies the legal concept of the confidential relationship between attorney and client. It is the commission's feeling that it should be allowed under the law to confer with their legal counsel in closed sessions.

4. *Personnel matters:*

This is a generally accepted procedure under the Brown Act, and we feel the same should apply to our Agency.

5. *Deliberations of commission in arriving at a decision following a public hearing:*

Here again, we might compare the commission hearing a case with a jury in civil matters. In other words, it appears that it is reasonable to allow the hearing panel of commissioners at a public hearing to deliberate and arrive at a decision in a closed session. During these deliberations, they will also have legal counsel with whom they may consult. We, therefore, suggest that closed sessions are quite necessary for these purposes.

Edward Howden
Executive Officer

Industrial Accident Commission

... By Section 136 of the Labor Code, all meetings of the commission, except for the purpose of judicial deliberation of cases, shall be open to the public.

... We do not schedule meetings for committees, or subcommittees, and other groups smaller than a quorum.

Since a group smaller than a quorum would not be effective in determining either policy or matters that concern the commission as a whole, there would be no reason to schedule other than a meeting which could produce effective results.

J. William Beard
Chairman

Industrial Safety Board

... The board's duty is that of reviewing and adopting industrial safety orders to become a part of the California Administrative Code. After adoption such regulations have the effect of law in establishing minimum safety requirements applying to California employment.

Does your agency schedule open meetings for committees, subcommittees, and other groups smaller than a quorum?

"No. I know of no such small meetings having been held."

Are there any compelling reasons for not requiring by statute that your agency follow such practices?

"No."

George A. Sherman
Secretary

Industrial Welfare Commission

. . . The Industrial Welfare Commission is covered by specific requirement and exception in Labor Code Section 71.1.

The Industrial Welfare Commission does not hold meetings of committees, subcommittees or other groups smaller than a quorum. However, under Labor Code Section 1178 the commission is required to appoint a wage board made up of an equal number of employer and employee representatives with an impartial chairman. The purpose of the wage board is to make recommendations to the commission on minimum wages, maximum hours and working conditions for women and minors in a particular industry. The proceedings and deliberations of the board are made a matter of record to be reviewed by the Industrial Welfare Commission in public hearings. Traditionally, the meetings of the wage boards have been attended by members, alternates and required staff. On the chairman's request expert witnesses and additional information is sometimes requested. Labor Code Section 71.1 is silent as to the meetings of the wage boards. . . .

Since the wage board meetings are composed of an equal number of employer and employee representatives and the public does not participate in these recommendations, we feel that the present practices are sufficient since the conclusions of the wage board become a subject of public hearings.

Florence G. Clifton
Chief

Commission on Manpower, Automation and Technology

Does your agency schedule open meetings for committees, subcommittees, and other groups smaller than a quorum?

"No."

Are there any compelling reasons for not requiring by statute that your agency follow such practices?

"The reasons may not be compelling but they are persuasive to the point that, if disregarded, the work of the commission would be seriously hampered.

"We have reference, especially, to the work of the Research Committee of the commission. This committee's practice is to meet with representatives of government and private organizations asking them for a full and frank discussion of the problems confronting their agencies that lie within the commission's area of interest. They are also questioned concerning their research needs. We have good reason to believe that much information of great value to the commission in its subsequent deliberations would not have been given to the public or to the press, or presented before the full commission at an open meeting."

Andrew C. Boss, S.J.
Chairman

Unemployment Insurance Appeals Board

. . . Section 408 of the code provides that meetings, hearings, and proceedings of the appeals board are open to the public. There is no specific statutory provision requiring that hearings on appeals to referees shall be open to the public. However, Section 408 has been interpreted by the board to apply to referee hearings.

There is one exception to the above provided by Section 2713 of the Unemployment Insurance Code whereby a claimant for disability benefits may request a closed hearing.

Gerald F. Maher
Chairman

HEALTH AND WELFARE

Citizens' Advisory Committee on Aging

... As an agency not presently covered under the open meeting legislation, we wish to report as follows:

It is the practice of the committee to consider all of its meetings open to the public and press. All of our meetings are accompanied by advance publicity and notice and are frequently attended by interested persons or groups.

We believe that there are no compelling reasons why the committee should not be required by statute to hold open meetings. This would merely reaffirm and formalize our present practice.

William D. Bechill
Executive Secretary

Coordinating Council on Programs for Handicapped Children

... As a note of explanation, the coordinating council consists of the directors of the Departments of Education, Mental Hygiene, Public Health, Social Welfare, and Rehabilitation. Much of the work of the council is done by a committee consisting of administrative personnel from the various departments, who ... are called the staff committee of the Coordinating Council on Programs for Handicapped Children.

In response to your questionnaire, we are not certain as to whether the coordinating council is covered by open meeting legislation, but the members of the council would certainly have no objections to specific legislation being prepared if it is deemed advisable ...

The meetings of the council and of the staff committee are open to the public although no particular effort has been made to advertise such meetings or to solicit public attendance.

Andrew Marrin
Chairman

Department of Public Health

... The meetings of the boards, commissions, and committees affiliated with this department are open to the public and it is so stated in many of the statutes governing such groups.

There are, however, two situations ... to which we would like ... call your attention, involving the Cancer Advisory Council and the Coordinating Council for State Programs for the Blind.

Enclosed are copies of letters written to Mr. Marks in 1963 which clearly outline the problems of making these two groups "open to the public" by law. ...

Robert G. Webster
Chief

Enclosures

Letter to Assemblyman Marks relating to the Cancer Advisory Council, May 1, 1963.

... The responsibility of the council is that of investigating the efficacy of drugs and devices alleged to be proper for the treatment of cancer, and to control the enforcement of the Cancer Quackery Law ...

The Cancer Advisory Council, at their meetings, discuss freely some of the following matters:

a. The nature of evidence accumulated against a proponent of an unorthodox remedy.

b. The known facts regarding the personal activities of the proponent.

c. The name of the next proponent to be investigated and the specific remedy in use by him.

d. The names of informers and of undercover operators furnishing information to us and the nature of that information.

A disclosure of proposed activities would alert a proponent to the point where he would be able to cover up his activities. If the names of informers and undercover operators became known to a proponent prior to the formal hearing required by Section 1720 of the Health and Safety Code, it would provide the proponent with an opportunity to annoy, threaten or use actual violence to prevent testimony being given. Also, the knowledge that an individual or a method of therapy is being in-

vestigated might cast public doubt on the individual or the procedure before findings were made.

There are occasions when it is necessary for the council to examine records pertaining to specific patients alleged to be inflicted with cancer, and who are being treated for this condition. And there are situations where such records should not be available to the public and should not be discussed in open meetings. There might also be situations wherein a medical practitioner would be required to present evidence relative to his specific treatment of a given patient where the evidence could be properly considered as Confidential.

We would not expect other governmental agencies dealing with crime, such as the police department or narcotic enforcement agency to publish in advance proposed activities dealing with the elimination of narcotic or other violations, and I believe that the crime of using fake remedies in the diagnosis or treatment of cancer is closely enough related to the violations referred to that advance warning should not be given here. The intent of the legislation is to put cancer quacks out of business, and restrictions such as are inherent in public meetings should not provide them with the means of escaping that intent.

Letter to Assemblyman Marks relating to the Coordinating Council on State Programs for the Blind, May 2, 1963.

... These meetings have never been "closed" to any one but experience indicates that there have never been any "members of the public" who have appeared at such meetings.

... Since the council is made up of three department heads, they have been in the habit of meeting four times a year, at an informal luncheon, when the reports of committees are presented to them and they make suggestions for the coordination of the efforts of the various state departments interested in this activity. There is, of course, nothing "secret" in any of their deliberations.

On the other hand, our concern is that if this council is listed as a group meeting "in public," it will be necessary for the meetings to be formalized with advance notice, for an agenda to be prepared, and for the meeting to be conducted in a hearing room where members of the public can be accommodated and heard. This would involve considerable additional activity.

It is our feeling that the public has adequate means to be heard by the departments which are involved in the program of Aid to Blind and the Prevention of Blindness, and that there would be no particular point in making the meetings of the Coordinating Council on State Programs for the Blind available to them.

Department of Mental Hygiene

... All the committees in this department which are not covered by "open meeting" requirements serve only an advisory or informational role. They typically do not have public or "open" meetings. Those units covered by open meeting laws may meet without call by officers of this department.

Only one reason seems to argue against compelling that this agency hold open meetings of all committees, boards, and commissions. When a committee has an advisory function in addition to any regulatory function, it seems unreasonable to compel the director to seek advice and counsel in a public setting. He should have the option of gathering information from bodies with a specific assignment of providing that information without being subject to public audit, just as the Legislature has the prerogative of conducting executive sessions. Otherwise, compelling public meetings creates no serious problems except for the additional clerical preparation in arranging public notices and making records of the meetings available to the public later.

This agency does not schedule open meetings of groups smaller than a quorum. Those boards and committees closely related to this department which have open meeting requirements in the law are sufficiently autonomous in operation that they do not depend upon this agency to call meetings. They are not instruments of this department.

Tom Moore
Executive Assistant

Study Commission on Mental Retardation

... The Study Commission on Mental Retardation was created by the 1963 session of the Legislature and the commission will go out of existence when the regular 1965 session adjourns.

The study commission conducted all of its work in the public eye. There were seven meetings, all of them open to the public, publicized in advance through the major news media and attended by interested citizens. Moreover, when the commission had reached agreement on its tentative conclusions and recommendations, it undertook to share its ideas with the people of California at regional workshops arranged and conducted by University of California extension.

Such work of the commission as was assigned to committees was generally executed by one member of the commission who involved others by correspondence and telephone, rather than by regularly called meetings.

Leopold Lippman
Executive Secretary

Motor Vehicle Pollution Control Board

All committee meetings are fully covered by public reports so there is no secrecy involved. The problem of a public committee meeting is twofold.

First we are dealing with highly proprietary and competitive data on auto smog control devices. For a full discussion of (for example) test procedures or criteria, it is necessary to tailor requirements to cover all these proprietary possibilities.

Secondly, there is a question of timing. Oftentimes emergency committee meetings are necessary in this fast moving field and sufficient public notice would be difficult.

... There has been little or no interest in our committee meetings on the part of developers of smog devices. If they ask to attend we invite them with a limitation on discussion of proprietary data of competitors. The press occasionally has a reporter stop in but they invariably leave because of the usually highly technical discussion *without* any conclusions being reached.

Only the board at an open public meeting can make any decisions.

D. A. Jensen
Executive Officer

State Social Welfare Board

... The State Social Welfare Board ... since 1963, has been an advisory body ... which is required by law to have open meetings. The board likewise has no closed door committee meetings. ...

J. M. Wedemeyer
Director

HIGHWAY AND TRANSPORTATION

Aeronautics Board

Our department is completely covered already in regard to the necessity of holding all action meetings open to the public.

We do not hold any board meetings with the exception of those dealing only with personnel matters in a closed fashion.

Our board meets only eight or nine times a year for one day, and inasmuch as the nature of our business is entirely public, there is no reason why we should not be open to the public in any event.

Clyde P. Barnett
Director

Department of California Highway Patrol

... It is the practice of this department to hold open meetings on any subject not related to personnel matters or matters pertinent to the administration of the department.

We know of no compelling reason why this department should not be subject to statute requiring open meetings except for meetings relating to personnel administration matters.

... Open meetings are scheduled. If less than a quorum is in attendance, such matters as it may be possible to consider are discussed.

Bradford M. Crittenden
Commissioner

Board of Harbor Commissioners for Humboldt Bay

... This is to advise that the local board of harbor commissioners does not have any closed meetings. All of our meetings are open to the public ... however, this board does not have finances available to post notices in the local newspapers re meeting dates, time, etc.

R. W. Saukko
Chairman

Department of Motor Vehicles

... This agency is presently covered by open meeting legislation and we do not schedule meetings for committees, subcommittees, or other groups smaller than a quorum. There are no compelling reasons for not requiring by statute that this agency follow such practices. We see no difficulties between meetings of the whole and meetings of lesser groups which would serve to limit the open meeting plan.

Tom Bright
Director

California Reciprocity Commission

... This agency is covered by open meeting legislation.

This commission holds no meetings involving groups smaller than a quorum, and consequently, no open meetings are scheduled except for those meetings officially at which a quorum is present.

Tom Bright
Director

San Francisco Port Authority

... The San Francisco Port Authority is covered by the present open meeting legislation. Advanced notification and copies of tentative agenda of the semimonthly meetings are sent to newspapers, radio, and TV stations. As a rule, only newspaper people provide coverage of authority meetings. However, arrangements have been and will be made for TV and radio coverage when requested. It is also made clear to interested inquirers that our authority meetings are open to the public. Citizens attending such meetings are always welcomed and are given the opportunity to comment on matters being presented to the authority.

Edward L. David
Assistant to the Port Director

Department of Public Works

... The following bodies are concerned with the operation of the Department of Public Works:

1. The California Highway Commission
2. The California Toll Bridge Authority
3. The advisory committee on a master plan for scenic highways

The highway commission and the toll bridge authority are expressly subject to the open meeting requirements of Government Code Section 11015. The advisory committee on scenic highways is not subject to such specific legislation. In answer to the questions contained in your questionnaire, the following information is furnished regarding these bodies:

- (1) Concerning the advisory committee on scenic highways:
 - (a) It is the uniform practice of the advisory committee to hold open meetings.
 - (b) There would appear to be no compelling reasons for not requiring by statute that this agency hold open meetings.
- (2) Concerning the highway commission and the toll bridge authority:
 - (a) The highway commission and the toll bridge authority seldom conduct meetings for groups smaller than a quorum. Occasionally, one or more highway commissioners will preside over a public meeting called for the

purpose of taking evidence concerning proposed highway route locations. Also, the highway commission has appointed two of its members to serve with members of the park commission on a special joint committee for the purpose of attempting to solve problems of common interest.

- (b) and (c) There would appear to be no compelling reasons for not requiring by statute that these bodies conduct open meetings should they decide to meet in groups smaller than a quorum. However, there might be some merit in delaying the enactment of such legislation until the law is further clarified concerning the meaning of the word "meeting." We have been advised that some local bodies have been experiencing some difficulty as a result of the interpretation that the Attorney General's office has placed upon the meaning of the word "meeting" in the Brown Act.

John Erreca
Administrative Officer

RESOURCES

Colorado River Board of California

... The Colorado River Board does not hold open meetings. Section 12516 provides that all information and records of the board are confidential and they are not available to the public except upon authorization of the board.

The board considers it to be essential that all meetings be closed to the public in order that it may effectively fulfill its statutory functions and activities and that it is consistent with its policy-making decisions that this restriction be maintained. The Colorado River Board is singular in that its policy-making activities relate to interstate relationships with both state and federal agencies having functions and responsibilities relating to Colorado River resources and developments. The extremely important and complicated legal aspects of Colorado River problems make it important that deliberations involving decisions in these areas be restricted information.

Harold F. Pellegrin
Executive Secretary

Department of Conservation

... This department operates with the policy stated in Government Code 54950 and all meetings called, either by the department or any of its boards and commissions, are conducted to both the letter as well as the spirit of that policy statement.

DeWitt Nelson
Director

Fish and Game Commission

... Our meetings are covered by the open meeting legislation.

... When less than a quorum is present no action can be taken, and the commissioner or commissioners are generally acting as hearing officers.

Leslie F. Edgerton
Assistant to the Commission

Forest Practice Committees

... There are four forest practice committees, each consisting of four citizen members appointed by the Governor and serving at his pleasure and a fifth member from the Division of Forestry . . .

These committees meet on call of the chairman, usually meeting to review forest practice rules, to propose new or amended rules or to consider approval of alternate rules of forest practice . . .

All meetings of the committee are required to open to the public . . . by Sec. 4941.5, Pub. Res. Code.

Any meeting of the committee or any subcommittee is open to the public.

There is no compelling reason for not requiring such practices.

There are no differences between the meeting of the whole and meetings of any subcommittee which would be compelling reasons for not extending the open meeting principle to the latter.

F. H. Raymond
State Forester

Board of Forestry

The State Board of Forestry is required by law, under Sections 505.1 . . . to hold open and public meetings . . .

Committees and subcommittees and groups smaller than a quorum of the board have customarily held their meetings open to the public.

There are no compelling reasons why this practice should not be required by statute.

Insofar as this board is concerned, meetings of committees of the board have no reason to be secret or closed to the public any more so than would regular or special meetings of the board itself.

W. B. Carter
Chairman

Klamath River Compact Commission

The Klamath River Compact Commission is an interstate agency. Rules and regulations for the conduct of its meetings are set forth in Article IX of the Klamath River Basin Compact between the States of Oregon and California. Paragraph 9 of subdivision A of this article provides that:

"All meetings of the commission for the consideration of and action on any matters coming before the commission, except matters involving the management of internal affairs of the commission and its staff, shall be open to the public. Matters coming within the exception of this paragraph may be considered and acted upon by the commission in executive sessions under such rules and regulations as may be established therefor."

The commission is composed of two voting members and one nonvoting member. No meetings for groups smaller than a quorum are practicable, and therefore are not scheduled.

Since it is an interstate agency, the commission would not be subject to statutes of the State of California regarding meeting practices. As a practical matter the commission cannot function as a group smaller than a quorum.

Robert B. Bond
Executive Director

Pacific Marine Fisheries Commission

The Pacific Marine Fisheries Commission is presently composed of membership from the States of California, Washington, Oregon, and Idaho.

The Pacific Marine Fisheries Commission is covered by open meeting legislation as follows: "All meetings of the commission shall be open and public, and all persons shall be permitted to attend any meetings of the Commission." (Fish and Game Code Section 14106.)

W. T. Shannon
Director

Goose Lake Compact Commission

To the best of its knowledge this commission is not presently covered by open meeting legislation.

It is the practice of this commission to hold open meetings.

There are no apparent compelling reasons for not requiring by statute that this commission hold open meetings.

Reginald C. Price
Chairman

California-Nevada Interstate Compact Commission

To the best of its knowledge this commission is not presently covered by open meeting legislation.

It is the practice of this commission to hold open meetings.

There are no apparent compelling reasons for not requiring by statute that this commission hold open meetings.

A. M. Barton
Chairman

Marine Research Committee

. . . Subcommittees in the formal sense are rarely used. Occasionally one or more members are requested to study a particular problem and report back to the entire committee.

However, I would like to observe that too stringent a requirement for open meetings of subcommittees and working parties would tend to weaken appointive bodies for the simple reason that the only persons with the privilege of thoughtful, private, and thorough consideration of problems would be paid staff members.

As already indicated meetings of less than the full committee are always in the nature of study groups seeking to develop in depth problems that have arisen during open meetings. These have always been ad hoc assignments. Sometimes only one member is involved. A requirement to perform such tasks in public would negate their usefulness and we would have to assign the studies to staff members.

J. G. Burnette
Chairman

The Reclamation Board

... Section 8562.5 of the Water Code provides that all meetings of the board shall be open and public. . . . The board has two committees which have met on very rare occasions during the past few years. Insofar as we have been able to ascertain, the meetings of the committees held in the past were not scheduled as open meetings. . . . we do not know of any compelling reasons for not requiring that the meetings of the board's committees be open meetings.

A. E. McCollam
General Manager

Recreation Commission

The Recreation Commission is required by law to have all its general meetings open to the public. The commission, during my chairmanship, has not had any subcommittee meetings or meetings of other groups smaller than a quorum. I can think of no reason for not requiring that our meetings be public with the exception, of course, of executive meetings where personnel might be discussed.

Considering our commission alone, I can perceive no differences between meetings of the whole and meetings of subcommittees and other groups smaller than a quorum which would serve as reasons for limiting or qualifying the extension of the open meeting plan to the latter.

Mrs. Dewey J. Forry
Chairman

Small Craft Harbors Commission

... The Small Craft Harbors Commission is required by statute to hold open meetings.

Open meetings are not scheduled for groups smaller than a quorum nor are such meetings held.

The statutes provide that no action shall be taken by the commission by less than a majority of its members. A meeting of less than four of the seven members of the commission would therefore be pointless.

Lachlan M. Richards
Chief

Water Commission

... Section 164 of the Water Code already provides for such practices.

The use of subcommittees and committees of the Water Commission is necessary because of the large membership of the commission and the fact that its members come from widely separated parts of the state and because of the large number of statutory responsibilities. Section 164 of the Water Code provides that the commission may conduct any hearing or investigation by any member or nominee on authorization of the commission but that final action of the commission must be taken by a majority of the members at a meeting duly called and held. The section further provides that all hearings held by the commission or by any member or nominee thereof, shall be open and public. The commission subcommittees have, in the past, conducted work sessions following such hearings for the purpose of drafting their recommendations to the full commission. Similarly, subcommittees of the commission have inspected various water projects as a part of the commission's responsibility for prior approval of loans and grants under the Davis-Grunsky Act and for various other projects. Without such work sessions and field trips the work of the subcommittees and of the commission as a whole would be seriously restricted.

It is our opinion that the Legislature noted the difference between hearings and other meetings of the subcommittee in Section 164. That section held that the com-

mission could hold hearings and investigations by subcommittees but further provided that only hearings by such subcommittees must be open and public.

William M. Carah
Executive Secretary

Water Rights Board

... The Water Code in Sections 181 and 183 expressly provides with respect to the State Water Rights Board that all meetings of the board and hearings held by it "shall be open and public."

With possible rare exceptions, the work of the board is not conducted on a committee or subcommittee basis. Water Code Section 183 does authorize any board member upon authorization of the board to conduct any hearing or investigation, but all such hearings are open and public.

L. K. Hill
Executive Officer

Water Quality Control Board

... The State Water Quality Control Board is presently covered by open meeting ... legislation (Water Code Sections 13007 ...), but the board has never established a policy regarding open meetings for committees. ... I will reply to the questionnaire after I have been given some guidance as to board policy. ...

Paul R. Bonderson
Executive Officer

Water Quality Control Board

... The board, on occasion, schedules open meetings for committees.

The board is of the opinion that there are compelling reasons for *not* requiring by statute that all of its committee meetings shall be open to the public.

The board feels that there are differences between meetings of the whole and meetings of committees and other groups smaller than a quorum.

Paul R. Bonderson
Executive Officer

Wildlife Conservation Board

... The full Wildlife Conservation Board and legislative interim committee meet as a group as required by law.

R. J. Nesbit
Executive Officer

REVENUE AND MANAGEMENT

State Allocation Board

The meetings ... of the State Allocation Board are required to be open and public pursuant to Section 15490 of the Government Code.

The State Allocation Board, from time to time in the past, has appointed a committee from its membership to study particular problems. While the committee meetings are open, general notice is not given. However, any persons or groups known to be interested are notified and invited to attend.

There are no compelling reasons against requiring (by statute) that committee meetings be scheduled and open—provided the procedures for meeting the requirements do not impede progress, timewise or otherwise. On the other hand, there appear to be no compelling reasons for such requirements since the proceedings and findings of the committee are reviewed in a regularly scheduled open meeting of the board and interested persons are afforded an opportunity to be heard before a decision is made.

There are no differences between the meeting of the whole and the meeting of the committee that would be compelling reasons for limiting or qualifying the application of the open meeting principle to the *committee* meetings. However, the application of the open meeting principle to "other groups smaller than a quorum" could interfere with the board's efficient operation if what constitutes a "meeting" is not clearly defined or if informal discussions, etc., were included.

Paul T. Hoyenga
Assistant Executive Officer

Capitol Building and Planning Commission

... It is the practice of Capitol Building and Planning Commission to hold open meetings.

... There are no compelling reasons for not requiring the commission to hold open meetings by statute.

James M. Bordenkircher
Staff Coordinator

Communications Advisory Board

... All meetings of this board are open meetings to the public and press.
There are no compelling reasons for not following this practice.

William E. Whiting
Chairman

Board of Control

... Meetings of the Board of Control are presently open to the public. Item (2) of the questionnaire is not applicable since the board does not have committees, subcommittees, or other groups smaller than a quorum.

B. V. Dittus
Secretary

Exposition and Fair Executive Committee

... The committee has held open meetings. Their agenda is distributed to the press.

There are no reasons for other than open meetings except when the committee has been interviewing and selecting staff for appointment.

Committee meetings have been open, except personnel interviewing and selection committees.

Stanley B. Fowler
Executive Officer

Board of Equalization

... The board does not hold meetings or make decisions with less than a quorum of its members present.

Under published rules of procedure, individual board members act as hearing officers for specified types of tax appeals. The hearings are scheduled hearings which are open to the public and the board member reports the facts to the board for its decision.

Each member of the board also acts as chairman of a committee of employees of the board concerned with a specified segment of our administrative operations. These staff committees meet on an irregular basis. Staff recommendations originating from a committee are reported to the board for decision at scheduled open meetings.

H. F. Freeman
Executive Secretary

Franchise Tax Board

... The Franchise Tax Board is covered by open meeting legislation. Section 15703 added by Stats. 1957, p. 3865, provides:

15703. All meetings of the board shall be open and public, except during executive sessions of the board if public disclosure of the subject under discussion or consideration is prohibited by law.

... the Franchise Tax Board may authorize any person to conduct a public hearing for the purpose of considering proposed regulations. However, the results of the hearing and summaries or copies of material presented at the hearing must be submitted to the Franchise Tax Board before it acts on the proposed regulation.

Martin Huff
Executive Officer

Public Works Board

... As you are aware, in 1963, Section 11015 was added to the Government Code. Pursuant to this section all meetings of the State Public Works Board must be open and public. In practice, this section has had no changed effect on meetings of the State Public Works Board since the policy of the board has always been that all meetings of the board shall be open and public. Since the Public Works

Board consists of only three voting members and does not hold committee meetings, the board never has taken a position on the question of whether committee meetings should be open and public.

H. C. Vincent, Jr.
Administrative Secretary

State Building Standards Commission

... Meetings of the Building Standards Commission are open to the public. (Section 18909 H. & S. Code.)

There appears to be no reason for not requiring that the commission meetings shall be open to the public.

Meetings for committees, subcommittees, advisory panels and other groups smaller than a quorum are handled occasionally with some degree of informality and are not *always* scheduled as open meetings.

There appears to be no absolutely compelling reason for not requiring that meetings of the committees, subcommittees, advisory panels and other minor groups shall be open to the public. However, in many instances such meetings are open to the public. Also all known divergent interests are represented in these informal groups.

No official action of the commission shall be taken at an informal session which includes meetings of committees, subcommittees, advisory panels and minor groups (Title 24 Calif. Admin. Code Section 312). Some informality involving closed meetings is desirable for reasonable economy, effectiveness, expediency and promptness of action particularly regarding special assignments involving factual exploration and investigation. All findings, conclusions and recommendations, however, are subject to review and confirmation by the commission at formal open meetings.

Harry A. Cobden
Executive Secretary

State Employees' Retirement System

... The Board of Administration is subject to the requirement that its meetings be open and public (Sec. 20136, Govt. Code). The board's meetings have always been open and public.

The board is authorized to delegate authority to act to a committee of its members. It has not used this authority in recent years, except in the investment field. It has appointed a standing committee to assist in the purchase of securities from lists of securities acceptable for purchase established by the board in open meeting. The system is a large investor. Opening of this committee's meetings would supply information as to purchases under consideration to the system's disadvantage in the market. Opening of the meetings of this committee could obstruct the system's obligation to obtain maximum productivity of employer and employee contributions entrusted to its care. We think the public's right to know in his area is adequately protected by the board's action in open meetings to establish its list, to approve all purchases by name and the publication of the system's security holdings.

William E. Payne
Executive Officer

State Lands Commission

... All meetings of the State Lands Commission are open to the public pursuant to Section 6109 of the Public Resources Code.

The lands commission consists of three members. Attendance less than a quorum would amount to a committee or group consisting of one member. Therefore, such a statutory requirement could place each commissioner in the untenable position of having to call a public meeting for the purpose of conferring with one of the commission's staff or any other person.

Meetings of the lands commission always consist of a quorum. No action or resolution may be taken or passed at meetings of committees, subcommittees or groups. In fact, no public hearing may be conducted by the executive officer of the lands commission or a commissioner without authority of the full commission and adequate public notification.

F. J. Hortig
Executive Officer

State Personnel Board

... Under the provisions of Government Code Section 18653 the meetings of the State Personnel Board are open to the public. ...

The Personnel Board does not have meetings of subcommittees or other groups with a number smaller than a quorum.

We do not believe additional legislation is necessary. We have always interpreted and applied Government Code Section 18653 as precluding meetings or action with less than quorum and as requiring that all meetings be opened to the public.

For the reasons stated above, additional legislation does not appear necessary.

John F. Fisher
Executive Officer

Television Advisory Committee

... Please be assured that the Television Advisory Committee conducts all of its meetings in public sessions with locations and agendas published prior to the meetings, a practice we intend to continue.

Dr. Frymire
Television Coordinator

PUBLIC SAFETY

Atomic Energy Development and Radiation Protection

... The Advisory Council on Atomic Energy Development and Radiation Protection is required by Statute (Section 25763, Chapter 7.5, Division 20, California Health and Safety Code) to hold only open and public meetings.

All council meetings are open regardless of the number of members present.

Gene A. Blanc
Secretary

Departmental Coordinating Committee on Atomic Energy Development and Radiation Protection

... The Departmental Coordinating Committee on Atomic Energy Development and Radiation Protection is required by statute (Section 25751, Chapter 7.5, Division 20, California Health and Safety Code) to hold only open and public meetings.

All committee meetings are open regardless of the number of members present.

Gene A. Blanc
Chairman

California Disaster Office

The following responses are provided to your questionnaires of November 24, 1964, addressed to the California State Disaster Council and the citizens' advisory committees to assist in specific fields of disaster:

... Both the California State Disaster Council and citizens' advisory committees are covered by the provisions of Section 11015 of the Government Code.

Normally, the California Disaster Office only schedules meetings of the disaster council or of an advisory committee as a whole. These bodies have no standing subcommittees. Occasionally one of the advisory committees appoints a subcommittee of three or four members to prepare a detailed report and recommendations on some specific subject; meetings of such subcommittees are customarily arranged informally by the subcommittee chairman at the convenience of its members.

The principal difficulty created by a requirement for public notice and open meetings in connection with such subcommittees would seem to be that it would prevent their meeting in one of the members' offices on short notice.

Members of these advisory committees receive no compensation for their services. A few of their members are employees of some public agency, but most of them are private citizens who are expert in some field related to disaster preparedness. In accepting membership, they are agreeing to donate a certain amount of time, as a public service, to make their experience available to the state. When a few of these members agree to research some problem and prepare a report for the committee as a whole, it would seem to impose an unnecessary burden to require that they give

public notice of their meetings and make the special arrangements necessary for the holding of a public meeting.

John W. Gaffney
Director

State Fire Advisory Board

The State Fire Advisory Board is created within the office of the State Fire Marshal and acts in an advisory capacity to the State Fire Marshal. The board meets at the call of the Fire Marshal and all meetings are open and public.

It has been my general practice to schedule meetings of the board as a whole. However, should meetings of committees, subcommittees, and other groups smaller than a quorum be scheduled, such meetings would also be open and public.

There are *no* compelling reasons for not requiring by statute that the State Fire Marshal follow such practices.

There are *no* differences between the meeting of the whole and meetings of groups smaller than a quorum which would serve as compelling reasons for limiting the open meeting principle in the case of groups smaller than a quorum.

Glenn B. Vance
State Fire Marshal

Department of Veterans Affairs

... The Department of Veterans Affairs participates in meetings of the California Veterans Board which is open to the public. An advisory committee to the veterans board meets at the call of the veterans board and this also is open to the public. The Director of Veterans Affairs is secretary to the Veterans Finance Committee which is also open to the public.

Our department does not schedule meetings for these boards with less than a quorum present.

There are no reasons for not requiring by statute that our department follow such practices.

Dean Hooper
Administrative Assistant

OTHER BOARDS AND COMMISSIONS

Governor's Council

This is in response to your questionnaire regarding the meetings of the Governor's Council. The Governor's Council meetings are open to the public and press coverage is always invited.

The council does not currently have any subcommittees, and has not held special meetings or meetings other than those regularly scheduled.

Since the purpose of the council is an exchange of reports between department heads and the Governor, there is no reason to restrict public information regarding these reports. As a matter of practice, copies of written reports are made available to the press and any interested parties.

Ronald A. Clark
Assistant Cabinet Secretary

California Arts Commission

... Chapter 1742 creating the California Arts Commission provides under Section 6, "All meetings of the commission shall be open and public and all persons shall be permitted to attend any meetings of the commission."

There would be some question in my own mind as to whether or not personnel committee meetings should be open meetings. Confidential and personal information may be involved.

Abbott Kaplan
Chairman

Coordinating Council on Urban Policy

... The coordinating council is an agency presently covered by open meeting legislation. ... all meetings of the council are open to the public. The only meeting of a group smaller than the full council are those of the council executive committee consisting of five members and all of these meetings are held in meeting rooms and

offices which are open to the public. I know of no compelling reasons why all meetings of the coordinating council should not be open to the public.

Philip G. Simpson
Executive Secretary

Controller

. . . While all of their meetings are, in fact, open to the public, the statutes do not specifically name the Committee on County Accounting Procedures (Government Code Sec. 30201) or the Advisory Committee on Tax-Deeded Property (Revenue and Taxation Code Sec. 3534).

All meetings thereof are open.

The advisory committee to assist the Controller in developing complete and adequate records (Government Code Sec. 12463.1) is specifically mentioned in Government Code Sec. 11015.

Ralph I. McCarthy
Deputy

Commission on Judicial Qualifications

. . . With respect to questions (1) (a) and (1) (b), it is *not* the practice of this agency to hold open meetings and there *are* compelling reasons for not requiring the agency to hold open meetings.

The applicable law on the subject is contained in Section 10b of Article VI of the California Constitution, "all papers filed with and proceedings before the Commission on Judicial Qualifications or masters appointed by the Supreme Court, pursuant to this section, shall be confidential . . ."

Before the constitutional amendment establishing this commission was submitted to the people, this subject received the most careful attention. It was decided by the Legislature and the various persons who had been working on a method of removing unfit judges that the public interest required the fullest protection of the courts and reputations of judges against unjustified accusation. It was, therefore, determined that unless a recommendation for removal or retirement were filed with the Supreme Court matters pending before the commission would be confidential.

Lloyd E. Griffin
Chairman

Commission on Voting Machines and Vote Tabulating Devices

In answer to your inquiry of November 24, this is to advise that all meetings of the State Commission on Voting Machines and Vote Tabulating Devices are open to the general public.

Frank M. Jordan
Secretary to Commission

Treasurer

. . . For your information, the Pooled Money Investment Board consists of the Director of Finance, the State Controller, and the State Treasurer as chairman. All meetings are required to be open to the public in accordance with Section 16480.1 of the Government Code.

I would just like to add that I am in complete accord with the open meeting principles as regards all governmental agencies.

Bert A. Betts
State Treasurer

III. PUBLIC RECORDS
AND
THE RIGHT OF INSPECTION

THE RIGHT OF INSPECTION

The English courts declared that there was no common law right in all persons to inspect public records. However, the courts commonly recognized the right of inspection where a record was sought for use as evidence or information in pending litigation. As a result of this **background**, the development of a definition of "public records" was for use in litigation, rather than as an instrument for making the public's business the public's business. This purpose has tended to produce a more restrictive definition which appears to have no uniform or essential relevance to access to the end that the people may know about the activities of the government agencies which exist to serve them.

CALIFORNIA LAW

California's statutory law reflects this development. The specific public records provisions were enacted in 1872 and are found in the Code of Civil Procedure relating to the admissibility of evidence in judicial proceedings.

WHAT IS A PUBLIC RECORD?

There are various statutes which bear on this question. Section 1888 and 1894 C.C.P. provide as follows:

"1888. Public writings are:

1. The written acts or records of the acts of the sovereign authority, of official bodies and tribunals, and of public officers, legislative, judicial, and executive, whether of this state, of the United States, of a sister state, or of a foreign country;

2. Public records, kept in this state, of private writings.

"1894. Public writings are divided into four classes:

1. Laws;

2. Judicial records;

3. Other official documents;

4. Public records, kept in this state, of private writings."

While these statutes might appear to be broad in their application, the courts have tended to be restrictive in their interpretation. For example, the above sections have been construed in the leading case of *Mushet v. Department of Public Service* (1917), 35 Cal. App. 630, as exclusionary. In determining whether a document in question is a public record a process of elimination must be applied. It must be either a "law" a "judicial record" or a "public record . . . of private writings" and this latter category has been construed to apply only to documents filed or recorded in public offices by virtue of recording or other laws. This leaves remaining "official documents" and "written acts or records of acts of official bodies or tribunals or public officers" and the *Mushet* case held that these sections must be construed together.

In other words, it is not enough that they be written acts or records of acts or official documents—they must be both.

PRIVILEGED COMMUNICATIONS

There is another consideration. Even though a record is public in nature it may be withheld because a public officer maintains it in official confidence. In this connection, Section 1881 (5) C.C.P. provides as follows:

“1881. (5) A public officer cannot be examined as to communications made to him in official confidence, when the public interest would suffer by disclosure.”

This statutory statement of public policy has been recognized in several cases. In *City and County of San Francisco v. Superior Court*, 38 Cal. 2d 156, the court held that private employment data acquired for the purpose of fixing the compensation of municipal employees could be treated as confidential because disclosure would have an adverse effect on the public interest.

COMMITTEE REVIEW

The most recent legislative study of the accessibility of public records was undertaken in 1953 by the Senate Special Committee on Governmental Administration. The committee report published in 1955 was titled “Public Records Survey.” In the foreword the committee stated:

This report deals with a survey as to the accessibility of government records to public inspection and is submitted without conclusions or any recommendation except that further study be given. This presentation is made at this time to afford those interested in the problem an opportunity to study these conditions prior to the preparation of legislation to clarify existing law and resolve policy in those instances where uncertainty now prevails.

This committee has undertaken to update the work of the special Senate committee pursuant to House Resolution No. 564 by Assemblyman William T. Bagley.

In order to facilitate our study a questionnaire was sent to all state agencies asking the following questions:

- (a) What agency records are presently closed to the public?
- (b) For what reasons are these records closed to the public (other than by law)?
- (c) If under certain conditions these records are open to particular sectors of the public, for instance the press, please specify?
- (d) For what reasons are these records open to a part rather than all of the public?
- (e) What suggestions have you for further opening the records of your own agency to the public?
- (f) What charges are made, and what facilities are provided for the inspections and duplication of public records?

Responses to the committee questionnaire are included as **Appendix B** to this section of the report.

COMMITTEE RECOMMENDATION

On the basis of the responses to the committee questionnaire and the decisions of the courts in interpreting the law providing for inspection of public records, the committee supports the enactment of general legislation providing for access based on the public's right to know. Such legislation should apply to all governmental agencies and require all records to be open to the public except where public policy as expressed by statute requires confidentiality. The committee also recommends continued review of statutes granting to specific agencies a privilege of nondisclosure with respect to certain of their records.

APPENDIX A

STATE OF CALIFORNIA OFFICE OF LEGISLATIVE COUNSEL

Sacramento, California
November 23, 1964

Honorable Milton Marks
Russ Building
San Francisco 4, California

Inspection of Public Records—No. 7755

Dear Mr. Marks:

You have requested a brief summary of the California laws relating to the inspection of public records by members of the public, and a short digest of cases that interpret the law on this subject.

The general provisions are found in various sections of the Code of Civil Procedure and the Government Code, and read as follows:

“1888. Public writings are:

“1. The written acts or records of the acts of the sovereign authority, of official bodies and tribunals, and of public officers, legislative, judicial, and executive, whether of this state, of the United States, of a sister state, or of a foreign country;

“2. Public records, kept by this state, of private writings.”
(Sec. 1888, C.C.P.)

“1894. Public writings are divided into four classes:

“1. Laws;

“2. Judicial records;

“3. Other official documents;

“4. Public records, kept in this state, of private writings.”
(Sec. 1894, C.C.P.)

“1892. Every citizen has a right to inspect and take a copy of any public writing of this state, except as otherwise expressly provided by statute.” (Sec. 1892, C.C.P.)

“1227. The public records and other matters in the office of any officer, except as otherwise provided, are at all times during office hours open to inspection of any citizen of the state.” (Sec. 1227, Gov.C.)

Consolidating the language of Sections 1888 and 1894 of the Code of Civil Procedure (see above), the court in *Mushet v. Department of Public Service* (1917), 35 Cal. App. 630, 634, held that before questioned documents can be denominated as public writings they must not only be “official documents” but must also be the “written acts or records of the acts” of public officials or bodies. In other words, it is not

enough that they be written acts or records of acts or official documents—they must be both. (See 44 Cal. Law Rev. 305, 316 and 50 Cal. Law Rev. 79.)

This interpretation has led to a number of opinions of the Attorney General holding that the records of various governmental agencies need not be made public. Thus, in 31 Ops. Atty. Gen. 103, 104, where the question was whether the Real Estate Commissioner need make public the applications for licenses filed by persons seeking to engage in business as real estate brokers or salesmen, the Attorney General, after stating that he found no provision of law making such applications either confidential or subject to inspection, went on to hold that since the applications were filled out by private individuals they are not the "written acts or records of the acts of the sovereign authority" nor "other official documents" and therefore there was no requirement that such applications be open for public inspection (see also 11 Ops. Atty. Gen. 41, 44 and 18 Ops. Atty. Gen. 231, 233).

Government Code Section 1227 (see above), however, provides that not only public records but "other matters" must be held open to inspection. This language has been used by the court to permit the inspection of certain papers even though they are not public records. In *Coldwell v. Board of Public Works* (1921), 187 Cal. 510, the court held that a private person had the right to inspect the preliminary estimates and plans prepared in the office of the city engineer of San Francisco in connection with the Hetch-Hetchy Project, even though the documents were memoranda prepared for use in the office and had not been formally adopted as the official acts of the engineer. Inspection was granted on the basis they were "other matters" in which the "whole public" had an interest (see also *Musket v. Department of Public Service*, supra; *City Council of the City of Santa Monica v. The Superior Court*, (1962), 204 Cal. App. 2d 68, 75; and 44 Cal. Law Rev. 305 and 50 Cal. Law Rev. 79).

Another statutory provision to be considered is Section 1881, subdivision 5, of the Code of Civil Procedure, which reads as follows:

"A public officer can not be examined as to communications made to him in official confidence, when the public interest would suffer by the disclosure."

In interpreting this section, together with the others previously set out, the courts have held that the right of inspection may be curtailed in relation to communications or portions thereof where public policy demands that disclosure be prohibited. Thus, where private employment data required for the purpose of fixing compensation of municipal employees could not be obtained except upon the express pledge that the source of the material would be treated as confidential and where the disclosure of information thus acquired would have an adverse effect on the public interest a municipal corporation was held to be entitled to keep this matter confidential (*City and County of San Francisco v. Superior Court*, 38 Cal. 2d 156). The same holding was made with regard to a report of an investigation made by a city in connection with the drowning of a child in a municipal swimming pool, in preparation for a possible action against the city (*Jessup v. Superior Court*, 151 Cal. App. 2d 102). Similar holdings have been

made with reference to documents and records filed in the offices of law enforcement agencies relating to the apprehension, prosecution, and punishment of criminals (*People v. Wilkins*, 135 Cal. App. 2d 371).

The statutes discussed above are general ones which are applicable to both the State and local governmental units such as cities and counties. They are qualified by a number of provisions relating to certain kinds of records. In respect to state governmental agencies, there are many statutes requiring all records of a particular state board or commission to be open to the public (for example, see P.R.C. Sec. 506.2, re records of State Park Commission; Ed.C. Sec. 113, re records of State Board of Education).

Other provisions require specific departmental records to be open. Illustrative are provisions concerning the records of the Department of Motor Vehicles relating to the registration of vehicles (Veh.C. Sec. 1808), wine price schedules or changes therein of the Department of Alcoholic Beverage Control (B. & P.C. Sec. 24874), records of animal brands (Ag.C. Sec. 336.2), and grain warehouse inspection records in the Department of Agriculture (Ag.C. Sec. 1260.25). Also, all records, papers, documents and reports filed with the Commissioner of Corporations under the provisions of the Corporate Securities Law, except those he elects to withhold, are open to public inspection (Corp.C. Sec. 25314).

On the other hand, certain departments are specifically prohibited from releasing certain information. For example, all information and records of the Inheritance Tax Department are confidential as to the Inheritance Tax Law and the Gift Tax Law, except those necessary for enforcement of the provisions of the laws or as permitted by such laws (R. & T.C. Secs. 14813, 16563). Except as otherwise provided, all records of the Department of Social Welfare relating to individuals in connection with the administration of the provisions of the Welfare and Institutions Code involving grants-in-aid from the United States Government except disbursement records are confidential (W. & I.C. Sec. 118). For at least six months all required accident reports are for the confidential use of the Department of Motor Vehicles and the Department of the California Highway Patrol (Veh.C. Secs. 20012-20015).

As for local governmental entities, the books, records, and accounts of a county board of supervisors are required to be kept at the office of the clerk of the board and open at all times for public inspection (Gov.C. Sec. 25104). Many district laws also contain a specific section requiring a district's records to be open to public inspection, for example, recreation and park districts (P.R.C. Sec. 5782.14), resort districts (P.R.C. Sec. 10472), irrigation districts (Wat.C. Sec. 21402), and fire protection districts (H. & S.C. Sec. 14105).

We have not attempted to compile a list of all the special laws relating to inspection of public records, but merely to show examples. Unless qualified by a special law, the general statutes discussed above will determine whether a particular record is required to be open to public inspection, regardless of whether it is a state, or a city or county record.

There are no constitutional provisions concerning the inspection of public records, but some records are required by federal law to be kept confidential as a condition of receiving federal aid (see W. & I.C. Sec. 118 as to public assistance for the aged, needy children, and blind).

Very truly yours,

George H. Murphy
Chief Deputy Legislative Counsel

By

Barbara Cochrane Calais
Deputy Legislative Counsel

APPENDIX B

RESPONSES TO COMMITTEE QUESTIONNAIRE BY STATE AGENCIES REGARDING PUBLIC RECORDS

For convenience in comparing responses of various state agencies, the departments, boards and commissions have been organized under generally related headings. In general, this classification approximates the organizations of units of state government within the agencies.

AGRICULTURE

Department of Agriculture

... On April 14, 1954, we answered a questionnaire by the Senate Special Committee on Governmental Administration covering this same subject. The policy stated in this letter which was published in the Committee Report "Public Records Survey," commencing on page 68, provided the basis for the development of our present policy. The department's present policy governing records closed to the public, is stated in Policy Letter No. I-3, dated April 7, 1964. A copy of this policy statement is enclosed.

In addition, there are two omissions in this policy letter with regard to records that are closed to the public. These are: (1) Military information—records pertaining to the movement of armed services and their ships; aircraft, vehicles, personnel and equipment. Such information on military movement may from time to time be in our records in connection with our plant and animal quarantine inspection work; and (2) referendum ballots—several marketing programs under different marketing laws, provide for referendum voting by producers or handlers, or both. These referendums are conducted by the department. The ballots received under these programs are considered confidential and the voting record of each individual voter is closed to the public.

Question 3(b)

Records closed to the public other than by law include:

Examination questions. Disclosure would destroy the value of the examination to be given.

Records, correspondence and lists of names pertaining to the operations of individual persons or firms. Some of this information is obtained under the authority of Article 2, Chapter 2, Division 3, Part 1, Title 2, of the Government Code, and therefore is by law, confidential. Much of it is obtained by other means. Disclosure of such information would often be harmful to the person concerned and disclosure would be detrimental to the public interest.

Information developed in connection with the apprehension or prosecution of violations of laws—the reasons given for "2" above, would also be applicable here.

Information obtained under a pledge of confidence. If such information is made public, the sources of such information will disappear.

Question 3(c)

Certain records are disclosed to persons who have a direct financial interest in the transactions or upon written release of the principal. Please refer to Item B, page two of department policy letter, for a statement of these records.

Question 3(d)

The reason these records are not open to all the public is that they deal with the affairs of private individuals or firms and it is not considered to be in the public interest to disclose the information except to persons who have a direct financial interest in the particular transaction.

Question 3(e)

We do not believe the public interest would best be served by further opening of records to the public. The Department of Agriculture policy, as stated in our policy letter, regarding the disclosure of records is sound. A lot of study has gone into the development of the policy. It serves the public well and records not available to the general public, if not confidential by statute, are withheld for valid reasons.

Question 3(f)

Copies of many records are available and are given to any interested person free of charge. A \$2 fee is charged for shipping point inspection certificates, issued to financially interested parties. Mailing lists not available for free distribution, which may be released, are issued for the actual cost of preparation.

Adequate work space is provided for persons who desire to examine or copy public documents.

Question 4

The current practice of the department is to permit radio and television coverage at public meetings and hearings conducted by the department.

We do not see any problem which would impede the beneficial effects of such coverage. However, we would hope for appropriate standards of conduct which would cause a minimum of interruption or hindrance to the proper conduct of such meetings or hearings.

Boards Not Covered by Open Meeting Legislation

There are several boards and commissions over which the department has some supervisory jurisdiction which are not covered by open meeting legislation. These boards are as follows:

Marketing order boards established under the California Marketing Act.

Milk producer advisory boards under the Milk Stabilization Law.

The California Beef Council.

Program committees established under the Agricultural Producers Marketing Act.

Questions 3(a) through (f) and Question 4

The answer to these questions with respect to these boards is the same as for the policies stated above for the Department of Agriculture.

Boards or Committees Related to the Department Covered by Open Meeting Legislation

These boards are:

District Agricultural Association Directors

The Dairy Council of California

The Livestock Identification Advisory Board

The Livestock Health Committee *

Question 3(a)-(e)

All records of these agencies are open to the public by statute except as provided in Section 84.2 of the Agricultural Code with regard to records of district agricultural association directors. These records which are closed to the public are: Entries in events scheduled for future judging and for overnight entries in races on which there is pari mutual wagering prior to such events, judging times, or races.

* The Livestock Health Committee is inactive and has not met for several years. The authority for the committee will expire the 91st day after the 1965 Regular Session of the Legislature.

Question 4

Our answer is the same as stated above for the Department of Agriculture.

Two boards, the California Fish and Seafood Advisory Board and the California Table Grape Commission, authorized under the Agricultural Code, Chapter 20 and Chapter 21 respectively of Division 6, were never activated. These programs called for majority approval in assent and referendum procedures by persons affected. The vote was not sufficient to put either program into effect.

Chas. Paul
Director

Enc.

State of California
DEPARTMENT OF AGRICULTURE

POLICY LETTER: NO. 1-3

TO: All Employees

SUBJECT: Records Available to the Public

Section 1892 of the Code of Civil Procedure and Section 1227 of the Government Code give to any citizen of the state the right to inspect public records, except as otherwise provided by law. There have been no court cases that have laid down any broad general rules that can be followed in determining what type of records or documents are "public writings" or "public records" within the meaning of these sections.

Officers and employees of the department should therefore be guided by the following in considering requests for permission to inspect or take copies of any records or documents in their possession:

A. The following records are considered confidential in accordance with provisions of law or because disclosure of their contents would not be in the public interest:

(1) The following personnel records:

(a) Formal signed applications for state civil service examinations (Section 18934, Government Code).

(b) Employee appeals to Personnel Board and communications in connection therewith (Section 18952, Government Code).

(c) Information required by the Personnel Board in connection with each appointment, separation from service, or other change in position or salary or other matter affecting the status of positions or the performance of duties of employees in the state civil service, except that a person may inspect any record relating to his own services (Section 18573, Government Code). This would include such material as comments and item ratings on reports of performance, information concerning written and performance tests and oral examinations, and information concerning the medical condition of an employee.

(d) Examination questions.

(2) Information acquired from the private books, documents or papers of any person while acting or claiming to act under any authorization pursuant to Article 2 of Chapter 2, Division 3, Title 2, of the Government Code, in respect to the confidential or private transactions, property, or business of any person (Section 11183, Government Code).

(3) Individual reports of handlers of farm products required to be filed with the director pursuant to the provisions of Section 1300.13 of the Agricultural Code (Section 1300.13, Agricultural Code).

(4) Records or reports made by distributors or manufacturers of milk, cream or dairy products pursuant to the provisions of Article 4, Chapter 16, Division 6, or by distributors of fluid milk or fluid cream pursuant to the provisions of Article 13, Chapter 17, Division 6, of the Agricultural Code (Sections 4163 and 4401, Agricultural Code).

(5) Lists of persons reporting, and reports made by farmers, stockmen, processors, dealers, handlers, and others, to the California Crop Reporting Service, as well as tabulated copies of such reports and copies of reports made to the Federal Crop Reporting Board at Washington, D.C. (Federal regulations require confidentiality.)

(6) Records, correspondence and lists of names which would reveal the confidential affairs of individual persons or firms, such as the volume of business done, the composition or secret formulas of products manufactured, prices paid or charged, financial condition, or like items.

(7) Information developed in connection with the apprehension or prosecution of violations of laws. Such information should not be disclosed until it is found necessary to use it at a hearing or in court. Prior disclosure would, in most cases, not only be detrimental to the public interest, but might work an undue hardship on innocent persons.

(8) Information included in requests en route to the Attorney General's office.

(9) Information obtained under a pledge of confidence.

B. The following records may be disclosed only to persons who have a direct financial interest in the particular transaction or, upon written release of the principal, may be disclosed to other interested persons:

(1) Records and correspondence indicating that the business operations, premises, equipment, or products of specific persons or firms have been found not to comply with the laws and regulations governing such materials, or are of inferior quality, or that such premises, crops, livestock, or other products have been found to be infected or infested with pests or diseases. Examples of this type of material are: inspection reports, certificates of inspection, and notices of violation or rejection. Records of hearings, court actions and other disciplinary proceedings pertaining to such materials are not restricted as to public inspection. Results of examination or chemical analysis of official samples of fertilizing materials and economic poisons are, however, required by law to be published, at least annually, and are so published.

(2) Certificates of inspection and reports of analysis for individual persons or firms when such certificate or report is issued as a service upon payment of a fee, and indicates the quality or grade of the product. Examples are: shipping point inspection certificates, field crop inspection certificates, reports of seed analyses, and canning tomato inspection certificates.

C. The following are also privileged and need not be disclosed except upon order of a court:

(1) Intra-agency memoranda.

D. Lists of names and addresses on record with the department may be made available to any interested person subject to the following conditions:

(1) Lists of producers or handlers developed pursuant to Section 1300.13 of the California Marketing Act, or pursuant to any comparable authority, may be released only with the approval of the director and subject to such conditions as will assure that they are to be used for a purpose authorized by law and relating to a proposed or established marketing program.

(2) Lists which are compiled and distributed by the department in order to effectively carry out its official responsibilities may be distributed free of charge.

(3) Other lists may be furnished upon payment of any costs incurred by the department in preparing such material, provided further that such preparation does not interfere with the regular work of the department. Lists or reproduced records will be furnished by the data processing section only when so ordered by the program division concerned. The data processing section will notify the fiscal officer of the costs to be recovered. The fiscal office will bill such costs to the recipient of the data furnished. If two or more lists or sets of records are prepared in a simultaneous operation, the cost of each list or set of records shall be determined by dividing the total cost of the work by the number of lists or sets of records prepared.

E. Unless specifically restricted by law, any records or information in possession of the department may be made available to any cooperating agency when necessary to the conduct of the business of the department.

Chas. Paul
Director

April 7, 1964

Board of Agriculture

... All records of the board now on hand are open to the public.

The board has certain powers under Article 2 of Chapter 2, Part 1, Division 3, Title 2, of the Government Code. This authority is seldom exercised. However, in the event that it is exercised, the provisions of Section 11183 of the Government Code regarding the divulging of information would be applicable. All other records are open and available to the public.

We do not have any suggestions for further opening the records to the public since all records are available other than those restricted by law.

No charges are made for records when copies are available. Appropriate provisions are made for any interested persons to inspect and copy any records.

D. A. Weinland
Executive Secretary

Poultry Improvement Commission

... Copies of the minutes of the previous meeting of the commission are circulated to all who are present at the meetings of the commission, and requests for access to the public records are granted.

Emery A. Johnson
Superintendent

BUSINESS AND COMMERCE

Department of Alcoholic Beverage Control

... Not open to the public for inspection are *investigative reports* dealing with either accusatory or application matters.

Also not open to the public are forms of the type which are mandatorily required by the department containing personal information supplied by applicants. These forms contain such personal information as financial status, arrest history, marital history, etc., and are furnished by the applicant with the understanding that they are to be held confidential. Much of this information would not be available if it were to be open to public inspection.

The department has adequate facilities providing for the inspection and duplication of public records. ... No charges are made for providing copies to public agencies.

James O. Reimel
Director

Alcoholic Beverage Control Appeals Board

... Concerning the records of this agency, all records are public records except for those cases which are pending before the board and have not yet been decided. No provision is made by the agency for duplication of records for members of the general public at the agency's expense.

Charles P. Just
Chief Counsel

Banking Department

... Section 254 of the Financial Code states: "The records of the department are not public documents and are not open to inspection by the public." Such records include information set forth in files, correspondence, memoranda, documents, reports, books, records and other papers of the department relating to: (1) reports of examinations and investigations of supervised institutions; (2) the business, financial or other affairs of supervised institutions; (3) relations between the department and supervised institutions and relations between the department and other bank supervisory or other governmental agencies; (4) the internal operations of the department where disclosure could be of no public interest or benefit or would interfere with the operations of the department.

These records are closed to the public to protect the state banking system and to enable the Superintendent of Banks to properly administer his responsibilities. Improper disclosure of such information could: (1) adversely effect the stability and welfare of supervised institutions; (2) unreasonably interfere with the confidential business relationships and encroach upon the right to privacy of business transactions of supervised institutions, their customers, and other persons dealing with them; (3) interfere with the performance of the superintendent's statutory duties

and impede the collection of information and advice, much of which cannot be obtained except on a voluntary and confidential basis; (4) permit speculators and others unfairly to profit in speculative trading in securities and otherwise.

John A. O'Kane
Superintendent of Banks
 James Ahlf
Chief Deputy

Districts Securities Commission

... All records of this agency are open to the public. No charge is made for inspection of commission records. A charge of 15 cents per folio is made for duplication of record by the staff.

T. P. Stivers
Executive Secretary

Horse Racing Board

What agency records are presently closed to the public?

"Reports to the board by the board's investigators and reports from law enforcement agencies."

For what reasons are these records closed to the public? (Other than by law)

"To facilitate detection and prevention of illegal activities."

What charges are made, and what facilities are provided, for the inspection and duplication of public records?

"No charge for inspection. Duplication performed by private firm which bills directly to member of public requesting such duplication."

Charles L. Harman
Secretary

Department of Insurance

... Those agency records which are closed to the public and those open to the public are defined in administrative memorandum No. 26, copy attached.

Closing of certain records is based upon the provisions of Section 12919 of the Insurance Code.

The public interest and reason back of this statute is the necessity of the Insurance Commissioner to obtain, for purposes of proper regulation, a great deal of really personal information concerning some 200,000 people licensed by, or connected with organizations licensed by, the Department of Insurance. To make all this information public could be very detrimental to many of these individuals and in some special cases could cause "runs" on institutions, which would be of great evil to large numbers of the public. It also might impede effective regulation especially in the area of enforcement and rehabilitation.

This agency makes only one exception to its rules on closed materials. Under careful safeguards information from our closed records are made available to recognized public law enforcement agencies, local, state and federal.

Copies of those records which are open to the public may be obtained by anyone by paying our cost of making the copy. We have Xerox equipment available in both San Francisco and Los Angeles. Copies made in this manner require a very nominal per page charge. Pages too large for the Xerox machine are taken by our custodian to a public reproduction firm. Charges for such reproduction are substantially higher and include the time of the custodian. If a certification is required on any document an additional charge of \$1 or \$2 is made.

Stafford R. Grady
Insurance Commissioner

Board of Pilot Commissioners

What agency records are presently closed to the public?

"None."

Captain Henry W. Simonsen
President

Pilotage Rate Committee

What agency records are presently closed to the public?
 "None."

Bert W. Levit
Chairman

Department of Professional and Vocational Standards

The department consists of 24 separate boards and 5 bureaus under the supervision and control of the director of the department.

Board of Accountancy

What agency records are presently closed to the public?

... Investigation reports, examination grades of candidates (except to the candidate himself), names of clients or former clients (where such is contained in the application), lists of persons failing the examination, minutes of the two administrative committees.

A \$2 charge is made for certification of public records. Uncertified copies are supplied free of charge. Records may be examined at the board's office, Monday through Friday between the hours of 8 a.m. and 5 p.m. Chairs and tables are supplied if required.

Harvey Shadle
Executive Secretary

Board of Architectural Examiners

... No agency records are presently closed to the public.

Frank B. Cronin
Executive Secretary

Athletic Commission

... All medical records and all investigative records are closed to the public.

Medical records are not made public because to do so might discourage full disclosure to the doctor and, moreover, might violate the doctor-patient privilege.

Investigative matters are not made public until such time as the matters are tried before a proper tribunal. Many times there are statements and reports in investigative files which are not competent legal evidence. To make these investigations public so that they might be reported as being contained in the states files would often add a dignity and efficacy they do not deserve, thus only investigative matters presented in public hearings are deemed public material.

Careful comments to the press in regard to the results of investigative reports or medical examinations are given; however, every effort is made not to try a case in the press. In some isolated cases with the consent of the doctor and applicant, the actual medical reports are made available.

The purpose in keeping medical records confidential is to protect the doctor-patient privilege and to encourage full disclosure to the doctor. If the doctor and patient decide to waive this privilege, the commission feels the purpose has been served.

The Department of Professional and Vocational Standards, of which the athletic commission is a part, maintains a duplicating service and a charge is made based on the actual cost of such service. Thus, should anyone desire records duplicated, an estimate is prepared by the department and such charges are prepaid.

Jack W. Urch
Executive Officer

Board of Barber Examiners

What agency records are presently closed to the public?
 "Individual examination scores are not available to the public."

For what reasons are these records closed to the public? (Other than by law)
 "Considered personal to the applicant."

James D. Knauss
Executive Secretary

Cemetery Board

What agency records are presently closed to the public?

Annual endowment care fund and special fund reports submitted to the board showing the results of operation and financial condition of these trust funds; and (II) examinations and investigations *in process*.

For what reasons are these records closed to the public?

These reports are closed by statute and we feel that legislation opening these records to the public would enable competitors to gain an unfair advantage and would not benefit the public as the information on these trusts is available at the office of the cemetery authority to the persons directly concerned—the lot purchasers.

If examinations and investigations were not closed during the process of completion we feel that our position would be compromised with a resulting lack of ability to gather necessary information.

All records open to the public are available for review during the regular office hours of the board. Space is provided for the reviewers and they are permitted to bring their own duplicating machines if they so desire. If we duplicate records, we charge the exact cost we are charged for such duplication. If certification is required, we charge a fee of \$2.

James A. Lahey
Executive Secretary

Board of Chiropractic Examiners

... The only records presently closed to the public are those of confidential nature pursuant to Section 1881 (5) C.C.P. as interpreted by the Attorney General—i.e., applications, investigation reports, complaints, examination papers.

These records are closed to the public for no other reason than by law.

These records are not open to particular sectors of the public.

Records are available for inspections during the regular business hours. Duplication of records is provided by photostat and Xerox equipment in the department. Charges are those set forth in Sections 161 and 163 B. & P. Code.

Earl E. Pope
Executive Secretary

Board of Registration for Civil and Professional Engineers

What agency records are presently closed to the public?

... "None."

Logan N. Muir, Jr.
President

Contractors' State License Board

What agency records are presently closed to the public?

... The regulations set forth in the Manual of Policies of the Contractors' State License Board specify:

Private records of the board include:

Examination papers

Investigation reports

Inter-office memorandum

Correspondence, unless the correspondence is used to note records.

For what reasons are these records closed to the public? (Other than by law.)

Examination papers—These are used for continuous testing and must be kept confidential.

Investigation reports—Legal advice has been received that these documents are privileged communications between the deputy and the registrar.

Correspondence—Any correspondence *not* used to note the records is considered confidential on the basis of the registrar's administrative decision.

Confidential records are opened to other law enforcement or regulatory agencies only.

For what reasons are these records open to a part rather than all of the public?

To permit the Contractors' State License Board to cooperate in the enforcement of governmental legislation.

Persons who call in person are permitted to inspect the licensee's record purged of confidential information.

Requests of license histories are typed and signed by an authorized representative of the agency certifying to the information (P. & V. Code 161). A charge of \$2 is made.

Requests for uncertified copies of public records are filled by copying the document on a Transcopy or Xerox duplicator and a charge of 50¢ per page is made.

A fee of \$2 is made for certification of a copy of any public record. (P. & V. Code 163.)

Leo B. Hoschler
Registrar of Contractors

Board of Dental Examiners

What agency records are presently closed to the public?
Apparently none. See B. & P. Code, Sec. 1617.

Victor A. Hill
Executive Secretary

Board of Dry Cleaners

... The only records presently closed to the public are reports from the Bureau of Criminal Identification and Investigation, and from the Division of Investigation; the preparation of examination material and the examinations themselves; complaints from the public and all other documents designed as such by statute.

David M. Hayes
Executive Secretary

Board of Funeral Directors and Embalmers

What agency records are presently closed to the public?

... Section 7611 of the Business and Professions Code requires that

"Except as otherwise provided by law, all records of the board shall be open to inspection by the public during regular office hours."

Leroy M. Perrin
Executive Secretary

Board of Guide Dogs for the Blind

... All records of the board are open for inspection to the public during regular office hours, except as follows: certain records are perceived as confidential. For example, records of investigative procedures in connection with the licensing process, records of investigation of private complaints, and records of deliberations of decisions to be reached upon the evidence introduced in a proceeding concerning the suspension, revocation, limitation or conditioning of a license.

D. R. Mendelson
Executive Secretary

Board of Medical Examiners

... In connection with the records of the board, certain records at the present time are not open to the public. These records would include investigative reports and other information gathered in connection with investigations, complaints received regarding licensed and unlicensed persons, correspondence when its disclosure would interfere with the performance of the duties of the board in which event the public interest would suffer by such disclosure. Information gathered in connection with an applicant relating to a determination to be made on the granting or denying of the application other than such information required by law to be filed.

Full disclosure of the above-mentioned information would place the board in a position wherein certain valuable information would not be divulged if it were known that such information would be open to the public and where complaints might not be filed if the complainants were aware that their names and information submitted to the board would be open to the public.

The records of the board are either open to all sectors of the public or considered confidential information and not revealed to any segment of the public with the exception that certain information may be divulged to other law enforcement agencies.

The charge made for duplication of public records is closely related to the actual cost of the duplication, and facilities are available in the office of the board for duplicating the records that are open for public inspection and duplication.*

Wallace W. Thompson
Executive Secretary

Board of Nursing Education and Nurse Registration

... At the present time the records of the board such as accredited school lists, regulations and policies of the board, and directories of the licentiates serve the public well.

There are, however, records in the office of the board that need to be kept confidential. These concern the individual licentiates who have given information which would not have been given if the individual thought it would become a matter of public record. There are certain areas of school records that should not be shared. This confidential material would not serve the public's best interest. If the records were to become a matter of public knowledge, the services of the board would be hampered in assisting schools with problem areas. The area of the results of the state board test pool examination is kept confidential. The individual schools are notified of their achievement and their ranking on the scale, but they are not apprised of the ranking of other schools. This has been treasured as a highly confidential matter and is known only to the board and staff. The value of this is that the nursing education consultant staff may assist the schools which indicate an area or several areas of curriculum wherein their graduates seem to be having difficulty in successfully passing the licensing examination. The general overall pattern of the schools might be a matter of interest, such as the report that was given in co-operation with the junior college committee when the Legislature was interested in the performance of the graduate of the two-year program as compared to the graduate of the diploma and baccalaureate program. No reference in this study was made to an individual school or an individual candidate.

Information on enrollment, faculty members and other areas of the same nature are made public to those who are concerned and would gain from this information. Very careful identification needs to be made in order not to cite any confidential information concerning an individual school or individual licentiate.

The public may come into the Sacramento office and obtain names and addresses from the directory. Information about the licentiates given on the application is another restricted factor. With 160,000 potential licentiates and about 120,000 currently licensed there would be a tremendous number of individuals calling the board for addresses, names and other such information rather than seeking it through other sources. Therefore, information of this kind from an operational standpoint has to be carefully evaluated. There are selected agencies with whom the board works and to whom the board would give additional information such as the Attorney General's office or other public or governmental agencies specifically prescribed by policy and again in the best interest of the public in order to effectively carry out the provisions of the laws and regulations. These matters are shared with those who are concerned and who are serving the public well.

The matter of press releases would have to be considered in terms of whether the public's interest would well be served and also to recognize whether certain basic information is desirable and what information is not of public interest. For example, following the administration of the licensing examination there is a press release on the successful candidates by name and address. This information does serve the public in a very important manner and this publication is made in the communities wherein the newly licensed professional nurse resides.

Beverly C. André
Executive Secretary (acting)

Board of Optometry

What agency records are presently closed to the public?

... The contents of applications for examination other than names and addresses of applicants, names and address of applicants who do not successfully pass an examination for licensure, complaints and reports of possible unlawful or unprofes-

* The committee received similar responses to these questions concerning meetings from the Physical Therapy Examining Committee, the Podiatry Examining Committee, and the Psychology Examining Committee. These committees are under the general direction of the Board of Medical Examiners.

sional activity, investigation requests and reports, and privileged communications between the board and its attorney, the Attorney General.

These records are primarily of an investigative nature containing confidential information which, if disclosed, would impair rather than enhance the protection of the public.

... Official records of the agency other than those of a confidential nature having to do with investigation of applicants or licensees are available to the public at all reasonable times.

J. R. Patterson
Executive Secretary

Board of Pharmacy

What agency records are presently closed to the public?

... Records involving:

Personnel matters

Cases under current investigation, including contents of prescriptions

Private formulae and special manufacturing processes

Examination papers

For what reasons are these records closed to the public? (Other than by law)

None.

Joseph F. Bottini
Executive Secretary

Board of Shorthand Reporters

... It is the opinion of this office that there are three areas where certain records are closed to the public:

Matters under investigation concerning licensees or nonlicensed individuals, which are by their very nature confidential and not for dissemination to the public.

Matters relating to the preparation, subject matter and grading of examinations.

Information contained in applications filed with this agency other than the date of application and the name, age and address of such applicant.

The public records and other matters in the office of this agency, except as otherwise provided by law are, at all times during normal office hours, open to inspection by any citizen of the state.

It is naturally assumed that such inspections would not interfere with the normal administrative activities of this agency.*

William E. Barbeau
Executive Secretary

Boards of Social Work Examiners

... The agency records presently closed to the public are those which go into the preparation of the examination, the examination itself, and investigative material; in general, that which goes into any investigative efforts to help the board determine whether later public action should be taken in reference to revocation or suspension of a license.

The reason that such material is closed in the first two cases is that this is provided by law. As for the third reason, such material is considered privileged communication in the public interest and it is desired to preserve confidentiality to promote full disclosure for any complainants. In addition, it is desired, by all means, to prevent any defamation of individual licensees or applicants when complaints without proper basis have been made.

Charles H. Dickinson
Executive Secretary

* The committee received similar responses to these questions regarding agency records from the Board of Examiners in Veterinary Medicine, the Board of Landscape Architects and the Yacht and Ship Brokers Commission.

Structural Pest Control Board

... The records of this agency that are closed to the public are examination material, investigation records, privileged communications and other items as limited by the Administrative Procedure Act.

These records are closed to the public other than as required by law so that we may promote confidentiality and preserve our sources of information.

Under certain conditions these records are made available to other agencies but are not open to any particular sections of the public or the press.

E. C. Sizemore
Deputy Registrar

Board of Vocational Nurse Examiners

What agency records are presently closed to the public?

Examinations, medical records, and information given in confidence.

Maryellen Wood
Executive Secretary

Collection Agency Licensing Bureau

What agency records are presently closed to the public?

The results and details of complaints and investigations which do not result in a formal disciplinary proceeding. The only records actually open and public are the following:

- Formal disciplinary accusations.
- Decisions by the director relating to accusations.
- Names and addresses of licensees.
- Names and addresses of qualified persons.
- Names and addresses of licensed entities.
- Names and addresses of officers of corporate licensed entities.

For what reasons are these records closed to the public? (Other than by law.)

The results of investigations and the names of complainants are considered to be privileged information. Primarily, complainants against collection agencies consist of debtors, customers of licensees, employees or exemployees of licensees. Complaining debtors often fear reprisals by the collection agencies in the form of harassment and misuse of legal process. Customers of collection agencies fear legal process by "suit happy" collection agencies. Some agencies would file a suit at "the drop of a hat" since they already retain an attorney and the cost of legal action would be minimal. Employees of licensees are reluctant to have their names divulged for fear of losing their positions, and further, of being "blackballed" in the industry. If the bureau were required to make the names of informants and complainants open and public, information now available to the bureau from such sources, we believe, would be reduced considerably, if not completely cut off.

Investigations of complaints, on many occasions, reveal no wrongdoing on the part of the licensee. However, if the complaint and/or the results of the investigation were made an open record, unethical competitors may take advantage of the information by publicizing it to the clients of the licensee involved. A licensee is considered innocent of any wrongdoing until such time as a hearing officer has adjudicated the issues and the director has formally adopted the hearing officer's findings and recommendations.

To make the details of complaints and/or investigations available before the licensee has exhausted his legal remedies is, we believe, eminently unfair to the licensee.

Bureau of Electronic Repair Dealer Registration

The only records presently closed to the public are those concerning unlitigated complaints from the public against service dealers suspected of misconduct.

These records are closed to the public to protect service dealers from possible unjustified harm, resulting from unproven or fictitious allegations.

These records are not open to the public.

Daniel J. Weston
Chief

Bureau of Furniture and Bedding Inspection

What agency records are presently closed to the public?

Records relating to pending investigations.

Frank C. Freer
Chief

Board of Osteopathic Examiners

... The only agency records that are presently closed to the public are the investigation reports.

(Mrs.) Lola Tankersley
Assistant Secretary

Marriage, Family and Child Counselor Licensing Section

... The statutes setting up the program do not have a statement in reference to the records. In the absence of other statutory provisions, all records would be open except those pertaining to that investigative material which is used to help determine whether later public action should be taken in reference to revocation or suspension of a license. The reason here is that such material is considered privileged communication in the public interest and it is desired to provide confidentiality to permit full disclosure from any complainants.

Charles H. Dickinson
Coordinator

Public Utilities Commission

... As to accessibility of public records, the record in all formal proceedings (consisting of pleadings, briefs, exhibits, transcripts of testimony, and orders) is open to public inspection in San Francisco and Los Angeles. Certified copies of such documents may be obtained.

Section 583 of the Public Utilities Code provides as follows:

"583. No information furnished to the commission by a public utility, except such matters as are specifically required to be open to public inspection by the provisions of this part, shall be open to public inspection or made public except on order of the commission, or by the commission or a commissioner in the course of a hearing or proceeding. Any officer or employee of the commission who divulges any such information is guilty of a misdemeanor."

The commission's General Order No. 66A specifies the records of the commission which are open to public inspection. A copy of this general order is enclosed. It will be noted therefrom that files and records not open to public inspection may be opened to such inspection by order of the commission or by a hearing officer in the course of a hearing. The order also provides that any person, desiring to see a record not open to public inspection, may request such inspection, setting out the reason or justification for the request, and upon good cause shown the commission may grant such request.

Frederick B. Holoboff
President

GENERAL ORDER
No. 66-A

(Supersedes General Order No. 66)

Public Utilities Commission of the State of California

IN THE MATTER OF RECORDS OF THE PUBLIC UTILITIES COMMISSION WHICH ARE OPEN TO PUBLIC INSPECTION AND THOSE RECORDS WHICH ARE NOT; SUBPOENAS AND OTHER PROCESS SEEKING PRODUCTION OF SUCH RECORDS AND SUBPOENAS DIRECTED TO THE COMMISSION, ITS MEMBERS, OFFICERS AND EMPLOYEES, IN THEIR OFFICIAL CAPACITIES.

Approved October 18, 1955 Effective October 18, 1955
(As amended December 15, 1959)

SEC. 1. It is hereby ordered, that the following records of the Public Utilities Commission of the State of California are open to public inspection:

1. Annual Reports and General Orders of the Commission.
2. Uniform Systems of Accounts.

3. Annual Reports filed by public utilities including reports to stockholders, and individual system reports of multi-system utilities.
4. All pleadings, briefs, exhibits, and transcripts in formal proceedings.
5. Material filed in compliance with Commission decisions.
6. All reports (except accident reports) filed with the Commission pursuant to any of the Commission's General Orders, unless at the time of filing request is made in writing that any part thereof be not open to public inspection and the Commission has so ordered. Accident reports are not open to public inspection.
7. Tariff schedules, including "advice letters" and service area maps contained in such tariff schedules.
8. Resolutions and minutes of the Commission.
9. Contracts filed by utilities for services at other than filed rates, and filings of rate deviations.
10. Filed contracts between utilities.
11. Material or reports which have been declared by Commission action to be open to public inspection.
12. Grade Crossing data:
 - Name of street and location and number of crossing.
 - Number and description of tracks at crossing.
 - Description of existing crossing protection, and date installed.
 - Accident experience at crossing, i.e., date and number of persons killed or injured only.
13. Transportation Rate Section docket applications.
14. Powers of attorney and concurrences applicable in connection with transportation tariffs.
15. Copies of Interstate Commerce Commission filings, pleadings and copies of reports, orders and certificates filed with the California Public Utilities Commission pursuant to the Interstate Commerce Act.
16. Annual Reports relating to hospital service filed by common carriers by rail pursuant to Labor Code Sec. 2508.
17. All applications for the issuance or transfer of permits filed under the Highway Carriers' Act, City Carriers' Act, or Household Goods Carriers' Act, and all permits, authorizations, and notices in connection therewith.
18. Certificates of insurance pertaining to bodily injury and property damage, insurance, including notices of cancellation and reinstatement, bodily injury and property damage liability bonds when an accident has occurred involving such insurance and bonds.
19. Certificates of cargo insurance, notices of cancellation and notices of reinstatement.
20. C.O.D. bonds, required by General Order No. 84-C, including notices of cancellation and notices of reinstatement.
21. Subhaul lease bonds, required by General Order No. 102-A, including notices of cancellation and notices of reinstatement.

Correspondence files and records not enumerated above are not open to public inspection but may be opened to public inspection by order of the Commission or by the Commission, a Commissioner or an Examiner in the course of a hearing or a proceeding. Any person desiring to inspect a record of the Commission, which is not open to public inspection, may apply to the Commission in writing requesting such inspection, setting out the reason or justification for such inspection. Upon good cause shown the Commission may grant such request.

SEC. 2. The experience of the Commission reveals that parties to litigation have seriously abused the process of the courts by causing subpoenas, other similar process and orders to be issued to this Commission and its personnel seeking the production of its original records in such litigation, there to be held for indeterminate periods of time, and have caused such personnel to be subpoenaed in such litigation in their official capacities, seeking their testimony concerning matters which could be shown by a certified copy of a record or records of the Commission, or seeking testimony from such personnel concerning matters not open to public inspection. This abuse of process has resulted in the taking from the Commission of its original records, thus interfering with its proceedings and the performance of its official duties, and in taking the time of Commission personnel without justification or excuse and to no public or otherwise justifiable purpose. In the past the Commission, although the law did not require response to such process, did at-

tempt to cooperate in such matters but such cooperation, apparently, was construed as an acquiescence in such abuse of process by litigants. Hereafter, the Commission will invoke the authority granted to it by the Constitution and statutes of this State to correct these abuses and hereby promulgate the following rules and regulations to that end:

(a) No original record (whether open to public inspection or not) shall be removed from the office of the Commission without the approval of the Commission having first been granted so to do; provided, that such records may be removed from the office of the Commission for the purpose of hearings and other proceedings before the Commission and for use in proceedings to which the Commission is a party or in which it may be interested.

(b) Any record of the Commission, which is open to public inspection, may be duplicated by the Secretary of the Commission, certified as a true copy and furnished to any person upon such person paying the fee required by law. For good cause shown, the Commission may authorize the Secretary to furnish a certified copy of a record of the Commission not open to public inspection upon payment of the fee required by law.

(c) No original record of this Commission (whether open to public inspection or not) shall be removed from the office of the Commission in response to any subpoena duces tecum or similar process or order unless issued by the Supreme Court of this State or a Federal Court. In a proper case, the Commission, for good cause shown, may waive this provision.

(d) No member, officer or employee of this Commission shall respond in his official capacity to any subpoena or similar process or order which purports to require him to testify concerning records of the Commission or the contents thereof which are not open to public inspection or which purports to require him to testify to any matter concerning the official business of the Commission which is not open to public inspection, unless issued by the Supreme Court of this State or a Federal Court. Where a subpoena or similar process or order, not issued by the Supreme Court of this State or by a Federal Court, purports to require the production of a record or records of the Commission which are open to public inspection or purports to require any member, officer or employee of the Commission to testify in his official capacity concerning any such record or records, the Secretary shall inform the party or parties, at whose instance such subpoena, process or order was issued, if the name or names and address of such party or parties be shown by the subpoena, process or order, and the Court or other tribunal which issued the same, that such record or records may be secured by certification of a copy thereof by the Secretary of the Commission upon payment by the interested party or parties of the fee required by law for such certification. The foregoing action of the Secretary shall constitute the only response to such subpoena, process or order permitted or authorized by the Commission. In a proper case, the Commission for good cause shown may waive this provision.

(See Sections 22 and 23 of Article XII, Constitution of California; Sections 1759 and 1901, Public Utilities Code; *Oakland v. Key System Transit Lines* 52 Cal. P. U. C. 779, 783; *Seaton v. A. T. & S. F. R. R. Co.* 173 Cal. 760, 763-764; *Miller v. Railroad Commission* 9 Cal. (2d) 190, 195, 198; *Clemmons v. Railroad Commission* 173 Cal. 254, 256-258; *Pacific Telephone & Telegraph Co. v. Eshleman* 166 Cal. 640, 650, 655-656, 658, 689; *San Jose v. Railroad Commission* 175 Cal. 284, 283, 290; *Northwestern Pacific R. R. Co. v. Superior Court* 34 Cal. (2d) 454; *Live Oak Water Users Assn. v. Railroad Commission* 192 Cal. 132, 143; *Loustalot v. Superior Court* 30 Cal. (2d) 905, 912; *People v. Northwestern Pacific R. R. Co.* 20 Cal. App. (2d) 120, hearing by Supreme Court denied; *People v. Brophy* 49 Cal. App. (2d) 15, hearing by Supreme Court denied; *Southern Pacific Co. v. Public Utilities Commission* 41 Cal. (2d) 354, 359; *People v. Western Air Lines* 42 Cal. (2d) 621, 630.)

The effective date of this Order shall be October 18, 1955. Approved and dated at San Francisco, California this 18th day of October 1955.

PUBLIC UTILITIES COMMISSION OF THE
STATE OF CALIFORNIA

R. J. PAJALICH, *Secretary*

Real Estate Commission

... All records of the Division of Real Estate are open to the public except records pertaining to investigations involving disciplinary actions, subdivision filings, real property security permits, information of a purely personal nature in applications, and examination questions. Effective law enforcement requires that such investigatory material be held confidential. Should formal action be initiated, the hearings are public and the records pertaining to such proceedings, including the pleadings, notices, and documentary evidence, are public. Should a formal proceeding not result, it is in the public interest, as well as that of the licensee or applicant, that unsupported accusations and conjectural material remain confidential.

J. P. Mahoney
Chief Legal Officer

San Francisco World Trade Center Authority

Section 3.12 California Stats. 1959, Chapter 845, provides "all records of the authority shall be open to inspection by the public during regular office hours."

J. Monroe Sullivan
Executive Director

CORRECTIONS

Adult Authority

... Official Adult Authority records of board actions are open to the public and in numerous instances are published.

Fred R. Dickson
Chairman

Board of Trustees

California Institution for Women

What agency records are presently closed to the public?

Those involving privileged communications, i.e., psychiatric reports; clinical studies; staff recommendations.

For what reasons are these records closed to the public?

Information contained in these records would serve no known useful public purpose. The board of trustees has a two-fold purpose—that of protection of the public and the rehabilitation of the offender. Disclosure of privileged communications would be detrimental to the rehabilitation of the offender if made available to the public.

Percy B. Crow
Executive Officer

Board of Corrections

... We have no records presently closed to the public.

Walter L. Barkdull
Executive Officer

Correctional Industries Commission

What agency records are presently closed to the public?

... "None."

Walter L. Barkdull
Executive Officer

Governor's Narcotic Rehabilitation Advisory Council

... None of the council's records is presently closed to the public. In view of this fact we have no suggestions to offer with respect to the further opening of records.

William F. Quinn, M.D.
Chairman

Youth Authority

What agency records are presently closed to the public?

All case records.

If under certain conditions these records are open to particular sectors of the public, for instance the press, please specify.

Some portions of our records are made available to law enforcement, social welfare, school districts, social security, selective service, etc., where this information would be of assistance to the court, the Youth Authority, or the ward himself.

For what reasons are these records open to a part rather than all of the public?

These records are open to only those agencies which could be of assistance in either the correction or rehabilitation of Youth Authority wards.

Heman G. Stark
Director

EDUCATION

State Board of Education

... The only records pertaining to the board to which the public and the press have been denied access are complaints and investigatory material obtained or developed by departmental investigators relating to grounds for revocation or denial of a teaching credential.

These "confidential" files often contain highly defamatory material, some of it unfounded. Complaints come from many sources, some irresponsible. To make them open to the public would expose teachers to calumny resulting from untrue, inaccurate or unprovable charges. Such charges as are deemed having merit are set forth in pleadings under the Administrative Procedure Act. The latter documents when filed are considered public records and are available to interested persons.

Records of the board, particularly its minutes, are made available at all reasonable times in the department's offices in Sacramento, San Francisco, and Los Angeles. Persons are allowed to make notes. Copies are furnished at a cost of 10 cents per page.

Laurence D. Kearney
Administrative Adviser

State Department of Education

... Correspondence and other records of the department have been made available to the press and the general public in accordance with the provisions of the Code of Civil Procedure and the Government Code.

Dr. Everett T. Calvert

Board of Governors, California Maritime Academy

What agency records are presently closed to the public?

Only those disciplinary and personnel matters, the divulgence of which would infringe upon the right of privacy of the individual concerned.

E. N. Kettenhofen
Chairman

State Scholarship Commission

... By commission policy all pupil personnel tests and informational records obtained from parents, students, and schools are treated as confidential and are not disclosed to anyone except on special resolution of the commission.

... Confidential financial information from the parents is confidential because of our agreement with the parents at the time of submission of the financial data. It is standard practice to maintain as confidential transcripts of grades, test scores, and other material commonly submitted for scholarship application.

Arthur S. Marmaduke

Coordinating Council for Higher Education

... The council as primarily a research-advisory agency does not maintain formal records in the sense of certain other state agencies. Our files of research data, etc., are open to any and all persons with the general consideration in mind that such persons should be able to benefit from such examination of files. Reports, minutes, etc., of the council are available to any persons on request so long as supplies last.

Willard B. Spalding
Associate Director

State Teachers' Retirement System

... Generally speaking, the records of the retirement office are available for public inspection, but the same cannot be said of individual member files. The law provides

that such information as is filed by the members shall be confidential, and I know our board would insist on the continuance of this provision. Information filed by a member, including such data as birth dates and beneficiaries, are personal matters, and should not be available for inspection by persons other than the members, nor used for purposes other than the administration of the retirement system. If such information were open to public inspection, I am quite sure the members would be most reluctant to supply certain information which is necessary to follow the dictates of the retirement law and the orderly operation of the retirement program.

Leo J. Reynolds
Executive Officer

Western Interstate Commission for Higher Education

... The compact states that "The commission shall keep accurate books of account, showing in full its receipts and disbursements, and such books of account shall be open at any reasonable time for inspection by the Governor of any compacting state or territory or his designated representative. The commission shall not be subject to audit and accounting procedures of any of the compacting states or territories. The commission shall provide for an independent annual audit."

Copies of the audit are sent to the governors and fiscal offices of the 13 states, and single copies are available to others upon request.

Robert H. Kroepsch
Executive Director

EMPLOYMENT RELATIONS

Apprenticeship Council

... The only agency records which are presently closed to the public are those authorized and required to be held confidential by a ruling of the Attorney General which deals with the ethnic background of apprentices...

The reasons that the agency might hold certain records confidential, other than by law, would be at the request and direction of higher authority, or during certain investigations under the authority of law, or when the revealing of certain information might be prejudicial or damaging to the parties involved.

Charles F. Hanna
Chief

State Compensation Insurance Fund

... The records of the State Compensation Insurance Fund consist of insurance policyholders' files and the files of injured employees who are receiving medical care and indemnity benefits.

The insurance policyholders' files contain confidential business and financial data concerning the individual business enterprises we insure which are essential to the successful underwriting of the insurance risk. If these files were open to public inspection, it would result in a serious loss of business because our policyholders would seek their insurance from a private carrier.

The injured employees' files contain intimate and personal medical data from hospitals and doctors concerning each injured worker. All insurance companies treat this vital information as strictly confidential, protecting inviolate the right to privacy of the individual together with the well recognized doctor-patient confidential relationship.

These records are always available to parties with a legitimate interest under the careful scrutiny of the subpoena powers of the courts.

We are firmly convinced that our records must continue to have the protection of the confidentiality they are presently accorded.

T. Groezinger
Chief Counsel

Department of Employment

... all information obtained in the course of administration of the Unemployment Insurance Code is confidential and may not be published or made available for public inspection in any manner except to the extent necessary to protect the rights of an employer or a claimant under the Unemployment Insurance Code. However, such information may be published in statistical form (Unemployment Insurance Code Sections 1094, 1095, 2111, and 2714). We have previously been advised by the United States Department of Labor, Bureau of Employment Security, that a state unemployment insurance law must contain a provision limiting disclosure of information received from employers or individual claimants before the Secretary of

Labor will make a certification for payment of administrative funds. For this reason, we cannot suggest that such records be made available to the public.

S. G. Goodman
Deputy Director

Fair Employment Practice Commission

... As to open records, the commission has not made the case files open in public records for the same reason that it does not dispose of cases in public meetings, that is to give reasonable protection to the respondent and to other parties in the case. We would hope that the commission be allowed to continue this policy.

It would follow that as to the minutes of meetings, the portions of the minutes that report on the public sessions be considered a public record, but that those portions having to do with closed sessions not be made public.

Records of this agency not concerned with specific cases or investigations could well be considered public records.

Edward Howden
Executive Officer

Industrial Accident Commission

... The answer to your division III(a) is that, pursuant to Section 137 of the Labor Code, all records of the commission shall be open to inspection by the public during regular office hours.

J. William Beard
Chairman

Industrial Safety Board

What agency records are presently closed to the public?

... None.

Geo. A. Sherman
Secretary

Industrial Welfare Commission

... All records and proceedings of the Industrial Welfare Commission are open to the public. Original copies are on file in the administrative office of the division. A complete copy is on file in the Los Angeles office for the use of the public.

The records of the individual cases processed by the Division of Industrial Welfare are open to the public after completion. In the enforcement of the regulations the division requires the employer to produce payroll records and wage data for all employees of the firm in order to determine whether the minimum wage has been paid and the hours limitations have been complied with. This information is treated as confidential in order to protect an employer from his competitors. The division also takes confidential complaints of employees who allege violations as to wages, hours and working conditions. These complaints are treated confidentially to prevent possible recrimination against the employee. However, upon the completion of all investigations, the determination made by the division on whether a violation does exist becomes public information. On the rare occasion when one of these cases is referred to the district attorney for criminal prosecution, the case file is made available to the prosecutor and the defense attorney. There are no charges involved in providing for an examination of a case filed.

Florence G. Clifton
Chief

Commission on Manpower, Automation and Technology

... Those records which by law cannot be opened to the public, as follows:

"The information received from any group, firm, or individual in response to the commission's request shall be for the confidential information of the commission insofar as it relates to planning, manning, personnel, union membership and related matters."

And research committee meeting minutes which are labeled "working document, confidential—not for distribution."

Research committee minutes are not freely distributed for the same reason that its meetings are not open to the public. We do not wish to inhibit a free flow of information and we do not wish premature conclusions to be reached, based on preliminary findings.

Minutes of research committee meetings are sent to any consultant to the research committee who was invited to the specific meeting recorded in these minutes and who attended. (These consultants, many of them officers of state and federal government serve the commission on a voluntary basis. They were selected as experts in certain relevant fields so that they might contribute their expertise to the commission when problems falling within their fields of competence are under consideration.) Sending them the minutes of the meetings they attend is due them as a courtesy and further enhances their value to the commission.

Except for that portion of the commission's records where disclosure is prohibited by law, we expect that all findings eventually arrived at by this body will not only be open but actively disseminated to the public. This is, in large part, the purpose of the commission.

Andrew C. Boss
Chairman

Unemployment Insurance Appeals Board

What agency records are presently closed to the public?

... none, with the exception that by interpretation the records, where a closed hearing is granted under Section 2713, are likewise considered closed to the public.

Gerald F. Maher
Chairman

HEALTH AND WELFARE

Citizens' Advisory Committee on Aging

... All of our records, except for our mailing lists for our newsletter, *Maturity*, are open to the public for inspection upon request.

William D. Bechill
Executive Secretary

Coordinating Council on Programs for Handicapped Children

... There are no records of the coordinating council or the staff committee which are presently closed to the public.

Andrew Marrin
Chairman

Department of Mental Hygiene

... The following kinds of records are closed to the public:

Any information required by a physician which is necessary to enable him to prescribe or act for a patient including case history, diagnosis, continuous notes, and any information recorded or not which is deemed necessary or connected with treatment, including information received by other persons, is confidential under the Code of Civil Procedure, Section 1881. This does not apply to testimony in certain cases.

This department is also governed by the rule in Business and Professions Code, Section 2379, which in our case prohibits an unjustified disclosure of information with intent to injure a patient.

This department is also governed by Section 1881 of the Code of Civil Procedure which prohibits examination of a public officer as to communications made to him in official confidence when public interest would suffer by the disclosure.

For what reasons are these records closed to the public? (Other than by law)

In addition to legal closure, the records ... are closed in order to protect the interests of patients. The courts have upheld the traditional right to privileged correspondence between patient and physician.

Circumstances under which medical records are open to the public are limited to cases where permission is given by the patient or his lawful representative in which case the records are available to any person designated by the patient to receive them, or where records are subject to court order.

Medical records are open only to the persons specified by the patient.

Tom Moore
Executive Assistant

Study Commission on Mental Retardation

... No records of the study commission are closed to the public. In fact, we have made available on request even the suggested drafts, position papers and other preliminary documents which did not receive official commission endorsement.

Leopold Lippman
Executive Secretary

Motor Vehicle Pollution Control Board

What agency records are presently closed to the public?

... Only confidential proprietary plans of devices and interim test results prior to a conclusion as to "pass or fail."

For what reasons are these records closed to the public? (Other than by law)

Attorney General's informal opinion indicated the above action was consistent with the law and in the public interest.

If under certain conditions these records are open to particular sectors of the public, for instance the press, please specify.

After public action approving a device, then all records become public since auto smog device presumably will be marketed and subject to "pirating" at that time by competitors. Records are open to all of the public—not part.

D. A. Jensen
Executive Officer

Department of Rehabilitation

... Regarding records in our Division of Vocational Rehabilitation the case records on individual clients are governed by a federal regulation since the major portion of our financial support comes from the Federal Department of Health, Education, and Welfare. The regulation concerned is Section 401.22, Confidential Information of the Federal Regulations, which is enclosed.

The reason for the regulation is that much information of a personal and confidential nature, such as medical records, psychiatric reports, and social history data, is included in all such case records.

With the consent of the client it is possible for us to make these records available to a potential employer or to an agency from which the individual is requesting services. They also are occasionally released under subpoena from a court or an Industrial Accident Commission referee.

Andrew Marrin
Chief Deputy Director

State Social Welfare Board

§ 401.22 Confidential information.

(a) The state plan shall provide that the state agency will adopt such regulations as are necessary to assure that:

(1) All information as to personal facts given or made available to the state or local rehabilitation agency, its representatives, or its employees, in the course of the administration of the vocational rehabilitation program, including lists of names and addresses and records of agency evaluation, shall be held to be confidential.

(2) The use of such information and records shall be limited to purposes directly connected with the administration of the vocational rehabilitation program and may not be disclosed, directly or indirectly, other than in the administration thereof, unless the consent of the client to such release has been obtained either expressly or by necessary implication. Release of information to employers in connection with the placement of the client may be considered as release of information in connection with the administration of the vocational rehabilitation program. Such information may, however, be released to welfare agencies or programs from which the client has requested certain services under circumstances from which his consent may be presumed, provided such agencies have adopted regulations which will assure that the information will be held confidential, and can assure that the information will be used only for the purposes for which it is provided.

(3) All such information is the property of the state agency or of the state and local rehabilitation agency, and may be used only in accordance with the agency's regulations.

(b) The state plan shall further provide that the state agency will adopt such procedures and standards as are necessary to: (1) give effect to its regulations; (2) assure that all rehabilitation clients and interested persons will be informed as to the confidentiality of vocational rehabilitation information; (3) assure the adoption of such office practices and the availability of such office facilities and equipment as will assure the adequate protection of the confidentiality of such records.

What agency records are presently closed to the public?

Adoption and public assistance records.

None of the records are open to the public except with the consent of the person affected.

J. M. Wedemeyer
Director

HIGHWAY AND TRANSPORTATION

Aeronautics Board

. . . All of our records are open to the public at any time for any purpose.

Clyde P. Barnett
Director

Department of California Highway Patrol

What agency records are presently closed to the public?

Those accident reports and portions of accident reports made in compliance with Sections 20000-20016 Motor Vehicle Code. In addition to the code provision Attorney General's Opinions NS-268 and NS-4970 govern release of information from such reports.

Criminal investigation case histories including correspondence relative to auto theft received from police authorities throughout the state. Public revelation of information in these reports could subject the department to litigation, eliminate the reception of information from confidential sources and hinder prosecution.

Reports of accidents involving department equipment and personnel. These are considered confidential primarily because they are available in the office of the state's insurance officer and should be reviewed there for proper coordination with the insurance carrier. In addition, the file in this office contains recommendations as to responsibility.

A file of civil defense and security matters is maintained by our coordinating officer. These have been deemed confidential or restricted by competent military authority.

The department maintains files of leases of office buildings. In some instances a lease file contains an assignment of rentals which reflects the financial status of the lessor. This part of a lease file is considered confidential although the lease itself or the fact that an assignment was made is not.

Personnel files of departmental employees contain some information and reports which are considered confidential. These consist mostly of investigations and complaints. Release of this information is done only with the advice and consent of the Attorney General.

Records of the accomplishment of officer trainees and appraisal of trainees by instructors are considered confidential since they apply to the individual.

The officer's daily activity report and special detail report are considered confidential since information contained could be detrimental to others.

If under certain conditions these records are open to particular sectors of the public, for instance the press, please specify.

The basic information that an accident occurred, who was involved, the time, date, and injury information is made available to all news media and to any other person who cares to review a file maintained on the public counter of the field office concerned for this purpose.

Reports of criminal investigations are made available to allied law enforcement agencies and district attorneys when necessary to their activity.

The confidential reports in the personnel files are made available to the employee or his attorney with the advice and consent of the Attorney General.

For what reasons are these records open to a part rather than all of the public?
 Protection of the individual concerned. Any record now confidential record is considered open to the public generally if the reason for inquiry is believed to be non-vindictive or does not interfere with the normal operations of the department.

Bradford M. Crittenden
Commissioner

Board of Harbor Commissioners for Humboldt Bay

... All of our meetings are open to the public as well as our records.

R. W. Saukko
Chairman

Department of Motor Vehicles

... Our agency records are open to the public as provided by Section 1808 of the California Vehicle Code. This provision makes confidential such records of the department relating to the physical or mental condition of any person. There are no records that are open to particular sectors of the public and we have no suggestions for further opening of records to the public since we feel that the present restriction on physical and mental condition is appropriate.

Tom Bright
Director

California Reciprocity Commission

... None of the records of the California Reciprocity Commission are closed to the public.

Tom Bright
Director

San Francisco Port Authority

... Generally speaking, the records of the port authority are open to the public. The only exception to this rule would be records which are subject to the provisions of the United States Shipping Act of 1916, which forbids the dissemination of information regarding nature, kind, quantity, destination, consignee, or routing of any property tendered or delivered to a common carrier. The specific section of the Shipping Act which is germane to this prohibition is attached for your review.

Edward L. David
Assistant to the Port Director

Department of Public Works

The department responded by including statements, regarding public records for the:

California Highway Commission
 The California Toll Bridge Authority
 The Advisory Committee on a Master Plan for Scenic Highways

The following records are presently not available for public inspection for the following reasons:

Questionnaires and financial statements submitted by prospective bidders in order to qualify for bidding under the State Contract Act. These financial statements are expressly made confidential by Government Code Section 14312. They must be kept confidential in order to promote full disclosure of each contractor's true financial status and also to avoid the improper use of such information by his competitors.

Copies of accident reports made to the California Highway Patrol by peace officers, members of the patrol, or employees of the Department of Motor Vehicles. These documents are expressly held to be confidential by Vehicle Code Section 20014. Again, the reason for holding them confidential is to promote the full disclosure of information so that corrective action might be taken to avoid the occurrence of similar accidents in the future.

Estimates of costs of projects proposed to be done under contract to be awarded to the lowest responsible bidder. These estimates are kept confidential until the construction contract document is fully executed. Failure to keep these cost estimates confidential until after the submission of bids could tend to promote collusion among prospective bidders, lead to a lack of individual computation of bids, and cause some bidders to use the state's figure rather than their own (if the former were higher).

Employees' personnel records. It has been the long time and consistent policy of the department that employees' personnel records are confidential. This position is taken by this department and other state agencies on the basis of *Colnon v. Orr*, 71 Cal. 43, 11 Pac. 814, and an opinion from the Legislative Counsel for Senator George Miller, dated February 5, 1954, to the effect that under Government Code Section 18573, all information and correspondence concerning employees must be considered strictly confidential unless the Personnel Board has specifically provided by rule for disclosure.

Matters involved in prospective or pending litigation. Confidential communications between officers and employees of the department with the attorneys of the department are obviously matters covered by the attorney-client privilege found in Section 1881 (2) of the Code of Civil Procedure. Also, other documents concerning prospective or pending litigation are normally not made available to the states' adversary except pursuant to the procedures and safeguards provided in the California discovery statutes.

Real property appraisal reports. A related matter is the confidentiality of reports made by staff members of the Division of Highways to determined the amount to be offered to property owners for rights of way. Similar appraisal reports are also obtained from independent appraisers if litigation appears imminent. These reports are kept confidential because the particular property owner involved is entitled to this consideration. Also, the free examination of such reports would permit the state's opponent in such condemnation proceedings to examine the state's entire case before trial, while the state would not have an opportunity to examine its opponent's case.

For the above reasons, the department has established the practice of divulging its real estate appraisal information only pursuant to the procedures and safeguards set forth in the California discovery statutes. In this way, the interested property owner can obtain all the relevant information properly available for his inspection and, at the same time, the state has an opportunity to obtain similar information that may be in the possession of its opponent. In this way, the interested property owner is protected from the unwarranted prying into his financial affairs by mere curiosity seekers. Also, by insisting upon compliance with the applicable discovery statutes, the state is protected from being required to give all the information it has and receiving nothing in return. Such procedures tend to bring about the full disclosure of all information relating to the value of the real estate, thereby tending to bring about a more equitable disposition of the eminent domain action.

Information transmitted to the department with the express understanding that it be kept confidential. Occasionally, the department receives communications from a variety of sources (e.g., employees of contractors, competitors of contractors, other governmental agencies, citizens who disagree with the actions of certain city councilmen, etc.) who provide certain information and expressly request that such information be kept confidential. Whenever possible, we endeavor to respect the request that the communication itself be kept confidential.

Except as mentioned above, none of our records are open to inspection by a particular sector of the public while not available to all of the public.

John Erreca
Administrative Officer

RESOURCES

Colorado River Board of California

... "All records of the board are confidential and not available to the public."

Harold F. Pellegrin
Executive Secretary

Department of Conservation

... Two segments of records held by divisions within this department are held confidential by statute. The Division of Mines and Geology holds the production records of individual mines and mineral consumption records of individual consumers confidential. The figures totaled from these individual records are published in gross but individually are not available for public scrutiny in order to protect the free enterprise and private rights of the individuals.

Similarly, the Division of Oil and Gas holds confidential the logs, histories, and production records of oil and gas wells in California for the same reason of individual enterprise protection.

By opinion of the Attorney General's office, the Division of Mines and Geology also holds confidential reports filed by licensed ore buyers who purchase gold.

The reasons for keeping these records closed to the public seem logical for the proper protection of individual's business activities, and inasmuch as reports are required to be filed by law with the state it seems appropriate that the state also should provide this personal protection.

In the case of the records held confidential by the Division of Oil and Gas, an individual owner may, under the law, give written authorization to others to inspect his individual records held by the Division of Oil and Gas. This is the only exception to the confidentiality of the records held by this department.

We do not suggest that these records be opened to the public because the general public has not interest in individual records and the gross information from them is available to the public.

DeWitt Nelson
Director

Fish and Game Commission

What agency records are presently closed to the public?

None.

Leslie F. Edgerton
Assistant to the Commission

Forest Practice Committees

What agency records are presently closed to the public?

No records of the committees are closed to the public.

F. H. Raymond
State Forester

Board of Forestry

What agency records are presently closed to the public?

No records of the State Board of Forestry are closed to the public.

W. B. Carter, Chairman
State Board of Forestry

Klamath River Compact Commission

What agency records are presently closed to the public?

Paragraph 5 of Subdivision A of Article IX provides that "All records, files and documents of the commission shall be open for public inspection at its office during established office hours."

Robert B. Bond
Executive Director

Pacific Marine Fisheries Commission

What agency records are presently closed to the public?

The Pacific Marine Fisheries Commission is covered by the following legislation: "All records of the commission shall be open to inspection by the public during regular office hours." (Fish and Game Code Section 14107.)

W. T. Shannon
Director

Goose Lake Compact Commission

What agency records are presently closed to the public?

None of the records of this commission are presently closed to the public.

Reginald C. Price
Chairman

California-Nevada Interstate Compact Commission

What agency records are presently closed to the public?

None of the records of this commission are presently closed to the public.

A. M. Barton
Chairman

Marine Research Committee

What agency records are presently closed to the public?
None so far as I am aware.

J. G. Burnette
Chairman

The Reclamation Board

... The only board records which are now closed to the public are those nonpublic records involving litigation wherein the Reclamation Board is a party.

... we feel that the protection of the state's interests and the preservation of the confidential relationship between the Attorney General and the board as his client requires that these office records be closed to the public.

A. E. McCollam
General Manager

State Recreation Commission

... "to the best of my knowledge all our records are open to the public."

Mrs. Dewey J. Forry
Chairman

Small Craft Harbors Commission

What agency records are presently closed to the public?

Boating accident reports (see Section 656(c) Harbors and Navigation Code) and personnel records.

Lachlan M. (Lock) Richards
Chief

Water Commission

What agency records are presently closed to the public?
"None."

William M. Carah
Executive Secretary

Water Rights Board

... No records of the board are closed to the public. All documents filed with board pursuant to the Water Code or the rules and regulations of the board, all correspondence relating thereto, all transcripts of hearings, and all minutes of board meetings are open to the public for inspection and copying. (The only documents of any kind not open to the public are staff analyses and proposed decisions which are ordinarily prepared subsequent to the termination of hearings and prior to adoption of decisions by the board. Until and unless adopted by the board, the proposed decisions and related documents merely represent informal and unofficial opinions and recommendations of members of the staff.)

L. K. Hill
Executive Officer

Department of Water Resources

... A general statement of our practice regarding release of documents to the public is found in Section 2800 of the Administrative Manual of the Department of Water Resources:

"Official departmental records, correspondence, reports, attachments or other materials, or copies thereof, are not to be publicly released either as an enclosure to an official communication, or in any other form until adopted, approved, or authorized by the director."

This statement recognizes the proposition that interim records and working papers are not "public records" as this term is used in Government Code Section 1227. Permission to inspect such nonpublic record papers is not given without my approval. In deciding whether to permit inspection in a given case, I exercise the discretion given me as a public officer by Section 1881 of the Code of Civil Procedure; that is, if in my judgment the public interest would suffer because of inspection, I do not permit inspection of the paper.

Examples of interim records which I do not release for public inspection are the interim audit letters of the Department of Finance and correspondence relating thereto.

In addition to interim records and working papers, I respect the confidence of agencies outside the Department of Water Resources which submit reports to the department for review purposes. Included in this category are U.S. Army Corps of Engineer reports, marked "Confidential," concerning flood control projects in which the federal government is interested, and reports made by local water districts in connection with application for financial aid under the Davis-Grunsky Act. I believe that the appropriate source of public inspection of such reports is the office of the originating agency.

I do not, of course, permit public inspection of personnel files. Such records are normally not "public records" nor are they matter in which the whole public has an interest, which latter test, it has been held, must be fulfilled if matter other than public records is required to be made accessible to the public under Government Code Section 1227.

Finally, Water Code Section 7076.1 requires that well drilling reports made pursuant to Section 7076 shall not be made available for inspection by the public. Copies of such reports, which are on file with this department, retain their confidential character.

William E. Warne
Director

Water Quality Control Board

. . . With the possible exception of some personnel documents, all of the board's records are open to the public as required under Water Code Section 13008.

Some personnel records are of a confidential nature and probably would be open to an individual only if he had a legitimate reason for examining the record. From a practical standpoint, this issue has never arisen during the 15 years the board has been in operation.

With the possible exception noted above, all records are open to all sectors of the public.

Paul R. Bonderson
Executive Officer

Wildlife Conservation Board

What agency records are presently closed to the public?
None.

R. J. Nesbit
Executive Officer

REVENUE AND MANAGEMENT

State Allocation Board

. . . All agency records are presently open to the public except that real property appraisals are held confidential until negotiations for acquisition, or condemnation proceedings, are carried out. (Appraisals addressed to a school district's county counsel often are held confidential at his request.)

It is in the best interests of the public welfare that appraisals remain confidential so that negotiations for acquisition, or condemnation proceedings, may be carried out without undue prejudice.

All records (with the exception of that stated . . . above) are open to the public. Various board reports, minutes, etc., are distributed to interested parties or groups including certain universities and public libraries. Press releases are prepared covering salient points of the board's regular meetings. Other press coverage and publicity are provided as the occasion presents itself. Additional efforts to further open this agency's records to the public may be more than is warranted.

Paul I. Hoyenga
Assistant Executive Officer

Capitol Building and Planning Commission

. . . None of the records of the commission are presently closed to the public.

James M. Bordenkircher
Staff Coordinator

Communications Advisory Board

What agency records are presently closed to the public?

No records are closed to the public.

William E. Whiting
Chairman

Board of Control

... The records of the board are open to the public. Inspection of such records may be made in the offices of the Board of Control, and a charge of 15 cents per page for duplication of records is made.

B. V. Dittus
Secretary

Exposition and Fair Executive Committee

What agency records are presently closed to the public?

... None.

Stanley B. Fowler
Executive Officer

Board of Equalization

What agency records are presently closed to the public?

Records, files and information relating to business affairs of persons filing returns and being audited under provisions of various excise tax laws administered by the Board of Equalization. (Illustrative of these statutory limitations is Revenue and Taxation Code Section 7056, for bidding the disclosure of information acquired as a result of the board's administration of the Sales and Use Tax Law.)

Information and records relating to the property of state assesseees, except assessment rolls, maps and plats, etc. (Revenue and Taxation Code, Section 833.)

Appraisal data acquired under our intercounty equalization program. (Revenue and Taxation Code, Sections 1818-1820, inclusive.)

The only board records closed to the public are those which we are precluded by law from disclosing. The basis for these restrictions would appear to be the legislators' belief that the imposition of a tax should not be used as a device for any unnecessary public disclosure of the taxpayer's confidential business affairs.

H. F. Freeman
Executive Secretary

Department of Finance

... The Department of Finance has a significant role in the preparation of the administration's program. It functions under the scrutiny of the press, representatives of interest groups and of the public in general. The staff of the department, from long experience, know the importance of making available public information, official records, and agency reports. Our working papers, however, are usually restricted to internal circulation.

A recent opinion by the departmental administrative advisor states that *interim* reports prepared by the Division of Audits for submission to departments under audit are not themselves considered public records. Such preliminary materials need not be made available for public inspection prior to completion of the final report. Final audit reports are considered public records and are made available on request.

Staff papers are memoranda or proposals submitted by other departments to the Department of Finance are generally not treated as public records. Nor are data or information secured from industry, business, or other jurisdictions on an understanding of confidentiality, included in public records.

Plans, research efforts or planning models are considered public records after they have been accepted and/or endorsed by the department as official papers. Prior to that time, they are not made accessible.

Inquiries are, on occasion, made to the staff and interviews sought with them by members of the public or representatives of groups. We make every effort to accommodate these requests. Our offices are open to the public during our regular office hours. Whenever we have copies of reports, statistical tables, or other data which come within the definition of public records, we make these available on request free of charge. The Governor's budget is available for purchase through the documents division of the printing office.

Hale Champion
Director

Franchise Tax Board

What agency records are presently closed to the public?

All reports and returns required to be filed under the Personal Income Tax Law or the Bank and Corporation Tax Law. (Sections 19282 to 19289, inclusive, and 26451 to 26455, inclusive, of the Revenue and Taxation Code.)

For what reasons are these records closed to the public? (Other than by law.)

So that taxpayers will make full and truthful declarations without fear that their statements will be revealed or used for other purposes. *Webb v. Standard Oil Co.*, 49 Cal. 2d 621.

None of the records are open to any sectors of the public.

Martin Huff
Executive Officer

Public Works Board

... all records of the board are open to public inspection with the exception of reports of real estate appraisers as to the value of parcels of real property being acquired by the board. While these reports are open to the public after the property appraised has been purchased, prior to the acquisition of the property the reports are not open to the public, or the press. We believe that until such time as the board approves a negotiated price, which is done in open meeting, the valuation placed upon property should be considered a confidential matter between the property owner and the board.

In negotiations between the state and the property owner, the state's appraisal report is normally not available to the owner. It is believed that the state should be in the same position as any private individual, and should not be required to reveal all of its information if the owner is not also required to reveal his. On the other hand, if the negotiations are carried on in an atmosphere of free exchange of information and the state's negotiator is of the opinion that it will facilitate reaching a negotiated settlement, the contents of the report are disclosed to the property owner.

H. C. Vincent, Jr.
Administrative Secretary

State Building Standards Commission

... All records of the commission are open to public inspection during regular office hours (Section 18911 H. & S Code).

Harry A. Cobden
Executive Secretary

State Employees' Retirement System

... Data filed by any member or beneficiary with the board is confidential, and release of his individual record without his consent is prohibited by statute. All other records of the system are open to inspection (Secs. 20134 and 20137, Govt. Code). The formula for the benefits paid, the conditions under which they are paid, the basis of member contributions, and the persons who may be designated as beneficiaries by members are all set forth in statute, and therefore, public information. The system is regularly audited by the Auditor General and the Department of Finance, thus giving assurance that the statutes are followed. Disbursements are made through the State Controller, whose records are open to public inspection. We think that currently a proper balancing of the public's right to know and an employee's right to privacy in his personal affairs is achieved.

William E. Payne
Executive Officer

Commission on California State Government and Economy

What agency records are presently closed to the public?
All.

State Lands Commission

... Section 6826 of the Public Resources Code: All factual and physical exploration results, logs, or records resulting from geological and geophysical survey operations conducted by a state permittee on state lands which are required to be made available to the commission, shall be for the confidential use of the commission and shall not be open to inspection by any other person or agency without the written consent of the permittee.

Transactions in process and prior to lands commission consideration for authorization or approval.

Confidential data of lessee and permittees.

For what reasons are these records closed to the public? (other than by law)

To prevent collusion between bidders and to prevent discounting of bids through disclosure of confidential data of lessees or competitive bidders.

These records are not opened to any sectors of the public.

F. J. Hortig
Executive Officer

State Personnel Board

... The following records of the State Personnel Board are closed to the public:

1. Applications for employment.
2. Examination test materials.
3. Examination scoring records.
4. Information obtained as a result of investigation of applicants.
5. Individual employee employment records.
6. Supervisory appraisals of individual employee performance.

Authority to keep the above records closed to the public is provided in sections of the Government Code and Personnel Board rules. The pertinent laws and rules are attached.

For the press, credit associations and others who have a bonafide reason for requesting the information, we do provide some of the basic facts concerning individual employment record (such as department in which employed, job title and salary.)

The refusal to make details of employment records available to all members to the public is based on cost factors as well as upon a belief that the individual should have his privacy respected from the standpoint of indiscriminate or harassment types of inquiry. However, we do presume that the employee would not wish us to refuse to verify basic facts about his employment with the state with the press, credit bureaus and others who present a logical need and purpose in their request.

John F. Fisher
Executive Officer

Television Advisory Committee

What agency records are presently closed to the public?

None.

L. F. Feymire
Television Coordinator

PUBLIC SAFETY

Atomic Energy Development and Radiation Protection

... All records of council actions, including minutes of meetings, are open and available to the public.

Gene A. Blanc
Secretary

Departmental Coordinating Committee on Atomic Energy Development and Radiation Protection

... All committee records are open to the public.

Gene A. Blanc
Chairman

California Disaster Office

... No records of the California State Disaster Council or of the citizens advisory committees to assist in specific fields of disaster are closed to the public.

John W. Gaffney
Director

State Fire Advisory Board

... At the present time, the following records of the State Fire Marshal are closed to the public:

Arson investigations.

Information concerning the release of persons from state penal institutions convicted of arson.

Information concerning the discharge of persons from state hospitals having arson tendencies.

These records, being criminally investigative in nature, are closed to the public by virtue of statutory provisions.

Under certain conditions, portions of these records are open to police and fire investigation officials.

... access to these records is limited to law enforcement officials.

Since the remainder of our records are open to the public, we have no suggestions for further opening them to the public.

Glenn B. Vance
State Fire Marshal

Department of Veterans Affairs

... Of the total records in the Department of Veterans Affairs, all are open to the public or to those specific segments that have a legal reason for access except the following:

Medical records at the Veterans Home which are accessible only with the approval of the patient and/or doctor;

Records within the department's attorney's office which have information of a confidential nature and which can be released only by the confidant;

Credit and financial statements within the department's Farm and Home Division which under the provisions of the Military and Veterans Code cannot be made open to the public.

Portions of the records within our division of service and coordination which deal with a claim and which are of a confidential nature. Access to any of these records require a power of attorney from the veteran claimant.

Dean Hooper
Administrative Assistant

OTHER BOARDS AND COMMISSIONS

Governor's Council

... Since the purpose of the council is an exchange of reports between department heads and the Governor, there is no reason to restrict public information regarding these reports. As a matter of practice, copies of written reports are made available to the press and any interested parties.

Ronald A. Clark
Assistant Cabinet Secretary

California Arts Commission

What agency records are presently closed to the public?

The commission has no policy in this regard. The problem has never arisen.

Abbott Kaplan
Chairman

Office of Consumer Counsel

What agency records are presently closed to the public?

... Consumer letters and correspondence with the Governor.

In order to maintain the trust of the public, it is necessary to treat their letters as confidential. These letters can be made public when a release is given by the writer.

Correspondence with the Governor involves a confidential relationship between him and the Consumer Counsel.

Helen Nelson
Consumer Counsel

Economic Development Agency

... The only agency records that are treated confidentially are those involving prospective industries and businesses interested in a California location. This treatment is necessary to avoid disclosure of business or industry's intention to competitors and is a recognized and accepted procedure with all agencies and organizations working to achieve economic development.

Lewis M. Holland
Commissioner

Coordinating Council on Urban Policy

... none of the council records are closed to the public. There is no specific provision for charging the public for the duplication of our records.

Philip G. Simpson
Executive Secretary

Controller

... The following records in this office are required by law to be kept confidential:

Govt. Code, Sec. 12573. Vouchers in support of claims for expenses of secret investigations by the Attorney General under Sections 12572 and 12573.

Ch. 23, Stats. 1948, Item 57. Vouchers in support of claims for expenses of the Director of Corrections paid from such item, in the study of crime pursuant to Section 6027, Penal Code.

Rev. and Tax. Code, Sec. 14813. Inheritance tax records (except copies of inventories, tax reports, and tax receipts—the originals being public records in the county clerk's office).

Rev. and Tax. Code, Sec. 16563. Gift tax records.

Rev. and Tax. Code, Sec. 10406. Motor vehicle transportation license tax records.

Govt. Code, Sec. 15619. Motor vehicle fuel license tax and insurance tax records to the extent specified in Section 15619. The section would also prohibit divulgence of other information therein specified, should such come into our custody.

The above records are confidential by law. All other records in the custody of this office are open to public inspection.

The above-cited provisions of law making the specified records confidential, do not provide for any exceptions other than for the examination of tax records by federal tax officials or other state officers as specified.

All records, other than those restricted by statute for compelling reasons, are open to public inspection.

Ralph I. McCarthy
Deputy

Commission on Judicial Qualifications

... Confidentiality has proved an essential element in the performance of this delicate and vital function. One of the reasons for such success as this plan has had has been the nonpublic character of the pending cases and deliberations. For the same reasons, the agency records and files are closed to the public until such time as a record containing a recommendation for a judge's removal is filed with the Supreme Court.

Lloyd E. Griffin
Chairman

Commission on Peace Officer Standards and Training

What agency records are presently closed to the public?

... Reports of the field representative which are classified by the commission as confidential.

Section 13512 of the Penal Code requires the commission to "... make such inquiries as may be necessary to determine whether every city, county, and city and county receiving state aid pursuant to this chapter is adhering to the standards for recruitment and training established pursuant to this chapter."

In complying with this provision, the field representative's reports cover personnel background investigations of peace officer trainees, including physical examina-

tions and other records which are privileged communications. It would be unethical and illegal for the commission to disclose such information to the general public.

These records are not open to particular sectors of the public.

Gene S. Muehleisen
Executive Officer

Commission on Voting Machines and Vote Tabulating Devices

The letter from the commission made no reference to the question on the availability of records.

Frank M. Jordan
Secretary

Treasurer

What agency records are presently closed to the public?

... None.

Bert A. Betts
State Treasurer

California Law Revision Commission

What agency records are presently closed to the public?

A few personnel records.

For what reasons are these records closed to the public? (other than by law)

Applicants for positions might not wish their applications public.

John H. DeMouilly
Executive Secretary

California Commission on Uniform State Laws

What agency records are presently closed to the public?

... None.

George H. Murphy
Secretary

APPENDIX C

Summary of State Statutes Granting a Privilege of Nondisclosure

Agricultural Code Sec. 84.2 (entries in events scheduled for future judging and for overnight entries in races on which there is parimutuel wagering prior to such events, judging times, or races are not open to inspection).

Sec. 1300.22 (director may require all processors or distributors to make records available subject to any marketing order which records shall be confidential unless open to inspection by court order).

Sec. 2091 (director's access to records for the purpose of investigating possible violations shall be confidential except when required in a judicial proceeding).

Sec. 2846 (same effect as 1300.22 above for information required under Agricultural Products Marketing Law of 1937).

Sec. 3351 (same effect as 1300.22 for information required under Agricultural Products Marketing Law of 1943).

Civil Code Sec. 79.06 (court may order hearing upon application for marriage license to be confidential and private).

Sec. 79.09 (data regarding premarital examination "confidential" and shall not be divulged).

Sec. 226m (adoption proceedings "shall be held in private").

Sec. 227 (documents in adoption proceeding "shall not be open to inspection").

Code of Civil Procedure Sec. 1747 (files of conciliatory court shall be deemed made in official confidence under Sec. 1881(5)).

Sec. 1881 (5) (information received by public officer in confidence shall be privileged).

Education Code Sec. 10751 (certain personal information concerning pupils in public schools shall not be disclosed except in a public hearing provided after final action of governing board of school district).

Sec. 14026 (data filed by members of Teacher Retirement System with retirement board confidential except to person authorized by Legislature).

Financial Code Sec. 254 (records of State Banking Department are not public documents and not open to inspection by public).

Sec. 1582 (a trust company shall not disclose information concerning the management, etc. of a private trust except under certain circumstances).

Sec. 8754 (Savings and Loan Commissioner may withhold audit or information in audit of savings and loan association for such time as in his judgment is necessary).

Fish and Game Code Sec. 7923 (licensee's record of fish taken is confidential and not a public record).

Government Code Sec. 11183 (information acquired from private records pursuant to investigating by heads of department authorized by Sec. 11180 not to be divulged except by court proceeding).

Sec. 12573 (vouchers in support of claim for secret investigation by Attorney General).

Sec. 14312 (financial statements by prospective bidders are confidential).

Sec. 15619 (certain records available to the State Board of Equalization concerning the business affairs of any company is confidential).

Sec. 18573 (employee records furnished to Personnel Board by each appointing power "not open to public inspection except under conditions prescribed by board rule except that a person may inspect any record relating to his own service and source of pay data").

Sec. 18952 (employee's appeal to State Personnel Board and any communication in connection therewith is confidential and shall not be disclosed without the consent of the employee).

Sec. 20134 (data filed with the State Retirement System is confidential).

Sec. 20137 (all records of Board of Administration, State Retirement System open to public inspection except as provided for by law).

Sec. 31532 (sworn statement of member of County Employees' Retirement System shall be confidential and shall not be disclosed).

Harbors and Navigation Code Sec. 656 (boat accident reports shall be without prejudice to the individuals reporting and shall be for confidential use of Division of Small Craft Harbors).

Health and Safety Code Section 211.5 (records of interviews in connection with morbidity and mortality studies shall be confidential insofar as identity of any persons are concerned and shall be used solely for purposes of study).

Sec. 410 (certain diagnosis of epilepsy shall be confidential and used solely to determine eligibility for driver's license).

Sec. 1416 (information and records concerning licensed hospital shall not be disclosed except for proceeding to revoke, suspend or deny).

Sec. 1515 (same effect as Sec. 1416 above regarding licensing of establishment for handicapped persons).

Insurance Code Sec. 735 (examinations by Insurance Commissioner private unless commissioner deems it necessary to publish result).

Sec. 855 (Insurance Commissioner may withhold all records relating to securities where public welfare demands that such information not be public for such time as in his judgment is necessary).

Sec. 12919 (communications to Insurance Commissioner are made in official confidence within meaning of Sec. 1881(5) of Code of Civil Procedure).

Labor Code Sec. 6319 (confidential information concerning failure to keep place of employment safe or violation of safety order shall not be divulged).

Military and Veterans Code Sec. 85 (Veteran's Board records of contract purchases not open to public inspection).

Penal Code Sec. 290 (registration data of sexual deviate "not open to inspection by public" except by law enforcement officer).

Sec. 938.1 (clerk not to divulge contents of grand jury transcript until defendant is in custody).

Sec. 3046 (statements by judge, district attorney, and sheriff to Adult Authority regarding parole of life-sentence prisoner "shall be and remain confidential").

Sec. 3107 (names and records of men granted special service paroles "shall be kept in the confidential files").

Sec. 11105 (information on file with the Bureau of Criminal Identification not to be furnished to assist "private citizens in carrying on his personal interests or in maliciously or uselessly harassing, degrading or humiliating any person").

Public Resources Code Sec. 2207 (reports of mining operations furnished to State Minerologist are confidential).

Sec. 3234 (records of active operators of an oil or gas well required by statute open to inspection by those authorized by operator, state officers and the district Board of Oil and Gas Commissioners and not evidence in any court proceeding).

Sec. 6826 (geology and geophysical survey information on state lands available to State Land Commission confidential and not open to inspection except under certain circumstances).

Public Utilities Code Sec. 583 (information furnished to the commission by a public utility may not be divulged except under certain circumstances).

Sec. 3709 (commission employee who divulges any fact or information concerning highway carriers except as authorized or directed by commission or a court or a judge is guilty of a misdemeanor).

Revenue and Taxation Code Sec. 408 (any information in assessor's office not required by law to be kept or prepared are not public documents and shall not be open to public inspection).

Sec. 451 (all information in property statements furnished to assessor by taxpayer shall be secret).

Sec. 646 (records of assessor are open to other taxing agencies within the county).

Sec. 833 (information and records regarding property of state assessees, with certain exception, are confidential).

Sec. 1820 (no appraisal data for individual properties shall be disclosed except as required by law).

Sec. 7056 (forbids disclosure of information acquired as a result of administration of Sales and Use Tax Law).

Sec. 10406 (all information acquired by Controller or Board of Equalization as a result of administration of motor transportation tax except as otherwise provided shall not be disclosed).

Sec. 14813 (all information and records required by the Controller or his subordinates relating to inheritance taxes except as otherwise provided shall not be disclosed).

Sec. 16563 (information and records acquired by Controller confidential except as necessary for enforcement of Gift Tax).

Sec. 19282 ("information as to the amount of income or any particulars set forth, or disclosed in any report or return shall not be disclosed, except under certain conditions").

Sec. 19287 (information secured from the federal government or another state shall be used solely for administering tax laws and not to be disclosed).

Sec. 26451 (amount of income or any particulars relating to business affairs of any taxpayer secured under the Bank and Corporation Tax Law shall not be disclosed except under certain circumstances).

Sec. 26453c (same effect as Sec. 19287 above).

Unemployment Insurance Code Secs. 1094 and 1095 (employment records for unemployment compensation furnished to the director not open to public or admissible as evidence except in statistical form except that the name of the employer or employee shall never be divulged or in other specified circumstances).

Sec. 2111 (except as provided in Sec. 1094 information obtained is confidential and shall not be published or open to public inspection. Any violation of this section is a misdemeanor).

Sec. 2714 (medical records are confidential except when necessary in department administration and are not admissible in evidence. Information of identity of claimant may be given to Bureau of Vocational Rehabilitation but such information shall remain confidential and not be disclosed by this bureau).

Vehicle Code Sec. 1808 (records of department relating to physical or mental condition of any person are confidential).

Secs. 16005, 20012, 20013 (accident reports without prejudice to individual reporting and for confidential use of Department of Motor Vehicles and Department of California Highway Patrol).

Secs. 20014, 20015 (all accident reports made to Department of California Highway Patrol by peace officers are for the confidential use of the department, Department of Public Works, member of California Highway Patrol, Department of Motor Vehicles, any local agency investigating accidents occurring off state highway).

Sec. 40832 (records of license suspension or revocation not admissible in any civil action).

Sec. 40833 (neither accident report nor departmental action therein evidence of negligence or due care in damage action).

Water Code Sec. 7076.1 (reports of well completion shall not be made available for public inspection).

Sec. 12516 (information and records of Colorado River Board confidential and not available to public except under authorization of board).

Welfare and Institutions Code Sec. 118 (all records concerning any individual relating to public assistance for which the state receives federal grants, Aged Aid, Aid to Needy Children, Aid to Needy Blind not open to examination).

Secs. 638, 639, 733 (certain records relating to the provisions of the Juvenile Court Law are not open to the public except by order of the court for good cause).

In addition Article 2, Sec. 5 of the California Constitution requires that secrecy in voting shall be preserved and Article 6, Sec. 10b, of the Constitution provides that "All papers filed with and proceedings before the Commission on Judicial Qualifications or masters appointed by the Supreme Court, pursuant to this section, shall be confidential, . . ."

IV. THE NEWS MEDIA

THE NEWS MEDIA

The Ralph M. Brown Act provides for the public's access to meetings of government agencies. There is no special privilege in that law for newsmen. They are granted the same legal rights as any other citizen to attend public meetings—no more, no less.

One section of the Open Meeting Law, however, does specifically refer to the news media. This is the section of the law which requires that notice of a special meeting be delivered to "each local newspaper of general circulation, radio and television station requesting notice in writing." (Gov. C. Section 54956.)

This section of the law recognizes the responsibility of the news media to the public to keep them informed about the activities of the government agencies which serve them. Clete Roberts, president of the Radio and Television News Association of Southern California, spoke to the committee about this responsibility:

MR. ROBERTS: In essence, gentlemen, our approach to the problem is this—we in the radio and television news profession are anxious to most effectively carry out our responsibilities in providing the public with information from the many governmental bodies. It is our belief that all meetings in which public business is discussed should be open to the press, both broadcast and print, as well as to the general public. On the other hand, we are also vitally concerned that the legislative or administrative process not be impeded by the mechanics of broadcast journalism.

To that end we will abide by any fair set of standards which assures the gathering of information. As you may have heard, the international body, that is the Radio and Television News Directors Association is currently in the process of drafting a code of ethics. And the organization which I represent, the Radio and Television News Association of Southern California, is reviewing and revising a general policy of radio and television coverage which concerns itself directly with the subject you are studying.

The specific bill before the committee, Assembly Bill No. 1716 by Assemblyman Tom Carrell, authorizes radio and television coverage of the meetings of government agencies provided that there is no interference from attendant broadcast equipment and lighting.

Many municipal legislative and administrative agencies opposed Assembly Bill No. 1716. The arguments against the bill are well summarized in the resolution adopted by the Oakland City Council (Resolution No. 45171, adopted December 10, 1964). The Oakland City Council argued that:

The conduct and procedure of such meetings and hearings, and specifically the decision to permit radio and television coverage thereof, is properly and should be within the control of such legis-

lative bodies, just as such control is exercised by the Legislature and the Congress and the judiciary over their hearings.

The council further argued that "the dignity and decorum of such meetings and hearings can be seriously and needlessly prejudiced, and the full and free participation by members and witnesses can be constrained and hampered, which are unreasonable results, due to television or radio coverage."

Don Mozley, director of news for KCBS in San Francisco and national vice president of the Radio and Television News Directors Association, responded to that argument:

MR. MOZLEY: Can there be, after all this time, any doubt that a public meeting means just that, and that the broadcast medium is now an accepted form of communication? Yet we in the business are continually astonished and chagrined to see intelligent people raising some doubt about it—debating with themselves what the correct course is to take. Just last week the academic senate of the University of California took it upon itself to try to decide the fate of the University, yet sought to bar the broadcast industry from this important meeting which was making such a vital decision. Reporters with paper and pencil were invited to attend.

* * * * *

CHAIRMAN MARKS: The situation where you were barred—you were not barred by the University of California, you were barred by the academic senate?

MR. MOZLEY: That's right, Mr. Marks.

CHAIRMAN MARKS: The academic senate at that time was considering the subject of free speech.

MR. MOZLEY: It's very appropriate.

The practice of permitting reporters to attend meetings with paper and pencil while barring radio and television newsmen was discussed by Roy Heatley, news director of KNXT in Los Angeles and a member of the Freedom of Information Committee of the Radio and Television News Directors Association:

MR. HEATLEY: It is often argued that banning cameras and microphones from certain hearings is not discrimination. After all, the argument goes, radio and television newsmen can still cover with pencil and paper. I say that asking us to leave our cameras and microphones behind is like asking a police officer to leave behind his revolver, his night stick, his tear gas, but to please go ahead and quell the riot where he is outnumbered ten to one.

It is curious but true that those who object most to cameras and microphones are often those whose conduct is most subject to criticism. Where there is nothing to hide, cameras and microphones are welcome. All the legitimate objections to cameras and microphones as tools of news coverage can be overcome first by common sense, and second, sensible ground rules enforced by a code of ethics and a system of sanctions against those offenders.

The committee recognizes that members of the news media have a responsibility to the public and that this can only be fulfilled if radio and television news coverage is authorized of meetings required to be open to the public. The committee, therefore, supports legislation to accomplish this purpose.

LETTER OF TRANSMITTAL

Assembly, California Legislature
Sacramento, January 8, 1965

HONORABLE SPEAKER OF THE ASSEMBLY

HONORABLE MEMBERS OF THE ASSEMBLY

*Assembly Chambers, State Capitol
Sacramento, California*

In accordance with the provisions of House Resolution 500 (g) and House Resolution 98 of the 1963 Regular Session, your Committee on Finance and Insurance hereby submits its Final Report.

Because the Department of Employment has not completed certain of the studies directed by House Resolution 98, your Committee has not included statements concerning several areas in the field of Unemployment Insurance.

Several members of the committee have indicated an intention to file a minority report on Unemployment Insurance.

Respectfully submitted,

GEORGE N. ZENOVICH, *Chairman*

CERTIFICATES OF CONVENIENCE

In order to insure that only qualified persons were allowed to act as insurance agents in this state, the Legislature in 1939 adopted a series of statutes which established a public policy requiring persons engaged in the selling of life and disability insurance to demonstrate, by taking and passing a qualifying examination, that they have met minimum standards of technical knowledge. The reasons for such agent's qualification laws are obvious. Insurance, whether it be life, health, or casualty is complex. The average citizen must, because of these complexities rely upon the advice of his insurance agent. One method of insuring that the agent is competent is to require that he be licensed. The agent's license, therefore, is a method of protecting the public, although it incidentally does result in limiting the entrance of persons into this field.

However, because of the economics of the insurance industry, and the time required to train prospective agents in insurance law, the Legislature also provided for the issuing of "temporary licenses," known as "certificates of convenience." Certificates are issued to prospective agents upon the application of an admitted insurer. The insurer in these cases acts, in reality, as the sponsor of the agent. Insurance Code, Section 1688, provides that the person applying for the certificate must be an applicant for a permanent license and a certificate of convenience shall only be to act in the capacity for which such license is sought. In order to avoid abusing the privilege of the certificate of convenience it was provided that no person would receive such a certificate if he had ever before been licensed or received a prior certificate of convenience (Insurance Code, Section 1690). As a further check upon abuses, the Insurance Code requires that persons issued certificates of convenience be enrolled in a course of study designed to prepare the enrollee for the taking and passing of the qualifying examination to become a fully licensed agent (Sections 1689, 1690). Such a course of study may have the prior approval of the Commissioner of Insurance. Criteria for the commissioner's approval are laid down in Insurance Code, Section 1690:

- (a) That it covers the fundamentals of the life and disability business, life business or disability business, as the case may be, and gives instruction designed to protect the insuring public.
- (b) That it includes further instruction commensurate with the type of business in which the applicant is to engage.
- (c) That it contains a system of written progress checks whereby it can be determined whether the applicant is taking the course and obtaining information or training. A record of such progress checks must be kept on file for a period of two years in this state.

If, after approval of such courses of study, the Commissioner of Insurance finds it to be inadequate to continue to meet the requirements for his approval, he may withdraw approval of such a course of study

upon notice and hearing and terminate all certificates of convenience issued to persons enrolled in such a course. In any event, the certificate of convenience expires six months after the date of its initial issuance.

Allegations have been made that some insurance companies are abusing the privilege of obtaining certificates of convenience for those employed as its agents. The charge is that a small number of disability insurance companies are appointing many hundreds of agents on certificates but qualifying only small numbers of these persons for permanent licenses.

Mr. Donald Burns representing the California Association of Life Underwriters stated that:

"These companies are incapable of using the certificate of convenience for prelicensing training as the Legislature intended. Are they intentionally operating on a formula for merchandising policies without permanently licensing agents? Here is how such a company in the latter category might operate. First, it runs advertisements promising good careers as insurance agents. Prospective agents responding simply sign the application for a certificate of convenience which is issued automatically. Given applications for health insurance policies, the agent calls on his first natural prospect, his family and acquaintances. When these run out and he arrives at the point where some training is mandatory if he is ever going to sell another policy he then is notified by the company that his contract is terminated and that it has canceled his certificate of convenience. This may take three weeks or it may take three months. In any event he is never presented for the qualifying examination."

The Department of Insurance presented the committee with exhibits showing their experience with life agent certificates of convenience issued during various periods. The figures presented by the Department of Insurance would indicate that certain companies, principally those engaged in the mass merchandising of health insurance, have been making a large scale use of the certificate of convenience to cover their salesmen. These companies which represent 50 percent of the certificates of convenience granted to potential agents have had little or no success in qualifying their agents. Only 14 percent of those who were granted certificates of convenience satisfactorily passed the Department of Insurance exams during the period of December 1959 through May 1960. The other periods covered by the report of the Department of Insurance would indicate an equally poor percentage of licenses eventually granted persons who were granted certificates of convenience when sponsored by these companies.

Although it is difficult to assess the damage done by the relatively large number of unlicensed but certificated persons who are selling insurance, one witness did state that:

"There is double harm done by such insurance practices. First, the agent may have, in good faith, given up a job to become an agent or a representative of the company. When canceled, he becomes unemployed and cannot transfer his certificate to another company and start in the insurance business over again, for the

law provides that each man is allowed *one* certificate only. He is required to take and pass a qualifying examination before engaging in the insurance business again. And, of course, this could take several months. On the other hand, there is the harm which can be done to persons who have purchased what these companies call 'mass-merchandised health insurance' from untrained agents who underexplain and oversell. When claims are rejected, the company can simply state that the policy did not cover the illness or accident. And when the policyholder protests that the agent *said* the situation would be covered when the policy was sold, it is explained that the agent is no longer with the company. And the company can't be held responsible. The person is told that he should have read his contract—his insurance policy. The legal complexities of insurance contracts and the overall lack of comprehension by the general public is really the very foundation of California's requirement that life agents be licensed. Insurance shouldn't be—and generally isn't—a 'let the buyer beware' business. Companies whose licensing statistics have given rise to this particular question today—as noted earlier—engage in the widespread marketing of low-cost medical insurance policies. This coverage is merchandised to the least sophisticated segment of our citizenry. It is merchandised to those least able to withstand the financial disaster caused when the illusion of coverage is shattered by the facts of policies."

At the hearing held by the committee, the Chief Deputy Commissioner of Insurance, Mr. Joseph Thomas, was asked what powers the Department of Insurance had to restrict the issuance of certificates. His response was:

Mr. Thomas: There is a statute (Insurance Code, Section 1691) that we felt wasn't workable from the standpoint of trying to enforce it. It says that the Commissioner may after notice and hearing disapprove the course of study that is required when they appoint one of these agents. The statute says that we can revoke the approval of the course of the study after a proceeding but that only means that the next day they could come in and file a new course asking for our approval. Apparently, if that was added, we would have to approve it again so that it wouldn't really solve much of the problem.

Chairman Knox: So it is a practical matter. You found that statute unworkable and that is the only one that would give you control over the situation. Is that right?

Mr. Thomas: That is correct.

AB 1375 introduced by Assemblyman Knox during the 1963 General Session provided that the privilege of sponsoring persons for the certificates of convenience could be suspended if $33\frac{1}{3}$ percent of the certificate of convenience holders certified by the insured during any calendar year fail for any reason to qualify for permanent licenses during a period of six months following issuance of a certificate of convenience to such holder. The bill as amended would not have applied to insurers who certified less than 25 applicants for the certificate.

CONCLUSIONS AND RECOMMENDATIONS

The committee concludes that enactment of legislation similar to AB 1395 is desirable. It is obvious that some companies are taking advantage of the privilege of the certificate of convenience by certifying extraordinary numbers of persons who later prove unqualified to continue in the insurance industry. Of 631 persons issued a certificate of convenience by one company from April through September 1961 only 94 presented themselves for the examination. Even upon reexamination a total of only 12 percent of those initially granted a certificate of convenience passed the examination. This indicates to the committee that excessive numbers of persons who were either unable to satisfy the companies or unable to master the technical information involved in insurance law are being granted the certificate of convenience.

The committee feels that the enactment of legislation which would limit the ability of a company to abuse the certificate of convenience would promote a higher standard of hiring in the insurance industry as a whole and would indirectly cause the insurance carrier to upgrade its training program so that at least one-third of the persons for whom it had obtained certificates would be able to pass the examination. The committee feels that this could only result in better insurance service to the insurance-buying public.

INTERIM STUDY REPORT ON LENDER-BORROWER RELATIONSHIP IN THE PROCUREMENT OF INSURANCE

I. INTRODUCTION

The clash on this subject has been primarily between four trade associations. On the one side are the California Association of Insurance Agents (CAIA) and the Insurance Brokers Association of California (IBAC) which have brought charges of illegal and undesirable practice in the solicitation and sale of insurance against a minority of the lending and mortgage institutions of the state, and have sponsored bills amending and changing Insurance Code Sections 770-771 in an effort to rectify such grievances. On the other side stands predominantly the California Savings and Loan League (CSLL) and, secondarily, the California Mortgage Bankers Association (CMBA) which defend the present practices of their members, urge no change in the provisions of the Insurance Code, and object to the proposed legislation.

While the bulk of the complaints by the CAIA and IBAC are primarily designed to protect the business activities of their own members agents and brokers against alleged "unfair competition" in the sale of insurance policies by some lenders and their affiliated insurance agencies, the plaintiff groups also raise the public interest in claims that some, perhaps many, policyholders have suffered "coercive pressure" from lenders regarding the placing of insurance coverage, pressure which was considered psychological and implied but nonetheless real, hence a violation of Section 770 of the Insurance Code, which prohibits such pressures in the sale of loans and insurance.

The defense by the CSLL and CMBA stresses the importance and legitimacy of "freer competition" which now exists because of the soliciting activities of lenders for insurance business, and they justify these actions as benefiting the policy-purchasing public because of the alternative insurance programs made known to it by such competition. These latter two groups consider the regulations in the code as adequate, as is code enforcement by the Insurance Commissioner. The small number of unadjustable cases are, they argue, not sufficient to warrant more legislation but, if anything, require only reforms within the business itself. As a counterclaim, the lending institutions point to certain policy-preparation and submission weaknesses by agents and brokers which have caused lenders difficulty.

An integral part of the whole question, and one which is a major feature of the proposed legislation, is the extent to which a lender may solicit and place coverage with an insurance agency in which it has a direct or indirect financial stake and hence would derive benefit. A subsidiary question deals with the reverse of this: to what extent an

insurance company, or agency with financial or directorate links to a lender may use that connection in furthering the sale of its policies to borrowers or potential borrowers.

II. CONCLUSIONS AND RECOMMENDATIONS *

After weighing the evidence in this matter, it is the belief of the Finance and Insurance Committee that no substantial public policy considerations are at issue. The overwhelming impression in this matter is of several large economic entities vying for the same business, a competitive struggle which is being carried on within the established regulatory laws. Therefore, it is an issue in which the committee does not believe it should be its proper function to interfere or to favor one side more than the other.

It is recognized that in the course of this competition some practices have developed which allegedly have worked to the detriment of some borrowers and especially to the economic detriment of those independent agents and brokers serving borrowers. On the other hand, there is evidence that the activities of lenders in the insurance field have been readily accepted by borrowers and in some instances these services have provided better insurance coverage. That the independent agents and brokers have deemed the lender-insurance agency tie "unfair competition" is no doubt a natural response, but it is one which the committee feels should be dealt with through the trade associations and the Insurance Commissioner and not by seeking legislative relief, for evidence that the Insurance Code, Section 770, is being violated is far from conclusive. Despite "grey areas" of enforcement noted by the Insurance Commissioner, the economic gains accruable to the independent agents and brokers through preventing a lender from aiding its insurance affiliate seems out of proportion to any correction thus affected. As noted by all sides, the continued effort by the trade associations to observe each other's activities plus the occasional public and administrative complaints have led to a gradual but continuing improvement of business practices. The involvement of both the Insurance Commissioner and the Savings and Loan Commissioner has been continuous and positive. It is the committee's position that these commissioners must take an even more vigorous stand in policing their respective industries through formulation of "codes of good practice" which could be recommended to their clientele groups. These industries have seemed to be highly sensitive to public criticism. This committee is loath to recommend legislative action which, no matter how restricted in its wording, might have sweeping effect, when the corrections required seem less extensive and best handled administratively or through reciprocity between the trade associations.

III. BACKGROUND

In brief, Insurance Code Section 770 now makes it unlawful for any lender to require any borrower or prospective borrower to purchase insurance from any particular agent or broker as a prerequisite to the borrowing or renewal or extension of a loan on property. The right of the borrower to refuse any designated agent is guaranteed in

Section 771 (c), however, the lender is permitted to approve or disapprove of the insurer, may recommend a specific agent or insurer to the borrower if such does not contravene Section 770, and is permitted to order its own policy to cover the loan if an approved policy from the borrower is not in the lender's possession at least 30 days before expiration of the old insurance policy. The borrower may submit his own policy at any time, but a small "substitution fee" is authorized if a policy has already been ordered by the lender.

In the first years after passage of Sections 770-771, so-called "coercive practices" by lenders respecting insurance sales were notably reduced, but the complaints of independent agents about lender activity in the insurance field began to grow with the result that efforts were made by a committee of the CAIA to work out a "code of ethics" with the CSLL regarding practices considered by the CAIA to be violations of the spirit, if not the letter, of Section 770. This effort continues.

One of the complicating factors in this dispute was that many savings and loan associations were, until mid-1960, licensed as insurance agents or brokers. In July, 1960, Attorney General Mosk gave an informal opinion to the Savings and Loan Commissioner to the effect that state-chartered savings and loan associations could not lawfully transact insurance in California because the insurance business was of a different category than a legitimate savings and loan business. Furthermore, no express permission in the Financial Code gave such authorization to savings and loan associations as was given to a few banks in certain locations.¹ Following this opinion the savings and loan associations which had insurance licenses divested themselves of them but then proceeded, quite within the law, to maintain their insurance activities in several other ways, primarily via "affiliated" insurance agencies in which there was some personnel or financial tie.

Another complicating factor is that, in contrast to the savings and loan associations, the mortgage correspondents or mortgage bankers, who usually represent out-of-state lenders, are actively in the insurance business and openly solicit for such business. The Attorney General's opinion did not concern mortgage correspondents, but CAIA/IBAC complaints were levelled against them as well as the S & L's.

In the 1963 General Session three bills were introduced with the intent of satisfying the grievances of the CAIA against lenders. One measure, AB 1974 (Miliias et al.) was specifically backed by the Farmers Insurance Group and sought amendments to Section 770 and 771 for the primary purpose of eliminating lender discrimination against certain types of insurance companies. The CAIA and IBAC were more closely identified with AB 2254 (Veneman) and AB 2333 (Veneman and Burgener). AB 2254 proposed an amendment to Section 770 to require that insurance information received by a lender from a borrower be held in a fiduciary capacity and that it should not be disclosed to the detriment of the borrower, insurance agent, or insurer, or for the direct or indirect advantage of the lender or other person.

¹ Letter from Deputy Attorney General Harold B. Haas to Savings and Loan Commissioner Frank J. Mackin, July 8, 1960.

The additions to Section 771 incorporated in AB 2333 sought to prohibit lenders from recommending to borrowers or prospective borrowers the placing of insurance with any insurer, agent, or broker with whom the lender had any financial or other valuable interest or from which the lender received any benefit directly or indirectly if the borrower placed his insurance in such company or agency pursuant to lender recommendation. Specific descriptions of such lender-agent-insurer affiliations were detailed in AB 2333, evidence of which was conclusively presumed to be a requirement on the borrower to purchase from the recommended insurer and hence a violation of Section 770.

The subject of the relationship between lender and borrower in sale and loan insurance transactions in order to determine whether or not the lender may derive benefits which would be adverse to the public interest, and whether or not the insurance information obtained from the borrower in connection with the financing of a purchase of real or personal property shall be of a confidential nature. . . .

IV. THE HEARING

The Interim Committee hearing pursuant to HR 570 was held on January 15, 1964, in Los Angeles.

The case for new legislation to correct "this major problem of coercion and pirating of (insurance) renewals" was presented by various independent agents and brokers and their association representatives. Documentary evidence included a large collection of letters sent by lenders to borrowers, as well as other "case correspondence" and copies of policies, some of which had been submitted to the committee prior to the hearing.

One form of alleged coercion occurs in the practice referred to as "pirating of renewals". ("Pirating" is described as the practice by lenders of taking information from borrowers' insurance policies, for example the expiration date and the amount and type of property coverage, and giving such information to the affiliated or "captive" agency of the lender. The lender then seeks to interest the borrower in the insurance offered by the affiliated agency hoping to get that business. The agency itself may also solicit the borrower using the information it has gained from its lender affiliate, but the former method is more typical. "Pirating" refers to the process whereby the independent agent or broker who originally sold the policy is seemingly removed from renewing "his" policy by the "unfair competition" of the lender and its agency.)

For example, another complaint of the independent agents was that while the savings and loan associations informed the original brokers that its regulations required an insurance policy with a company having a rating of A+ or better in Best's Insurance Guide, it quoted a lower premium on a policy to be furnished by its own agency, from a company with a rating less than what it nominally required.

Another qualitative factor about lender involvement in assessing insurance needs for borrowers was raised by the lender's suggesting the amount of coverage a borrower ought to have. This matter led to the following exchange:

Assemblyman John Knox: Mr. Hardinge, is it still the custom for the letter to advise them what the face amount of the policy for fire and other damage coverage should be?

Mr. Hardinge: (Exec. Vice President of the CSLL) Yes, Mr. Knox, this is a suggested amount which is based upon the lender's record; based upon the appraisal that they have to make at the time of the loan . . .

Assemblyman Knox: No, wait a minute. Suppose the loan was five years old and property values had gone up and they hadn't made a new appraisal on it; they'd be taking a chance on allowing the fellow to be under-insured by not having personal advice on how much insurance to carry?

Mr. Hardinge: Any lender knows what the trends of construction costs have been in the last five years. If they are confronted with an appraisal form made five years ago, it is relatively simple to recalculate what the insurable value might be today.

In the name of service to the borrower another disliked practice of some lending companies is to begin their notification of expiration of insurance anywhere from 60 to 120 days before policy expiration, long before the original broker would consider seeking renewal from his customer. Further, as a service, the lenders suggest that they would be glad to handle the placing of the insurance. Two ways were considered standard. One was to return a signed authorization permitting the lender to order insurance. The other method was to put the burden on the borrower to refuse the service otherwise insurance would be ordered. For example, this phrase was occasionally used: "Unless we have your personal instructions to do differently, we will order your insurance for you from the ----- Agency for the amount suggested." (The representative of the CSLL reported at the hearing that use of such a phrase had been discontinued in current S & L correspondence with borrowers. The more typical phrasing now connects the ordering with failure of the borrower to reply or to provide a policy at least 30 days before expiration; for example: "If we do not hear from you before 30 days prior to the above expiration date, we will assume you want us to order the renewal from (our designated agency).")

That such tactics are believed to be "coercive" and financially injurious to the borrower was described by Mr. Moselle as follows:

I'd like to cover some added inducements that are thrown in which are adverse to the public interest. The added inducement of installment premium payments is frequently included, a courtesy extended only if the insurance is placed with the captive agency. Many of these same lenders require a full three-year period policy from an outside agency or broker, not even permitting the

use of the annual premium installment provisions of the standard fire policy. If the borrower insists upon his free choice of agent or broker he may do so, but in such case he must advance the full three-year premium. Notice that several of the lenders in the letters just read offered to add the premium to the loan balance, and one stated that 'we can add the premium right to the loan payments'. I wonder if your borrower would accept that added service if he was aware of the interest charge involved. If the monthly payments are not increased it means the premium would have to be added to the top of the loan balance and interest charged on that balance for the entire remaining years of the mortgage. This could result in interest charges far exceeding the total premiums.

In addition to the belief that the borrower is coerced, the independent agents and brokers have felt themselves unduly harassed by certain tactics of the lenders. The supposed object of such alleged harassment was the eventual securing of the borrower's insurance for the lender's affiliate.

Mr. Fred Dupuis, Executive Secretary of the CAIA, completed the major presentations for the independent agents with a review of a number of technical points about insurance acceptance by lenders as well as a review of the major complaints and an emphasis on what corrective legislation would accomplish.

The problems, noted Dupuis, are not with the entire lending industry, but only with some 30 savings and loan associations out of about 257 in the state.

In reference to AB 2254, Mr. Dupuis felt that the fiduciary relationship between lender and borrower had to be more clearly established. The effort to keep lenders from using insurance policy information in dealing with borrowers was especially vital to the independent agents because, Dupuis believed, the lenders and their affiliated agencies were granted a competitive advantage in their solicitation of insurance as they often required a policy to be deposited with them yet did nothing to get the facts which were in the policy. Hence, he believes they gained valuable information for which they did not pay to acquire.

As for the changes proposed in AB 2333, Mr. Dupuis believed that the right of lenders to recommend an agent had to be qualified.

Mr. Dupuis: When this was brought up before, the argument against it has always been well, those agents, they're trying to build a little wall around the business they have, they're trying to stifle competition, and so on. I think all of you realize that there're varyingly estimated to be 30 to 100,000 people competing in this state in the sale of insurance. Our members compete with each other. Our members compete with the members of the brokers association to which we testified earlier. We're trying to eliminate only one type of competition and one competitor by this bill. The savings and loan institution or the lender in this right to recommend—we would ask only that it be altered in one regard; he can recommend any insurance agency or company that he

wants throughout this state, among these thousands, except the one he owns or the one from which he derives financial benefit. We feel that the profit incentive involved tempts and leads astray many persons in this business to the extent that other rather questionable tactics come into the picture.

Defending the lenders and in opposition to proposed changes were representatives of the CSLL and the CMBA. In brief, the contentions of the independent agents and brokers were denied on the grounds that (1) the present laws provided adequate protection to the borrowers; (2) far from a detrimental treatment of borrowers by lenders, insurance services furnished by lenders provided comparative policies and premiums to borrowers not otherwise aware of such, hence providing them economic savings. In addition, by assuring that the loans were adequately protected through policies placed with knowledgeable affiliated agencies, the lenders were not only providing better coverage to borrowers but also assuring the stockholders of the savings and loan association better investment protection. Thirdly, what could be healthier for business and more suitable for the insurance customer than the competition offered by lenders and their agencies to the independent agents and brokers? Lastly, the bills are, in fact, "class legislation" designed to protect one group of insurance agents against another, hence they permit a monopoly which has antitrust implications.

Frank Hardinge of the CSLL believed that lender interest in borrower's insurance was desirable because the lender had a responsibility not only in protecting his own loan but in seeing that the borrower received as good insurance as he could get. The use of a designated agency by the lender in which to place such a policy enhances this service. For one thing, many California borrowers have no insurance contacts and the lender can so provide one.

Mr. Hardinge: So long as (the borrower) is taken care of, he cares less where his insurance business goes.

The designated agency can often get coverage which an independent agency could not get, for example in brush fire areas, occasionally at more reasonable costs.

Mr. Hardinge: When we lenders are dealing with an outside agent and there is a fire claim, and it's a tough one, it's a disputed one, we have no way to go in and work with that agent in trying to get the insurance company to do the right thing. When they're dealing with a designated agency there is some bargaining power which is very important for the borrower in this connection . . . The public interest has been proven many times to be better protected by the designated agency of a lender writing insurance because they have complete facts as to the construction of square footage of the business, the building and other pertinent information which makes them better qualified to determine values and proper coverage.

Another point was the issue of competition.

Mr. Hardinge: The independent agents intend to have competition among themselves. But I find it inconsistent that they are willing to ask this committee to cut off a form of competition . . . Why is competition coming from one group of agents different from any other group? . . . I submit that no efficient agent has ever lost any business because of the activities—and *solely* because of the activities of a designated agency. (Emphasis in the original) I repeat, that in the complaints that have been registered with this committee . . . that we're dealing with about one complaint to every 100,000 loans in effect. We repeat it is not from the public that the complaints are coming, but . . . from the agents which mean competition.²

Assemblyman Knox challenged Mr. Hardinge's position by inquiring why a lending institution should write its customer a letter about insurance at all when the lender was not able to be in the insurance business himself.

Mr. Hardinge: Mr. Knox, number one, most . . . savings and loan associations feel that it is part of their service to a borrower to notify him of the impending expiration of the policy . . . Number two, whether or not there is anything in that letter, many borrowers will contact the association regarding their insurance and ask questions about it; this is why every lending institution must maintain some people on their staff who are knowledgeable in this field. Number three, I submit that the law specifically states . . . that a lender is permitted to recommend an agent. I submit further, that we see nothing where the borrowing public or the property owning public is given a disservice by having additional information about the alternate choice that he has—which he should have—is a matter of competition. Now, to the extent that there is no coercion, and the laws are perfectly clear on this, to the extent that the borrower of his own choice makes this choice as to with whom he wants to do business, I see nothing wrong with it.

Mr. Knox questioned too whether the lender was injecting himself as a noncompetitor into a real competition between insurance agencies in an effort to aid that agency with which it was affiliated by capitalizing on the special economic relationship it had with the borrower who needed insurance.

Mr. Hardinge: I think that the facts of the case will support the position that, whenever this letter of pending renewal goes out that, it typically will trigger the borrower to take . . . the steps he should to get his insurance policy written by whoever—in addition to which an efficient agent will have already been at work seeking renewal of this policy. And I think that there has been no evidence brought to this committee which indicates that

² Hardinge noted that there are over two million real estate loans outstanding in California. The S & L business has about 1,200,000 of these. He estimated the specific complaints at about 100 received by his organization from the CAIA and the IBAC.

there are a lot of policies being written by designated agencies, which, as has been used here, 'pirated' away without the free choice of the borrower involved. I think this is where the testimony this morning is trying to convey an impression that there is coercion here.

As for the agents' complaint that policies are returned for insignificant reasons or are deliberately delayed, Hardinge informed the committee that 20 percent to 30 percent of the policies received are inaccurate because of errors by the agents. These policies, he said, are promptly returned for correction. The \$5 substitution fee was considered fair not least because cost studies showed that it cost more nearly \$12 to make the actual change.

On the extent of the effect of the legislation under study, Robert DeKruif, of H. F. Ahmanson Co., raised the point that

This type of legislation not only includes savings and loans and mortgage companies, but also real estate agents, loan brokers, escrow agents, finance companies and automobile dealers. Because they all have access to information contained in the insurance policy. The statement was made at one time—and I cannot verify it—that 65 percent of the membership of these associations were engaged in other businesses. Again—class legislation—are you going to rule one group as opposed to another group when the Insurance Code specifically says who can be licensed and who can't.

As for the benefit to the public, Mr. DeKruif said,

One specific instance, that we know of, where the public has benefited recently as the result of a designated agency sold 58 homeowner policies out of a possible 72 borrowers. These homeowner policies definitely broaden the coverage and gave greater protection to the borrower. However, the existing insurance agent—or we might call it the outside agent as they have been referred to today—had not even informed his client that the policy was available. I reiterate, the public was benefited by the designated agency.

A representative of the CMBA posed the difficulty faced by mortgage correspondents in relation to the proposed ban on insurance soliciting by lenders.

Mr. John Lyman: A mortgage correspondant is not a financial institution; he is either an individual or a corporate structure. His job is primarily to represent specific lenders, usually Eastern lenders, and making mortgage loans in his geographical area. Consequently, he is actively in the insurance business; he actively solicits insurance business and he sends out letters as either a company, an individual, or a designated company in which he has an interest. There is no secret about this; this is a matter of common knowledge . . . these are licensed brokerage companies.

Mr. Lyman contended that the independent agency complaints against the CMBA members were, on investigation, unsupported by the borrowers themselves.

Mr. Lyman: When we get over into coercion, I can't follow this. They're gonna send out letters and say 'your insurance is due; we'd like to write it.' Now if that is wrong, why then this is an odd approach as to how you get business. I don't know how else you can get business without soliciting. Now, this is the position of the Mortgage Bankers; they are not prohibited by law from being in the insurance business and they are.

A compilation of the cases by type of complaint was presented to the committee by the Chief Assistant Insurance Commissioner, Joseph D. Thomas.

In commenting on the different cases received by the commissioner, Mr. Thomas made the following points:

From his experience about 90 percent of the complaints to the commissioner come from agents and brokers. Complaints from borrowers are always or nearly always professional people. "We don't ever seem to get—as far as I recall, never have gotten—a complaint from a borrower who was just the average run-of-the-mill guy, who wasn't a professional person or rather prominent."

Although Mr Thomas said that his department did not "as a department, want to take sides in this thing," in the course of explaining the "grey areas" he suggested in several instances that perhaps new rules should be made, although what was to be done he did not elucidate.

Mr. Thomas: The lender, in soliciting—or the affiliate in doing the soliciting—if you look at the letter and you look at the letterhead, you can't tell whether it's the lender that's writing the letter or whether it's the independent agent and you can't tell whether he's licensed or unlicensed. The letterhead will be the letterhead of the savings and loan association; then down at the bottom, it will say "Insurance Department". And, to me, that doesn't seem to be right. I think they ought to be truthful about this thing if they're an independent agent and not part of the savings and loan which, itself, can't be licensed. I think the way the letter is put together should properly identify who's doing the soliciting.

V. SUBSEQUENT DEVELOPMENTS

In the months following the January hearing, efforts were made to bring the four trade associations together in hopes that they could work out many of their respective differences through some kind of institutionalized liaison committee. One hoped-for result would be a "code of ethics" covering not only insurance soliciting practices by lenders but also seeking improvements in some agent and broker methods which had bothered lenders.

A "working draft" for such a "code" was prepared jointly in February 1964 by officials of the Insurance Commission and the Sav-

ings and Loan Commission. It was suggested that in its "approved" form it be issued as a joint bulletin by both commissioners. After extensive criticism of the draft, especially by the CSLL, which sought to moderate the suggested changes proposed in the draft, issuance of the joint bulletin was held in abeyance.

Meanwhile, representatives of the four associations did meet on several occasions in late spring and at the end of the summer in an effort to reach agreement on some points.

* Assemblyman John Veneman has expressed reservations about the committee's recommendations in this report.

REPORT—FINANCIAL RESPONSIBILITY LAWS FOR PRIVATE AIRCRAFT OPERATORS

HR 16

This subject, in which the State of California is being asked to foster and to enforce minimum financial responsibility standards for the owners and operators of aircraft within the state, is for several reasons one of those problems which the American system of government finds especially difficult to handle. For one thing, the air transportation field in all of its phases has been almost from the beginning centrally controlled at the federal level. State participation has been in the nature of "cooperation" but still bound by the extensive regulations maintained by the national government.

In the post-World War II period travel by air has become an increasingly popular activity as a wide range of aircraft have become available for private use, as social and economic mobility has made rapid travel by air highly desirable, and as a more affluent society has permitted many private citizens as well as business organizations to own aircraft or at least qualify to fly them. Thus private planes combined with military and commercial carriers has increased the total of airspace users to the point where the term "the crowded air" applies to more than just wireless communication.

Increasingly, therefore, the individual states have found that the exercise of their "police powers" to ensure the health, safety, and welfare of their citizens has meant having concern for the proper use of the airspace above and for the potential dangers to citizens and property below. The California Division of Aeronautics, for example, carries on a program which includes among other things the granting of state permits to airports meeting certain approved criteria, an extensive program of air safety education, and promotional activities regarding flying, as well as cooperating with federal authorities in the field and seeking coordination of state and federal laws regarding aircraft.

Despite this activity, the state has been naturally reluctant to legislate in a field so dominated by national government regulation unless permission is granted or implied to do so or some lack of action by the federal authority leaves some part of the aircraft field unregulated in the face of a call for meeting some public need. A further damper on state action has been the insistence by many state residents involved or interested in the aircraft field that the broad range of federal regulations were quite adequate, and the increased supervision by the state would only prove confusing, oppressive, and costly.

On the other hand, the states have come to have almost complete control over the regulation of minimum insurance requirements for certain activities. In the area of commercial and private aviation, however, state insurance requirements have obviously been a more

contentious matter than, for example, in the automobile field, given the federal role. For whatever reasons, the national government has not acted, except for minor exceptions, to require a national minimum standard of insurance coverage for commercial and private aircraft owners and operators. It has been assumed that aircraft owners and operators are sufficiently cognizant of the dangers of the business and of the possibilities of high loss, and were financially capable, to carry adequate personal liability and property damage insurance against aircraft accidents. Among private owners an estimated 90 percent or more do carry insurance and virtually all commercial carriers are so covered.

Despite this, uninsured loss from air accidents occasionally occurs. Because of the heavy life and property loss potential—and after several spectacular cases—California had passed by 1963 an insurance requirement for commercial air carriers operating in the state. Since 1959, several bills have been introduced to foster minimum insurance standards for private, noncommercial aircraft owners and operators as well.

The automobile insurance laws, themselves a rather late response to an overwhelming and growing need, are often used as evidence of the kind of action needed for the private aircraft field, but the analogy founders on many dissimilarities. There are 8 million private automobiles currently in California and only 14,000 private aircraft. The education, training, testing, and qualification of automobile operators holds no comparison with the rigorous checks on pilot ability, the latter a matter of clearer necessity perhaps, but which have proved themselves in the enviable proportional safety record of pilots compared to the dismal record of automobile drivers. On the whole, too, aircraft are under greater supervision than most automobiles. In general, as noted before, aircraft owners and operators are of an economic class and of a socially responsible mind which assures their compliance with rules for liability and damage. Further, the personal and legal penalties for carelessness in the air are comparatively harsh.

Despite the institutional obstacles and the relative lack of need, few if any voices have been raised against the passage of some kind of legislation in California which would seek to extend insurance coverage to *all* persons who own and operate private aircraft in California. The question in contention is how to establish and administer such requirements.

Since the problem is believed to be statewide in scope, one proposal involves a system administered centrally by the Division of Aeronautics. This is opposed because of the estimated cost to state taxpayers and the dislike of increased state bureaucracy. Instead, a system whereby local municipal airports would require aircraft insurance is proposed as most suitable.

The state program advocates a minimum public liability and property damage insurance standard in which the aircraft owners and operator is not *compelled* to buy, but failure to do so and involvement in an accident in which death, injury, or a certain dollar loss is involved would lead to state sanctions against his flying. Subsequent uninsured losses by the same person would lead to fines and imprisonment.

Opponents of this plan point out that under such a scheme those incurring loss are not compensated in the first accident at all, hence a plan for locally required insurance as a prerequisite for habitual use of the local public airport would be more protective. Further, state prohibitions against flying seem unrealistic since the license to fly is, in fact, a federal one. There appears to be no way for the state to keep an "offender" out of the air at least in the short run and possibly not at all.

The state plan counters this first by decrying any requirement for "compulsory insurance" as a prerequisite to flying. Such insurance, it is said, would make premiums far higher than is currently the case. It is granted that state sanctions might not keep flyers grounded, but in the long run the greater reporting of accidents, which would permit identification of offenders, plus the eventual fines and punishments would "cleanse" the air of "chronic offenders," persons with sub-standard aircraft, reckless natures, and fiscal irresponsibility, who should not be flying anyway regardless of their federally approved license signifying their technical ability to do so. In this connection it is argued that of some 1,830 total airfields and airstrips in California, only an estimated 200 are publicly owned facilities, hence the great majority are not covered by the "local insurance" proposal. In addition, only about 220 airports either public or private have full or part-time professional managers. Needless to say, the financially irresponsible owner and operator is more likely to base his plane and do his flying beyond local supervision, as it is quite possible to do.

It is argued that at least a dozen public airports as well as a number of private fields already have successful local insurance requirements and thus local action has a basis in good experience. In reply it is pointed out that many of these same public airport managers have found undesirable both the expense and the burden of administering insurance rules, and that they support a statewide program. This was so not least because local rules cannot be applied to "transient" aircraft using a "public use" facility since federal rules required the field to be open to all planes. The cost of administering such local rules has been estimated at \$10,000 annually for a field with 200 resident aircraft. Estimated cost of administration by the state has been placed at between \$11-15,000 annually.

This state administration would require at least some kind of registration or identification of plane owners who carried minimum public liability and property damage insurance. A sticker costing a dollar or so could be issued by the Motor Vehicles Department. Such a rule is considered a necessity and similar registration in several other states is considered neither a burden on pilots nor in conflict with federal licensing regulations. "Licensing" means basically the approval of a pilot's ability to fly, his health, and his plane's airworthiness. Even so, opponents of any statewide registration hold any such "identification" as a step toward unwanted and, as they see it, unnecessary, state interference in a federal area.

The issue of "how" is almost completely at loggerheads, yet the potential problem grows greater as the annual total of private planes in California increases by 500 and as nonowner "weekend" pilots grow

in number. California's year-round climate prompts a greater use of private aircraft than in most parts of the country—an average of 250 hours a year in the densely crowded southern third of the state. There is an expressed fear that a rash of small uninsured accidents or some major uninsured catastrophe might raise public emotion for passage of highly restrictive legislation including the generally unwanted compulsory insurance. There is desire to forestall precipitous legislation by beginning the regulation more moderately now.

Under the best of circumstances questions remain, especially about insurance coverage policies, which cast doubts on the possibility of developing as thoroughgoing a system of minimum coverage as seems necessary. For example, an aircraft insurance policy is based on highly individual factors and is shot through with exceptions and exclusions which might cause accident loss by a seemingly "covered" pilot to be, in fact, uninsured. Violations of Federal Aviation Agency rules on night flying, safe altitude, and instrument flying may serve as breaches of the policy, and no coverage is given if losses are due to racing, aerobatics, crop dusting, or hunting from the plane. Only a pilot qualified to fly that particular craft is permitted to operate it else the coverage is void. A pilot renting a plane is not generally covered unless he carries a nonowner policy. An aircraft owner is not liable for damage caused by his plane merely because he is the owner.

In light of the static condition of the debate, yet with a present and especially with a potential need looming, this committee strongly urges that new alternatives be examined by those involved in administering and participating in the air travel field. State requirement of an absolute liability on plane owners might be examined. Greater specific use of local law enforcement and tax officials as aids in the regulation of a state program might be investigated. Finding a system of identifying aircraft owners without resorting to "tagging" should be considered. Barring the possibility of getting the aircraft insurance underwriters to eliminate or to modify traditional exclusions, perhaps a state fund might be established, filled through appropriate levies, to help guarantee compensation for losses occurring under the special, excluded, circumstances. There has been no real discussion of what stand federal aviation authorities would take toward aiding implementation of state insurance requirements, or whether, in fact, the federal authorities would find state registration an imposition on their domain.

Because it is believed that national uniform insurance regulations would greatly alleviate the current dispute, with its many parochial problems, the committee recommends that the California Assembly pass a resolution urgently requesting the United States Congress to legislate such national standards for personal liability and property damage insurance for the owners and operators of private aircraft. Meanwhile, the committee calls for a renewed effort to find a suitable, statewide solution.

UNEMPLOYMENT INSURANCE

CONCLUSIONS AND RECOMMENDATIONS

1. Unemployment Insurance coverage should be extended to employees of the State of California, its political subdivisions, employees of all special districts, and employees of nonprofit employers. Such coverage should be on a merit rated basis, but it is the obligation of the state to provide the cities, counties, and special districts with additional sources of revenue so that the added cost of such coverage is not borne solely by the property taxpayer.
2. Any additional increase in the cost of providing benefits under the Unemployment Insurance program should be met by both an increase in taxable wage base and a revision of the premium schedules.
3. That the Assembly authorize a comprehensive study of the administration of the Unemployment Insurance program by the Department of Employment.

UNEMPLOYMENT INSURANCE REPORT

One of the primary objectives that the 1935 Legislature intended to achieve by the enactment of a system of unemployment insurance is set forth in Section 100 of the California Unemployment Insurance Code, to wit: to provide "... benefits for persons unemployed through no fault of their own and to reduce involuntary unemployment and the suffering caused thereby to a minimum." To achieve the purpose of the law, unemployment benefits should be high enough to provide the unemployed person with a livelihood while seeking another job, and at the same time not so large as to blunt his incentive to find new employment. The law makes the amount of benefits dependent upon the level of the claimant's past earnings and thereby establishes a formal standard against which to measure the degree of fulfillment of the law's goal.

Average and Maximum Weekly Benefit Amounts

Unemployment compensation under the original act passed in 1935 was to be 50 percent of average weekly earnings so long as these did not exceed \$30. In 1938, the first year in which unemployment benefits were paid, maximum benefits were \$15 a week and this maximum did correspond to 50 percent of *average* weekly earnings in covered employment. The average weekly payment amounted to about 34 percent of average weekly earnings in covered employment.

In December 1939, maximum benefits were raised to \$18 a week, while the minimum payments were increased from \$7 to \$10. This re-

vision in benefits considerably increased the ratio between average weekly benefits and average weekly earnings.

In 1940 the maximum benefit was 58 percent of average weekly earnings, while average weekly benefits equalled 45 percent of these earnings. These high proportions were never again reached in subsequent years. With rapidly rising earnings during World War II, the percentage shrank respectively to 41 percent and 33 percent in 1943. Since then there have been several upward provisions of the maximum benefit. These higher benefits, together with continual wage increases, held the average weekly benefit amount as a percentage of weekly earnings to a relatively stable figure during the 1950 to 1959 period.

In 1960, the average weekly benefit payments rose to about 38 percent of average weekly earnings as a result of the substantial increases in maximum benefits from \$40 to \$55, and the \$55 maximum equalled 52 percent of average weekly earnings.

The 1961 amendments did not change the \$55 maximum but did narrow the steps in the benefit formula with the result that the weekly benefit of about two-thirds of the eligible claimants was raised by \$1 to \$3. As a result, the average weekly benefit amount rose to \$42.19 in 1962. Average weekly earnings also rose, however, so that the average weekly benefit was the same percentage of average weekly earnings in 1962 as it had been in 1961—37 percent.

Monetary Eligibility Requirements

Since the law's intent is to partially compensate a worker for the wages he fails to earn while unemployed, the claimant's eligibility for benefits depends on his having a substantial attachment to the labor force. One of the methods used to measure this attachment is a minimum earnings test. This requirement denies any benefits to claimants whose earnings in a 12-month period are below a specified level, on the assumption that low earnings indicate a short or temporary attachment to the labor force.

In 1940, more than 16 percent of all monetary determinations held the claim ineligible because the claimant had not earned the statutory minimum of \$300 during the base period. The percentage of monetary determinations which declared claimants ineligible on this test alone fell rapidly during the war years and reached 5 percent in 1945. Following 1945, the percentage of claims ineligible because of low annual earning rose to 8.9 percent in 1946 and 9.3 percent in 1947. From 1947 to 1954, the percentage declared ineligible for insufficient earnings declined steadily to an alltime low of 3.7 percent.

In 1955, the Legislature raised the minimum earnings requirement from \$300 to \$600. In 1956, as a result of this revision, 9.1 percent of first determinations found claimants ineligible. From 1957 to 1962, the proportion of claimants ineligible because of insufficient earnings ranged between 6.6 percent and 8.3 percent.

An eligibility requirement of a given dollar amount of earnings becomes less effective as wages rise. Three minimum dollar amounts have been part of the California Unemployment Insurance laws at different times: \$156 from 1938 through 1939; \$300 from 1940 through 1954; and \$600 from 1955 to date.

During the first two years in which benefits were paid, 1938 and 1939, claimant could earn the amount of wages necessary to qualify for the minimum award in a little over five weeks of work at average weekly earnings. In 1940, when the minimum requirement for the base period was raised from \$156 to \$300 the number of weeks of work at the average rate needed to qualify for benefits jumped to 9.6 percent. During the period in which the minimum requirement was \$300, from 1940 to 1954, the minimum number of weeks of work at the average rate needed to qualify declines every year, and by the last year of the period was down to a low of 3.7 percent. When the wage eligibility requirement was doubled to \$600 in 1955, approximately seven weeks of work at the average rate were needed to earn that amount. With wages still rising, the number of weeks of work needed to qualify continues to decline, and in 1963 less than five weeks of work were necessary to earn enough wages to qualify for benefits.

Two other tests contained in the Unemployment Insurance Code have resulted in controversy between interested groups. These are the lag quarter provision and the 75-percent rule.

The lag period is an administrative device which gives the Department of Employment time to process the wage reports that employers submit quarterly. The lag period is time gap between: (1) the end of the four calendar quarters, the base period used in determining a claimant's right to unemployment insurance and the amount of his benefit award and (2) the date when his claim is opened; that is, the start of his benefit year. This lag period will run as high as four calendar months. The lag period provision provides that a claimant cannot qualify for two consecutive years of regular benefit payments unless he has had at least \$600 in earnings during the 52 weeks after he opens his claim. If a claimant has received disability insurance or workmen's compensation during his 52-week benefit year, however, these benefits doubled can be counted as earnings for establishing a new claim. Thus, an employee's lag period earnings cannot be counted toward his benefit award unless he has earned \$600 additionally during his benefit year.

To the extent that an employee does have substantial earnings during the lag period, he is deprived of any award for unemployment insurance based upon these earnings unless he has had post-lag period earnings in addition. To this extent, it does work to the disadvantage of persons caught up in recession unemployment or technological displacement. Although extended duration benefit payments help to alleviate such unemployment, they are available only during periods of high unemployment and do not treat the individual problems of the employee on an individual basis.

The 75 percent rule is another supplementary test of eligibility for benefits which is applicable to claimants having low base period wages who earn most of these wages in a single calendar quarter of the base period. When their entire base year wages are at least \$600, but less than \$750, claimants are not entitled to benefits if more than 75 percent of these wages were earned in one calendar quarter. This rule was devised originally to limit the number of persons in seasonal industries who could qualify for wages. Such persons generally have high weekly earnings for a short period of time, wages which would amount to \$750 during the benefit year but which would largely be

earned in one quarter. The presumption is that such a worker is not "enough of a worker" to come within the scope of unemployment insurance protection.

At the 1964 average weekly wage in insured employment of \$120 a person would only have to work 6.3 weeks in the base year to satisfy the \$750 earnings test and remove the presumption on which the 75 percent rule is based. However, at the minimum hourly wage of \$1.25 an hour, 15 weeks of work at 40 hours a week in the base year would be needed to earn more than \$750. This rule does result in arbitrary exclusions since some persons may be entitled to benefits because their working period spans parts of two calendar quarters while other persons who have the same amount of earnings are deemed ineligible by the 75 percent rule because most or all of their work occurs in a single quarter. The rule works its greatest hardship on the unskilled intermittent employee who has frequent periods of unemployment.

Unemployment Insurance Coverage

As of 1940, the unemployment insurance statute covered employment by employers having four or more employees for some portion of a day in each of 20 different weeks in a year. Excluded from coverage were agricultural labor, domestic service in a private home, government employment, work in certain types of nonprofit organizations and certain other small categories of employment. Elective coverage of exempt employment was permitted. In 1940, a little more than one-half—53 percent—of total civilian employment was covered. The percentage rose to a wartime peak of 63 percent in 1943 as the war effort resulted in concentrating employment in covered industries, and then it declined to 57 percent in 1945.

In 1946, coverage was extended to all employers with one or more employees who paid wages in excess of \$100 within a calendar quarter. As a result of the change, an additional 264,000 employees on the payroll of about 140,000 employers were brought under unemployment insurance coverage. Approximately 63 percent of all civilian employment in California was covered in 1946. With a single exception in 1955, unemployment compensation was extended to federal employees by federal legislation. No major change in coverage has been enacted since 1946. Since 1955, the proportion of civilian California workers under the protection of unemployment insurance has remained close to 70 percent.

At the request of the committee, the Department of Employment submitted a report of their experience with state and local government entities covered under the Unemployment Insurance Code. That report is partially reprinted here.

"EXPERIENCE OF STATE AND LOCAL GOVERNMENTAL ENTITIES COVERED UNDER THE UNEMPLOYMENT INSURANCE CODE IN CALENDAR YEAR 1963"¹

Introduction

Historically, three methods have been used to bring state and local government agencies under unemployment insurance coverage. One method is compulsory coverage by statute; for example Section 605

¹ Department of Employment. Report 438c No. 4 (June 1, 1964).

specifically covers public housing administrative agencies that are operated by state or local government subdivisions, and Section 605.5 specifies that the California Industries for the Blind is a subject employer with respect to certain of its employees.

In addition, governmental entities are allowed to elect coverage under either Sections 709 or 710.

An agency electing coverage under Section 709 becomes subject to the code in the same manner as other subject employers, and is subject to the same tax provisions as other subject employers.

On the other hand, an agency that elects coverage under Section 710 is not required to make regular contributions but is only required to reimburse the Unemployment Fund for the additional cost of benefits that result from its own coverage. No payments of any kind need be made under this type of coverage unless or until actual benefit cost liability is incurred.

The provisions of Sections 709 and 710 are discussed in more detail in the following paragraphs.

The additional-cost type of coverage is also used by the federal government to extend unemployment insurance to its own employees and to ex-servicemen. Under these programs the states pay benefits to former federal employees and to ex-servicemen, and are reimbursed by federal funds for the additional cost of these benefits.

Provisions of Sections 709 and 710, California Unemployment Insurance Code

Section 7.6 of the California Unemployment Insurance Act that was enacted in 1949 provided for elective coverage of governmental employment. In 1953 this provision became Section 709 of the California Unemployment Insurance Code. This section permitted the Director of the Department of Employment to grant coverage to state and, until amended in 1959, to local governmental entities, provided the government entity requested it and a majority of the affected employees voted in favor of coverage. Civil service and permanent tenure employees are excluded from coverage under this section.

When a governmental entity elects coverage under Section 709, it must agree to maintain its coverage for a minimum of two years. Any time thereafter, the governmental unit may terminate its coverage effective at the end of a year. Governmental entities subject under Section 709 are subject to the code to the same extent as other subject employers, and are experience rated and required to pay contributions in the same manner as other subject employers.

At the present time, governmental entities subject under Section 709 pay tax rates ranging from 1.7 to 3.0 percent of taxable wages, depending on the ratio of their reserve balance to base period taxable wages. In addition they pay the 0.5 percent balancing tax. Their reserve accounts are not charged for the extended duration benefits paid to former employees or for benefits paid to employees who are ruled to have voluntarily quit without good cause or to have been discharged for misconduct connected with their most recent work.

The 1959 Legislature enacted Section 710, providing for elective coverage of local government units, and amended Section 709 to exclude such entities and to apply only to the state. Governmental

entities covered under Section 709 prior to the 1959 amendment and eligible for coverage under Section 710 were given the option of either remaining subject to the provisions of Section 709 or changing their coverage to Section 710. The option can be exercised at the end of any calendar quarter. Section 710 provides for elective coverage of all employees, including civil service and tenure employees, of districts, county, and municipal governmental units. In order to be granted coverage a majority of the employees must sign a petition in favor of coverage.

Section 710 stipulates that governmental units covered under its provisions must maintain their subject status for a minimum of two calendar years, after which coverage may be terminated at the option of the entity. A governmental unit which terminates coverage remains liable for its proportionate share of the additional cost of benefits paid which are based on wages earned while coverage was in effect.

In lieu of the contributions required of private employers, governmental units subject under Section 710 reimburse the Unemployment Fund for the additional cost of all the benefits paid as a result of this coverage. Under this financing system the employers pay the full additional cost of all regular and extended duration benefits paid to their former employees. This includes the full additional cost of benefits drawn by employees who have voluntarily quit or were discharged for misconduct, since Section 710 coverage does not establish an employer reserve account and the provisions for noncharging of benefits are not applicable to government units that elect coverage under it.

Employers Covered by Section 709

During 1963 there were 70 employers paying wages to workers covered under Section 709 of the code. These employers paid almost \$37 million in total wages to their 6,111 employees.

Most of the employers subject to this section have few employees. Miscellaneous districts (which includes port and transit districts) are the largest in terms of employment with an average of 449 employees; soil conservation, reclamation, and fire districts are the smallest with an average of four employees. Most of these employers have high tax rates. There are 19 employers who contribute at the maximum rate of 3.5 percent of taxable wages, whereas there are only four that contribute at the minimum. Well over half of them (43) have tax rates of 3.0 or more. Soil conservation, reclamation, and fire districts, as a group, have the lowest average tax rate (2.7). Redevelopment agencies with an average tax rate of 2.9, is the only other group to have an average rate under 3.0. All of these tax rates include the 0.5 percent uniform balancing tax.

Within several groups there are wide spreads in the tax rates. While about half of the water districts contribute at rates above 3.0 percent, there are districts which contribute at the minimum rate. The mosquito abatement district group is the only one where all employers pay at rates higher than 3.0 percent.

Employers Covered by Section 710

On December 31, 1963, there were 40 governmental units which have been covered for at least a full year under Section 710. In addition,

there were three districts which terminated coverage but were still liable for benefits.

The only two groups characterized by a large number of employees are hospital districts with an average employment of 258 and "other districts" with an average employment of 129. (If one large employer in the "other districts" group, with 1,440 employees, is excluded, the average employment of the group drops to 10.) The employers in the other groups generally have few employees. Public utility districts have an average employment of six, water districts 19, and redevelopment agencies 13. In addition to being relatively small, most have a stable employment pattern with little seasonal fluctuations.

Of the 43 employers potentially liable for benefits, 17 incurred no benefit costs during 1963 and therefore made no remittances to the fund. The remaining 26 contributed over \$110,000 to the fund for the cost of benefits paid to their former employees during 1963.

These employers are not assigned tax rates. In order to make statistical comparisons, hypothetical rates have been computed by dividing incurred benefit costs during 1963 by the amount of their wages that are under \$3,800. Twenty-two had hypothetical tax rates below 2.2 percent, and of these, 15 had equivalent rates of 1.0 percent or less. One district had a cost liability equivalent to a 4.4 percent tax rate, and in three cases the equivalent rates ranged from 2.2 to 3.5 percent.

Since employers subject to Section 710 pay only for the additional cost of benefits their former employees draw, there can be a wide fluctuation in the percentage of wages that an employer must budget to pay for benefits. One employer had benefits amounting to .05 percent of "taxable wages" for 1963 but during 1962 benefit cost liability was 14.9 percent of "taxable wages." Under the current statute, if a claimant earned all of his base period earnings from one governmental unit, the liability for the layoff of one employee could amount to a maximum of \$2,145 including extended benefits (\$55 times 39) in one benefit year, and under special circumstances, to an additional \$2,145 in a second benefit year."

A significant portion of the committee's hearing on June 16 and 17, 1964 was devoted to the question of extending unemployment insurance coverage to employees of the state, its subdivisions, and to employees of nonprofit institutions. Although it is often claimed that employment by governmental entities is so stable that no unemployment insurance coverage is required for its employees, information presented by the Department of Employment at this hearing demonstrated that unemployment rates were comparable to those found in the more stable private employment.

Unemployment rates for civil service employees for the calendar year 1963 were as follows:

SEPARATION RATES FOR CIVIL SERVICE EMPLOYEES ^a
OF THE STATE OF CALIFORNIA
Calendar Year 1963

Month 1963	Total civil service employees ^a	Separations per 100 employees			Permanent employees separations per 100 employees ^b
		Total	Voluntary	Involuntary	
January	96,898	1.9	1.1	0.7	1.0
February	97,765	1.7	0.9	0.8	1.0
March	98,131	1.9	1.0	0.8	1.1
April	97,652	1.9	0.9	1.0	0.9
May	97,895	2.1	1.1	1.0	1.1
June	99,731	2.3	1.2	1.1	1.3
July	99,731	1.9	1.2	0.7	1.2
August	101,104	3.4	2.1	1.3	1.5
September	100,764	3.6	2.2	1.4	1.5
October	99,558	3.0	1.2	1.8	1.2
November	99,367	1.9	0.9	1.1	1.0
December	99,960	1.4	0.8	0.6	0.9
Average for calendar year 1963	99,046	2.3	1.2	1.1	1.2

^a Excluded from these figures are employees of the State Colleges, the University of California, and those in statutory and exempt classifications.

^b Monthly separation rates are estimated by Personnel Board.

SOURCE: Personnel Statistics, Table 20, compiled and released by California State Personnel Board.

Representatives of the State Employees' Association objected to coverage of their members under the Unemployment Insurance statutes. Their position was that the money that would be used to provide these benefits could better be used to provide higher wages or other fringe benefits, and that the state under a merit rating system would be paying more into the Unemployment Insurance Fund than its former employees would draw as benefits. However, these identical arguments have been made in the past by other employee and employer interests. If these were considered acceptable reasons for excluding groups from coverage under the Unemployment Insurance Act, then virtually no employer or employee group would voluntarily submit to the plan. It must be admitted, however, that the hardship experienced by an unemployed former government employee is as great as that experienced by any unemployed individual who has expenses that must be met. Similarly, if a private employer has an obligation for the payment of an unemployment insurance premium tax to provide benefits for his unemployed former employees, the state should bear a similar responsibility, it being the largest single employer in the state.

If the State of California became a subject employer on the same basis as other employers, it would be assigned a standard tax rate of 2.7 percent plus the balance tax of 0.5 percent. All new employers are unrated for a period of approximately five years during which they pay contributions at this 3.2 percent rate. At the end of this period, when it becomes a rated employer, the state will be eligible for a sub-

stantial reduction in its contribution rate. The amount of this reduction would depend on which tax schedule was in effect at that time. In a period year, the tax rate of this state as a rated employer would fall to around 1 percent, or the minimum rate of the tax schedule, whichever is the highest. In addition to this rate, it would also be required to pay the uniform balancing tax.

An alternative method of coverage would be for the state to be covered on a cost basis only; that is, it would be required to pay the additional cost of benefits that resulted from its coverage. This would include all regular benefits and extended duration benefits. For example, it would include benefits paid to a claimant who left the state's employment voluntarily and without good cause or was discharged for misconduct connected with his work. At present, the few governmental agencies who have elected coverage on an additional cost basis are billed at the end of each calendar quarter for liability incurred during that quarter. Section 710 of the Unemployment Insurance Code does, however, provide that the director may require advance payment of estimated benefit costs. If this type of coverage is extended to the state, consideration should be given to avoiding any adverse effects on private employers or on the Unemployment Fund. One such effect would be the loss of interest revenue to the fund. This could be prevented by payment in advance or minimized by a frequent billing system. Another possible adverse effect would be lowering of the solvency ratio, the ratio computed on December 31 which determines which tax schedule would be in effect during the following year. If benefit costs are not prepaid then the amount of money due or owed to the fund as of December 31 could be considered as in the fund for purposes of computing the solvency ratio. The following estimated costs of extending coverage to employees of the state computed on a merit rating basis the same as other employers was prepared by the Department of Employment.

**ESTIMATED COST OF EXTENDING COVERAGE
TO EMPLOYEES OF THE STATE**

Estimates for Year Like Calendar Year 1964

I. Unemployment Insurance

Item	Current coverage	Additional coverage of state employees	Total coverage including state employees
1. Amount of taxable wages.....	\$16,700.0 million	\$550.0 million	\$17,250.0 million
2. Amount of total employer contributions, earned.....	\$507.0 million	\$17.6 million	\$524.6 million
3. Amount of regular benefit payments.....	\$430.0 million	\$6.0 million	\$436.0 million
4. Regular benefit payments as percentage of taxable wages.....	2.57 percent	1.10 percent	2.53 percent
5. Extended duration benefits.....	\$50.0 million	\$1.0 million	\$51.0 million
6. Average employment.....	4,344,000	140,000	4,484,000

The employment figures include all employees of the state and the University of California. Estimates of employment and wages were derived from data published in the proposed State Budget for the fiscal year ending June 30, 1965.

The estimate of the cost of unemployment insurance benefits is related to actual experience under the Federal Unemployment Compensation for Federal Employees program in California, and the cost of benefits paid to state employees in New York and some other states.

Cost of mandatory coverage for employees of counties, districts and local government agencies are as follows:

ESTIMATED COST OF EXTENDING COVERAGE TO EMPLOYEES OF COUNTIES, DISTRICTS, AND LOCAL GOVERNMENT AGENCIES

Estimates for Year Like Calendar Year 1964

I. Unemployment Insurance

Item	Current coverage	Additional coverage	Total coverage including employees of local government
1. Amount of taxable wages.....	\$16,700.0 million	\$2,200.0 million	\$18,900.0 million
2. Amount of total employer contributions, earned.....	\$507.0 million	\$70.4 million	\$577.4 million
3. Amount of regular benefit payments.....	\$430.0 million	\$24.2 million	\$454.2 million
4. Regular benefit payments as a percentage of taxable wages.....	2.57 percent	1.10 percent	2.40 percent
5. Extended duration benefits.....	\$50.0 million	\$4.8 million	\$54.8 million
6. Average employment.....	4,344,000	640,000	4,984,000

The employment figures include all employees of counties, cities, and school and special districts. Wage data was derived from U.S. Department of Commerce, *Current Business*, August 1963.

About 10,000 employees of agencies which have elected voluntary coverage are excluded from the above estimates of additional coverage.

The estimate of the cost of unemployment insurance benefits is related to actual experience under the Unemployment Compensation for Federal Employees program in California, and the cost of benefits paid to state employees in New York and some other states.

Extension of coverage to employees of non-profit institutions excluding members of the clergy and religious orders, would involve the following costs:

I. Unemployment Insurance

Item	Current coverage	Additional coverage	Total coverage including employees of nonprofit agencies
1. Amount of taxable wages.....	\$16,700.0 million	\$150.0 million	\$16,850.0 million
2. Amount of employer contributions, earned.....	\$507.0 million	\$4.8 million	\$511.8 million
3. Amount of benefit payments.....	\$430.0 million	\$3.8 million	\$433.8 million
4. Benefit payments as a percentage of taxable wages.....	2.57 percent	2.50 percent	2.57 percent
5. Average employment.....	4,344,000	82,000	4,426,000

Students employed by schools or universities who are exempt under Section 645 and employees of nonprofit agencies who have already elected coverage are excluded from the additional coverage data.

The employment and earnings data are derived from the 1960 Census of Population. This additional coverage could result in the payment of about \$500,000 in extended duration benefits in a year like 1964.

The committee would recommend that unemployment insurance coverage be extended to employees of the State of California, county and city employees, and employees of all special districts. In addition, coverage should also be made available to employees of nonprofit employers. Such coverage should be on a merit rated basis the same as other covered employment. However, the Legislature should recognize that

new sources of financing such local government coverage must be found so that the full burden of financing such benefits are not passed on to the local property taxpayer.

Taxable Payrolls in Covered Employment

Over the past two decades the rapid expansion in total payrolls has occurred in California. The expansion is due to an increased number of employers, to the enlarged size of the average employing unit and to rising wage rates.

In 1936, an estimated 1.5 billion in payrolls were earned in covered employment and by 1962 taxable payrolls had increased to 15.2 billion and total wages had reached 24.2 billion. For the first four years of the program the entire payroll of covered employment was taxed, but in 1940 taxable wages were limited to \$3,000 a year earned by an employee from a single employer. During the time this ceiling was in effect, 1940 to 1959, taxable wages as a percentage of payrolls in subject employment decreased yearly from 90.2 percent in 1940 to 59.5 percent in 1959. The ceiling wage was raised to \$3,600 in 1960 and the proportionate total wages that was taxable rose to 65.1 percent. In 1962, the ceiling was raised to \$3,800 but, nevertheless, only 63 percent of total wages were taxable—less than in 1960.

In 1940, average weekly earnings were \$31.18, so that a worker earning this amount throughout the year would have about \$1,620 in annual earnings, a little more than one-half of the \$3,000 ceiling. By 1949, average earnings had risen to \$62.97 a week and 48 weeks of work at this rate would give annual earnings above the \$3,000 limit. In 1959, only 29 weeks of work at the average weekly wage were needed to earn

ESTIMATED EFFECT OF HIGHER WAGE CEILINGS IN A YEAR LIKE CALENDAR YEAR 1964

Item	\$3,800 tax ceiling	\$4,000 tax ceiling	\$4,500 tax ceiling	\$5,000 tax ceiling	\$6,000 tax ceiling

\$3,000. In 1961, when the ceiling wage was raised to \$3,600, the number of weeks of work at the average weekly wage needed to earn ceiling rose to 34. This ratio is currently less than 33 weeks under the \$3,800 ceiling.

Because only about 61 percent of total wages are taxable under the \$3,800 ceiling, proposals have been advanced which would increase the tax ceiling and yield additional funds for the fund. The following statistics demonstrate the amount of additional revenue which would be earned by the fund if other tax ceilings were in effect in a year like calendar year 1964.

Five factors determining regular tax yield would be affected, either at once or after a lapse of time, by any rise in the taxable wage limit, and the full impact of the change would not be felt until the amendment had been in effect for several years:

1. The current taxable wage figure to which each employer's tax rate is applied to determine his liability;
2. The employer's balance of reserve (Section 904);
3. The average base payroll figure (Section 905) used, together with the balance of reserve (Section 904) to determine each employer's specific reserve ratio which, in turn, determines his tax rate on the "low" or "high" tax schedules;
4. The fund balance ratio as of December 31, used to determine which of the three tax schedules in Sections 977, 978, or 979 is applicable.

Chronologically, the current taxable payroll figure would rise as soon as the new ceiling went into effect, i.e., January 1, 1964, for the purposes of this estimate. The tax rate already established on the computation date preceding the effective date of the new ceiling, would be applied to the raised taxable wage figure and would increase tax yield in about the same ratio that taxable wages rose. At present, about 95 percent of all wages paid in the first calendar quarter of a year are taxable, 80 percent of second quarter wages, 50 percent of third quarter wages, and 30 percent of fourth quarter wages. The impact of raising the taxable wage ceiling would be greatest on taxes accrued during the later quarters of a calendar year when collections are now low, and the impact would be very small in the early quarters.

As tax yield increased, employer balances of reserve as of June 30 of the first year in which the new ceiling is in effect would also rise, but by very little because by June 30 of the first year in effect only taxes for the first two quarters would have been received and, as already noted, the impact of the new ceiling would be very small for these quarters.

The aggregate taxable wage figure used to determine whether Section 977, 978, or 979 applies is wages paid in the 12 months of July through June preceding the year for which taxes are being determined. With a change operative on January 1, this figure would only partly reflect the change in the taxable wage ceiling because almost 90 percent of all wages paid from January through June are already taxable. On June 30 of the following year, however, the figure would show the full impact of the change to a higher tax ceiling.

The fund balance subsequent to the rise in the taxable wage figure would also be larger on the new than on the old ceiling assuming no changes in tax rates or benefit expenditures.

During the first few years at the new ceiling, the fund balance would rise less rapidly than taxable wages, and therefore the ratio of the fund balance to taxable wages would be lower than it would have been under the old ceiling. As a result, the return to operation of a lower schedule would probably be delayed, unless the breaking point in Section 977 were changed. The fund balance on December 31, 1963, was below the breaking point for the rate year 1964 by about \$155.6 million. It should be noted that the high tax schedule could well be in effect for several years, whether or not the ceiling were changed.

The factor slowest to rise would be the average base payroll figure of each employer, which is one-third of his taxable wages for the three completed calendar years preceding the computation date. For the second year in which the new tax ceiling was operative, all three base years would be under the \$3,800 ceiling so that a June 30 balance of reserve that includes some contributions under the higher tax ceiling could be expected to yield (in a few cases at least) a higher reserve ratio—and thus the employer would receive a reduction in tax rate. As the three-year base period moved on, however, taxable wage figures for the higher ceiling would gradually expand the average, reduce reserve ratios, and raise the tax rate. The higher tax rate would rebuild employer reserve balances and again reduce the tax rate.

The Long-run Effect on Regular Contributions

Once the fund has approximated the 5.0 ratio to taxable wages, the amount of revenue produced under the higher tax ceiling would tend to be a little larger than that under the \$3,800 ceiling, all other things being equal. This reflects some higher payments from employers with negative reserve ratios, and a somewhat heavier impact of the rising trend of wages.

A higher tax limit, however, would support the program more easily than the \$3,800 ceiling, because a greater proportion of wages paid in covered employment would become taxable. It would also afford greater flexibility to experience rating. In 1964, under the present taxable wage ceiling, about 61.2 percent of wages in covered employment are taxable. This proportion will rise to the extent that the taxable wage ceiling is raised, but will drop in future years as wage rates increase. To maintain the proportion of taxable wages at a constant level, periodic increases in the taxable ceiling would be required.

Individual Employer Regular Contributions

The distribution of the tax burden would be changed by an expansion of the tax wage limit, depending on the amount of charges of individual employers in relation to their taxable wages, and on the amount of wages falling between \$3,800 and the new ceiling for every employee on their payrolls. The contributions of some positive reserve employers would be about the same as under the \$3,800 ceiling, once their balances of reserve stabilized in relation to the raised average

base period wages; the contributions of other positive and reduced rate employers would be somewhat raised; and the contributions of negative reserve employers would be higher under an expanded tax ceiling than under the \$3,800 wage limit by the same percentage as the increase in taxable wages each employer has experienced because of the new ceiling.

CALIFORNIA SYSTEM OF EXPERIENCE RATING

Experience Rating in General

The purpose of experience rating is to relate an employer's tax rate to unemployment insurance benefits charged to his account. Employers having high benefit charges will therefore have high tax rates within the limitation of 3 percent and those having little or no labor turnover will enjoy the lowest tax rates which in California may be three-tenths of 1 percent. (Under the high rate schedule which is in effect in 1964 the minimum rate is 1.7 percent.)

All of the states, including the District of Columbia, have provisions for experience rating. The Federal Unemployment Tax Act permits the states to have experience rating.

In addition to the amount of tax determined under the experience rating provisions, every employer is required to pay five-tenths of 1 percent for the Balancing Account.

Legal Considerations in Experience Rating

The principle of experience rating has its basis in Sections 3301 to 3304 of the Internal Revenue Code. The federal laws provide for an excise tax of 3.1 percent on the first \$3,000 of wages paid by employing units who have four or more workers on some day in each of 20 weeks during a year.

The federal laws provide that an employer may offset as much as 2.7 percent (90 percent of 3 percent) if he has paid such amount to a State Unemployment Fund or if he would have paid that amount except for a reduced rate of contributions granted him under the state law. The offset credit can only be taken if the laws of the state relating to experience rating calculation have been approved by the federal government. A state law to be approved must meet certain standards. There are many general standards relating to the deposit of funds and conditions surrounding benefit payments but there is only one which specifically covers a pooled fund type of experience rating system and that is provided in Section 3303 (a)(1) of the Internal Revenue Code as follows:

"No reduced rate of contributions to a pooled fund or to a partially pooled account is permitted to a person (or group of persons) having individuals in his (or their) employ except on the basis of his (or their) experience with respect to unemployment or other factors bearing a direct relation to unemployment risks during not less than the three consecutive years immediately preceding the computation date."

NOTE: The federal law also permits reduced contribution rates for employers newly subject after one year of employment experience. The California law has not been amended to this extent.

This standard is amplified by certain definitions contained in the Internal Revenue Code and has been further implemented by many interpretations by the Bureau of Employment Security.

In meeting this standard the California Unemployment Insurance Code provides:

"... No employer shall be eligible for a contribution rate of more nor less than 2.7 percent for any rating period unless his reserve account has been subject to benefit charges during the period of twelve complete consecutive calendar quarters ending on the computation date for that rating period and he is qualified under Section 977, 978 or 979." (Effective January 1, 1962)

Reserve Accounts

Under the California law a reserve account is established for each employer. The account is credited with contributions which the employer pays. The account is charged on a pro rata basis with benefits paid to the employer's former workers. An example of the pro rata charging is if a claimant has base period wages of \$1,000 with Employer "A" and \$1,000 with Employer "B" and had been paid \$300 in benefits, the account of "A" would be charged \$150 and the account of "B" would be charged \$150.

Provision is made in the law for the transfer of a reserve account on the request of a successor employer. When the request is made, the successor becomes entitled to the reserve account and all of the employment experience of the predecessor employer. A successor employer need not acquire the entire organization or business of his predecessor but may acquire a distinct and severable portion and be entitled to a transfer of a part of the predecessor's reserve account. Any request for transfer of reserve account made within 90 days of the date of acquisition results in the successor acquiring any reduced rate as of the date of acquisition. In the case of complete acquisitions, a request for transfer made after the 90-day period will only affect the tax rate as of the beginning of the quarter following the date of request. If there was only a partial acquisition and the predecessor remained in business, a transfer request made after 90 days cannot be allowed.

In general, reserve accounts are cancelled on the books of the department after slightly more than three years from the date the employer last had a payroll.

In a reserve account system of experience rating, an employer will never have a rate of less than 2.7 percent unless he has contributed in taxes an amount necessary to meet the cost of all benefits charged to his account plus an amount necessary to equal $5\frac{1}{2}$ percent of his average base payroll. This feature has given rise over the years to many exceptions in the charging of benefits to employers' accounts.

Noncharging of Benefits

At the present time there are several situations under which benefits paid will not be charged to the account of the base period employer

or employers. In the order of their relative magnitude, these non-charging provisions are:

Benefits paid after a ruling to a base period employer that the claimant voluntarily left his work without good cause or was discharged for misconduct in connection with his work may not be charged to the account of that employer.

Benefits paid through an error or misinterpretation of the law may not be charged to the account of any base period employer.

Benefits paid after a so-called "double affirmation" may not be charged to the account of any base period employer.

There are a few other miscellaneous categories of noncharges which do not occur, with enough frequency to discuss here.

Fund Solvency

If it were not for certain solvency safeguards provided in the law, experience rating might so reduce fund income that the ability to pay benefits would be materially impaired. These safeguards are:

1. A high rate schedule provided for by a new Section 977 effective January 1, 1962; an intermediate rate schedule provided for by Section 978; and a low rate schedule provided for by Section 979.

The ratio of the Unemployment Fund balance to taxable wages determines which one of the three rate schedules is to be used for a year. A schedule will be effective for a year whenever the balance in the Unemployment Fund as of December 31st of the preceding year produces a ratio to taxable wages paid during the 12-month period ending June 30 of that year as follows:

Less than 5 percent—the high rate schedule, Section 977.

5 percent to less than 7.5 percent—the intermediate rate schedule, Section 978.

7.5 percent or more—the low rate schedule, Section 979.

The former provision contained in Section 981 which permitted the director to suspend experience rating when the balance in the Unemployment Fund dropped to less than $1\frac{1}{2}$ times the amount of benefits paid during the preceding year was repealed by the 1961 Legislature. However, the high rate schedule, together with the five-tenths of 1 percent Balancing Account Tax, will apparently produce slightly over 3 percent average revenue and the fund is at least as well off as it was under the prior law.

2. The 1961 Session of the Legislature created a Balancing Account and a Balancing Account Tax of five-tenths of 1 percent. The Balancing Account Tax is intended to finance benefit payments which are not charged to any employers' account and to finance negative reserve accounts which exist with respect to many seasonal businesses, such as canneries, packing houses, etc.
3. The director is also authorized to accept a loan from the federal government in order that the payment of benefits may continue.

The federal loan fund was created by the diversion of a portion of the four-tenths of 1 percent tax collected by the federal government on wages subject to the Federal Unemployment Tax Act.

Representatives of the employer community urged the committee at its June hearing to consider the drafting of different tax rate schedules which would more clearly reflect the experience rating of various employers. The present high tax schedule presented in Section 977 of the Unemployment Insurance Code has narrow limits ranging from a minimum rate of 1.7 percent to a maximum rate of 3.0 percent, excluding the 0.5 percent balancing tax which must be paid by each employer in addition to the rate determined by the tax schedules. So long as merit rating is to be used as a method of encouraging stable employment in industry, the tax schedules must adequately reflect an employer's experience and provide the necessary incentive for employment stability. The present high tax schedule does not accomplish this objective. The committee would recommend the adoption of revised tax schedules which give effect to the philosophy of merit rating. However, if additional funds are required to adequately finance the fund, such additional financing should be met by both a revised tax schedule and an increase in the taxable wage base.

UNEMPLOYMENT INSURANCE PROGRAM
PRELIMINARY ESTIMATE OF THE AVERAGE TAX RATE, NUMBER OF EMPLOYERS,
AND ESTIMATED PROPORTION OF TAXABLE WAGES DISTRIBUTED BY TAX RATE
Calendar Year 1964

	2.2	23,565	7.50	1.40

* Tax rates include the uniform 0.5-percent additional contribution tax.

Separate views on the unemployment insurance conclusions and recommendations of Assemblyman Houston I. Flournoy, joined by Assemblyman Hale Ashcraft, Stewart Hinckley, Robert S. Stevens, Howard J. Thelin, John G. Veneman, Victor V. Veysey:

I cannot agree with the committee's recommendation that "unemployment insurance coverage should be extended to employees of the State of California, its political subdivisions, employees of all special districts, and employees of nonprofit employers." There is relatively little need for such coverage—due to the low unemployment experience of these employers. There has been no indication of any desire for such coverage on the part of the employees. Indeed the California State Employees' Association actively opposed such a proposal in testimony before our committee.

I can only conclude that this recommendation stems from a desire on the part of the committee to avoid the serious fiscal problems which currently are affecting the solvency of the Unemployment Insurance Fund. I can only conclude that this proposal is viewed as a means of temporarily bringing additional revenue to the fund without facing the fact that the currently high rate of employer contributions is insufficient to carry the cost of the current payout of benefits with a sufficient reserve.

In short, this proposal is designed to bring at least \$50 million of net revenue to the fund in each of the next five years before the newly covered public and nonprofit employers have their contribution rates reduced upon a merit-rated basis of unemployment experience. The day of reckoning with our currently insolvent funding of unemployment insurance will merely be postponed, and perhaps aggravated by increased benefits which might be based upon the additional funds accrued by this extension of coverage.

I firmly believe that the committee should face up to the inherent problems of the present condition of the fund, and make adjustments to bring the fund back into balance. We should restore the integrity of the program which should provide unemployment insurance payments for those persons who find themselves unemployed through no fault of their own; persons who are permanently part of the labor force and who are ready, able and willing to work. At the same time, we would not be burdening the state and local taxpayers with the costs of continuing the present benefit payout under the guise of providing unwanted coverage to public and nonprofit employees.

THE LEVEL OF CONSUMER DEBT

In the period since World War II the private debt of American families has been piling up faster than personal income. The level of such private debt stood at \$378 billion in 1963 up from \$55 billion in 1945.¹

This heavy indebtedness is not spread evenly among spending units. Half of America's families have no consumer debt at all while perhaps 6 million of them (or 10 percent) have at least 40 percent of their yearly income committed to debt payments.² Since the level of consumer debt is lowest among older people and the lowest income groups, it would seem that those families most heavily in debt are found among young families with moderate incomes. In this group there is the heaviest pressure to buy all the amenities they have been taught to believe are essentials in American middle class life. Their experience of economy life has been confined to the prosperous postwar years and they optimistically expect such prosperity to continue. With their principal earning years ahead of them they are notoriously willing to take the gamble and go deeply into debt.³

Unfortunately no data is available on the role of consumer credit in California's economy. For the nation as a whole this phase of economic activity has grown so rapidly and changed so dramatically that serious investigations have just begun to ponder its implications.

It is probably correct to assume that the average California family owes installment debts considerably above the national average. Our population is young, mobile and relatively wealthy. The number of automobile purchases in California is notoriously high. One estimate places the average installment indebtedness exclusive of mortgages, for California families at \$900.⁴

IS CONSUMER DEBT AT A DANGEROUS LEVEL?

There is no general agreement as to whether this debt level constitutes a danger to our economy. A growing number of economists are beginning to express concern that the bubble may burst.

For the individual family yielding to the temptation of supereasy terms, the bubble often bursts. Illness, unemployment or other family misfortune can and do create financial havoc. The startling rise in personal bankruptcies is one symptom of this problem. Such nonbusiness bankruptcies rose in California from 3,765 in 1953 to 26,641 in 1963 placing this state fifth in the nation in number of personal bankruptcies per capita.⁵

In the state's economy, consumption credit constitutes a large and highly unstable force. This private deficit financing does not function as a counter-cyclical force. It has a more volatile and exaggerated effect on production than does public deficit financing. A certain amount of long-term planning can accompany public deficit spending while private deficit financing through short-term loans tends to exaggerate the peaks and valleys of public demand.

Most credit purchases fall in the area of discretionary spending. The purchase of a new car or television set can be deferred by most families. A slight nervousness about their economic future will cause most families to avoid new installment contracts, especially when a mortgage hangs over them. A serious cut in federal defense spending in California could thus transform installment buying from a vital part of our present prosperity into a definite deflationary force. The more retail sales depend upon installment credit, the more vulnerable they are to crises of confidence.

Also, consumer desire for many products is highly seasonal but can be translated into immediate demand by consumer credit. Air conditioners, for example, are wanted in the summer; cameras, TV sets and fur coats in November and December; washing machines, bedding and rugs in August and September when people move, etc. Easy credit exaggerates these seasonal peaks.

Credit buying runs in spurts followed by retrenchment. Sales quotas and production schedules, however, are frequently based on the past year's performance without due consideration for the psychological fluctuations to which a debt-committed urban community may be subject.

The economic costs attendant upon short-run, wide fluctuations in demand are well known. Inventory costs accumulate throughout the productive and distributive system. Efforts to push these costs forward through so-called "dealer loader programs" not only add to the costs of goods but supply severe pressures for sharp dealing at the retail level. And finally, through its depressing effect on price competition and through the cost it adds to the distribution of goods, credit selling tends to narrow the total market over a period of time rather than expand it.

SMALL BUSINESS IN A CREDIT MARKET

Small business is at a serious disadvantage in a market heavily based on consumption debt. The inability of the small businessman-manufacturer, wholesaler or retailer—to obtain financing on equitable terms is a well-known story. In addition to this basic competitive disadvantage, the large operator has also the means for heavy promotion of credit selling which are not available to the smaller business.

A small manufacturer cannot set up his own credit corporation to finance dealers' inventories and to buy up dealers' consumer paper. Nor does he have the resources to make a deal with a sales finance company to put his retail sales on a nonrecourse basis by setting up a manufacturer-financed reserve within a large sales finance organization. Thus the extra income to be developed through credit selling as well as the close control over dealerships and outlets that credit selling makes possible, is denied the small producer.

The small bank, too, is disadvantaged. Large captive finance firms like GMAC and GECC deal with large banks and their distributors and retailers tend to do likewise. When banks decide to enter consumer lending directly by issuing bank credit cards, only the large banks have the resources to blanket a large area with promotional material and dealer tieups needed to produce consumer debt in large enough volume to justify the use of economical mechanical recordkeeping machines.

CHANGES IN CONSUMER CREDIT

Since 1950 dramatic changes have taken place in the practice of debt-financing for consumption. The most significant change has been the transmutation of this financial device into a merchandising tool.

In the first place, the concept of collateral has practically evaporated. Even in automobiles, 36-month terms taken together with rapid new car obsolescence have rendered the goods small surety for the loan. Even before the passage of the bill ending deficiency judgments under the Unruh Act, other consumer durables were not really considered as collateral. Their resale value was simply too low. Their repossession on delinquency was almost universally accompanied by a deficiency balance change which became, of course, a lien on any income or property of the debtor. This situation still applies in automobile sales.

In short, too many consumer credit extensions today are made solely against the lender's expectation of (1) the consumer's ability to maintain current income, or (2) his own (the lender's) ability to exercise command over the borrower's assets via the courts. Thus, the theorizing of the past about the functions of consumer credit based on the concept of pacing time units of consumption with payments over time in the use of durables which secure the debt fails to fit reality.

A second concept of consumer credit that has evaporated except in the case of a few of the very largest retailers, is the seller's responsibility for the loans disguised as sales. This implies the weakening of the whole basis of the "time price doctrine." The retailer today generally acts as an agent for a lender. Typically, all of the conditions attending the loan, including the forms to be filled out, have been set by the financing institution. The retailer receives a commission for his services in the form of a dealer reserve held out by the lender.

No longer does a retailer "carry the consumer" over a period of time as the general store once did the farmer between seeding and harvesting. As soon as the paper is signed it is turned over to the lending agency. Only the old style 30-day charge account offered by department stores can be called a retailer carrying service and this is the only form of consumer credit which has failed to increase. Retailers would argue that most revolving credit accounts belong in this same category.

The retail trade press has been using a term for a number of years that best expresses the meaning of consumer credit today. The speak repeatedly of "credit selling." Credit selling means two things: selling goods on credit and selling credit as well as goods.

Credit selling is generally recognized as the core of present day profitable retailing operations for four reasons: (1) The consumer buying on credit tends to buy higher priced merchandise (he is easy to "trade up"), to buy more in volume and to buy more frequently than the cash customer. (2) The credit customer does not shop around, he "marries" his seller-lender. (3) The amount of purchase per credit sale is typically enough larger than the cash sale to more than compensate for the extra overhead of credit selling. (4) Earnings on credit extensions frequently equal or better the net return on mark-ups on merchandise. This latter point seems to be most true of automobile dealers in areas of high competition although figures are difficult to obtain.

Consumer spokesmen charge that throughout retailing today there is a heavy and continuing pressure to sell debt. Salesmen in automobile showrooms and appliance stores are given larger commissions for credit sales. And, as one after another seller-lender has placed increasing promotional emphasis on loans disguised as sales, as new lending schemes tied to sales have multiplied (credit cards and bank schemes); the traditional consumer lender—the small loan company—has been forced to up its promotional efforts accordingly. Thus, the advertising of debt as a way of life has expanded into a national propaganda effort of phenomenal proportions.

This effort is backed by a record amount of funds seeking profitable investment outlets. The high level of savings does not necessarily lessen the dangers involved in the existing situation. These savings are not in the hands of the heaviest users of installment credit. Many debtors could not take much of an income decline without facing serious problems.⁶

"A related worry from the standpoint of the economy is about the deteriorating quality of debt. The degeneration shows up notably in the use of mortgage loans for nonhousing purposes like buying a car or taking a trip to Europe. Not only that; some economists fear excessive funds are pouring into real estate, bringing forth building projects completely unwarranted by demand."⁷

COMPETITION IN CONSUMER LENDING

In the sale of credit, as in the sale of most other goods and services in the post-Korean War boom, promotional rivalry has been substituted for price competition in the search for markets. Price competition is clearly inhibited by existing cost disclosure practices but the "truth in lending" approach would have a limited effect in invigorating it.⁸ There are many factors other than cost that influence the borrower to accept a particular loan arrangement. Convenience may be the most important consideration.

The present scramble to find profitable investment outlets may lead to an increase in price competition and some lowering of rates. There are signs of such a development in the field of automobile financing.⁹

⁶ Malabre, "Worry Over Debt," *op. cit.*

⁷ Editorial, *Wall Street Journal*, (June 29, 1964), 8.

⁸ More than 99 percent of the consumer loans (under \$5,000) made in California in 1962 by personal property brokers were made at the maximum legal rate. *Lending and Credit Problems Hearing*, I, 7.

⁹ "Installment Credit Expansion," *op. cit.*, 582.

Also, the large scale entry of banks into the consumer credit field has helped to widen the range of credit sources for money borrowers.

There is a kind of horizontal class or income line which cuts across the field of credit selling. The lower income buyer has been the traditional customer of the small loan and sales finance companies while the lower rates at banks were available only to the better credit risks. Banks did not begin to compete for consumer loans until the 1950's. Now they are trying to overcome their former semiaristocratic image.

At the present time the poor still pay more for credit as they frequently do for goods. The kind of merchant who solicits their business is frequently the one who is more interested in selling high cost credit than good quality merchandise at reasonable prices.¹⁰ His "easy terms" have the long range effect of increasing the gap between the standard of living of lower socio-economic groups and that of those wealthier citizens who deal with reputable merchants and lower cost lenders. The revolving credit account has been the major means through which the large retailer has sought the business of the lower income buyer. However, this is still rather high cost credit.

CONSUMER DISCONTENTS

The middle class installment debtor is probably most concerned about the state of the consumer credit market. The consumer groups which speak for such people are concerned not only with the cost of credit *per se* but with the methods by which debt as a way of life is sold.

They insist that advertising techniques and disclosure practices generally prevent the consumer from playing his proper role in the free market. They are interested in consumer education but contend that these practices make such education extremely difficult. They are apt to be critical of the entire atmosphere of credit selling and see it as a sort of conspiracy against the typical credit buyer. They point out that those people most dependent on credit are those with little economic experience or financial sophistication. When the college-educated young housewife finds that she has been talked into a bad bargain this is a blow to ego and she is apt to react in anger against the system which brought this about.

It is true that the credit industry itself is concerned with consumer education. The National Foundation for Consumer Credit publishes an impressive collection of educational materials but it is doubtful that they are reaching enough of the right people. The growth of community-sponsored credit counseling services is also to be applauded but such services reach the consumer only after he is in serious trouble.

In addition, the low income buyer faces a different set of problems. He is the classic victim of exploitive practices many of which are illegal under current statutes. He is frequently unaware of his rights and difficult to reach by ordinary education methods. Often he is unaware of such institutions as Better Business Bureaus and Small Claims Courts or can avail himself of their services only by

¹⁰ An interesting study of this matter is presented in David Caplovitz, "The Poor Pay More" (The Free Press, Glencoe, Ill., 1963).

taking time off from his job. All too often his experience with authority or bureaucratic institutions has led him to believe that they are never on his side.

The low income buyer is particularly vulnerable to the temptation to get in debt over his head. Especially if he is a member of a minority group he may be denied opportunities in jobs or housing to improve his status. A higher status can only be demonstrated by ownership of goods; a new car, a color television set, etc. Advertisements are only too ready to teach him that such things are the proper goals of first class citizens.

Some lenders are inclined to blame a general decline of moral standards among consumers for the problems of the industry. Unsound loans, mounting personal bankruptcies are looked upon as symptoms of this. Business as well as the consumer, they insist, needs greater protection against sharp practices.¹¹

Undoubtedly, there are many instances of irresponsible and dishonest consumer behavior. But often the debtor who would like to pay his bills is driven into bankruptcy by rough collection practices and threats of wage attachments. Also, the buyer who finds that he has been sold shoddy merchandise on questionable terms may skip payments simply as a gesture of revenge. He sees himself as justifiably cheating the system which cheated him. The morality of the market place may be set more by the seller than the buyer.

DISCLOSURE OF CREDIT COSTS

It is difficult to argue against the use of a standard form for stating the price of credit.

"No one will dispute the proposition that all parties to a transaction should know what the transaction is all about. A regulation that requires that finance charges be stated in a standard and reasonably straightforward way makes it possible for the buyer of consumer loan services to understand what he is doing and to compare available alternatives, including the alternative of saving now and buying later. Hence such a regulation improves the functioning of markets and this improves our enterprise system."¹²

Defenders of the status quo argue that the consumer who truly desires to shop for credit can now gain the information he needs in terms he can easily understand.

"The important point in connection with transactions of this kind is that comparative shopping can be done on a dollar cost basis easier than on an annual rate basis, and the comparison is more meaningful to the buyer. In doing his shopping the buyer might go to the bank, to a small loan company or a credit union . . . or he may consider whether to draw the money from a savings account. In any borrowing transaction the measuring stick would be 'what is the difference in dollars?' "¹³

¹¹ Hearing on Lending and Credit Problems, II, 96-97.

¹² Hearing on Lending and Credit Problems, II, 24,

¹³ *Ibid* I, 75-6.

This is probably true if the individual is seeking a direct loan for a specific amount. If he wants to buy an item such as a television set, the problem is not so simple. The increasing use of forms for open-end credit (revolving credit and add-on contracts) adds one complication. The retailer offering such credit cannot tell the customer in advance of the purchase what the dollar cost of credit will be. He can tell him the rate at which a service charge will be assessed, but he cannot predict in what amounts and when the customer will make his payments. It might also be pointed out that, under such an arrangement, the retailer cannot predict the actual yield from the service charges as a percentage rate on the declining balance.

Moreover, those lenders who seek to expand their consumer lending business usually do not approach potential customers with advertising featuring the dollar cost of the credit they offer. Insofar as they engage in price competition, they find some statement of finance rate makes a simple and striking message.

A consumer shopping for credit is apt to be influenced by such advertisements. It would be a rare shopper who visited each potential source of credit and demanded to see the terms of a contract spelled out on paper from each one before making his decision.

In advertising credit the lender or retailer frequently seems to recognize that the consumer understands or is familiar with credit rates stated as percentages. The typical middle class consumer has encountered interest rates in dealing with his own savings or with mortgage financing. Banks and automobile dealers all too often seek to exploit this experience by advertising 3 percent, $3\frac{1}{2}$ percent or 4 percent auto loans when they are actually offering add-on rates of \$3, \$3.50 or \$4 per \$100. Such advertising has long been held deceptive by the Federal Trade Commission.¹⁴

The consumer shopping for credit is faced with inadequate information as well as deliberate attempts at deception.

" . . . These four ads were all in one issue of one Los Angeles newspaper. You can borrow \$1,000 and repay at \$1.92 a week. Now that's all the information one of the ads gives you. Another one, you can borrow extra fast anywhere in California, and you can borrow \$1,000 and you pay back \$15 a month. You can call collect. In some cases they will send a man out to your home. This other one, you borrow \$1,000 and pay only \$6.67 a month. Now that's all of the information that you have there. Which one are you going to borrow your money from, and are you going to borrow from this kind of a loan, or are you going to the bank, or going to the personal property broker? You need \$1,000. How are you going to decide what to do? This is the kind of invitation to borrow, and this is the lack of information on which people are borrowing today." ¹⁵

Section 30004 of AB 2288 would require that any creditor that advertises the extension of credit in any media and stating a finance rate must state that rate as a simple annual rate on the outstanding balance of a prospective obligation. Such a requirement could be of

¹⁴ General Motors Corp., *et al.* V. Federal Trade Commission, 114 F 2d 33 (2 d. Cir. 1940).

¹⁵ Hearing on Lending and Credit Problems, II, 112-13.

doubtful utility to the consumer. It would discourage one kind of deception but certainly would not guarantee the consumer the information he needs to shop intelligently for credit.

It has been argued that if a standard form stating credit rates is desired, the dollars per hundred is preferable in that it is easier for the customer to understand and easier for the ordinary clerk to handle. While it may be relatively simple to explain such rates to the customer it is also too simple to deceive him into believing that they are equivalent to simple annual rates on the declining balance which are likely to be more familiar to him.

The argument that the simple annual rate is difficult if not impossible to determine accurately cannot be taken very seriously. It is true that the ordinary clerk probably cannot determine the simple annual rate given a certain schedule of payments. The fact of the matter is that the ordinary clerk rarely, if ever, makes the calculations on which installment contracts are based. Banks and finance companies as well as the credit departments of large stores provide charts which take care of this problem.

Lenders also insist that the variety of installment contracts actually written is so great that a serious burden would be placed on the small retailer by the passage of AB 2288. Unusual or unequal payment terms are customarily offered only by larger establishments equipped with enough credit personnel to handle special terms. Even the small retailer is not necessarily without assistance. He frequently has the services of the bank or finance company which handles his paper and provides him with the contract forms used in his store.

At the Los Angeles hearing, Mr. John A. Metzler, Supervising Deputy Commissioner of Corporations stated:

"It is my belief that under legislation which gives a sufficient leeway to the statement of a rate per annum, and perhaps gives the administrator regulatory powers to act within the area, that satisfactory tables can be prepared which would give the consumer adequate information as to that matter, within the limits of accuracy, which would permit an intelligent comparison, even in the case of these irregular payments."¹⁶

Contracts calling for "balloon" payments are used primarily in automobile retailing and do create some special problems. However, such contracts are often of doubtful utility to most buyers and a measure which discouraged their use might have a salutary effect on the industry. Open-end credit arrangements of various kinds present the most serious difficulties and will be discussed separately.

The passage of AB 2288 would require lenders and retailers to adopt new rate charts and make some important changes in their business practices. A certain amount of expense and inconvenience would be involved but, except in the case of those offering open-end credit, the mechanical problems should not be serious.

¹⁶ *Ibid.*, I, 140.

TIME PRICE AND INTEREST

The most serious objection to requiring a uniform statement of finance rates in percentage terms is that such a statement constituted an implied denial of the "time price doctrine."¹⁷

Opponents of the bill insist that a service charge in connection with the sale of goods is not interest. California courts, along with those of most other states have long held that a retailer may offer his goods at a cash price and a higher price, or "time price," for the customer who wished to buy on credit. The finance charge added to the cash price has been held to be a charge for credit service and not interest.¹⁸

It is held that to compute a service charge or finance rate on an installment purchase in percentage terms as though it were interest constitutes an implicit denial of the validity of the "time price doctrine." This doctrine is a venerable one but originated in selling practices which have changed rather drastically. Traditionally, the merchant offering credit carried the customer's amount himself and the service charge he assessed was clearly a payment for this service. No loan was involved in the customary sense of the term. The installment seller today usually acts as the agent for a bank or consumer finance company which discounts his contracts and provides the contract forms and charts he uses. The buyer makes his payments to the lender not to the retailer and, from his point of view, the transaction involves a loan.

This development in modern installment selling does threaten the legal foundations of the "time price doctrine." The Nebraska Supreme Court recently ruled that "regardless of the term used" the difference between a time-sale price and a cash price "is a charge for the loan money or for forbearance of a debt," and therefore, "disguise it as we will, it is and remains interest."¹⁹ This same court has recently declared unconstitutional a third attempt by the Nebraska State Legislature to provide statutory exemption from the state's constitutional usury clause for installment sales.²⁰

California law differs from that of Nebraska in that the Nebraska Constitution specifically forbids "special" laws setting interest rates above the constitutional usury limit for classes of transactions.²¹ The California Constitution (Article XX, Section 22), limits interest to 10 percent per annum but proceeds to except savings and loan associations, industrial loan companies, credit unions, pawn brokers and personal property brokers from this limitation. The Legislature is authorized to regulate by statute the excepted persons or firms. However, no specific mention is made of installment purchases and it is feared that if statutes treat such purchases as loans they could be declared subject to the constitutional usury clause.

OPEN-END CREDIT

Open-end credit arrangements take various forms, the add-on contract, check credit and, by far, the most common, revolving credit. Add-on contracts have long been employed by mailorder houses and some retail stores. Although no figures are available, it seems that such credit devices are being replaced in many cases by revolving accounts, now available for larger amounts. Retailers using add-on contracts could comply with the provisions of AB 2288 but the procedure would be somewhat complicated. Large mailorder houses with fully equipped credit offices would have to make some changes in their operations. The adoption of such a measure would probably accelerate the shift to revolving credit plans.

Retailers employing the latter have serious objections to stating the $1\frac{1}{2}$ percent monthly service charge as an 18 percent simple annual rate. Such a statement can describe the price of credit with reasonable accuracy when applied to an installment contract for a given balance with the dates and amount of the payments set forth. Under a revolving account the customer's balance is constantly changing; he adds to it at irregular intervals and makes payments of varying amounts subject to only a stated minimum. The cost to him of such credit will depend on how he spaces his purchases.

It is argued that, under such an arrangement, the statement of a simple annual rate is meaningless. The $1\frac{1}{2}$ percent monthly service charge assess would not equal 18 percent simple annual rate except under the most ideal conditions.²²

It is insisted that to demand that the retailer quote the customer an unrealistic and seemingly high annual rate for credit is to ask that he damage his customer relations without reasonable cause. The revolving credit customer needs to understand how the system works, and how he can reduce the service charge through careful handling of his account. He is not assisted by being told those charges in terms of a purely theoretical annual rate.

Revolving account service charges are generally what the name implies. The retailer can make a good case for not lumping them with other forms of finance charges which are interest in a legal sense or something closely resembling interest. However, consumer groups would argue that, from the point of view of the buyer, the revolving credit account is one of a number of alternative means of financing his purchases. If he is to shop for credit he needs a standard form for stating rates which will permit him to compare this type of credit arrangement with others available to him.

On this point, consumer finance companies might be expected to agree with consumer representatives. If the retailer is to be allowed to state his revolving credit charge as a monthly rate, he will gain a serious competitive advantage. The consumer, they feel, would respond to the $1\frac{1}{2}$ percent figure and look upon the 18 percent simple annual rate quoted him by the finance company as outrageous.²³

²² Los Angeles hearing, I, 86-92.

²³ Office of the Consumer Counsel. *Survey of Interest Rate Knowledge* (January-March, 1964). In this survey 20 percent of the respondents did appear to confuse the monthly with the annual rate on revolving accounts.

EFFECT ON CONSUMER BEHAVIOR

Actually, no one can state with confidence just how the consumer would react to the disclosure of all finance charges as a simple annual rate. Fears are sometimes expressed that such disclosure would have an extremely depressing effect on credit buying and thus, on California's economy as a whole.

"Regarding the proposed requirements that consumers be informed regarding the true simple annual credit charge rates however, the result could be different. Lenders and retailers have always felt that telling a customer that "up to" 18 percent simple interest will be added to his purchase or his loan, or his account, every time he buys so much as a pair of socks, will deaden his desire to buy or finance anything; the results, we feel, will be very depressing to business."²⁴

At the other extreme, it is frequently claimed that the credit buyer does not care what he pays for credit or even what the total cost of his purchase may be. He is concerned only with the amount of the monthly payment. Thus his buying habits would be effected only slightly by uniform disclosure of credit costs as a simple annual rate. This issue was explored at the Los Angeles hearing.²⁵

Assemblyman Foran: . . . "If the percentages of the credit were set forth, you said that some people would invest rather than buy now and pay later. In your analysis, have you made any projections in this field, or has anyone, any economist, made any projections?"

Professor Minsky: . . . "Frankly, I think that the consumer credit field, what would happen in California with such a law, is I think, some rate competition. Price competition is good and the rates would come down. I think that what the effect would be in switching people to low-interest rate and buying later would be all to the good. I doubt if it would have much impact. As I pointed out, there is no data that I could find on the amount of consumer credit outstanding in California. It would be interesting to try to compare the amount of consumer credit outstanding in California with the amount outstanding in New York State, or in other parts of the country where you have less of a growth situation, lower interest rates in general and competition among lenders in general. But, as I said, this is a field in which we know too little, and I appealed to you earlier to try to investigate this in greater detail than we have been able to today."

REVOLVING CREDIT: BALANCE ON WHICH SERVICE CHARGE IS TO BE ASSESSED

The Unruh Retail Credit Sales Act sets a maximum rate on revolving charge accounts at $1\frac{1}{2}$ percent per month on the outstanding balance.²⁶ Legislation was referred to this committee for interim study which was designed to assure that this legal maximum was never exceeded, that no service charge was assessed on the amount of any purchase until at least 30 days had passed.

²⁴ *Ibid.*, II, p. 14.

²⁵ Testimony of Hyman Minsky, Associate Professor of Economics, University of California, Berkeley, *Ibid.*, II, p. 40-41.

²⁶ A.B. 2865 (Unruh).

Proponents of this legislation claim that ambiguities in the existing law permit charges far in excess of the legal maximum.

"The way it actually works out, the retailer and only the retailer, defines outstanding balances, and that's a pretty broad term to leave undefined in a private contracting relationship. As Mr. Kaiser pointed out, the practices of the stores by and large are pretty good, average experience varies from here to there, and so forth. Well, averages don't apply in this kind of a situation. We are talking about one particular contract between one person and a store, and it can be enforced by the courts, or it can't be enforced; and that service charge can be collected, or it can't be collected. And so it should be defined so that both parties know whether it is collectable or not. And in the present circumstance, it is not."²⁷

The legislation presented to meet this problem encountered serious drafting problems. Some opponents have insisted upon interpreting it as requiring that each purchase on a revolving amount be dated and dealt with as a separate item in the assessment of service charges or that an average balance be determined and used as the basis of the service charge. This was not the intent of the bill. An understanding of this intent depends upon an understanding of customary billing procedures. The vast majority of stores offering revolving credit fix service charges as $1\frac{1}{2}$ percent of the balance at the beginning of the month (billing period). The customer's bill then lists any payments or returns (credit) for the period, purchases made during the period and the balance due. If this entire balance is paid by the customer after receiving the bill the account is treated as a 30-day account and no service charge is assessed. A large majority of the store's customers either pay off the entire balance or make the minimum payment required by the account.

When an individual pays the entire balance there is no credit charge; the service is free. If he pays less than the total balance, he ordinarily gets more than 30 days credit before any service charge is added.²⁸ This results simply from the mechanics of the billing procedures.

A service charge equalling an extremely high simple annual rate can result under certain circumstances. Suppose a customer, perhaps before Christmas, makes a large number of purchases and a minimum payment upon receipt of her bill during January when a number of other bills fall due. At the beginning of the next billing period she has a large balance but, being in better financial condition she pays most, but not all of this balance. Nevertheless, the service charge is assessed on this large beginning-of-the-month balance and does not take into account the fact that during the month, before the billing date she paid most of this balance.

The irate customer then sees that, had she paid the entire beginning of the month balance, she would have no service charge at all but when she pays *most* of it she is charged a service charge on the entire amount. In her view, she is being charged "interest" on money she does not owe.

²⁷ Los Angeles Hearing II, 117.

²⁸ *Ibid.*, II, 106-107.

At one time some stores offering revolving credit computed the service charge on the end of the month (billing period) balance, a practice which could result in an extremely high yield on some purchases. For example, a large purchase made just before the billing date was included in the "outstanding balance" and the customer was billed for $1\frac{1}{2}$ percent of this amount even though she used this credit for only a few days.

Most stores seem to have abandoned the latter practice. At least, no complaints based on it have come to the attention of the committee.

Many retailers try to deal with the problem of a large repayment by instructing credit clerks to watch for such situations and deduct payments of say, 50 percent from the balance due figuring the service charge. Others have no such established policy but make the deduction as a matter of policy if the customer complains after receiving her bill.

Both these methods have been adopted for the sake of customer relations, and because the retailer feels the Unruh Act requires such a policy. It is true that the law does not now define the outstanding balance on which the service charge is based.

The proposed legislation would require that all credits (payments and returns) on the customer's account be deducted from the beginning of the month balance before the service charge is determined. This would prevent the customer ever being charged more than the maximum rate allowed by the Unruh Act. In fact, the actual rate would never equal the maximum except under the most ideal circumstances. Compliance would require that credit personnel introduce an additional operation into the billing process, the subtraction of any payments the customer made during the billing period.

Retailers oppose this measure on the grounds that it would add greatly to the cost of operating a revolving credit system. This cost would have to be absorbed by raising the prices of their merchandise. In other words, cash customers would have to bear a greater portion of the cost of credit operations.

Retailers contend that under the present system service charge income does not cover the cost of maintaining revolving credit.

"This year the difference between our service charge income and our credit department expense is $\frac{3}{4}$ of a percent. That is, our service charge income falls short of our credit expense. Now the credit department expense figure that I am using does not include any charge for rental, utilities, floor space, equipment depreciation, or anything of that type. The figures in our expense which are included in NRMA accounting practices for our type and volume store are salaries and fringe benefits, supplies, credit reports, collection commissions, unclassified postage on our statements and bad debts. Just those items. No charge for any office space or advertising or anything like that, and we will fall short in our service charge income of our credit department expense by almost $\frac{3}{4}$ of a percent of credit sales." ²⁹

²⁹ Los Angeles Hearing, II, 18-19.

Actually, the question as to the profitability of revolving credit operations does not admit of a simple answer.

"Many students have produced accounting studies which purport to prove that revolving credit *per se* is a losing proposition under existing finance charges. Others disagree, and submit accounting data as evidence of the large profits earned from the financing of revolving accounts. . . . Arguments on both sides rely on cost-accounting data to add credence to their respective positions. The accounting studies are very useful for developing productive efficiency data, but, in order to prove that finance ceilings are too restrictive (or loose), it would have to be discovered what would happen to the store's profit (as a return on investment) if revolving credit were not offered, or offered at a different price. This information is largely speculative, and the answer would vary from community to community and from store to store within a given community." ³⁰

No major legislative intervention would seem to be required in the field of revolving credit. Situations do arise in which the retailer gains a very high rate of yield on service charges. These instances, however, are infrequent and the amounts involved are ordinarily small. It would not seem advisable that the Legislature require retailers to make extensive changes in their billing practices.

It would seem that stores offering revolving credit ought to give serious consideration to meeting the problem of large payments for the sake of their customer relations. If they wait until the irate customer comes to complain and then, tacitly admit they have been unfair by refunding the service charge, they are perhaps compounding their problems rather than preventing them.

From the point of view of consumer protection, the important thing is that the customer understand the nature of the contract she enters when she establishes a revolving account. With such an understanding, she should be able to utilize such an account so as to minimize its cost.

The vast majority of retailers appear to do a good job in providing the customer with explanatory literature when the agreement is signed. However, the committee might consider legislation requiring a standard explanatory statement to be printed on each bill. Such a statement should make clear to customers how the balance due is determined. Again, the performance of most stores is good in this regard but there are exceptions.

CONDITIONAL SALES OF AUTOMOBILES

The committee also gave some consideration to the subject matter of AB 2502 (Zenovich and Beilenson). This measure would amend the Rees-Levering Act to set a maximum finance charge on automobile contracts of from \$7 to \$12 per \$100 per year depending on the age of the car. At present, the legal maximum on such contracts is 1 percent per month on the contract balance. The bill would make some change in the provision governing the retention of finance charges upon prepayment of a contract.

³⁰ Barrie Richardson, "State Regulation of Retail Revolving Credit", *State Government* (Summer, 1963), 175.

Auto dealers support the *status quo* insisting that the profit of the average members is already at a dangerously low point, $2\frac{1}{2}$ percent before taxes,³¹ and thus finance rates are a crucial segment of that profit.

"Many dealers today, for your information, truly, who have what we call an operating profit, operate actually at a loss. The insurance premium and the finance price differential, that portion of it that the bank lets the dealer retain, comes in under what is called, 'miscellaneous income' and in many, many instances the miscellaneous income itself is the difference between whether for the year that operation is either in the red or the black. Many automobile dealers actually operate month in and month out with an operating deficit."³²

It is also contended any lowering of the maximum rates would force a denial of credit and, therefore, of adequate transportation to large numbers of people without established credit.

Other states operated successfully with laws similar to AB 2502 setting different maximums depending on the age of the car. However, in California some disillusionment seems to be developing with the whole approach of setting varying legal maximums for different kinds of credit transactions.

"... I would like to make one comment on the statement of Governor Brown's which was read by Mrs. Nelson in which he refers to the large volume of money loaned by personal loan companies and the fact that they were all at the maximum rate, and I call attention to the fact that if by law you set a maximum rate, that's what you are going to have. Most people will tend to pick on the maximum and once it is there, it doesn't go down. So, when you regulate, I am afraid that is what you are going to get."³³

A good case can be made for opposing any piecemeal amending of the Rees-Levering Act. The legislation now governing consumer credit transactions is complex and well may give undue advantage to certain types of credit grantors. In any case, greater simplicity and uniformity of law in this field is desirable.

The Legislature may prefer to delay any major study of the laws governing consumer credit until the National Conference of Commissioners on Uniform State Laws completes its study and makes recommendations. Whatever is done should certainly be based on far more data on the role of consumer credit in California's economy than is presently available.

³¹ Los Angeles Hearing, II, 79.

³² *Ibid.*, II, 93.

³³ *Ibid.*, I, 69.

CONCLUSIONS *

1. There are some dangers to the stability of California's economy in the large and growing burden of consumer debt. Because of its dependence upon defense production, our economy is particularly vulnerable to deflationary potential in this situation.
2. A far more intensive study than this of California's status as a capital-deficit area and consumer debt in this state is sorely needed if any serious changes in the laws governing credit selling are contemplated. There is a deplorable lack of information in this area.
3. It would be worthwhile if such a study could be the basis for a wholesale revision and simplification of the laws governing installment selling.
4. If the National Counsel of Commissioners on Uniform State Laws does recommend—as they seem about to³⁴—the repeal of state usury law and the enactment of a uniform maximum rate for all consumer credit transactions, such a proposal should not be adopted without very serious study. Unless such a measure were supplemented by rather rigid disclosure requirements the consumer's task in shopping intelligently for credit could be made far more difficult than at present, in fact, nearly impossible.
5. Without such information the effects of such a measure as the Truth in Lending Bill on the existing system cannot be predicted with any real confidence.
6. There are now sufficient powers in the hands of the Attorney General's Office and the members of the Board of Investments to deal with the most serious problems of deceptive advertising in the field of credit selling. These powers need to be employed with greater vigor.
7. The appropriate committee of the Assembly should undertake a serious study of the laws governing wage attachments to determine what contribution they make to the bankruptcy rate and how much they encourage unsound loans promoted by "hard sell" methods.
8. The committee should consider recommending legislation to require a uniform explanatory statement to be printed on all bills for revolving credit purchases.

* Assemblyman Stewart Hinckley has indicated that he has reservations about the conclusions stated in the committee's report.

REPORT—REGULATION OF HEALTH PLANS

During the 1961-63 interim, this committee conducted an extensive investigation into the legal status and activities of prepaid health plans. The results of that study are extensively set forth in this committee's final report for that interim.¹

To review briefly, a decision of the California Supreme Court in 1946² held that health plans were not insurance, their principle purpose was "service" and not "indemnity". The court said:

"The business of (CPS) lacks one essential element necessary to bring it within the scope of the insurance laws for clearly it assumes no risk. Under the provisions of the contracts or group agreements, it is a mere agent of distributor of funds. It does not promise the beneficiary members that it will provide medical care, on the contrary, "the services which are offered to . . . beneficiary members of CPS are offered personally to said members by the professional members of CPS . . .". The professional member is compensated for his services solely from the fund created by the monthly dues of the beneficiary members . . . stated in terms of insurance, all risk is assumed by the physicians not by the corporation. Hence, the only affect of requiring compliance with regulatory statutes would be to compel the acquisition of reserves contrary to the established method of operation.³

Therefore, these direct service pre-paid health plans such as CPS, Blue Shield, or Kaiser were immune from regulations from the Department of Insurance, or for that matter, by any other state, county, or city agency.

The former interim committee found many abuses among some recently formed health plans which catered largely to the elderly. Among those abuses were misleading claims by salesmen, failure to pay benefits because of bankruptcy, and arbitrary changes in fee schedules.

The report of this committee filed in 1963 recommended that legislation be adopted which would, for the first time, bring direct service health plans under regulation. Although some objections developed to designating the Department of Public Health as a regulatory agency, agreement was reached that AB 2291 of the 1963 session, authored by Assemblyman Knox, was a suitable approach to the problem. This bill provided for policing of health plans by the Attorney General. It set forth a mechanism whereby the Attorney General would be able to identify all health plans in the state by requiring that they be registered, and empowered the Attorney General to take immediate administrative action against a plan which could not, or did not, intend to live up to the commitments made to its members. Under

¹ Vol. 15, No. 26, Assembly Committee Reports.

² *California Physician's Service, v. Garrison*, 28 C 2nd, 801.

³ *Ibid.*, page 805.

its provisions, the Attorney General could take action including dissolution of the plan upon a finding of verbal or written misrepresentation in advertising or in misleading contracts.

The primary virtue of the bill lay in the fact that the Attorney General could do all the things that he cannot do under the statute governing fraud, but could act through an administrative tribunal without awaiting a formal court proceedings. Under Section 17500 of the Business and Professions Code and Section 3369 of the Civil Code, the Attorney General possesses substantial powers for acting against fraud, but it must be borne in mind that the test of fraud almost invariably requires surveillance of an operation over an extended period of time to determine that a pattern and design exist. From such a pattern proof of intent not to live up to the representations made can be shown. Clearly, if such a pattern had to be shown before a health plan could be restrained, a bogus plan could take a good deal of money from desperate and unknowledgeable elderly persons in the space of two years. It hardly serves society's interest to fine a devious or merely incompetent plan operator after he has taken a great deal of money from the public.

AB 2291 failed of passage when agreement could not be reached concerning the exemption from regulation of certain health and welfare plans. The exemption sought for health and welfare plans rested on the theory, at least in the case of negotiated plans, that sophisticated parties act as "watchdogs" and that the opportunity for fraud is inconsequential if not nonexistent. This is probably true, but it is not outright fraud or the ability to deliver on commitments which alone concerns us.

No doubt there would be far fewer complaints in those cases where a plan member was also a union member. Through his union local he could express his grievance and, presumably, a union official would intercede in his behalf. But what of the case where benefits are sought for an illness incurred before the claimant left his job. Who will press his case for him? Facing facts, it should be obvious that the union is going to be more solicitous in behalf of the voting member. It goes without saying that in those cases where a union is not party to a plan, the member has no one to intercede for him and no independent public agency to which he can appeal.

Some question has also been raised as to the method of financing the regulatory activities that the Attorney General would have to engage in. Sentiment is about equally divided between requiring a general fund appropriation or a registration fee or assessment. This fee would amount to approximately 6 cents per family unit with a minimum of \$200. Since it was estimated it would cost the Department of Justice an additional \$87,000 to administer the bill, the per family unit registration fee would raise sufficient funds.

It is admitted that assessments on management and labor management plans would be disproportionate to the amount of trouble they would occasion the Attorney General. But with regard to this point, it is not sound logic to exempt from registration fees those whose

records are clean. If this were carried out certainly CPS or Blue Shield or Kaiser, who between them would pay for the principal cost of regulation, should be exempt.

Although a general fund appropriation seems preferable since the purpose of this legislation would be to protect the general public from unscrupulous health plans, financial realities may dictate that the registration fee approach would be more practical. However, the dispute over financing is probably all out of proportion to the significance of the issue. An initial crackdown under a program such as set forth in AB 2291 would almost certainly eliminate 80 percent of the problem. In subsequent years, the number of Justice Department attorneys assigned to this responsibility would diminish and the cost and the concomitant registration fee would significantly drop.

The committee concludes that legislation on the registration of health plans such as that set forth in AB 2291 is long overdue. No significant reason exists why such legislation should not now be adopted.

LETTER OF TRANSMITTAL

ASSEMBLY INTERIM COMMITTEE ON
PUBLIC UTILITIES AND CORPORATIONS

Sacramento, January 11, 1965

HON. JESSE M. UNRUH
*Speaker of the Assembly
and Honorable Members*

Dear Speaker Unruh and Members:

Pursuant to House Resolution No. 500 sections (n) and (s) of the 1963 California Legislature, your Assembly Interim Committee on Public Utilities and Corporations submits its report of functions and activities during the 1963-65 interim.

Shortly after the close of the 1963 Extraordinary Session, I assumed the chairmanship of the committee from Assemblyman John C. Williamson. Concurrently, the Committee on Public Utilities and Corporations assumed the interim assignments from the Manufacturing, Oil, and Mining Industry Committee of which I had been chairman.

Several subject matters were studied by subcommittees, but the findings and recommendations reported herein are the responsibilities of the full committee with Mr. Greene, Mr. Holmes, Mr. Stanton and Mr. Whetmore holding partial reservations.

Respectfully submitted,

JOSEPH M. KENNICK
Chairman

Letters of Nonconcurrence	35

RECOMMENDATIONS OF THE COMMITTEE

A total of 17 subject matter assignments were assumed by the full committee, which included the assignments of both the Public Utilities and Corporations and the Manufacturing, Oil, and Mining Industry Committees.

Of these, five are reported upon without hearing, in the light of information before the chairman which dictated that disposition.

A.B. 1394 and A.C.A. 28—"Allocation of tidelands funds." Conferences with the author, Mr. Lanterman, and with Mr. Charles Baldwin, Consultant to the Joint Committee on Tidelands, concluded that this subject should receive attention during the 1965 session for possible study during the next interim.

A.B. 1612—"PUC procedures on the setting of rates for sightseeing buses." This proposal, if adopted, would prove unconstitutional. The committee received a legislative counsel's opinion to this effect and concludes that only a constitutional amendment would achieve the desired ends. The sponsoring industry was so informed and the author, Mr. Porter, made no request for hearing.

H.R. 607—"Abolition of minimum trucking rates." The author, Mr. Zenovich, informed the committee that the sponsor of this legislation withdrew his request in light of developments that erased the need for the changes proposed.

H.R. 450—"Pay television." In view of the November ballot Proposition 15, the committee concluded that any action would have been superfluous. The author, Mr. Williamson, concurred.

H.R. 452—"Location and relocation of utility facilities." Staff negotiations with the major utility companies disclosed that any need for legislative action has been eliminated by joint agreements between utilities and state or local agencies. The author, Mr. Williamson did not request a hearing.

Within the range of the additional referrals, there are 12 issues which have been studied by the committee and have been resolved for purposes of the final report. Five of these require legislation and are treated individually, along with accompanying legislative proposals. The other seven, listed below, are reported upon without legislation.

H.R. 451 (Williamson)—"Operations and practices of the PUC." Mr. Greene suggested at a hearing, in May of 1964, that, in the distribution of their directories, telephone companies provide the necessary copies of directories to cover all phones within a "toll-free" calling zone. The need for this arises whenever two or more contiguous areas with different directories include a common "toll-free" calling zone.

Staff for the commission explained that present authority of the PUC is adequate and that costs of a "blanket" proposal of this nature would work a financial hardship on ratepayers. A change was suggested in the wording which appears at the front of all directories advising users of the availability of extra copies. The statement employed at the time of the hearing read:

"Directories of other cities are available at a reasonable charge. Just call our Business Office (XXX-0000). If you just want to look up a number, drop in at our office at 0000 X Street, Your Town, where we keep directories for the principal cities in the Western U.S."

The Pacific Telephone and Telegraph Company proposed the following change and has since instituted same:

"If your telephone needs require that you frequently use a directory for a calling area other than your own, out-of-town directories are available through our business office. Some may be had without additional cost, others may be obtained for a reasonable charge. For information, just call our business office."

The committee recommends that all telephone companies voluntarily adopt the above change in wording, but does not support legislation requiring "blanket" distribution.

H.R. 586 (Williamson)—"Ratefixing procedures of the PUC." Assemblyman Greene proposed at the same hearing in May of 1964, that law be enacted requiring utilities to notify—by mail—all ratepayers likely to be affected by rate or service changes, the applications for which are pending before the PUC.

Staff for the PUC explained that this procedure would be sufficiently difficult and costly so as to make it a hardship on ratepayers. They added that existing constitutional authority of the commission empowers it to so require notification if, in its discretion, it is warranted.

The committee recommends no legislative action.

H.R. 560 (Williamson) and A.B. 1988 (Bagley)—"Private contractor competition with utilities." Testimony on this subject was received on September 16, 1964, in Newport Beach. Arguments were presented on behalf of contractor groups which sought to place utilities and private contractors under a universal workmanship code. Their objective is to place utility companies on a safety factor and pricing level competitive with electrical contractors. More specifically, it was proposed that competitive bidding requirements be promulgated for utility work done underground, as opposed to overhead lines since this is more properly the domain of the private contractor.

Opposition statements of utility companies and electrical workers' unions pointed out that the PUC has existing authority to adopt workmanship standards of any nature suiting their discretion; that legislation is not necessary; that there is no evidence to compel any changes in present standards; and, that the PUC recently ruled that existing practices of utilities ensures an adequate level of competitive bidding arrangements, beyond which the financial interests of the ratepayers may become jeopardized.

It was also stated that neither legally nor operationally is there a logical basis to distinguish any difference in "domain" between utility easements overhead or underground.

The committee recommends no legislative action.

H.R. 97 (1964) (Young)—"Underground utility wiring." On the same day, September 16, the committee received extensive testimony on the subject of underground wiring. The transcript of those proceedings constitutes a meaningful source document on a subject into which the Legislature has heretofore never delved.

No legislation is recommended by the committee. However, mention was made of a possible need for permissive legislation to make it legally clear that special assessment districts can be formed for the purpose of converting existing overhead utility networks to underground. If and when such a proposal is submitted to the Legislature, favorable action is recommended.

H.R. 537 (Williamson)—"Competitive gasoline sales." Testimony received on July 22 urged legislative action to prevent gasoline price wars. It was pointed out that this competitive marketing device works undue burdens on gasoline retail dealers and, in total economic view, does not benefit the consumer. Neither staff negotiations, testimony, nor industry proposals resulted in the development of meaningful legislation that would both ensure fair treatment of retail dealers and, at the same time, guarantee marketplace safeguards to the consuming public.

It is recommended that the committee recognize the dilemma in attempting to solve the inequities which apparently result from gasoline price wars and support continued study into ways and means of correcting bad practices in retail petroleum marketing.

H.R. 376 (Kennick)—Four separate hearings were conducted on the subject of "zoning of rock, sand and gravel deposits and the establishment of reasonable and uniform limitations, safeguards and controls over future production" (October 25, November 16, and December 16 of 1963 and January 30 of 1964).

Testimony from industry representatives explained that the interests of quarry operators and those of urban planners are occasionally in conflict. Costs of aggregate (the state buys 35 percent of the annual sales) increase almost geometrically with the distance of the quarry from the construction site. However, quarries located on prime real estate present difficulties (e.g. noise, dust, unsightliness) in the orderly development of urban areas. The multitudes of local planning authorities exercise various standards in adjusting zoning regulations for quarries. According to some representatives, the aggregate industry, the state, and the general economy are at the mercy of planning agents whose notions of proper land utilization may fail to recognize the economic impact of quarry relocations.

Testimony from planning authorities noted that zoning has always been a local prerogative and that state intervention, as suggested by certain segments of the industry would be unacceptable.

The committee found that the "aggregate industry *versus* local planning" issue should be resolved, but was unable to extract from the

testimony any single, workable solution. The committee therefore recommends the adoption of and assignment to the Assembly Committee on Public Utilities and Corporations a House Resolution that enables the Assembly to create and pay the necessary expenses for a "study group" to recommend specific legislative action. The "study group's" composition and appointment should be at the committee chairman's discretion. This recommendation acknowledges the need for action, but concedes that testimony before committee is not likely to produce meaningful results until the interested parties have resolved their differences and can report, before the 1967 Legislative Session, its consolidated suggestions for changes in the law, if any.

H.R. 97 (Pattee), H.R. 449 (Williamson), H.R. 625 (Kennick); A.B. 3125 (Pattee), A.B. 3126 (Pattee)—"Natural Gas." Hearings were conducted on September 17-18, October 22, November 19-20, and December 3-4 of 1963 and January 7-8, 1964.

The resolutions and bills referred to committee under the heading of "natural gas" called for various approaches to interim investigation, all of which were covered in a study based on two basic questions previously raised by the California Public Utilities Commission (Case 7132), the Governor's Task Force on Natural Gas and by a number of other legislative proposals in recent years:

- (1) Is there a need for legislative action to bring the field price of natural gas produced in California under direct, wellhead, cost-type regulation by the California PUC?
- (2) Is there a need for legislative action to amend the California Public Utilities Code to require regulatory approval for all direct sales or service of gas to customers within market areas already covered by certificated gas utilities?

The committee employed the professional advisory services of a natural gas expert, Dr. Edward J. Neuner of San Diego State College, who presented an introductory paper at the initial hearing. He followed the three subsequent meetings and formalized a summary report with legislative alternatives and predictions as to their consequences, which he presented at the final meeting.

The committee report is presented in two separate sections.

SECTION I—REGULATION OF WELLHEAD PRICES

Then president of the State PUC, William M. Bennett, has been the key voice in the support of regulating the well-head price of natural gas produced within California on a utility, cost-type basis. His testimony pointed out that 75 percent of the state's gas supply comes from out-of-state sources, selling at an average border price of 30¢ per thousand cubic feet (Mcf). The Federal Power Commission regulates the wholesale price of gas sold for export to other states, at an average price of about 14¢/Mcf at the point of production. The added 16¢ reflects transportation costs. California-produced gas, selling inside the state, has no such transportation cost tied to it; yet, it sells at the border price, 30¢/Mcf. The difference, according to Bennett, constitutes an undue profit of 16¢ over and above normal production costs.

There are, according to Mr. Bennett, two reasons for regulating gas prices:

- (a) It is marketed through a regulated monopoly and its wholesale regulation is a necessary step in the direction of full control of monopolistic activity, and;
- (b) The consumer, because of his investment in gas-operated fixtures (stoves, household furnaces, water heaters, etc.) is completely wedded to natural gas and is at the mercy of the economic whim of the gas marketplace.

While the State Supreme Court has held that the commission has no authority to regulate wholesale prices, Bennett interprets the general language of Section 216(c) of the Public Utilities Code as a grant of this power, an opinion which differs from that of the other four commissioners who declined to suggest a specific program of intrastate wellhead regulation in their decision on Case No. 7132. The Governor's Natural Gas Task Force did not recommend wholesale price control.

Spokesmen for the Western Oil and Gas Association, the Gas Producers Association of California, the Oil Producers Association of California, Pacific Gas and Electric Company, the Pacific Lighting Companies, the Southern California Edison Company, the California Farm Bureau Federation and others made statements in opposition to wellhead regulation proposals by pointing out the following:

- (a) None of the 50 states regulates gas prices, intrastate.
- (b) Among the cities of the nation, San Francisco has the 5th and Los Angeles the 13th lowest domestic gas rates;
- (c) California gas enjoys special value, both as a reserve supply for peak loads and as a nearby, easily marketed product; any commodity tends to level out at a price close to the nearest alternative; the FPC, for example, recognized values in resource proximity to market, by allowing gas in West Virginia transported for sale in New York to sell at a higher price than similarly destined gas in Texas;
- (d) Even if gas prices were regulated, the effect would be on the order of 1¢ on the customer's dollar for every 4¢ reduction in field price;
- (e) There is no evidence that gas producers are enjoying excessive profits and the existing market price is not overly encouraging to speculators—the exploration success ratio is 17 to 1;
- (f) Unlike the case in all other fields of utility regulation, the state could not offer any sort of guarantee for production success and profit as the "quid pro quo" in return for the imposition of price controls.

The committee found no conclusive evidence, either in fact or in economic rationale, to support legislative action to subject California gas producers to wholesale price regulation. Testimony did, in fact, indicate that wellhead price controls might work a hardship on the public interest by further extending the state's dependence on out-of-state supplies of natural gas.

The committee recommends that no legislative action be taken which would authorize state regulation of wellhead gas prices. Furthermore,

the committee recommends that the future Legislatures take diligent care to examine the possible impact should the Public Utilities Commission propose to implement the provisions of Section 216(c) of the Public Utilities Code and thereby carry out wellhead price regulation through administrative action.

SECTION II—UNREGULATED ENTRY

The second natural gas issue relates to direct sales of gas by nonutility corporations within the market area of certificated gas utilities to customers normally served by those utilities.

In 1960, the State Supreme Court ruled that a direct sale of natural gas by the Richfield Corporation to the Southern California Edison Co., normally the customer of the Pacific Lighting Companies, was not subject to the jurisdiction of the Public Utilities Commission, since that sale, in the court's view, did not constitute a utility-type "dedication" of Richfield's services.

Gas companies maintain low rates for nonindustrial users by "load-balancing" their pipeline deliveries thus enabling them to serve *all* household or firm users on the coldest day of the year. This technique enables gas utilities to ease the cost burdens of the pipelines by also selling to industrial users during the offpeak, summer months when household demands fall off, leaving a surplus of gas. These latter buyers enjoy rates as low as one-third that which the standard customers pay, in return for which they must accept periodic curtailments when the pipeline system is called upon in full for peak demands of the household consumers.

Testimony of the major gas sellers in southern California, the Pacific Lighting Companies, expressed concern that continued sales to large, industrial buyers within their market territory would work hardships upon household or "firm" users.

It is the gas company position that the loss of load-balancing, "interruptible" customers, and the related loss of revenue, must be met by increased rates among the firm, household users. They urged that legislation be adopted requiring that all direct, nonregulated sales, such as in the Richfield Edison case, come under the scrutiny of the Public Utilities Commission and that such a sale be certificated only upon a showing that its effects would not bear adversely on the general public.

The Southern California Edison Co. and a number of oil and gas production industry spokesmen opposed regulation of direct sales.

As a purchaser, the Edison company stated that an electric utility, with obligations to meet the public demand, has the right to contract for uninterrupted, long-term fuel supplies to operate its generating plants. They contend that the present service arrangement with the certificated gas utility is expensive and contrary to regulations that forbid the burning of fuel oil in the Los Angeles Basin. (When the gas companies curtail deliveries to interruptible users, the only feasible fuel alternative is oil.)

Edison further pointed out that the gas companies would not suffer from any loss of industrial market, that their system is already overbuilt for firm customer requirements and that firm demands can be met with minor adjustments, in the event of interruptible loss.

Oil and gas industry spokesmen expressed concern that the precluding of direct sales would leave gas producers with no alternative markets and they would be placed at the bargaining whim of the only two remaining purchasers, the Pacific Lighting Companies in the south and Pacific Gas and Electric in the north.

The issue of direct sales of gas within a certificated market area has presented the committee with the task of determining whether the benefits and market advantages which would thereby accrue to the gas and oil sellers and to industrial buyers of gas and their customers outweigh the possible disadvantages that may befall the gas utility industry and its customers. The testimony heard by the committee has not included sufficient factual data to lead to a positive conclusion.

The committee recommends that there be introduced a House Resolution calling for concentrated interim study on the subject of unregulated, direct sales of natural gas within already certificated market territories and the relative effects of such entries upon the public interest. Moreover, it is recommended that such study be conducted by the Assembly Interim Committee on Public Utilities and Corporations.

Finally there are five subject areas in which the committee endorses specific legislation. Each of these is treated as a separate item:

1. Emergency Telephone System (H.R. 473)
2. Charter Bus Operations (H.R. 447)
3. Gasoline Temperature Correction (A.B. 1320)
4. Corporations (H.R. 448, H.R. 70 1st Ex. 1964)
5. Water Companies (H.R. 451)

H.R. 473 (UNRUH)

"Emergency Telephone System"

Hearings were conducted as follows:

November 5, 1963, Full Committee in Los Angeles	} Members, Subcommittee on Emergency Telephone System
July 9, 1964, Assemblyman Soto in La Puente	
July 10, 1964, Assemblyman Ashcraft in San Diego	
July 14, 1964, Assemblyman Booth in Chico	
July 16, 1964, Assemblyman Casey in Bakersfield	
July 17, 1964, Assemblyman Britschgi in San Mateo	
July 22, 1964, Assemblyman Pattee in Monterey	
July 24, 1964, Assemblyman Dills in Los Angeles	
July 29, 1964, Subcommittee of the above-named members in San Francisco	
September 22, 1964, Subcommittee in San Diego	

SCOPE

H.R. 473 called for legislative study to determine the feasibility of establishing "regional switchboards to receive incoming emergency telephone calls and to relay such calls to the proper organization."

The need for state action, as expressed in newspaper articles and among police and fire officials, results from the fact that standard telephones, under today's systems, are not interconnected in any geographic pattern that relates to the multitude of police, fire, ambulance, and other local jurisdictions. Also, the everchanging complex of city, county, and other boundaries throughout the state render it highly unlikely that the average citizen knows which jurisdiction or service to call upon in a given emergency. It is even more unlikely that he would know the appropriate seven-digit telephone number to dial.

Over the years, cases have been reported in which emergency services have not responded in sufficient time to save lives or prevent injuries. These are few and far between. In some cases, the breakdown is simply jurisdictional—in others, a result of poor communications. The intent of H.R. 473 was to bring about investigation of ways and means to improve the speed and precision of transmitting distress calls from the general public to emergency services.

POSITIONS

At its first meeting on this subject, the full committee received ample testimony bearing out the fact implied in H.R. 473—that the general public is not capable of making the most expeditious contact with the proper emergency service. Equally evident to the committee at this early stage, was the concern of local fire and police officials that any action on the part of the state in the field of emergency communications would ultimately diminish control over their local agency operations. That is, the state might strip cities and counties of their autonomy by introducing itself as a third party in the relationship between the citizen and the responsible safety organization.

Cognizant of this apprehension on the part of fire and police chiefs, the committee chairman created a subcommittee consisting of himself, as chairman, and seven members selected on the basis of geographic spread. During a period of three weeks in July of 1964, the seven subcommittee members held separate seminar meetings in their respective territories, each of which was attended by the committee consultant and the member. With the assistance of the League of California Cities, invitations were sent to a sampling of fire and police departments and sheriff's offices asking them to send representatives to whichever one of the seven seminars was most convenient.

In all, there were approximately 115 people in attendance with average group sizes of 15 to 20. The purpose of the local gatherings was singular—to determine, at the local level, and from professional field men, precisely *what* should be done and *how* it should be achieved. These subcommittee seminars produced two specific results:

- (1) A consensus of two-thirds of the participants expressed a belief that a need does, in fact, exist for improving communication between distressed callers and responding agencies; and
- (2) more than two-thirds of those attending the conferences indicated they would approve of a "pilot study project" designed to test the concept of a universal emergency telephone system.

With the benefit of the opinions gathered from the seminar participants and with the committee consultant providing for continuity between the seven meetings, the subcommittee met in San Francisco on July 29 and directed staff to draft a "pilot project" for proposal to the Legislature. This proposal, along with enabling legislation, constitutes the essence of the full committee's recommendation on HR 473.

Also at the July 29 meeting, testimony was presented by a communications firm which manufactures a device known as the "call diverter." The Marcom company suggested that the "call diverter" could serve the purposes of an emergency phone network as follows:

- (A) Throughout the state, emergency callers would dial the AREA CODE digits applicable to the telephone in use.
- (B) The call would be diverted once it reached the telephone company central office building and would automatically ring in the assigned emergency service headquarters.
- (C) In the event that two or more emergency agencies serve a common telephone service area, the diverted call would ring in each separate headquarters, simultaneously, and the conversation would be monitored.

Subsequent to the July 29 meeting Marcom representatives advised the committee that further research had disclosed other, more direct channels for automatic distress call transmission.

The representatives were advised by the chairman that their proposals and research would be incorporated in the final "pilot project" so as to give ample opportunity to examine feasibility.

ANALYSIS

Committee investigations clearly disclosed the desirability of developing a statewide system for the routing of all emergency calls placed through a simplified, universal telephone number provided, however, that such system preserves the responsibilities and authorities of local agencies. Certain unanswered questions remain (e.g. costs, public acceptance, etc.) which compel the committee to undertake a short-term "pilot study" approach before recommending a full-scale program.

The committee's action, it should be noted, has been facilitated by the cooperative efforts of those involved throughout the interim, especially the Pacific Telephone and Telegraph Company, the General Telephone Company, the Los Angeles Voluntary Intergovernmental Cooperation Committee, the League of California Cities, the State Fire Chief's Association, the California Peace Officers Association, the California Association of County Supervisors, the Santa Clara County Department of Communications, the Los Angeles County Department of Communications, and the Marcom Corporation.

RECOMMENDATION

The committee recommends the adoption of legislation and the appropriation of state moneys for purposes of conducting a one-year pilot project for an emergency telephone system in accordance with the following outline:

A. The California Disaster Office shall coordinate the pilot project, beginning operations on October 1, 1965, and terminating on September 30, 1966. A total of \$150,000 shall be appropriated to cover related expenses. The Disaster Office shall submit to the Legislature its report and any attendant legislative proposals no later than December 1, 1966.

B. The project shall be conducted within the geographic boundaries of the Compton exchange of the Pacific Telephone and Telegraph Company and the Redondo exchange of the General Telephone Company.

These districts comprise a total area within Los Angeles County containing over 500,000 people in all or parts of the following territories: Bellflower, Compton, Downey, El Nido, El Segundo, Gardena, Harbor City, Hawthorne, Hermosa Beach, Lakewood, Lawndale, Los Angeles (city), Los Angeles County, Lynwood, Manhattan Beach, North Long Beach, Paramount, Palos Verdes, Palos Verdes Estates, Redondo Beach, Rolling Hills, Rolling Hills Estates, Torrance, South Gate, and Wilmington-San Pedro.

C. For those telephone operators receiving "0" calls from within the area incorporated in the project, the following procedure shall apply:

- (a) If the caller specifies the agency to be contacted, the operator shall make the appropriate connection.
- (b) If the caller is unable to specify which agency is to be contacted, the operator shall immediately connect the caller to an "emergency relay center."

* The use of the digit "0" was selected on the well-corroborated assumption that it would cause the least confusion in the minds of persons both inside and outside the pilot territory. Answering time on the "0" dial has been statistically shown not to exceed 10 seconds for over 95 percent of all trials. It is the existing practice of persons calling for emergency aid to use the "0" digit on 75 to 80 percent of all occasions.

(c) At the emergency relay center, trained personnel will:

1. Determine which *type* of service is required (fire, police, ambulance, etc.).
2. Locate the jurisdiction in which the emergency exists.
3. Contact the headquarters of the agency that is *jurisdictionally* responsible for emergency service, passing on all pertinent information.
4. Hold the caller on the line as long as possible in the event that the responding unit requests direct communication.

D. There will be an 11-member advisory body consisting of 2 members of the general public, 3 mayors or city council members from cities in Los Angeles County, 1 member of the Los Angeles County Board of Supervisors, 1 member of the Los Angeles City Council and 4 members of the State Legislature.

It shall be the function of this body to observe and review the operations of the pilot study, to provide advice and counsel to the California Disaster Office, and to report to the Legislature by the fifth legislative day of 1967 Regular Session any facts or findings it may desire to add as supplements to the final report submitted by the California Disaster Office.

E. In conjunction with the operation of the emergency relay center the California Disaster Office shall conduct whatever programs it deems necessary to test proposed techniques for the routing of emergency calls. (This should include, but by no means be limited to, experimentation with the Marcom "call diverter").

F. In addition to the \$150,000 budget for conducting the operational pilot study, there shall be appropriated \$50,000 for expenditure by the California Disaster Office for an engineering study. Such study should conclusively determine the feasibility and estimated costs of programming (such as by electronic processing) emergency calls in order to reduce to a minimum the time and complication in the processing of such calls and at the same time employ a simple, universal telephone number, regardless of locale.

G. In accordance with agreements reached between the two major telephone companies (Pacific and General) and the committee, every public-use telephone booth in the state shall henceforth be clearly marked if appropriate, with a notice which identifies its location as to the city or town in which it is situated and as to the names of the nearest intersecting streets. (This is designed to assist distressed callers in giving directions to the responding agency. It requires no legislation.)

An act to provide for an emergency telephone system pilot project, and making an appropriation therefor.

The people of the State of California do enact as follows:

SECTION 1. The California Disaster Office shall coordinate a one-year emergency telephone system pilot project in cooperation with an advisory body herein created, commencing October 1, 1965, and terminating September 30, 1966.

1 "Emergency," as used in this section, means a situation in wh
2 property or human life is in jeopardy and the prompt summoning
3 aid is essential.

4 SEC. 2. An advisory body is hereby created to observe and revi
5 the operations of the emergency telephone system pilot project a
6 to provide advice and counsel to the California Disaster Office w
7 respect to its activities under this act. The advisory body shall cons
8 of the following:

9 (a) Two members of the State Senate appointed by the Preside
10 pro Tempore of the Senate and two members of the Assembly appoint
11 by the Speaker of the Assembly.

12 These members shall serve at the pleasure of the appointing pow
13 and shall participate in the activities of the advisory body to the exte
14 that such participation is not incompatible with their respective po
15 tions as members of the Legislature. For the purposes of this act, t
16 members of the Legislature so serving shall constitute a joint inter
17 investigating committee on the subject of this act, and as such sh
18 have the powers and duties conferred and imposed upon such a co
19 mittee by the Joint Rules of the Senate and Assembly.

20 (b) One member of the Los Angeles County Board of Supervise
21 appointed by the Governor upon the advice of the chairman of th
22 board.

23 (c) One member of the Los Angeles City Council appointed by t
24 Governor upon the advice of the president of that council.

25 (d) Three city council members or mayors from three different cit
26 within Los Angeles County, other than the City of Los Angeles, a
27 pointed by the Governor upon the advice of the President of the Sout
28 ern California Division of the League of California Cities.

29 (e) Two members of the general public appointed by the Govern
30 The Governor shall select from among the members of the adviso
31 body a chairman, who shall serve as the executive officer of the adviso
32 body.

33 SEC. 3. The members of the advisory body shall serve without co
34 mpensation but shall be reimbursed for all necessary expenses incurr
35 in the performance of their duties.

36 SEC. 4. The first meeting of the advisory body shall be on Octob
37 1, 1965, at a time and place designated by the Governor.

38 SEC. 5. The project shall be conducted within the geographic boun
39 aries of the Compton exchange of the Pacific Telephone and Telegrap
40 Company and the Redondo exchange of the General Telephone Co.
41 pany.

42 The director of the disaster office may, with the concurrence of t
43 advisory body, extend the project to other areas within Los Angel
44 County.

45 SEC. 6. For those telephone operators receiving "0" calls fro
46 within the area in which the project is to be conducted, the followi
47 procedure shall apply:

48 (a) If the caller specifies which agency is to be contacted, the ope
49 ator shall make the appropriate connection;

50 (b) If the caller is unable to specify which agency is to be co
51 tacted, the operator shall immediately connect the caller to an "eme

agency relay center" to be coordinated by the California Disaster Office;

(c) At the emergency relay center, trained personnel shall:

(1) Determine the type of service which is required to render the necessary assistance.

(2) Determine the agency which is responsible for rendering the service in the area where the emergency exists.

(3) Contact the headquarters of the agency which is responsible for rendering the service and pass along to it all pertinent information regarding the emergency.

(4) Keep the caller on the line as long as possible so that he will be available if the unit responding to the emergency requests further information or direct communication with him.

SEC. 7. In conjunction with the operation of the emergency relay center the California Disaster Office shall conduct whatever programs it deems necessary to test proposed techniques for the routing of emergency telephone calls.

SEC. 8. The California Disaster Office shall also cause an engineering study to be undertaken to determine the feasibility and estimated costs of programming emergency telephone calls in order to reduce to a minimum the time and complications in the procedure required to process such calls and, at the same time, provide for the use of a simple, universal telephone number for reporting emergencies regardless of the location of the emergency.

SEC. 9. The California Disaster Office shall submit a report regarding its activities under this act, together with any proposals for legislation regarding emergency telephone service, to the Legislature no later than December 1, 1966. The advisory body may, in addition make such report to the Legislature, not later than the fifth legislative day of the 1967 Regular Session, regarding the activities of the California Disaster Office under this act or regarding emergency telephone service, as it may deem desirable.

SEC. 10. The sum of two hundred thousand dollars (\$200,000) is hereby appropriated from the General Fund to the California Disaster Office for expenditure in accordance with the following schedule.

Schedule:

(a) Conducting emergency telephone system pilot project, including expenses of members of advisory body and preparation of reports to the Legislature	\$150,000
(b) Engineering study of feasibility and estimated costs of programming emergency calls	50,000
Total of schedule	<u>\$200,000</u>

At any point during the conduct of the pilot project, the director of the disaster office may, upon his own discretion, terminate the project and, thereafter, explain the reasons for the termination in his report to the Legislature as required herein.

SEC. 11. This act shall remain effective until the 91st day after the final adjournment of the 1967 Regular Session of the Legislature, and shall have no force and effect after that date.

H.R. 447 (WILLIAMSON)

"Charter Bus Operations"

The committee held one hearing on HR 447, on September 30, 1964, in San Francisco.

SCOPE

H.R. 447 developed out of a series of legislative encounters with the question of competition between publicly owned and privately owned bus companies in the field of charter service.

In 1961, amendments were added to the Los Angeles Metropolitan Transit Act of 1957 which specified that the LA MTA could no longer offer charter bus service, since private bus lines in the area were ready, willing and able to do so. The MTA was permitted to lease its equipment to other parties for charter purposes, however. These amendments were perpetuated when, in 1964, the MTA was statutorily transformed into the Southern California Rapid Transit District.

In the meantime, during the 1963 Session, AB 889 passed both houses of the Legislature. It would have done to the Alameda-Contra Costa Transit District that which the 1961 amendments did to the Los Angeles system. The Governor vetoed the measure, and the Legislature found itself with conflicting positions on the matter.

H.R. 447 directed the Legislature to look into the State's policy and determine answers to "the problems connected with the competition of public and private entities in this field."

POSITIONS

Testimony was overwhelming in its opposition to furthering State policy that limits publicly owned bus companies in the charter business.

Spokesmen for the public-district-ownership and municipal companies stated that the revenue produced from charter operations is an integral part of the balanced budget in most bus firms and that to some, it constitutes the difference between deficit and operating in the black.

Furthermore, it was pointed out that public transit systems, when they are formed, usually buy out the equipment and facilities of an existing private operator. As part of the "package," districts often acquire charter service obligations and develop significant revenue sources using otherwise idle buses for charter parties. It was argued that the state should recognize the disservice it would render the public in prohibiting transit systems from offering charter service, since the loss of charter revenue would work toward increased transit fares.

The major testimony forthcoming from the private ownership sector conceded that prohibitions against public transit system charter operations are inadvisable. The spokesman for East-Shore Lines, Inc., suggested that charter privileges be restored to the Southern California Rapid Transit District under controlled conditions.

Statements filed by representatives of privately owned bus firms, subsequent to the hearing, suggested that the Legislature explore ways and means to reduce the tax burdens of private bus enterprises that are in charter bus competition with public ownership companies, whose tax obligations are minimal.

ANALYSIS

Since charter operations appear to be a significant element in an economically integrated bus system, there would appear to be little ground for denying privileges to operate charter services to the public ownership portion of the bus industry and not treating the private groups alike. Since the Los Angeles Southern California Rapid Transit District is the *only* operating transit system in the U.S. and Canada that is denied, by law, the right to charter its buses in competition with private carriers, amendments should be introduced that would enable this agency to reenter the charter field.

Also, since the 1961 MTA amendments, the legislature has created two transit districts in Marin and San Mateo Counties, neither of which is at this time operational. The legislation by which these districts were formed includes prohibitions against charter bus activity. While the testimony did not bear directly on circumstances within these districts the committee believes that the legislature should direct its attention to the question of whether or not charter bus privileges should be written into the Marin and San Mateo district statutes.

RECOMMENDATIONS

The committee recommends adoption of legislation restoring charter bus operation rights to the Southern California Rapid Transit District. It is further recommended that the legislature review its previous policy in prohibiting the San Mateo and Marin Counties transit districts from engaging in charter bus operations. This same policy question should be raised in the consideration of any future legislative proposals to create public transit systems.

An act to amend Section 30005 of the Public Utilities Code, relating to the Southern California Rapid Transit District.

The people of the State of California do enact as follows:

SECTION 1. Section 30005 of the Public Utilities Code is amended to read:

30005. "Rapid transit," as used in this part, means the transportation of passengers only and their incidental baggage by means other than by chartered bus, sightseeing bus, or taxi, or any other motor vehicle not on an individual passenger fare paying basis. Nothing in this section shall be construed to prohibit the district from leasing its busses to private certified public carriers or to prohibit the district from providing chartered bus service and schoolbus service for the transportation of pupils between their homes and schools.

A.B. 1320 (WILLIAMSON)

"Gasoline Temperature Corrections"

One hearing was conducted on July 22, 1964 in Long Beach.

SCOPE

A.B. 1320, 1963, would have required gasoline deliveries to retailers to be corrected for temperature expansion. Gasoline is expanded by heat and contracted by cold so that fuel purchased at one temperature and resold at a higher temperature will amount to more gallons resold than originally purchased, while fuel resold at a lower temperature will amount to fewer gallons.

The relationship between the atmospheric temperature at which the retail gasoline dealer purchases gasoline and ground temperature at which gasoline for resale is stored has the effect of accentuating this problem for the retail dealer. Scientific evidence has established that underground storage tank temperatures are ubiquitously and seasonally constant.

The problems raised by the foregoing are complicated by the dealer whose gasoline expands or contracts not only by gains or losses on the price, but also on state and federal taxes, totaling 11 cents per gallon. This is because taxes are paid to the producer or distributor on the basis of gallonage purchased and must be recovered by collection from retail customers on the basis of the gallons sold, which will most often amount to less than the purchased gallonage.

POSITIONS

Spokesmen for the gasoline retail industry testified that the State Legislature, at the time the Motor Vehicle Fuel License Tax Law was enacted, did not fully define "gallon." Although the law has been amended in many ways since that time, they pointed out that no precise definition of the word "gallon" has ever been made part of the law. Since 1961, however, state law has provided that whenever gasoline is sold in lots of 5,000 or more gallons, the state tax may be measured either by metered gallons or gallons as corrected to 60 degrees, as long as one or the other method is consistently followed for 12 consecutive months in sales to the retailer. (Revenue and Taxation Code, Section 7355) Thus state policy gives recognition to the generally accepted industry practice of temperature correction, a practice employed at all levels of petroleum transfers up to, but not including all deliveries to the retailer. The retail dealers took note of the fact that the distributor is allowed, but not required, to sell on a temperature corrected basis, and that many dealers are either unaware of any option they may have to obtain corrections or are reluctant to attempt bargaining with distributors.

Testimony from the petroleum producer and distributor industry indicated that some companies make standard practice of offering tem-

perature corrections on deliveries of 5,000 or more gallons; that others leave the initiative to the dealer; and that some do not correct deliveries. The belief was expressed that such sales arrangements should remain on the basis of arms-length bargaining, and should not be made a part of the law.

ANALYSIS

The committee found that correction of gasoline deliveries is a matter of considerable concern to retail dealers, and that the petroleum industry practice is not consistent; that is, gallonage is corrected in all transfers from refinery to retail dealer, but is frequently not executed at that final point. Moreover, the committee found that the nature of the retail petroleum market makes for the possibility that gasoline dealers be treated differently by the various distributors; that many dealers may either be unaware of the potential savings available through temperature correction, or may be led to believe that requests for corrections will result in breakdowns in distributor relations. The committee found no reasonable basis for setting minimum gallonage standards, since testimony indicated that sales to retailers by distributors and producers are rarely, if ever, of volumes so small as to not warrant temperature correction and the contraction or expansion of gasoline takes place, irrespective of that volume.

RECOMMENDATIONS

In view of the existing state policy that takes partial cognizance of the issue by allowing temperature corrections in the levying of state gas taxes, the committee is compelled to extend the law to a point of consistency and recommend passage of law requiring temperature correction on all deliveries of gasoline by distributors to retail dealers. Moreover, the committee recommends amendments to the Motor Vehicle Fuel License Tax Law (Revenue and Taxation Code, Section 7355) to take account of the proposed change in law affecting distributor sales to retailers.

An act to add Article 7.5 (commencing with Section 20870) to Chapter 7, Division 8 of the Business and Professions Code, and to amend Section 7355 of the Revenue and Taxation Code, relating to fuel.

The people of the State of California do enact as follows:

SECTION 1. Article 7.5 (commencing with Section 20870) is added to Chapter 7, Division 8 of the Business and Professions Code, to read:

Article 7.5. Basis of Settlement

20870. As used in this article, "gallon" means the United States gallon of 231 cubic inches as provided in Section 12302 of this code.

20871. It is unlawful for any distributor to sell any product to a retailer as, or purporting to be, gasoline, unless the basis of settlement is a temperature corrected gallonage to 60 degrees Fahrenheit.

In computing the net gallonage which shall be used as the basis of settlement, the distributor of such product shall add to or subtract from the gross gallonage delivered that number of gallons necessary

1 to so correct the volume delivered and to be found by computing si
2 tenths of 1 percent of the gross volume delivered for each 10 degree
3 Fahrenheit or major fraction thereof difference between the temper
4 ture of the gasoline taken at the time of delivery and 60 degree
5 Fahrenheit.

6 SEC. 2. Section 7355 of the Revenue and Taxation Code is amende
7 to read:

8 7355. "Gallon" means the United States gallon of 231 cubic inch
9 as provided in Section 12302 of the Business and Professions Cod
10 ~~without~~ with adjustment of the volumetric gallonage for temperatu
11 correction of the fuel distributed; ~~except that temperature correct~~
12 ~~gallonage to 60 degrees Fahrenheit. as invoiced to the purchaser w~~
13 ~~be accepted as the gallonage distributed with respect to the followin~~
14 ~~distributions:~~

15 (a) To a distributor licensed under this part.

16 (b) To any person ~~when~~ the distribution is exempt from tax
17 provided in Section 7401 of this part.

18 (c) To a purchaser who uses the fuel exclusively for a purpose oth
19 than in motor vehicles operated upon the public highways of this Sta
20 entitling him to a refund of the tax.

21 (d) To the United States government or any agency or instrume
22 tality thereof pursuant to a contract of sale requiring application
23 temperature correction.

24 (e) To any person when the quantity distributed in any sing
25 delivery is 5,000 or more gallons and temperature correction is co
26 sistently applied to all such deliveries to the purchaser over a period
27 12 or more consecutive months.

H.R. 448 (WILLIAMSON) AND H.R. 70 (1ST EX. STANTON)

"Corporations"

Hearings on H.R. 448 and H.R. 70 (1st Ex.) were conducted on July 7, August 4, and September 23, 1964, in Sacramento, San Francisco and San Diego, respectively.

SCOPE

Both resolutions, H.R. 448 and H.R. 70 called for legislative inquiry into corporations, generally, though the latter was aimed more directly at uncovering weaknesses in the separate functions of:

The Secretary of State—"The chartering of corporations," and
The Corporations Commissioner—"The issuance of permits to solicit capital."

The committee hired a special consultant, Sheldon H. Grossfield of Sacramento, to direct its investigation into the division of agency functions and to help in determining whether or not the public interest suffers as a result thereof.

POSITIONS

The findings of the special consultant's report pointed conclusively to the following:

- (a) Existing statutes technically grant certain immunities and privileges to a corporation in return for the mere action of filing articles of incorporation.
- (b) Existing statutes in no way require incorporators, after the filing of articles with the Secretary of State, to proceed with application for a permit from the Corporations Commissioner to issue securities.
- (c) The courts, in settling suits against the persons on behalf of whom corporations are formed, do not, in practice, recognize corporate immunities if the incorporators did not seek to issue securities.

It was concluded by the special consultant that legislation would be in order that requires incorporators not only to file articles of incorporation, but also to apply for a permit to issue securities, to then obtain that permit and, furthermore, to issue the securities, all of this within a reasonable period of time following the filing of articles. Thus, the statutes would be brought into focus with the practice of the courts.

The consultant's report urged consolidation of these two functions—filing of articles and issuance of stock permits—under one roof. Since the latter step of issuing permits as performed by the Corporations Commissioner, is the more complex, it was suggested that the corporate functions of the Secretary of State be transferred to the Division of Corporations.

Finally, a third recommendation was offered by the staff of the Secretary of State—that corporations be made responsible for keeping the public informed of any changes in their officers or addresses. The consultant drafted legislation which requires timely notice of such changes and empowers the Secretary of State to serve valid court process at the last known address of corporations if parties attempting to serve such process attest to their inability to locate the corporation or its officers due to the corporation's failure to comply with such law.

ANALYSIS

In view of the independent position of the special consultant, who is a practicing attorney, a judge of a judicial district, and a professor of law, the committee concluded that the substantive recommendations in his report are sound. No opposition arguments were stated before the committee, with the exception of the Secretary of State's rejection of the proposal to transfer his corporate functions to the Division of Corporations. The office of the Attorney General vigorously supported all three of the consultant's suggestions. The Corporation Commissioner took no official position on the matter of transferring functions, but agreed with the objectives contained in the balanced recommendations of the report's recommendations.

RECOMMENDATION

The committee recommends that legislation be adopted which embraces the two substantive recommendations contained in the consultant's report relating to conformity with the corporate securities laws of the state and to the notification of changes in corporate officers and addresses. The committee does not, at this time, find compelling the reasons for consolidating the corporate functions of the Secretary of State and Commissioner of Corporations and recommends that any proposal for such consolidation await sufficient time for analysis of the procedural difficulties that might arise as a result of the above recommended legislative actions.

An act to add Sections 102.1, 308.1, 3301.1 of the Corporations Code, to amend Section 338 of the Code of Civil Procedure and Section 3301 of the Corporations Code, and to repeal Sections 3302 and 3303 of the Corporations Code.

The people of the State of California do enact as follows:

- 1 **Add Sec. 102.1, Corp. C.**
- 2 102.1. "Commissioner" means the Commissioner of Corporations.
- 3
- 4 **Add Sec. 308.1, Corp. C.**
- 5 308.1. A corporation shall apply to the commissioner for a permit
- 6 to issue securities in accordance with the Corporate Securities Law
- 7 (commencing with Section 25000), within 90 days of having filed its
- 8 articles pursuant to Section 308, or prior to January 1, 1966, whichever
- 9 ever is later. In addition, a corporation shall secure such a permit
- 10 and issue its securities in compliance therewith within one year from

the date of filing of its articles, or prior to October 1, 1966, whichever is later, or any extension of such one-year period as may be granted by the commissioner within his discretion.

In the event a corporation fails to make application for a permit to issue its securities, or fails to secure such a permit, or fails to issue its securities in compliance therewith, within the prescribed periods its corporate existence shall be deemed never to have commenced, and its directors and officers shall be deemed to have been engaged in a partnership and shall be individually liable for all debts and obligations incurred from the date of filing the articles of incorporation.

Nothing stated in Section 308.1 shall be construed to preclude the application of the judicially developed doctrine which permits "piercing of the corporate veil" to those corporations which do comply with Section 308.1.

This section shall not apply to any corporations exempted from compliance with the Corporate Securities Law (commencing with Section 25000).

Amend Sec. 388, C.C.P.

388. When two or more persons, associated in any business, transact such business, under a common name, whether it comprises the names of such persons or not, *or as a corporation deemed never to have existed pursuant to Section 308.1 of the Corporations Code*, the associates may be sued by such common name, the summons in such cases being served on one or more of the associates; *or in the case of the indicated corporate association, as provided in Sections 3301 or 3301.5 of the Corporations Code* and the judgment in the action shall bind the joint property of all the associates, and the individual property of the party or parties served with process, in the same manner as if all had been named defendants and had been sued upon their joint liability.

Amend Sec. 3301, Corp. C.

3301. Every domestic corporation shall file within 30 days after filing articles of incorporation with the Secretary of State a statement of the names of its president or other head, its secretary, its treasurer (if any), and any other officers desired to be named, together with a statement of the location and address of its principal office. If desired, the statement may designate, as the agent of such corporation for the purpose of service of process, any natural person residing in this state or any corporation which has complied with Section 3301.5 or Section 6403.5 and whose capacity to act as such agent has not terminated. If a natural person be designated, the statement shall set forth his complete business or residence address. If a corporate agent be designated, the statement shall set forth the state or place under the laws of which such agent was incorporated and the name of the city, town or village wherein it has the office at which the corporation designating it as such agent may be served, as set forth in the certificate filed by such corporate agent pursuant to Section 3301.5, 3301.6, 6403.5 or 6403.6.

In the event of any change in the officers of the corporation, named in the statement required by this section, or in the location or address of its principal office or the stated address of a natural person whom it

1 has designated as such agent or the city, town or village wherein it
2 be served by delivery of a copy of any process to a corporate agent.
3 domestic corporation shall file with the Secretary of State within
4 days of the effective date of said change a statement of such
5 officers, or new location or address or such new city, town or village
6 which statement shall also, in any case, include the names of the
7 officers, the names of whom are required above to be stated whose names
8 are required by this section to be stated.

9 A corporation may at any time file a new designation of agent for
10 the purpose of service of process and such filing shall be deemed
11 to revoke any prior designation of agent.

12 Delivery by hand of a copy of any process against the corporation
13 (a) to any natural person designated by it as agent, or (b), if the
14 corporation has designated a corporate agent, at the office of such
15 corporate agent in the city, town or village named in the statement
16 filed by the corporation pursuant to this section to any person at such
17 office named in the certificate of such corporate agent filed pursuant
18 to Section 3301.5 or 6403.5, if such certificate has not been superseded
19 or otherwise to any person at such office named in the last certificate
20 filed pursuant to Section 3301.6 or 6403.6, shall constitute valid service
21 on the corporation.

22
23 **Add Sec. 3301.1, Corp. C.**

24 3301.1. If a corporation fails to file any statement required by
25 Section 3301, at the time required thereby or by July 1, 1966 when
26 ever date later occurs, then the Secretary of State shall be deemed
27 to have been designated an agent of the corporation for service of process.
28

29 Service of process on the corporation pursuant to this section shall
30 be accomplished by delivering personally to the Secretary of State at
31 his office in Sacramento, an affidavit affirming that the corporate
32 defendant has failed to comply with Section 3301, and two copies of
33 the process. Such service may also be accomplished by mailing, by
34 certified or registered mail addressed to the Secretary of State in
35 Sacramento, the affidavit and two copies of the process.

36 On receipt, by personal delivery or mail, of the affidavit and process
37 the Secretary of State shall mail, by certified or registered mail, to the
38 corporation's last address of record of its principal office in this state,
39 one copy each of the summons and complaint. If the only address re-
40 corded by the records of the Secretary of State for the principal office
41 is the county in which it is located, then the process shall be mailed
42 to the county seat addressed to the corporation in care of the county
43 clerk. The county clerk who shall promptly send it to the corporation
44 at its address within the county, if known to him, and if unknown,
45 shall cause the process to be posted at the courthouse of the county
46 within 30 days. At the time of such mailing, the Secretary of State shall send
47 by certified or registered mail a statement to the plaintiff acknowledging
48 receipt of the affidavit and process, and stating that he has mailed
49 a copy of the summons and complaint to the defendant, stating the
50 address to which it was mailed and affirming that it is the last address
51 of record of the defendant corporation's principal office in this state.

The plaintiff shall forward five dollars (\$5) with the affidavit and process, for each party to be served, and the Secretary of State shall have no obligation to act upon the process unless accompanied by the proper fee.

The defendant shall appear within 30 days after mailing of the process by the Secretary of State.

If a corporation had failed to comply with Section 3301 and subsequently does comply, service of process may be effected as provided in this section for a period of 30 days following the date of such compliance. Thereafter, for so long as the corporation remains in compliance with Section 3301, process may not be effected pursuant to this section.

Repeal Sec. 3302 and 3303, Corp. C.

3302. If designation of an agent for the purpose of service of process has not been filed with the Secretary of State, or if the agent designated cannot with due diligence be found at the address designated for personal delivery of the process, and it is shown by affidavit to the satisfaction of a court or judge that personal service of process against a domestic corporation cannot be made with the exercise of due diligence upon the designated agent or in any other manner provided by law the court or judge may make an order that the service be made upon the corporation by delivering by hand to the Secretary of State, or to any person employed in his office in the capacity of assistant or deputy, one copy of the process for each defendant to be served, together with a copy of the order authorizing such service. Service in this manner constitutes personal service upon the corporation.

3303. Upon the receipt of any such copy of process, the Secretary of State shall give notice of the service of the process to the corporation at its principal office in this State, by forwarding to such office, by registered mail with request for return receipt, the copy of the process. If the only address disclosed by the records of the Secretary of State for the principal office is the county in which it is located, then the process shall be mailed to the county seat addressed to the corporation in care of the county clerk, or it may be mailed to any address for the corporation specified in the court order. If the process is mailed in care of the county clerk, the county clerk shall promptly send it to the corporation at its address within the county, if known to him, and if unknown, he shall cause the process to be posted at the courthouse of the county for 30 days. The defendant shall appear within 30 days after delivery of the process to the Secretary of State.

The Secretary of State shall keep a record of all process served upon him under this division, and shall record therein the time of service and his action with reference thereto.

H.R. 451 (WILLIAMSON)

"Operations and Practices of the Public Utilities Commission" (As related to privately owned water companies)

SCOPE

Under the authorization of H.R. 451—"operations and practices of the Public Utilities Commission"—the committee investigated and discovered certain breakdowns in the commission's authority to regulate water service utilities.

Testimony received on June 8, 1964, in Seaside, California, brought forth certain inconsistencies in the state's regulatory law. Regardless of the type of utility in question, the Public Utilities Commission has limited power to bring into being the effects of orders that it imposes on regulated utilities. The commission occasionally finds that its directions, aimed at providing equitable service to ratepayers, go unheeded. In such event, its only available recourses are: a contempt ruling and subsequent criminal prosecution of the operators, or; revocation of the utility's certificate of convenience and necessity. Neither of these alternatives works to improve service.

POSITIONS

Testimony was presented in evidence that utility operators do, in fact, ignore commission orders. The staff of the Public Utilities Commission provided a list of 34 water companies whose operations continually frustrate the commission. The California Water Association, representing the bulk of the state's privately owned water service companies, explained the causative factors:

Water companies are often created to serve immediate limited needs and may not have begun as true business ventures. Growth in population often places pressures on such companies for service to which their financial and managerial resources are unable to respond. The result is a dissatisfied group of rate payers and a sincere, but ill-equipped water company management.

The California Water Association and the staff of the Public Utilities Commission urged the adoption of legislation that would give the commission added authority to bring about water service on par with state-wide standards. They did so, however, with reservations about the possibility of placing the state in the water business, and with the recommendation that an effort be made to insure that ownership of water utilities remains in the hands of investors.

ANALYSIS

The subcommittee found conclusive arguments in support of remedial legislation. A draft bill, presented at the hearing has since been reworked to accommodate reservations of the California Water Association and the Public Utilities Commission staff. It is necessary to promote this legislation in order to enable the Public Utilities Com-

mission to bring about fair treatment from *all* water utilities. A portion of its design is intended to encourage investor-ownership of water utilities by providing a step in between private ownership and public acquisition through formation of assessment districts.

RECOMMENDATION

Legislation is recommended that would:

1. Enable the Public Utilities Commission to review service standards of water companies, and have the power, upon full hearing, to declare a service deficient water utility "inadequate," or "adequate." There would be procedure established for public petition of the Public Utilities Commission and subsequent investigation of service adequacy.
2. Grant to the Public Utilities Commission the power of receivership over "inadequate" water companies. The trustee appointed by the commission would be expected to make every attempt to bring service up to statewide standards by management correction and whatever financial adjustments that neither work undue hardships on ratepayers nor confiscate property from the owners. The trustee would not be able to incur any debts or obligations beyond that which the rate structure of the utility could support.
3. After a reasonable period of receivership (e.g. one-year), the Public Utilities Commission would return ownership to the company if operations were deemed acceptable. If the PUC should determine that receivership, even if continued beyond one year, is is not likely to correct inadequacies, the commission would return ownership to the original owners, so notify the customers, and advise the customers of their legal recourse via formation of public ownership district.

A draft of appropriate legislation is appended hereto. Legislative Counsel has advised the committee that the powers this legislation confers upon the PUC fall within the constitutionality test of maintaining the public health and safety.

An act to add Chapter 2.5 (commencing with Section 2715) to Part 2, Division 1 of the Public Utilities Code, relating to public utility water companies.

The people of the State of California do enact as follows:

SECTION 1. Chapter 2.5 (commencing with Section 2715) is added to Part 2, Division 1 of the Public Utilities Code, to read:

CHAPTER 2.5. PUBLIC UTILITY WATER COMPANIES

2715. As used in this chapter:

- (a) "Commission" means the Public Utilities Commission.
- (b) "Public utility water company" means any water corporation or water company which is a public utility within the meaning of Section 216 or 2701 of this code.

2716. The commission shall review the standards of performance of all public utility water companies serving and providing water to the public in the State of California. Such review shall be made at the discretion of the commission or upon receipt of a written petition signed by not less than 25 persons who are served by the public utility setting forth the reason or reasons that, in the judgment of those signing the petition, justify a change in the classification of the public utility. On the basis of such review the commission shall rate each such public utility water company as to its adequacy in providing for the health, safety and needs of its customers. Such adequacy shall be determined by the dependability of the water supply to all areas served by it and the quality of the water supplied as measured by the following factors:

(a) Maintenance of adequate safety standards in the operation of its water system.

(b) Maintenance of its equipment to insure continued and proper operation.

(c) Provision of emergency supplies, such as for fire or sanitation where required.

(d) Purity and freedom from foreign matter of water supplies furnished to the public.

(e) Degree of cooperation in furnishing water supplies to new areas desiring or requesting such supplies.

2717. Upon making the review and rating required by Section 2716 the commission may place a public utility water company in either of the following classifications:

(a) Acceptable. This classification means that the public utility water company has provided a dependable and adequate water supply.

Such a classification shall be applicable for not less than one year from and after the date it is made, and shall continue until changed by action of the commission initiated either on its own motion or upon the filing of a written petition signed by not less than 25 persons who are served by the public utility, setting forth the reason or reasons that in the judgment of those signing the petition, justify a change in the classification of the public utility. No change in classification to "unacceptable" shall be ordered by the commission until after a public hearing conducted by it at which the public utility water company shall be entitled to be heard and produce evidence.

(b) Unacceptable. This classification means that the public utility water company has not provided a dependable and adequate water supply.

2718. Whenever the commission shall have determined that the facilities or service of any public utility water corporation are unacceptable, the commission shall by order or rule, fix the rules, practice, equipment, appliances, facilities, service or methods to be observed, furnished, constructed, enforced or employed. Such order or rule shall afford said water corporation not less than 90 days from the effective date of said order or rule within which to comply with the provisions of such order or rule. The commission may in its discretion extend the time for compliance. The order shall bear the date of service and shall state the effective date thereof, which shall be not less than 20 days after the date of service.

2719. If the water corporation shall fail to comply with the provisions of any effective order or rule made pursuant to Section 2718 within the time fixed by the commission, the commission may appoint a trustee to assume management of and operate any public utility water company which is determined to be "unacceptable." The trustee shall continue in control until the utility is classed as "acceptable" or until a period of one year elapses, whichever occurs first. The trustee shall be, at all times, responsible to the commission for his actions.

All costs of receivership shall be supported from operating receipts of the utility and shall, in no way, be met through state moneys.

If the trustee deems that additional revenues are necessary in order to secure compliance with the order of the commission made pursuant to Section 774, he shall promptly apply to the commission for authority to raise the rates or to alter any classification, contract, practice or rule so as to secure the increase in revenues as may be necessary in the circumstances. Hearing on the application shall be given precedence by the commission and shall be heard and decided at the earliest practicable time after the applicant is ready to proceed.

The trustee may obtain the process of a court to assist him in exercising his functions under this section.

The trustee may exercise his discretion in the operation of the utility during such time as the utility is under his management and control.

The trustee shall, in his discretion, pay out of receipts, moneys to the owner(s) of the utility an amount which is reasonable for his (their) livelihood and which does not impair the trustee in his efforts to restore service.

After a reasonable period of management by the trustee, which shall not exceed one year, the commission shall determine whether to return the utility's management to the owners, or to continue trusteeship for an additional year.

LETTERS OF NONCONCURRENCE

Relative to A.B. 1320

Gasoline Temperature Correction

Gentlemen :

The wide variations in climate throughout California render it impractical to require temperature corrections on *all* distributor-to-retailer deliveries of gasoline. In the colder parts of the state, temperature correction is not of sufficient concern to warrant the administrative and procedural detailing that would be mandatory under the proposed legislation.

Existing practices of several gasoline distributors conform to the intent of the recommended legislation. Temperature correction should remain as it is, on a voluntary basis unless further hearings show more conclusive evidence of the need for this legislation.

Sincerely yours,

(signed) JAMES E. WHETMORE

Natural Gas

Dear Mr. Chairman :

Kindly let the report show that on the subjects of the regulations of well head prices and direct sales not subject to Public Utilities Commission regulations, I share the views of Public Utilities Commissioner William M. Bennett. It is my belief that the total demand and total supply of natural gas must be part of a single system of regulation. Major elements of the supply and major elements of demand cannot be left unregulated since their size alone affects market conditions.

Sincerely,

(signed) WM. F. STANTON

Relative to H.R. 536

Rate Fixing Procedures of the P.U.C.

Dear Mr. Chairman :

Prime consideration is due the general public. There are any number of incidents wherein the public has no knowledge of an impending hearing. It is futile to describe legal notices in a newspaper as adequate public information.

There is no convincing evidence that suggests any significant cost in enclosing with a billing a notice of a hearing before Public Utilities Commission.

It is difficult to believe that the general public would not overwhelmingly support H.R. 586.

RELATIVE TO PACKAGING OF CONSUMER FOOD PRODUCTS.

WHEREAS, It appears to be a common practice for competitive food products to be packaged in a great variety of containers of different sizes; and

WHEREAS, This practice makes it difficult for the consumer to reasonably compare the prices of competitive food products; and

WHEREAS, The benefits of a competitive market are dependent, in large measure, upon informed consumers who are able to judge the relative price of similar products; now, therefore, be it

Resolved by the Assembly of the State of California, That the Assembly Rules Committee is directed to assign to the appropriate interim committee for study the subject of retail food packaging practices and the need of legislation to require retailers who sell food products to either sell such product packaged in standardized sizes or quantities or to publish the price per unit of such products offered for retail sale; and be it further

Resolved, That the Assembly Rules Committee direct such interim committee to report its findings on the subject matter of this resolution, together with its suggestions for proposed legislation, to the Assembly not later than the fifth legislative day of the 1965 Regular Session of the Legislature.

ART 1. INTRODUCTION

The California Legislature and the federal government long ago recognized the value and the contributions of the free enterprise system to California and the union, and they have continually followed courses of action dedicated to the preservation of such a system. As former President Kennedy said:

"I regard the preservation and strengthening of the free market as a cardinal objective of this or any administration's policies. It is well to remind ourselves from time to time of the benefits we derive from the maintenance of a free market system. The system rests on freedom of consumer choice, the profit motive, and vigorous competition for the buyer's dollar. By relying on these spontaneous economic forces, we secure these benefits."

"Our system tends automatically to produce the kinds of goods that consumers want in the relative quantities in which people want them. The system tends automatically to minimize waste. If one producer is making a product efficiently, another will see an opportunity for profit by making the product at a lower cost. The system encourages innovation and technological change. Profits are the reward of the innovator but competitors will soon adopt the new techniques, thus forcing the innovator to continue to push ahead."

*"The free market is a decentralized regulator of our economic system. The free market is not only a more efficient decision maker than even the wisest central management body but even more important, the free market keeps economic power widely dispersed. It does this as a vital underpinning of our democratic system."*¹

Dr. Irston Barnes, professor of political economy at the Columbia Graduate School of Business, further explains the free enterprise market system: *"Integrity of markets cannot be preserved unless all buyers and all sellers have a right of equal access to the market. Equal access to the market means a full knowledge of all relevant facts with respect to price, quality, and other significant dimensions of market transactions."*² Concerning the right of persons to have access to relevant facts ex-President Kennedy said: *"These rights include . . . the right to be informed—to be protected against fraudulent, deceitful, or grossly misleading information, advertising, labeling, or other practices, and to be given the facts (needed) to make an informed choice."*³

The California Legislature and the federal government are fully cognizant that the grocery industry in the past 20 years has grown fabulously with annual sales having increased from 16 billion dollars to 80 billion dollars⁴; that, whereas the average supermarket 10 years ago stocked some 1,500 items, today stocks 7,500, and in the not too far distant future supermarkets will carry

¹Quoted by Paul S. Willis, president, Grocery Manufacturers of America, Inc., New York, N.Y., in testimony before the Subcommittee on Antitrust and Monopoly of the Committee on the Judiciary, United States Senate (hereinafter cited as the Hart Subcommittee) 88th Congress. *Hearings on S. 387, Part I*, p. 234.

²*Ibid.*, p. 371.

³Message from the President relative to the Consumers' Protection and Interest Program. Reprinted in *ibid.*, p. 465.

⁴Testimony of Paul S. Willis, *ibid.*, p. 232.

upwards of 20,000 items⁵; that unfortunately there remain in our country 22 million persons who have less than an eighth grade education and who therefore, may have difficulty comparing prices no matter how simple such comparison is made for them⁶; that approximately 50 percent of the annual food dollar expenditures are for packaged groceries⁷; that retailers have reduced their operating margins 30 percent in the past three decades; that Americans spend 19 percent of their after-tax income for food, compared with 26 percent in 1949; and that an examination of 1949 kinds and quality of food will reveal that to get the same food today would take but 14 percent of post-tax income⁸; and that as L. Y. Ballentine, North Carolina Commissioner of Agriculture, so aptly states, "*Packaging should be the means for getting a commodity to the consumer in an attractive, efficient way—not to cover up anything that the consumer wants to know.*"⁹

The Legislature has constantly sought to protect the public and the honest entrepreneur from unscrupulous businessmen, and it has attempted (often with the instigation of or with the commendable assistance of the industries involved) to do all that it can to assist the consumer in obtaining the knowledge necessary to make the rational purchases which our free enterprise system thrives upon. Examples of the latter include efforts beginning in 1957 which led to the tentative adoption of specific tolerances and finally to the approval of the statutory quality control method of sampling packages by lot for inaccurate weight, final studies conducted on this topic and preliminary exploration of price-per-unit legislation by the Assembly Interim Committee on Agriculture in the 1961-62 interim, and passage of S.B. 378 (Rattigan) on package labeling in 1962. The Department of Agriculture has promulgated final regulations concerning quantity declarations on packaged commodities under S.B. 378.¹⁰ These regulations are designed to benefit the consumer without placing an unjust burden on the producer, who would, of course, ultimately have to pass on at least a substantial portion of any such encumbrance to the consumer. House Resolution 219 (1963) (Gonsalves) directed a study of "*the subject of retail food packaging and the need of legislation to require retailers who sell food products either sell such products packaged in standardized sizes or quantities or publish the price per unit of such products offered for retail sale.*"

It should be emphasized that H.R. 219 specifically designates food products sold at retail and that therefore this study is limited to such. It should also be noted at the outset that there are a great number of food commodities which for various reasons must, by law or regulation, be sold in California by specific quantities or sizes. Among these are the following:¹¹

- | | |
|--------------------------------|--------------------------------|
| 1. Bread | 7. Potatoes in containers |
| 2. Berries in containers | 8. Honey |
| 3. Butter in containers | 9. Eggs |
| 4. Oleomargarine in containers | 10. Dairy products |
| 5. Milk products | 11. Canned olives |
| 6. Onions in containers | 12. Some fruits and vegetables |

PART 2. THE PROBLEM

The impetus for this study came from the proliferation of package sizes (often in fractional ounces) which makes it virtually impossible to compare some products by price and even at times difficult to compare prices of the same product in various size containers.

Consumer groups have testified that they would not criticize the food industry if they believed the consumer had an alternative available—if the consumer could buy another product without experiencing the same difficulty—and if the industry would properly police itself.¹² It appears that this proliferation of packages is the result of what for want of a better term might be called ‘Gresham’s law of the marketplace.’¹³ Simply stated, the principle of ‘Gresham’s law’ is that the more honest operator is forced to the level of the less trustworthy in order to remain solvent. In the words of Dr. Barnes:

“Competitors cannot, as we know from experience, discipline the rival who engages in unfair and deceptive acts and practices or even in false and misleading advertising. Oblique statements calling attention to the merits of one product may carry implications with respect to the characteristics or advertising of another product, but these oblique statements are seldom very effective in influencing buyer responses. And any direct attack upon a competitor or his product is likely to be challenged as disparaging the competitor or the product. Disparaging a competitor or his product is, and long has been, treated as an unfair method of competition. Since consumers in substantial numbers do not recognize promptly any departure from good packaging standards and react decisively against those manufacturers who use deceptive packaging, there is little likelihood that competition can eliminate deceptive packaging when this practice is advantageous to some competitors. Consequently, we are forced to the conclusion that competitive morals in packaging are likely to be set by the least moral and the less scrupulous, rather than by those competitors who are sensitive to the importance of straightforward dealings with consumers. This last statement must be modified to recognize that where a firm establishes a dominant position in the market, either by reason of its size or by reason of its capacity to engage in intensive advertising and promotion, that dominant firm may be able to maintain high and scrupulous standards in packaging simply because it has established such strong consumer loyalty.”¹⁴

Dr. Barnes does admit that consumers may ultimately recognize deceptive practices perpetrated by the less scrupulous, but he contends that by the time the public becomes fully cognizant of the situation the highly honest businessman may be out of business, or if not, he has probably experienced a loss in sales.¹⁵ Of course, the harder it is for the consumer to discern the true price, the longer it will take the free enterprise system to eliminate the less scrupulous.

Mrs. Sarah H. Newman, General Secretary, National Consumers League, Washington, D.C.

Testimony before the Hart Subcommittee, *Hearings on S. 387*, pp. 160–61.

Testimony of Caroline F. Ware, consultant on consumer problems, Washington, D.C., *ibid.*, p. 193.

Barnes, *ibid.*, p. 380.

Ibid., p. 376.

That there has been a plethora of new packages, many in nonstandard sizes in the food industry is obvious and only a few examples need be cited. The office of the Consumer Counsel has brought some of these to the attention of the committee. In 1961 there were 17 items of oil on the market, one of which was in a nonstandard size, 24 ounces. By 1964 there were 39 different items of oil, 21 of which were nonstandard. None of the 21, however, contained fractional ounces.¹⁶ The Consumer Counsel has also pointed out some erosion of standard quantity sizes in the following commodities: cheese, dried apricots, salad dressing, rice, crackers, spaghetti, beer, canned kidney beans, wine vinegar, hotdog raisins, soft drinks, mayonnaise, olive oil, apple juice, evaporated milk, jam, syrup, egg noodles, instant coffee, and ketchup. (See Appendix A.)

It appears that consumers are painfully unaware of the exact price of many items whether they are packed in standard or nonstandard weight packages.¹⁷ A trade study made by the magazine *Progressive Grocers* shows that although 78 percent of the customers had shopped at the same store for more than two years, more than one-half of these consumers were able to name the exact price of only one item (a six-pack of Coca-Cola) in a survey of 60 fast-moving products. There appears to be no absolute relationship between rank in price recognition and standard or nonstandard weight packages. Many nonstandard weight commodities ranked ahead in price recognition of a standard one-pound can of coffee. On the other hand, there were many standard-weight items which ranked higher than some nonstandard weight containers.¹⁸

It has been contended that the aforementioned proliferation of packages, especially those with nonstandard or random weights, has made it difficult and confusing, if not impossible to ascertain price per unit without some type of hand computer.

Mrs. John Freeman, the representative of the Manhattan Beach Branch of the American Association of University Women underscored this contention and explained the mathematics involved in the calculation of price per unit and presented charts designed to show the difficulty involved in attempting to calculate price per unit. (See Appendix B)

The result is consumer confusion, accompanied by widely and often irrationally varying prices for what is basically the same product. In testimony before the committee, the representative of the California Federation of Women Clubs gave this example: "In one market, five similar varieties of packaged ham in 3-, 4-, 5-, 6-, and 7-ounce quantities, ranged in price from \$0.39 to \$0.59. In terms of a pound, the cost varied from \$1.31 to \$2.20."¹⁹ Mrs. James C. Goodwin, the representative of the Association of California Consumers pointed out that there were 153 different packages of cereal and cereal products in a grocery store but that only 30 are in standard sizes, there being 26 odd weights under one pound.²⁰ To test the ability of the consumer to solve such problems, the office of the Consumer Counsel conducted an experiment in an attempt to ascertain if five college trained women could compare prices of 14 products and buy the cheapest brand in a grocery store regardless of quality. Of the 70 attempts (5×14) to get the cheapest product, barely half (36) were successful.²¹

²⁰ Mrs. James C. Goodwin, *ibid*.

²¹ "Packages and Prices"—A report transmitted to Governor Brown, 1963, p. 4.

Finally, though it is generally expected that the larger size of a given commodity will cost less per unit than a smaller size because of economies gained in reduced handling costs, sometimes this is not the case. In such instances the consumer can get more for her money by purchasing two or more of the smaller item. There are five possible explanations of this phenomenon. It may be that the retailer wants to push the smaller package at the expense of the larger one, and thus makes it a better buy. It may also be that the retailer believes the consumer either does not care to or is unable to compare prices and that the retailer can, therefore, increase his profits by duping the consumer. It is equally conceivable that the retail grocer himself fails to determine the price per unit, and by guessing what the public will pay, occasionally inadvertently charges more for the larger size. Fourthly, it may be an error in marking by the clerk, and lastly, a new shipment may be placed on the shelf at a lower price than the earlier one, which was not marked down at the time the new shipment was placed on the shelf. In addition, the use of the words "economy size," "giant size," "king size," "family size," etc., sometimes deceive the consumer, and possibly the retailer, as to the relative size of packages.²²

It is interesting to note that a food and drug magazine commissioned the Institute for Design Analysis, Pier 5 North, San Francisco, to conduct a study of "Consumer Attitudes Toward Deceptive Packaging," published in July 1963. A major conclusion of this study was that "deceptive packaging is apparently not a paramount public issue now" (p. 9). However, this survey also reported that 42 percent of the total sample (34 percent of the women) felt that the term "economy size" was "not at all useful," 52 percent (49 percent of the women) opined that the words "giant size" were "not at all useful," and 54 percent (49 percent of the women) believed the term "king size" was "not at all useful." In each of these three cases less than 20 percent of the sample felt the terms were "very useful," the remainder falling into the category of "somewhat useful." Nonetheless, undue weight should not be placed on this preliminary study, for it was limited to the bay area and was conducted by telephone. A followup study is now being conducted by the Institute for Design Analysis. The institute expects to complete this survey by January 1965.

PART 3. CAUSES OF PROLIFERATION

Because of these problems, consumer groups suggest that either a standardized quantities (rather than standardized packages) law or a price per unit law similar to the Model State Law on Weights and Measures adopted by the 45th National Conference on Weights and Measures, be enacted.²³ Before an investigation into such proposed laws, it is necessary to ascertain the various reasons for proliferation of package sizes and the tendency towards the reduction of net contents accompanying such proliferation. These reasons fall into five categories:

- A. Consumer's desire for different size packages,
- B. New products or new formulas,
- C. Manufacturers' desire to increase profit,
- D. Packaging to price,
- E. Standardized containers for products with different densities,

and may profitably be discussed at greater length.

A. *"The consumers themselves have more and more expressed a desire to buy commodities in a variety of quantities, forms, shapes, and sizes,"* said Robert E. Graham to the Senate Antitrust and Monopoly Subcommittee.²⁴ Many of these desires stem from storage problems. As more Americans moved into smaller houses and apartments, they demanded smaller packages.²⁵ Special mixes, such as cake mixes, are oftentimes attendant with fractional weights, for they are designed to fill specific-size pans. When a manufacturer determines how much ingredient he must put into his package to make a good eight-inch cake, he places that amount in his package, no more or no less. In comparing prices of cake mixes the consumer must consider more than sales price and quality. She must consider also the recipe if she is to compare actual prices, for one may call for more additional ingredients than another.²⁶

Along the same lines consumers are often more interested in the number of servings they can get from a package rather than that the package contain an even pound or fraction thereof. Testimony at Norwalk pursuant to H.R. 219 brought out that this is the case in baby foods and tuna.²⁷ Quality must be considered heavily when purchasing food commodities, especially mixes. Many consumers prefer to buy a certain quality and do not compare prices after having first tested different products to ascertain which one they prefer. In the words of Merle Goddard, *"Most people buy by brand name and not by weight."*²⁸

²³ Testimony of Helen Nelson, *Hearings on H.R. 219*.
²⁴ Testimony of R. E. Graham, Executive Vice President, Owens-Illinois Glass Co., Hart Subcommittee, *Hearings on S. 387*, p. 401.
²⁵ Testimony of Esther Peterson, Assistant Secretary of Labor, *ibid.*, p. 126.
²⁶ Testimony of R. Alan Hickman, *ibid.*, p. 139.
²⁷ Testimony of R. J. Marsh and Charles Carry, *Hearings on H.R. 219*.
²⁸ Testimony of Merle Goddard before California State Department of Agriculture hearing considering labeling regulations, Sacramento, August 19, 1964.

B. From time to time, a manufacturer may alter the quality of his product in such a way as to justify either a price or package change, or both. Occasionally a manufacturer will develop an improved formula for which less total ingredients are needed to equal the performance of the earlier product. Consequently he may reduce the contents of his package without a proportional decrease in selling price. The same may be true of a new product which is similar to an established one. Whether there is deception involved in these cases is dependent on several factors, including whether the lesser volume does an equal or better job than the greater and whether the cost of the ingredients is greater. The prepared mix problem mentioned in the discussion of consumer desires is applicable here also. A new cake mix may make a seven-inch cake with a lesser number of ounces than another.

C. A decrease in net contents without an equally proportional diminution in price is a price increase which is much more likely not to be discerned by the consumer than a simple increase in the price of a given volume of a commodity. In the words of Professor Barnes, "*Temptations to reduce quantity while maintaining package size need not necessarily arise from the necessity of meeting an increase in costs of production or distribution; it may be a device to widen margins; either to increase profits, to provide for a larger advertising budget, or to compensate for a failure to achieve competitive standards of efficiency in some phase of the firm's operations.*"²⁹ Mrs. Goodwin, of the Association of California Consumers, presented an example of this. A 12-biscuit package weighed 9 ounces and sold for \$0.25, or \$0.45 per pound. The new, better labeled package still contained 12 biscuits, but it weighed 8 ounces and cost \$0.27, or \$0.54 per pound. Said Mrs. Goodwin, "*It is difficult to believe that this increase of 9 cents is merely a reflection of the additional costs of the new, taller, thinner package.*"³⁰

Against the assumption that such practices represent an arbitrary or totally unchecked consumer victimization by retailers, it should be noted that profits of supermarkets as a percentage of sales are low. Again quoting Professor Barnes, "*Competition among supermarkets limits the markup which supermarkets can take on the products which they offer for sale.*"³¹ Supermarket profits range between 1 and 2 percent of sales, and in 1963 the net income to net worth ratio of two large supermarket firms, Safeway and A&E, was 13.9 and 9.3, respectively.³²

D. Producers prefer to package some products by weight and others by price. In the first instance, the package weight remains constant and the price changes. In the second, weight is the variable factor. In the words of Alan Hickman, "*Variations in weight are usually not deceptive and not employed with the intent to confuse or hoodwink the public. Varying the weight is a legitimate and proper marketing method which benefits the consumer.*"³³ It appears that there are three separate but often interrelated reasons for a reduction in weight rather than a reduction in price other than the desire to increase profits. One is the desire to retain markets and quality in a time of rising or varying costs. The second is consumer preference for certain prices, and the third is the problem of vending machines.

³³ Alan Hickman, Vice Chairman, All-Industry Packaging Advisory Committee, Dow Chemical Co., testimony before the Hart Subcommittee, *Hearings on S. 387*, p. 141.

Fluctuations in the price of chocolate and other candy ingredients mean that to keep the candy bar price level constant at 5 cents the manufacturer must vary the net weight or lower the quality of the bar. Since most producers are reluctant to decrease quality, they vary weight. If the costs of production rise the net weight of the candy bar falls and vice versa. With a volatile chocolate market, it can be expected that such changes will occur. Variations in net weight for a given price of a specific commodity are often found regionally because raw material and other prices vary. Since potatoes cost 20 percent more in Los Angeles than they do in Madison, Wisconsin, there is less weight in a 49-cent package of potato chips in Los Angeles than in Madison.³⁴ The same phenomenon holds for varying labor rates and packaging materials. Thus a nickel bag of potato chips may weigh one-half ounce in one city and five-eighths ounce in another.

Increased costs may not be passed on to the consumer by increases in the listed price in many instances, for the consumer finds a substitute product rather than pay more for the original one. In one case a producer had virtually no competition for his 4-ounce chipped beef package which he sold for 39 cents. For various reasons his costs increased and he tried to pass these increases on to the consumer by raising his price to 43 cents. Sales dropped 40 percent. The producer now was faced with a choice. He could suffer a loss at 43 cents, reduce quality but not quantity and charge 39 cents, or reduce quantity, and maintain quality, at 39 cents. He took the third alternative and regained his sales.³⁵

Psychological values of various amounts of money play an important role in pricing. A consumer may, even knowingly, be more willing to pay \$0.39 for less than to pay 43 cents for the original contents, even though price per unit is equal. Everyone knows that a great many products have prices ending in nine. Though this seems to defy rational explanation, it exists and must be seriously considered by the retailer. That these psychological values are important is seen in the fact that a package of a product of superior quality may be reduced in weight so that its price is equivalent to that of a brand of lesser quality.³⁶

Vending machines are an ever increasing vehicle for the sale of packaged food products. They are geared to accept certain coins. A good example again is the five-cent candy bar. It is self-evident that it is cheaper to adjust the contents of the candy bar than to be constantly adjusting machines to accept odd cents.

E. A major cause of odd-weight packages, ironically enough, is standardization of containers, especially in the canning industry. Such standardization creates economies for the canner which he can pass on in the form of lower prices. A Caroline Ware, consultant on consumer problems, said, "*Industries have found that such simplification and standardization permits more efficient management.*"³⁷ Such economies accrue to production, warehousing, distributing, and breakage.

Economies in production stem from the fact that fewer packaging machines are needed with standardization. Volume purchasing of standard size packages reduces cost per package. Additional buildings to house machines needed in quantity standardization is to be adhered to are unnecessary as are other costs attendant with additional machinery (taxes, labor, repair, depreciation, start-up cost, etc.). Lee Bickmore of the National Biscuit Company puts it this way:

³⁴ James W. Gee, *Hearings on H.R. 219*.

³⁵ Testimony of Merle Goddard and Leo Cohen, *ibid*.

³⁶ Testimony of Lloyd E. Skinner, President, Skinner Macaroni Co., and President, National Small Business Association, Hart Subcommittee, *Hearings on S. 387*, p. 737.

³⁷ *Ibid.*, p. 191.

"Suppose we were required to pack each of our four varieties to a standard weight of eight ounces. We would need three additional sizes of packages. Each different size would require a separate line of packaging equipment * * * it would cost us over \$1 million for each set of packaging machines to handle these four varieties * * * packaged as full as practicable to a standard of eight ounces.

"What would happen to our costs? They would go way up. If we had four packaging machines, only 25 percent of our total packaging equipment and plant would be productive at any one time. Because of the time involved in shifting our employees from one to another, our costs would be further increased by additional startup and shutdown expense.

"All of these added costs have to be reflected in higher prices. If consumers refused to buy the products at the higher prices, we would have to stop producing them. As a result, both the freedom of choice and the production output would have been curtailed. This could become a widespread curtailment among manufacturers resulting in increased unemployment, lower earnings, and reduced tax payments to the government."³⁸

Palletized loading or unit-load shipping of standardized cartons reduces warehousing and distributing cost. Likewise standardized containers lessen the chance of breakage.³⁹

The simple fact that the specific densities of various products differ means that fractional ounces will occur if the different products are put into standardized cans, if the containers are filled to the top.⁴⁰ Spices provide one example. In the words of Harrison F. Dunning, president, Scott Paper Company, "*The housewife wants a neat little rack of six kinds of spices, and she wants them all to look good in her kitchen, so, she wants them all the same size. They have different specific gravities, so to fill the bottle you have got to have 2¼ ounces of one, 3½ of another, 4½ of a third, and that is what the housewife wants.*"⁴¹ Vegetables are another example. One standardized container may hold 5 ounces of spinach, 5¼ ounces of peas, and 4¾ ounces of carrots. Even the same product may yield different densities. No one would claim that a standard 303 can would contain equal weights of sliced and chunk pineapple.

The tuna industry researched industriously for 10 years, often in cooperation with the government, before the Standards of Identity and Fill of Container regulations were promulgated by the Food and Drug Administration. The standard establishes two types of tuna—light and white—and four styles of pack—solid, chunk, flake, and grated. Each of these styles has a different density. A standard can (307 x 113) will hold 7 ounces of solid pack tuna, ½ ounces of chunk-style tuna, and 6¼ ounces of grated or flaked tuna. Thus industry and government, working together, achieved standardization in the tuna industry to a degree unknown to all but a very few industries.⁴² Yet, the consumers' complaint still remains that there is an unnecessary multiplicity of tuna can sizes and that the fractional ounces deceive the average consumer.

PART 4. STANDARDIZATION

Consumer groups request that legislation for standardization of quantities be enacted. For the reasons discussed above, it is obvious that some commodities offer a better opportunity for standard quantity packaging than others. The Consumer Counsel suggests that British law gives us a good starting point for reasonable variations. British law requires that certain staple foods, particularly those in dried or processed form, be packaged in any or all of the following quantities:

2, 4, 6, 8 and 12 ounces; 1 pound; $1\frac{1}{4}$, $1\frac{1}{2}$, $1\frac{3}{4}$, 2, $2\frac{1}{2}$, 3, $3\frac{1}{2}$, 4, and 5 pound or any multiple of a pound. (Appendix C.)

Testimony at the Norwalk hearing brought out that U.S. companies doing business in Great Britain adhere to these regulations and still make a profit.⁴³ It should also be noted that relatively few products customarily sold in cans are on the British list, and that therefore nonstandard quantity cans are being sold in Great Britain, seemingly with no handicap to the consumer.

Manufacturers and retailers reply that quantity standardization:

- A. Will not eliminate fractions for the consumer who desires to know the price per pound,
- B. May stifle packaging initiative,
- C. Might well increase the cost to consumer, not decrease it.

A. Fractions will remain in the calculation of price even if standardized quantity laws are promulgated in most cases.⁴⁴ Two one-pound containers of product which sell for two for \$0.69 will cost $2\frac{5}{32}$ cents (69 divided by 32) per ounce. Thus, at most, such laws would but reduce somewhat the amount of work in calculating. However, such laws might make it easier in that consumers could compare total prices for one-pound cans of competing brands. The word "MIGHT" is used herein because the following hypothetical situation could arise.

"Let us assume regulations were adopted strictly limiting the quantities of a given product to 8- and 12-ounce sizes. Let us further assume that brand A is packed in the 8-ounce size and brand B in the 12-ounce size. Having freedom to price as he pleases, the retailer decides to sell the 8-ounce size of brand A at 3 for 79 cents and brand B in the 12-ounce size at 3 for \$1.17.

*"Would anyone seriously suggest that the average housewife could without pencil and paper, quickly determine which brand and size offered the lowest price per ounce? The fact is, dividing whole pennies by whole ounces seldom results in whole pennies per ounce."*⁴⁵

⁴³ Questioning of Mr. Dierson by Mr. Williamson, *ibid.*

⁴⁴ Statement of Gilbert H. Weil, general counsel, Association of National Advertisers, New York to the Hart Subcommittee, *Hearings on S. 387*, p. 653.

⁴⁵ Statement of R. L. Cheney, executive director and marketing manager, Glass Container Manufacturers Institute, *ibid.*, p. 427.

B. F. T. Dierson put the problem of stifling initiative this way:

*"As regards product quality, compulsory quantity standardization threatens an adverse effect because its preoccupation with price comparisons may, for example, be expected to block the development of new products with greater ingredient value which involve a necessary reduction in weight or bulk. Packaging improvements will also be discouraged, for a compulsory standard would outlaw any variation from the prescribed standard and render impracticable any attempt to experiment for a determination of consumer preferences for the sizes that best suit their individual needs."*⁴⁶

With regard to a manufacturer of tissue who had continually reduced his package size until he found that he could sell a package of 50 tissues, Dierson continued:

"The likely prospect would be that you would have a count of 200, 400, or 800, with no provision being made for the 50. The question is, how does a man who wants to experiment with the 50 get in? He can't. Maybe the law will provide that if he conducts this experiment, he can come back at a further hearing and obtain special permission for the use of this product. However, experience with administrative procedure indicates that this is a very difficult process."

*"Furthermore, it points this out. The big fellow can take care of himself, but let us suppose it is the small manufacturer, whether of food or paper or anything else, who is the one with enough initiative and creative imagination to discover that this is what the consumer wants. He is blocked. Let us say he survives and finally gets it before a commission. When he does, he has to lay the whole thing out before his competitors. Instead of getting the greatly increased production that otherwise is justified by his innovation, he just doesn't get the rewards. Since everybody knows about it, perhaps the big fellow has it on the market even earlier. These are the consequences which we regard as inevitable."*⁴⁷

C. That standard quantity regulations might yield an increase in costs in the form of more packaging machines, etc., was seen in the previous discussion of standardized container sizes and different product densities. Thus, it appears that standard container sizes eliminate standard quantities, if the packages are fully filled. On the other hand, standard quantity regulations seem to dictate a proliferation of container sizes. The cost of such a proliferation, most of which would ultimately be borne by the consumer, could be substantial. The Kellogg Company has estimated its costs for quantity standardization, and the probable effects:

*"Some quick calculations indicate that if we were required to pack our products to standardized sizes, it would cost us between \$3 and \$6 million to produce the same volume of cereals which we now produce, depending on the standardized weights or volumes prescribed by the regulations. However, if we were compelled to standardize our packages, we would probably lose some volume due to our inability to give the consumer the sizes she wants to fit the needs of her family. Our business is a convenience food business, and if this convenience is eliminated or curtailed, business may also be curtailed."*⁴⁸

⁴⁶ F. T. Dierson, *Hearings on H.R. 219*.

⁴⁷ *Ibid.*

⁴⁸ Paul S. Willis, President, Grocery Manufacturers of America, quoting the president of the Kellogg Company, Hart Subcommittee, *Hearings on S. 387*, p. 238.

Additional cost estimations are found in the transcript of the Senate Subcommittee on Antitrust and Monopoly hearings on S. 387.⁴⁹

Another factor to be considered is that "*big business does have a much better capacity to adjust to changing requirements imposed by legislation, by regulation, or by market strategy*"⁵⁰ than small business. Thus, standardized quantity legislation could turn out to be an extremely unjust economic burden on small producers.

The question of how additional costs are passed on, if standardized quantity is required, could be crucial. Since such regulations would apply only to intra-state commerce, one possibility is that California consumers would absorb them. This seems inequitable because 85 percent of California's canning production is sold out of the state.⁵¹ Any attempt to pass on these costs to consumers outside of California could result in a substantial loss of markets for California agricultural commodities, thereby jeopardizing an important segment of California's economy. In the words of R. J. Marsh:

*"While it would be possible from a technological standpoint to require standardization of container sizes for products which laws and regulations require be labeled on a volumetric basis, it would be economic suicide for the California canning industry if this were required in California but not elsewhere. Most likely the first thing that our foreign competitors would do (and 'foreign competitors' is used here to mean non-California canners, would be to come out with a different container size for volumetric labeled products. The California canning industry would be frozen and unable to meet such competition unless it either made a special pack solely for sale outside of the State of California or deferred meeting the competition until such time as the California law could be changed to authorize sale in this state of the product in the non-standardized container size."*⁵²

One solution to the problem would be to allow standard size cans to be filled to standard weights—in other words, to permit some slack filling. Esther Peterson, Assistant Secretary of Labor, put it this way, "*It is obvious, I am sure, that one cannot have standard size packages and standard weights at the same time where the product differs in density and hence in weight per ounce. A reasonable amount of air in a box is not necessarily 'slack fill' if weight is truly stated.*"⁵³ There are three difficulties attendant with this approach—one psychological, one legal, and one technical.

From the volume of "*slack fill*" complaints received by weights and measures officials and consumer groups, it appears that it would take a rather substantial public information campaign to convince the consumer she is not being cheated when the container is slack filled. Thus, the fact remains that consumers feel deceived by slack fill, whether it actually is deception or not.

The legal problems stem from slack fill laws. Section 12605 of the California Business and Professions Code covers this area:

"Section 12605. Construction to facilitate fraud; seizure; disposition.

No container wherein commodities are packed shall have a false bottom, false side walls, false lid or covering, or be otherwise so constructed or filled wholly or partially, as to facilitate the perpetration of deception or fraud."

⁴⁹ *Ibid.*, pp. 310, 325, and 738. See also testimony of F. T. Dierson, *Hearings on H.R. 219*.

⁵⁰ Testimony of Dr. Barnes, Hart Subcommittee, *Hearings on S. 387*, p. 394.

⁵¹ Testimony of R. J. Marsh, *Hearings on H.R. 219*.

⁵² *Ibid.*

⁵³ Testimony of Esther Peterson before the Hart Subcommittee, *op. cit.*, p. 126.

Furthermore, Section 403 (d) of the Federal Food, Drug, and Cosmetic Act with respect to foods "*prohibits a container that is so made, formed, or filled as to be misleading.*"⁵⁴ The reason these regulations are not specific is that there are logical grounds for slack fill. Cereal packaged in Michigan will settle somewhat in its package in transit to California, even if "*overpacked*" at the factory by means of a shaker. The contents of containers filled with hot liquids will contract as they cool. Marshmallow paste packed in Denver will expand or contract when shipped into areas with a different pressure than that found in Denver. Thus, enforcement officials would have to be called upon more often to interpret slack fill laws, and probably to interpret them more liberally, if slack fill were to be permitted in standard size containers in order that standard quantities be obtained. Needless to say, if slack fill is permitted for the reason described above, it will be tempting to unscrupulous operators to use such permission to deceive the consumer.

There is a difficult technical enigma also. This problem is best expressed by R. L. Cheney, executive director and marketing manager, Glass Container Manufacturers Institute:

"The use of a single-size container to pack a standard net weight of a variety of items having different densities would not be technologically sound because this would result in greater headspace for the denser items.

*"Wholly apart from the appearance of slack fill, headspace must be held at a minimum, in the range of 3 percent, in order to prevent oxidation and to preserve vitamin and other nutrient content. While theoretically minimum oxygen content could be maintained by increasing the vacuum, this would not be practical because the housewife couldn't get the lid off."*⁵⁵

⁵⁴ George P. Larrick, Commissioner, Federal Food and Drug Administration, testimony before Hart Subcommittee, *op. cit.*, p. 355.

⁵⁵ R. L. Cheney, *ibid.*, p. 427.

PART 5. UNIFORMITY

The discussion of standard quantity requirements brought to light the economic hardships which would be presented by a multitude of different state quantity regulations. No doubt if each entity had different regulations regarding quantity standards and if these were constitutional, the economies of scale now attendant with production by large manufacturers would cease to exist and food prices would rise. Thus, uniformity of laws and regulations is paramount if the consumer and manufacturer are to benefit from standardized, simple packaging. Consumers, manufacturers, and government officials clearly recognize the necessity. This is a primary reason for the adoption of the Model State Law on Weights and Measures by the National Conference on Weights and Measures and for the suggestion by the Consumer Counsel that such model law be used as a guideline. It is the reason manufacturers decried any attempts to proliferate numerous, far different weights and measures regulations. In the words of L. Y. Ballentine, Commissioner of Agriculture of North Carolina testifying in favor of S. 387 introduced by Senator Phillip Hart of Michigan

"Enactment of S. 387 would result not only in protecting the consumer but also, by setting standards for uniformity in packaging and labeling would afford industry both economic and public relations advantages.

"In my own work I see industry representatives constantly working and pleading for as much uniformity in regulatory requirements as it is possible to achieve. S. 387, if properly administered, would support the states which have adequate legislation to deal with these problems.

"In setting federal standards, it would tend to bring about greater uniformity in state standards. Enforcement officials often experience resistance to state laws and regulations because the requirements differ between states, creating a hardship for processors and others when they sell in several states and are required to have different packaging or labeling for each one.

*"Enactment of this legislation would do much toward elimination of such state-to-state variations. State control officials are constantly working toward as much uniformity as possible between state and federal regulations."*⁵⁶

Passage of the Hart Bill would not greatly restrict the sphere of possible state action in the field of packaging. Section 2 of the Hart Bill states: "No amendment made by this act shall be construed to repeal, invalidate, supersede or otherwise adversely affect . . . (d) any provision of state law which would be valid in the absence of such amendment unless there is a direct and positive conflict between such amendment in its application to interstate or foreign commerce and such provisions of state law." (See Appendix D.) The section of the Hart Bill on packaging and labeling which pertains to this study reads as follows:

⁵⁶ L. Y. Ballentine, *ibid.*, p. 204.

"Sec. 3A. (e) Whenever the Secretary of Health, Education, and Welfare (as to any food, drug, device, or cosmetic), or the Federal Trade Commission as to any other consumer commodity, determines that additional regulations are necessary to establish or preserve fair competition between or among competing products by enabling consumers to make rational comparison with respect to price and other qualities, or to prevent the deception of consumers as to such product, the Secretary or the Commission, as the case may be, shall promulgate under this subsection with respect to that commodity regulations effective to—

"(1) establish reasonable weights or quantities, or fractions or multiples thereof, in which that commodity shall be distributed for retail sale."

It is important to note that this bill makes no mention of price per unit regulations.

The necessity for basic uniformity among the states in the regulation of commerce is fundamental to the reservation of power over interstate commerce to the federal government. For this reason, any state legislation in the field of packaged commodities must not infringe upon the constitutional prerogatives of the federal government. Generally speaking, considerable latitude is given to state legislation in the absence of federal legislation preempting the field. The Legislative Counsel has held that the states presently have this authority over commerce in packaged commodities as an exercise of the police power, subject to the tests of uniformity and preemption. The counsel has also held that the passage of S. 387 would probably not preclude a state from adopting and enforcing standards which are either identical with or more restrictive than federal standards. (See Appendix E)

PART 6. PRICE PER UNIT

In order to circumvent the aforementioned problems which standardization of quantity would bring about, some groups have suggested that price per unit would not only avoid the problems but would be more meaningful because the consumer would be given, and therefore would not have to calculate, the price per unit. Any proposed price per unit legislation would undoubtedly be along the lines of Section 27 of the Model State Law on Weights and Measures, which is limited to "random" packages.

Sec. 27. Same: Declarations of Unit Price on Random Packages.

In addition to the declarations required by section 26 of this Act, any commodity in package form, the package being one of a lot containing random weights, measures, or counts of the same commodity and bearing the total selling price of the package, shall bear on the outside of the package a plain and conspicuous declaration of the price per single unit of weight, measure, or count." ⁵⁷

This language first appeared before the California Legislature as the amended version of A.B. 1364 (Knox) during the 1961 session. A.B. 1364 was assigned to the Assembly Interim Committee on Agriculture for the purpose of interim study. A hearing was subsequently held in San Francisco on the subject on October 9, 1961. Testimony was presented to the committee relative to the need for this information on meat and so-called delicatessen items that customarily appear in "random" packages.

A.B. 1364 was not recommended for passage by the committee. The committee felt that some of the language was vague (for instance, the words "random" and "standard"), that the bill should at least be confined to "food" that the consumer has the information needed to make such a calculation, that the costs to the consumer for such information would be greater than the benefit accruing to her from it, and that requiring such information would be an undue burden on small retailers. It concluded:

"It has been shown that many factors in the food industry have found it good marketing practice to supply price per unit information to their customers, but this does not mean that all stores should be required to do so. At present, the furnishing of this information is done on a competitive basis, consumers who feel that the computation of price per unit should be done for them may shop at stores which do it, or urge their local merchant to adopt the practice. Small retailers who find that the cost of the practice would make their prices too noncompetitive will continue to rely upon convenience and personal service to retain their trade. It would seem foolish for the state to further increase their cost disadvantage; the day of the captive consumer is not yet at hand." ⁵⁸

⁵⁷ National Bureau of Standards, U.S. Department of Commerce, "Model State Law on Weights and Measures, Form 2," p. 12.

⁵⁸ Assembly Interim Committee on Agriculture, *Final Report*, Vol. 17, No. 10 (1963), p. 34.

The office of the Consumer Counsel has brought to the attention of the committee that the following 20 states have enacted legislation requiring price per unit declarations on random packages:

Alaska	New Jersey
Arkansas	New York
Colorado	Oklahoma
Delaware	Pennsylvania
Illinois	South Dakota
Kentucky	Tennessee
Louisiana	Texas
Maine	Virginia
Maryland	Washington
Missouri	West Virginia ⁵⁹

However, it has also been suggested that these laws are not extensively enforced.

Obviously any price per unit information would have to be supplied by the retailer. Otherwise, the manufacturer might be infringing upon price-fixing or fair trade laws. Thus, manufacturers would not be adversely affected, for they would not be required to make any additional capital outlays as they might with standardized quantity regulations. Their competitive position in other states would not be affected because they could continue to ship the same size package, not a new one. In other words, each manufacturer would be treated equally in California, and the burden of placing price per unit information where the consumer can easily see it would fall upon the retailer.

The Legislature must consider carefully any proposed legislation on price per unit because such legislation, and the publicity arising therefrom, could easily deceive the consumer into excessive reliance on price alone. The consumer must also rely heavily on quality. A 10-ounce product which sells for 2 cents per ounce may be only one-half as effective as a 10-ounce one which sells for 3 cents. Thus, in terms of effectiveness and price, it would be to the consumer's benefit to buy the 30-cent product rather than two packages of the 20-cent product. Another conceivable detrimental effect of price per unit regulations is best put by Albert Halverstadt, Vice President, Advertising, Procter & Gamble Company:

"Emphasis on product weight as the measure of value could also have the detrimental effect of encouraging product debasement—the introduction of inert, or bulk or weight building additives which may not harm the consumer but would certainly do little to help her." ⁶⁰

An additional disadvantage of such legislation is that it might tend to freeze prices. A retailer would think twice before meeting the newly lowered prices of his competitor if doing so entailed not only remarking price but also remarking and recalculating price per unit. Thus, such legislation could serve to reduce competition.⁶¹

In examining any price per unit legislation, one central fact must be constantly borne in mind. Benefits accruing to the public from this information must exceed the costs of it. The manufacturer is in general unable to supply such information for reasons already stated, and the retailer has two possible alternatives for supplying meaningful price per unit information. He can label it next to the price of the item on each shelf or display area or he can supply

⁵⁹ Testimony of Helen Nelson, *Hearings on H.R. 219*.

⁶⁰ A. N. Halverstadt before the Hart Subcommittee, *op. cit.*, p. 173.

⁶¹ F. T. Dierson, *Hearings on H.R. 219*.

it on each individual package. It is difficult to say to what extent the initial calculation of price per unit information would represent an additional cost since it is not known to what extent retailers presently make such computations for their own use. Presumably, however, the competitive retailer has some idea of the unit value of most of his products. The additional cost reflected by the posting of such information on the shelf is also difficult to calculate, and would depend upon the nature of the shelf and the manner of posting. In general such a method of providing the information could be assumed to be much less costly than the marking of each individual package, since it eliminates repetitive labor costs. Available cost studies indicate that at the present level of technology the marking of each package would be a very costly undertaking, unless the packaging, pricing, and marking are done in a single operation. A self-calculating price per unit and price marking machine to be applied at the retail level to the general run of packaged items appears to be uneconomical at the present time. (See Appendices F and G.)

CONCLUSIONS:

A. Standardization by Weight

The committee concludes that despite a demonstrated tendency towards departure from standard weight packages in some commodities, it would be unwise for the state government to attempt to standardize the weight of such packages at the present time. The committee further concludes that standardization of weight in packaging, if it is done, should logically be done at the federal level. In spite of the fact that the states can constitutionally act in this field in the absence of federal legislation, the interstate traffic in packaged goods is so great as to make uniform national standards the desirable approach, from the standpoint of the public, the packager, and the retailer. The committee also concludes that such legislation must be highly selective in its choice of packaged commodities to avoid disturbing commodities wherein the packages have been already successfully standardized by size.

B. Price per unit information

The committee concludes that there is, on balance, no overriding need for comprehensive price per unit legislation at present. While the provision of such information would undoubtedly make shopping easier for consumers who utilize this form of comparison, it would also make shopping more expensive for all consumers, who would bear the additional costs of providing such information. The committee further concludes that evidence presented it during the last two interim periods justifies a distinction between products in which the package is standardized by custom and those where the product and the package are essentially random in nature. The former constitutes a category of packages with which the consumer can become familiar through repeated purchase, and where the advantages of the repetition of price per unit information are minimal. On the other hand, where the consumer encounters no familiar size of package, each purchase constitutes a unique experience. Under these circumstances, the committee concludes that there is a definite public interest in providing price per unit information for random packages, and that legislation for this purpose is both constitutionally and practically within the province of the California State Legislature.

RECOMMENDATION

The committee recommends the introduction of legislation to require the price per unit information be made available to consumers on certain nonuniform packaged items sold by weight, and that such information be made available either on the package or in the area where the package is offered for sale, at the option of the retailer.

Two years ago, the report of this committee in discussing the concept of random packaging, questioned the adequacy of the term "random" as a legally definable entity as related to packaged commodities, and further questioned the utility of using the draft provided in the Model Weights and Measures Law on this subject. Because of these objections, the committee has refrained from attempting to write a logical legal definition of a random packaged commodity and has instead followed the path indicated by the State Sealer of Weights and Measures. Mr. Kerlin, in testifying before this committee, suggested that the more practical approach would be a definition of the specific foods most often found in random packages and a subsequent exclusion of types of packages of such commodities that are least likely to contain random amounts. The result of such an approach is that the remaining packages will either be in fact random packages or so similar or competitive in nature that the public interest would be served by their inclusion.

The exclusions in the draft of canned, frozen, and nonrefrigerated items are for this purpose. The exclusion for unmarked packages weighed at the time of sale is in compliance with exemptions granted in other sections of the Business and Professions Code and encompasses packages wherein the price per unit is otherwise available at the time of sale. The exemption of prepared meals is in accordance with the relative meaninglessness of price per unit comparisons where products have multiple ingredients. The effect of the entire law is limited to "meat, poultry, fish, cheese, and products thereof" because evidence indicates that random packages most frequently occur in these commodities. The purpose of providing the retailer with an option in the posting of such information is to eliminate repetitive labor costs without limiting the quality of information to the consumer. It is the committee's conclusion that such legislation will provide measurable assistance to the consumer in the area of his most acute informational problem, and do so without measurably increasing the costs of the commodities to him.

PROPOSED STATUTE

An act to add Section 12024.6 to the Business and Professions Code, relating to weights and measures.

The people of the State of California do enact as follows:

Section 1. Section 12024.6 is added to the Business and Professions Code, to read:

12024.6. It shall be unlawful for any person to sell or advertise for sale in retail stores for consumer use in package form any meat, poultry, fish, or cheese, and products thereof, usually sold by weight, unless such package shall bear a plain and conspicuous declaration of the price per single unit of weight or unless a notice containing such a declaration for each such kind of package is conspicuously displayed on or above the shelf, bin, or area where such package is offered for sale.

This section shall not apply to any of the following:

(a) Such packaged commodities wherein the net contents are not otherwise required to be marked on the package and wherein the weight is determined at the time of sale.

(b) Such packaged commodities in sealed metal or glass containers.

(c) Such packaged commodities which do not normally require refrigeration.

(d) Such packaged commodities when the commodity is part of a prepared meal.

(e) Such packaged commodities when frozen.

(f) Such packaged commodities where the total selling price of the package is 20¢ or less.

Legislative Counsel's Digest

Weights and measures.

Adds Sec. 12024.6, B. & P. C.

Makes it unlawful to sell in retail stores for consumer use in package form any meat, poultry, fish, or cheese usually sold by weight unless the package bears a declaration of the price per single unit of weight or unless the declaration is displayed on or above the area where the package is offered for sale.

Specifies certain exceptions thereto.

APPENDIX A. EROSION OF STANDARD SIZES

EXAMPLES OF EROSION OF STANDARD QUANTITY SIZES

	Standard Size	"New" Size
HALF-POUND (8 oz.)		
Cheese	8 oz.	6 oz.
Apricots (dried)	8 oz.	6 oz.
Salad Dressing	8 oz.	6 oz.
POUND OR PINT (16 oz.)		
Rice	1 lb.	14 oz.
Crackers	1 lb.	13½ oz.
Spaghetti	1 lb.	14 & 12 oz.
Beer	16 oz. (1 pt.)	15 oz.
Canned Kidney Beans	1 lb. (303 can)	15 oz. (300 can)
Wine Vinegar	16 oz. (1 pt.)	12¼ fl. oz.
Hot Dogs	1 lb.	12 & 15 oz.
TWO POUNDS OR QUART (32 oz.)		
Raisins	2 lbs.	1 lb. 14 oz.
Soft Drinks	1 qt.	29, 28, 26, 24 oz.
Mayonnaise	1 qt.	24 oz.
Olive Oil	1 qt.	¾ qt.
GALLON (128 oz.)		
Apple Juice	1 gal.	3 qts., 3 oz.

EXAMPLES OF DETERIORATION OF INFORMAL INDUSTRY "STANDARD ODD SIZES"

	Standard Size	"New" Size
Raisins	15 oz.	11 oz. (Maid-Rite)
Evaporated Milk	13 fl. oz.	12¼ fl. oz. (Foremost)
Jam	1 lb. 4 oz.	1 lb. 2 oz. (Kraft)
Syrup	12 oz.	11 oz. (Bergens)
Egg Noodles	12 oz.	10 oz. (Golden Grain Shells)
Instant Coffee	6 oz.	5 oz. (Bordens)
Ketchup	14 oz.	12 oz. (Heinz Hot Ketchup)

APPENDIX B. COMPUTATION OF PRICE PER UNIT

Chart 1

PACKAGES AND PRICES OF SELECTED BABY FOOD ITEMS IN LOCAL MARKETS

Food Item	Brand	Contents—Ounces	Price
Strained Spinach	Beech-Nut	4 ¹ / ₄	4/45
	Gerber	4 ¹ / ₂	
	Heinz	4 ¹ / ₂	
Strained Meat	Gerber	3 ¹ / ₂	2/53

Wheat Hearts		14 oz.	27¢	30.5¢
Wheat Hearts	1 lb.	12 oz.	43¢	24.5¢
Wheatena	1 lb.	6 oz.	43¢	32¢
Zoom	1 lb.		31¢	31¢

APPENDIX C. STANDARD WEIGHTS IN BRITISH LAW

BRITISH WEIGHTS AND MEASURES LAW FOODS REQUIRED TO BE SOLD IN SPECIFIED QUANTITIES

Since 1926 British law has specified the quantity in which certain staple foods may be packaged. The specified quantities are:

2 ounces or multiples of 2 ounces up to 8 ounces
multiples of $\frac{1}{4}$ pound up to 2 pounds
multiples of $\frac{1}{2}$ pound up to 4 pounds
multiples of 1 pound

A packager selling in Great Britain can put these staple foods on the market in any or all of the following quantities:

2 oz.	1 lb.	2½ lbs.
4 oz.	1¼ lbs.	3 lbs.
6 oz.	1½ lbs.	3½ lbs.
8 oz.	1¾ lbs.	4 lbs.
12 oz.	2 lbs.	5 lbs. or any multiple of a pound

Thus, the British government, in specifying the graduation of package sizes encourages staple items to appear on the consumer market in a wide range of rational sizes to fit various family needs. Comparing prices among various brands and package sizes of these foods is easy for British consumers. The packager, too, has plenty of leeway; if he wants to put his product up in packages weighing less than a pound, for example, he can choose any or all of 5 sizes—2, 4, 6, 8 or 12 ounces.

These are the foods for which specified quantities are designated in the British law.

Tea	Oatmeal	Dried beans
Cocoa	Rolled oats	Dried peas
Cocoa powder	Rice	Dried dates
Chocolate powder	Flour of wheat, rye, maize,	Dried prunes
Coffee beans	pea or bean (including	Dried figs
Ground coffee	self-rising flour and	Dried muscatels
Potatoes	cake flour)	Dried apples
Butter	Cornflour	Dried pears
Margarine	Semolina	Dried peaches
Lard	Soya flour	Dried apricots
Compound cooking fat	Sago	Dried nectarines
Suet	Tapioca	Dried currants
Macaroni and similar products	Sugar	Dried raisins
		Dried sultanas

Congressional Record

PROCEEDINGS AND DEBATES OF THE 88th CONGRESS, FIRST SESSION

Vol. 109

WASHINGTON, MONDAY, JANUARY 21, 1963

No. 8

TRUTH IN PACKAGING BILL

Mr. HART. Mr. President, in behalf of myself and Senators KEFAUVER, DODD, LONG of Missouri, NEUBERGER, McNAMARA, MUSKIE, BARTLETT, and SINGLE, I introduce, for appropriate reference, the truth-in-packaging bill.

Similar legislation was introduced in the closing days of the 87th Congress so that suggestions and comments concerning its provisions could be made and studied.

As a result of responsible industry and consumer reaction, some changes have been made that give added benefits to consumer and businessman alike.

The proposed legislation directs the Food and Drug Administration—for foods, drugs, and cosmetics—and the Federal Trade Commission—for other consumer commodities—to promulgate regulations that will require packages accurately and clearly to give essential product information and fairly represent the contents.

In the original bill the authority to draft discretionary regulations on a product-line basis was given to the Federal Trade Commission. Under the new bill, traditional lines of authority have been re-established. The Food and Drug Administration will exercise the authority for foods, drugs, and cosmetics and the Federal Trade Commission will have jurisdiction for all other consumer commodities within the purview of the bill.

Other sections have also been modified.

Notice to promulgate regulations under the discretionary subsection must be published in the Federal Register so that all affected persons will have the opportunity to participate in the regulation-making process. In this way, it is intended that industry expertise can be utilized in the public interest.

Retailers and wholesalers are specifically excluded from the coverage of the bill unless they are actually engaged in the packaging and labeling process in interstate commerce.

The authority of the individual States to act in this area is protected and the Federal Government is directed to work with the States only on a voluntary basis to help achieve uniformity in the law.

The fact that this is a civil antitrust measure and carries no criminal sanctions has been further emphasized.

The definition of "consumer commodity" has been limited generally to "kitchen and bathroom" items, these being the great majority of products sold as marketbasket items in the average supermarket. These products represent commodities for which the package has replaced the salesman as a source of information. They have given rise to the kinds of problems for which the solutions of this bill are tailored. And these solutions are designed to require this package-salesman to represent the product as clearly and fairly as we used to expect from the corner grocer.

Approximately \$70 billion a year are spent by the American consumer on the marketbasket items about which this bill is concerned. This is an important segment of the American economy and represents almost one-third of the average family's budget.

Our aim is three fold: First, that the spirit and substance of the antitrust laws be extended to the relatively new form of nonprice competition represented by packaging. Second, that the American manufacturer be freed from the unfair trade practices that have grown up in this area beyond the reach of present law. Third, that the American consumer can know what she is buying and paying for.

Testimony at the hearings held last year by the Antitrust and Monopoly Subcommittee indicated that a large slice of the average family budget is being wasted because of the kind of packaging practices which this bill is designed to halt.

We learned that manufacturers are being forced by competitive packaging tactics to adopt practices of which no one is proud, but as one executive said, "We don't know how to get off the merry-go-round."

This bill is designed to take the ethical manufacturer off the merry-go-round so he may compete on a basis that is good for himself, the economy and the consumer—on the basis of price and quality, not on packaging gimmickry and deception.

This bill is designed to update the antitrust laws so they can respond to the new facts of life in the marketplace. Price competition too often finds itself obscured by newer forms of nonprice competitive practices that favor the big, discriminate against the small and cost the consumer untold sums yearly.

We have received a wide base of support for this bill as "public interest" legislation. The administration has pledged its support. Consumer-interest groups will work for its passage. Many State weights and measures and agriculture officials have expressed a strong desire for its enactment. And a number of manufacturers and industry representatives have indicated support for its provisions.

I believe that this widespread support from persons of diverse political philosophies means that before the 88th Congress has adjourned, truth in packaging will be the law of the land.

It is also encouraging that the gentleman from New York, Congressman CELLER, chairman of the House Judiciary Committee, is introducing a companion bill in the House. His support and participation are gratifying and welcome.

This bill is not intended as a cure-all to marketplace confusion. But it establishes an approach and a means for dealing with the misleading and unfair trade practices affecting the 8,000 items now on the average supermarket shelf. And it has been estimated that in the next decade there will be 20,000 such items from which the consumer must make a choice.

The record of the hearings the Antitrust and Monopoly Subcommittee has held on packaging and labeling practices, the thousands of letters of support that have poured into my office and the newspaper and magazine comments convince me that consumer and businessman alike need and welcome the benefits this bill affords. It is a reasonable attempt to solve problems that can and should be solved.

Your support is solicited in achieving truth in packaging.

I ask unanimous consent, Mr. President, that the text of the bill and a section-by-section analysis of it be printed at this point in the RECORD; and I ask that the bill lie on the table until the close of business on Wednesday, January 23, 1963, so that

other Senators who may wish to do so may join in sponsoring it.

The VICE PRESIDENT. The bill will be received and appropriately referred; and, without objection, the bill, and analysis will be printed in the RECORD, and the bill will lie on the desk, as requested by the Senator from Michigan.

The bill (S. 387) to amend the Clayton Act to prohibit restraints of trade carried into effect through the use of unfair and deceptive methods of packaging or labeling certain consumer commodities distributed in commerce, and for other purposes introduced by Mr. HART (for himself and other Senators), was received, read twice by its title, and referred to the Committee on the Judiciary, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) the Act entitled "An Act to supplement existing laws against unlawful restraints and monopolies, and for other purposes", approved October 15, 1914 (38 Stat., 730 et seq.: 15 U.S.C. 12 et seq.), commonly known as the Clayton Act, is amended by inserting therein, immediately after section 3 thereof, the following new section:

SEC. 3A. (a) It shall be unlawful for any person engaged in the packaging or labeling of any consumer commodity (as defined by this section) for distribution in commerce, or for any person (other than a common carrier for hire, a contract carrier for hire, or a freight forwarder for hire) engaged in the distribution in commerce of any packaged or labeled consumer commodity, to distribute or to cause to be distributed in commerce any such commodity if such commodity is contained in a package, or if there is affixed to that commodity a label, which does not conform to regulations promulgated pursuant to this section.

"(b) The prohibition contained in this subsection shall not apply to persons engaged in business as wholesale or retail distributors of consumer commodities except to the extent that such persons (1) are engaged in the packaging or labeling of such commodities, or (2) determine by any means the nature, form, or content of packages in which such commodities are contained or labels affixed to such commodities.

"(c) As soon as practicable after the effective date of this section, regulations shall be promulgated to—

"(1) require the net quantity of contents (in terms of weight, measure, or count, or any combination thereof) of consumer commodities to be stated upon the front panel of packages containing such commodities, and upon any labels affixed to such commodities;

"(2) establish minimum standards with respect to the location and prominence of statements of the net quantity of contents (including minimum standards as to the type size and face in which such statements shall be made) appearing upon packages containing any consumer commodity and upon labels affixed to any such commodity;

"(3) prohibit the addition to such statements of net quantity of contents of any qualifying words or phrases;

"(4) prohibit the placement upon any package containing such commodity, or upon any label affixed thereto, of any printed matter stating or representing by implication that such commodity is offered for retail sale at a price lower than the ordinary and customary retail sale price, or that a retail price advantage is accorded to retail purchasers thereof by reason of the size of that package or the quantity of its contents, except that no regulation promulgated under this section shall prevent any person engaged at any time in the sale of any consumer commodity at retail to ultimate purchasers thereof from placing upon any such commodity, or upon any package containing that commodity, any marking which states the true and correct retail sale price at which such person at that time is offering that commodity for sale to such purchasers;

"(5) contain such exceptions to the foregoing requirements as the promulgating authority may determine to be required by the nature, form, or

quantity of particular consumer commodities, except that no exception may be made if that exception would deprive consumers of reasonable opportunity to make rational comparisons between among competing products; and

"(6) prevent the placement, upon any package in which such commodity is distributed for resale, of any illustration or pictorial matter which may deceive retail purchasers in any respect as to the contents of that package.

"(d) (1) Regulations under this section shall be promulgated by—

"(A) the Secretary of Health, Education, and Welfare, with respect to any consumer commodity which is a food, drug, device, or cosmetic, as such term is defined by section 201 of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 321) and

"(B) the Federal Trade Commission with respect to any other consumer commodity.

"(2) Such regulations adopted by the Secretary and by the Commission shall be uniform in content and application to the greatest practicable extent as determined by consultation between the Secretary and the Commission.

"(e) Whenever the Secretary of Health, Education, and Welfare (as to any food, drug, device, or cosmetic), or the Federal Trade Commission as to any other consumer commodity, determines that additional regulations are necessary to establish or preserve fair competition between or among competing products by enabling consumers to make rational comparison with respect to price and other qualities, or to prevent the deception of consumers as to such product, the Secretary or the Commission as the case may be, shall promulgate under this subsection with respect to that commodity regulations effective to—

"(1) establish reasonable weights or quantities or fractions or multiples thereof, in which the commodity shall be distributed for retail sale;

"(2) prevent the distribution of that commodity for retail sale in packages of sizes, shapes, or dimensional proportions which may deceive retail purchasers as to the net quantity of the contents thereof (in terms of weight, measure, or count);

"(3) establish and define standards of designations of size (other than statements of net quantity of contents) which may be used to characterize quantitatively the contents of packages containing that commodity;

"(4) establish and define the net quantity of any commodity (in terms of weight, measure, or count) which shall constitute a serving, if that commodity is distributed to retail purchasers in a package or with a label which bears a representation as to the number of servings provided by the net quantity of contents contained in that package to which that label is affixed;

"(5) establish and define standards for the quantitative designation of the contents of packages containing any consumer commodity of a kind the net quantity of contents of which cannot meaningfully be designated in terms of weight, measure, or count; and

"(6) require (consistent with requirements imposed by or pursuant to the Federal Food, Drug, and Cosmetic Act, as amended) that sufficient information with respect to the ingredients and composition of any consumer commodity (other than information concerning proprietary trade secrets) be placed in a prominent position upon packages containing that commodity and upon labels affixed thereto.

"(f) (1) Before promulgating any proposed regulation under subsection (e) with respect to any consumer commodity, the Secretary or the Commission, as the case may be, shall (A) consult with other agencies of the Government having special competence with respect to the subject of the regulation concerning the scope, application, form, and effect thereof, (B) publish in the Federal Register reasonable advance notice of intention to promulgate such regulation, and (C) accord to persons who would be affected thereby reasonable opportunity for consultation with respect to such proposed regulation.

"(2) All regulations adopted under this section shall be promulgated in conformity with provisions of the Administrative Procedure Act.

(3) Any regulation promulgated under this section may be modified by the promulgating authority, upon the initiative of that authority or on application made by any person affected by that regulation, whenever such authority determines that such modification is necessary to conform to the requirements of this section or to any change occurring in the method of packaging, labeling, distributing, or marketing of any consumer commodity.

(g) Upon written request made, by the officer agency authorized or directed by this section to establish packaging or labeling regulations as to any consumer commodity of any class or kind, to any producer or distributor thereof, such producer or distributor shall transmit promptly to that officer or agency a true and correct sample of each package or label used or to be used by that producer or distributor for or in connection with the distribution of any particularly described consumer commodity of that class or kind. Any person who, with intent to evade compliance with the requirements of this subsection (g), fails to transmit any such sample to such authority promptly upon receipt of such request shall be fined not more than \$1,000, or imprisoned not more than one year, or both.

(h) (1) Any consumer commodity introduced or delivered for introduction into commerce in violation of any regulation promulgated by the Secretary of Health, Education, and Welfare under this section while that regulation is in force and in effect shall be deemed to be misbranded within the meaning of chapter III of the Federal Food, Drug, and Cosmetic Act.

(2) Any violation of any regulation promulgated under this section by the Federal Trade Commission while that regulation is in force and in effect shall constitute an unfair or deceptive act or practice in commerce in violation of section 5 (a) of the Federal Trade Commission Act.

(3) The remedy provided by section 16 of this Act shall be available to any person threatened with loss or damage by any violation of any such regulation while that regulation is in force and in effect.

(i) Each officer or agency required or authorized by this section to promulgate regulations for the packaging or labeling of any consumer commodity shall transmit to the Congress in January of each year a report containing a full and complete description of the activities of that officer or agency in the administration and enforcement of this section during the preceding calendar year.

(j) A copy of each regulation promulgated under this section shall be transmitted promptly to the Director of the National Bureau of Standards, who shall (1) transmit copies thereof to all appropriate State officers and agencies, and (2) furnish to such State officers and agencies information and assistance to promote to the greatest practicable extent uniformity in State and Federal standards for the packaging and labeling of consumer commodities. Nothing contained in this subsection shall be construed to impair or otherwise interfere with any program carried into effect by the Secretary of Health, Education, and Welfare under other provisions of law in cooperation with State governments or agencies, instrumentalities, or political subdivisions thereof.

(k) As used in this section—

(1) the term 'consumer commodity', except as otherwise specifically provided by this paragraph, means any food, drug, device or cosmetic (as those terms are defined by the Federal Food, Drug, and Cosmetic Act), and any other article or commodity of any kind or class which is customarily produced and distributed for sale through retail sales agencies or instrumentalities for consumption or use by individuals for purposes of personal care or in the performance of services ordinarily rendered within the household and which usually is consumed or expended in the course of such consumption or use. Such term does not include (A) any meat, meat product, poultry, or poultry product, or any commodity subject to packaging or labeling requirements imposed by the Secretary of Agriculture pursuant to the Federal Insecticide, Fungicide, and Rodenticide Act or the provisions of the eighth paragraph under the heading "Bureau of Animal Industry" of the Act of March 4, 1913 (37 Stat. 832-833; 21 U.S.C. 51-157), commonly known as the Virus-Serum-

Toxin Act; (B) any beverage subject to packaging or labeling requirements imposed under the Federal Alcohol Administration Act (27 U.S.C. 201 et seq.); (C) any household appliance, equipment, furniture, furnishing, or other durable article or commodity; or (D) any article or commodity intended for use in the maintenance of the exterior, or for the repair of any part, of any structure, or for use in the maintenance or repair of any article or commodity described by clause (C) of this sentence;

(2) the term 'package' means any container or wrapping in which any consumer commodity is enclosed for use in the delivery or display of that commodity to retail purchasers thereof, but does not include (A) shipping containers or wrappings used solely for the transportation of such commodity in bulk or in quantity to wholesale or retail distributors thereof or (B) containers subject to the provisions of the Act of August 3, 1912 (37 Stat. 250, as amended; 15 U.S.C. 231-233), the Act of March 4, 1915 (38 Stat. 1186, as amended; 15 U.S.C. 234-236), the Act of August 31, 1916 (39 Stat. 673, as amended; 15 U.S.C. 251-256), or the Act of May 21, 1928 (45 Stat. 685, as amended; 15 U.S.C. 257-257i);

(3) the term 'label' means any written, printed, or graphic matter affixed to any consumer commodity; and

(4) the term 'person' includes any firm, corporation, or association."

(b) The amendment made by this section shall take effect on the first day of the sixth month beginning after the date of enactment of this Act.

Sec. 2. No amendment made by this Act shall be construed to repeal, invalidate, supersede, or otherwise adversely affect—

(a) the Federal Trade Commission Act or any statute defined therein as an Antitrust Act;

(b) the Federal Food, Drug, and Cosmetic Act;

(c) the Hazardous Substance Act; or

(d) any provision of State law which would be valid in the absence of such amendment unless there is a direct and positive conflict between such amendment and such provision of State law.

The analysis presented by Mr. HART is as follows:

ANALYSIS OF TRUTH-IN-PACKAGING BILL INTRODUCTION

The bill amends the Clayton Act by adding a new section 3(a) (to take effect 6 months after enactment), for the purpose of prohibiting restraint of trade carried into effect through the use of unfair and deceptive methods of packaging and labeling certain consumer commodities as defined by this section.

SECTION 3(a)

Subsection (a) makes it unlawful for any person to package or label any consumer commodity (as defined by subsection (k) (1)) or to distribute in commerce any packaged or labeled commodities which do not conform to the regulations promulgated under this bill.

Subsection (b) exempts retailers and wholesalers from the provisions of the bill except to the extent they are actually engaged in packaging and labeling in interstate commerce.

Subsection (c) directs that the following regulations be promulgated;

1. To require that the net quantity of content statement be stated upon the front panel of packages and labels.

2. To establish minimum standards with respect to the location and prominence of net quantity of content statements (including minimum standards relating to type size and face).

3. To prohibit the addition of any qualifying words or phrases to net quantity of content statements.

4. To prohibit the printing on packages of information stating or implying that the product is being offered for sale at a price lower than the customary retail price or that a price advantage is being accorded to the purchaser because of the size or quantity of the package. But this does not apply to the ultimate retailer.

5. To make provision for exceptions to the foregoing requirements when necessary because of the nature, form, or quantity of the product.

6. To prevent placing illustrations or pictorial matter on packages which may deceive the purchaser as to the net quantity of content.

Subsection (d)(1)(a) and (b) require that the regulations under this section shall be promulgated by the Secretary of Health, Education, and Welfare with respect to foods, drugs, or cosmetics and by the Federal Trade Commission with respect to all other commodities.

2. Provides that regulations promulgated by the FDA and FTC shall be as uniform in content and extent as possible.

Subsection (c) gives the FTC and FDA discretion to establish additional regulations on a product-by-product basis. This discretion may be utilized only when necessary to establish or preserve fair competition by enabling consumers to make rational comparisons between competing products and when necessary to prevent consumer deception. Such regulations may be promulgated only to:

1. Establish reasonable weights or quantities in which a product can be sold.

2. Prevent the sale of a commodity in a package whose size, shape, or proportions may deceive purchasers as to the weight or the quantity of the product within the package.

3. Establish standards of size terminology such as "small," "medium," or "large."

4. Establish "serving" standards.

5. Establish standards to designate the quantitative contents of a package where net weight or number is not meaningful.

6. Require that sufficient information about the ingredients or composition be displayed prominently on the package or label with the exception of information concerning proprietary trade secrets.

Subsection (f):

1. Provides that before any regulation can be promulgated under the authority of subsection (c) that there must be consultation with other agencies of Government having special competence in the area involved and with persons or companies who might be affected by the proposed legislation. Notice of intention to promulgate such regulations must be printed in the Federal Register so that all affected parties can have an opportunity to be present if they desire. This subsection anticipates the "trade conference" concept presently being utilized by the FTC.

2. Provides that all regulations shall be promulgated in conformity with the Administrative Procedure Act.

3. Provides that any regulations may be modified on the initiative of the promulgating authority or by affected persons when changes in marketing methods and techniques make it necessary.

Subsection (g) authorizes the promulgating authority or the appropriate officer thereof to make a written request of any producer or distributor for a correct sample of any package or label he is presently using or intends to use. Failure to promptly forward the requested samples with intent to avoid compliance is punishable by a fine of not more than \$1,000 or not more than a year's imprisonment, or both.

Subsection (h):

1. Provides that if a commodity is put into commerce in violation of a regulation promulgated by the FDA, it shall be deemed "misbranded" within the meaning of the Food, Drug, and Cosmetics Act and subject to the penalties provided therein. This includes seizure, injunction, or criminal sanctions, depending on the circumstances involved.

2. Provides that any violation of a regulation promulgated by FTC shall constitute an unfair trade practice as set forth in section 5(a) of the Federal

Trade Commission Act. In general, this section sets forth the procedure for the issuance of cease-and-desist orders.

3. Makes the remedy for private litigants available in section 16 of the Clayton Act applicable to this section. Section 16 details the procedure for private litigants to get injunctive relief who are threatened by loss or damage for a violation of the act.

Subsection (i) provides that FDA and FTC shall transmit to Congress a yearly report of their activities under this act.

Subsection (j) provides that a copy of each regulation promulgated under this bill shall be forwarded to the National Bureau of Standards. The Bureau is directed to transmit copies to the appropriate State agencies and officials and furnish information and assistance to the States for the purpose of promoting uniformity between State and Federal standards.

This subsection anticipates the utilization of the Bureau of Weights and Measures in working with State officials or agencies on a voluntary basis to make State and Federal packaging and labeling regulations conform to the greatest practical extent.

Subsection (k):

1. Defines the term "consumer commodity." The term means any food, drug, device, or cosmetic. Those terms are defined by the Federal Food, Drug, and Cosmetic Act and any other commodity distributed through retail sales agencies for use by individuals for purposes of personal care or in the performance of services usually rendered within the household and usually used up in the performance of such services.

Specifically excluded are (A) any meat, product, poultry, or poultry product, or any commodity subject to packaging or labeling requirements imposed by the Secretary of Agriculture pursuant to the Federal Insecticide, Fungicide, and Rodenticide Act or the provisions of the eighth paragraph under the heading "Bureau of Animal Industry" of the act of March 4, 1913 (37 Stat. 832-833; 21 U.S.C. 151-157), commonly known as the Virus Serum-Toxin Act; (B) any beverage subject to packaging or labeling requirements imposed under the Federal Alcohol Administration Act (26 U.S.C. 201 et seq.); (C) any household appliance, equipment, furniture, furnishing, or other durable article or commodity; or (D) any article or commodity intended for use in the maintenance of the exterior, or for the repair of any part, of any structure, or for use in the maintenance or repair of any article or commodity described by clause (A) of this sentence.

2. Defines "package" to mean any container or wrapping in which a consumer commodity is closed for use in the delivery or display of the product to consumers. It exempts shipping containers or wrappings used solely for shipping the product to wholesale or retail distributors.

3. Defines "label" to mean any written, printed, or graphic matter affixed to a consumer commodity.

4. Defines "person" to include any firm, corporation, or association.

Section 2 provides that no amendment made by this act shall be construed to invalidate or otherwise adversely affect—

(a) The Federal Trade Commission Act or a statute defined therein as an Antitrust Act;

(b) the Federal Food, Drug, and Cosmetic Act;

(c) the Hazardous Substance Act; or

(d) any provision of State law which would be valid in the absence of such amendment unless there is a direct and positive conflict between such amendment and such provision of State law.

APPENDIX E. PACKAGING LEGISLATION AND INTERSTATE COMMERCE: LEGISLATIVE COUNSEL'S OPINION

State of California
Office of Legislative Counsel

Sacramento, December 1, 1964

N. JOHN C. WILLIAMSON
212 Goodman Street
Bakersfield, California

Packaging—No. 6766

Mr. Williamson:

You have asked two questions, which are separately stated and considered below, relating to legislation by the state and federal government in the field of packaging.

QUESTION NO. 1

Assuming there is no federal legislation in the field of packaging, can the states legislate with regard to products in interstate commerce?

OPINION AND ANALYSIS NO. 1

Article I, Section 8, clause 3 of the Constitution of the United States provides in part that:

"Congress shall have power . . . to regulate commerce with foreign nations and among the several states. . . ."

This constitutional provision of its own force, without any action by Congress, establishes an immunity from the direct control of the states of those subjects of interstate commerce which imperatively demand a single uniform rule, operating throughout the country (*Cooley v. Board of Wardens of the Port of Philadelphia et al.* (1851), 13 L. ed. 996, 1005). Thus, the courts have consistently held that where an aspect of interstate commerce is of a national character and requires uniformity of regulation, Congress alone may provide the regulation (*Morgan v. Commonwealth of Virginia* (1945), 90 L. ed. 1317, 1322). If the subject matter is one which requires national uniformity, the states may not act even if Congress has not (*South Covington v. C. Street R. Co. v. Covington* (1914), 59 L. ed. 350, 354; see also 15. Am. Jur. 2d Commerce, sec. 9, at p. 639).

Where, however, the subject is not one on which national uniformity is required, the states may act within their respective jurisdictions until Congress sees fit to exercise its overriding authority (*Milk Control Bd. v. Eisenberg Farm Products* (1939), 83 L. ed. 752, 756). The United States Supreme Court has stated:

"In conferring upon Congress the regulation of commerce, it was never intended to cut the states off from legislating on all subjects relating to the health, life and safety of their citizens, though the legislation might indirectly affect the commerce of the country." (*Sherlock v. Alling* (1876), 23 L. ed. 819, 820).

The states may, therefore, regulate matters of local concern, in the exercise of their "police power," even though the regulation may affect interstate commerce, or even to some extent regulate it (*Southern Pacific Co. v. Arizona* (1944), 89 L. ed. 1915, 1923; *Huron Portland Cement Co. v. Detroit* (1960), 4 L. ed. 2d 852, 855). The only requirements regarding such regulation which have been consistently recognized have been that the regulation not discriminate against interstate commerce, that it safeguard an obvious state interest, and that the local interest outweigh whatever national interest there might be in the prevention of state restrictions (*Cities Ser. G. Co. v. Peerless O. & G. Co.* (1950), 95 L. ed. 190, 202; see also 15. Am. Jur. 2d Commerce, sec. 20, at pages 651-654).

Generally speaking, the courts have recognized that the states may, in the exercise of their police power, adopt regulations regarding the packaging of products which will affect products transported in interstate commerce (see *Armour & Co. v. North Dakota* (1915), 60 L. ed. 11; *Corn Products Refining Co. v. Eddy* (1918), 63 L. ed. 689; *Pacific States Box & Basket Co. v. White* (1935) 80 L. ed. 138; *Detweiler v. Welch* (1930), 46 F. 2d 75).

Mention should, however, be made of the so-called "original package" doctrine, which was for many years understood to free from state regulation products imported for sale from a foreign country, or from one state into another state, so long as such products were in the original package. More recently, the United States Supreme Court has indicated that the doctrine, as applied to interstate commerce, has come to be regarded, generally at least, as more artificial than sound, and that the test of the original package is not inflexible and final for the transactions of interstate commerce, whatever may be its validity for commerce with other countries. That is ultimate is the principle that one state in its dealings with another may not place itself in a position of economic isolation. The court has held that the original package doctrine does not bar a state, under a proper exercise of the "police power," from regulating the labeling of articles of commerce. Similarly, state inspection laws may be made applicable to goods in original packages. Furthermore, Congress may legislate to remove whatever restrictive influence the fact that packages are unbroken may have upon state power. (15 Am. Jr. 2d, Commerce, sec. 44, at pages 682-683).

In any event, the protection afforded by the original package doctrine ceases if the imported product is sold, even though the merchandise in the hands of the purchaser remains in the original package; if the container is open and smaller packages removed therefrom and offered for sale; if the original packages are put up for sale and so dealt with as to make them a part of the common mass of the property in the state; or it has even been held, if the recipient of the package has an unexecuted intention to open it and sell the contents (15 Am. Jr. 2d, Commerce, sec. 47, at p. 686).

Subject, therefore, to whatever restrictive influence the so-called "original package" doctrine may have in any particular case, we conclude that the states may, in the exercise of their police power, adopt legislation regulating the packaging of products which will be applicable to products in interstate commerce where there is no federal legislation in the field of packaging. Such legislation may not, however, discriminate against or place an embargo on interstate commerce; it must safeguard an obvious state interest, and the local interest must outweigh whatever national interest there might be in the prevention of state restrictions.

QUESTION NO. 2

Assuming that there is federal legislation regarding the packaging of products in interstate commerce, and such legislation is along the lines of S. 387 of the 88th Congress, would the legislation preempt to the federal government the regulations of the packaging of products in interstate commerce?

OPINION AND ANALYSIS No. 2

Generally speaking, S. 387 of the 88th Congress would require the Secretary of Health, Education, and Welfare, (as to any food, drug, device or cosmetic), and the Federal Trade Commission (as to any other consumer commodity) to promulgate regulations to:

- (1) Require the net quantity of contents of consumer commodities¹ to be stated upon packages containing such commodities and upon any labels affixed thereto;
- (2) Establish *minimum standards* with respect to the location and prominence of statement of the net quantity of contents appearing upon packages containing any consumer commodity and upon labels affixed thereto;
- (3) Prohibit various statements and pictures upon packages containing commodities and upon labels attached thereto (subd. (c), Sec. 3A).²

The bill would also require, whenever the Secretary of Health, Education, and Welfare, the Federal Trade Commission, determines that additional regulations are necessary to establish or preserve fair competition between or among competing products by enabling consumers to make rational comparisons with respect to price and other qualities, or to prevent the deception of consumers as to such product, that the secretary or the commission, as the case may be, promulgate with respect to that commodity regulations effective to:

- (1) Establish reasonable weights or quantities in which that commodity shall be distributed for retail sale;
- (2) Prevent the distribution of that commodity for retail sale in packages of sizes, shapes or dimensional proportions which may deceive retail purchasers as to the net quantity of contents thereof;
- (3) Establish and define standards of designations of size which may be used to characterize quantitatively the contents of packages containing that commodity;
- (4) Establish and define the net quantity of that commodity which shall constitute a serving;
- (5) Establish and define standards for the quantitative designation of the contents of packages containing any consumer commodity of a kind the net quantity of the contents of which cannot meaningfully be designated in terms of weight, measure or count;
- (6) Require that sufficient information with respect to the ingredients and composition of any consumer commodity be placed in a prominent position upon packages containing that commodity and upon labels affixed thereto (subd. (e), Sec. 3A).

We note that the bill would specifically provide that the Director of the National Bureau of Standards is required to furnish to state officers and agencies information and assistance to promote to the greatest practical extent uniformity in state and federal standards for the packing and labeling of consumer commodities (subd. (j), Sec. 3A). We also note that the author of the bill, Senator Hart, stated, with reference to the bill, that: "The authority of the individual states to act in this area is protected and the federal government is directed to work with the states only on a voluntary basis to help achieve uniformity in the law." (See Congressional Record, V. 109, No. 8, Jan. 21, 1963.)

Turning to a consideration of whether or not federal legislation along the lines of S. 387 would prevent the application to products in interstate commerce of any state legislation regulating the packaging of products, we note, initially, that S. 387 is limited, by its terms, to "consumer commodities," as that term would be defined by the bill (see par. (1), subd. (k), Sec. 3A). Thus, federal legislation along the lines of S. 387 would not prevent the application of state laws regulating the packing of products to products in interstate commerce which are not made subject to such federal legislation.

As to products which are made subject to the federal legislation, we note that the United States Supreme Court has held that federal regulation of a field of commerce should not be deemed preemptive of state regulatory power in the absence of persuasive reasons—either the nature of the regulated subject matter permits no other conclusion, or that Congress has unmistakably so ordained (*Florida Avocado Growers v. Paul* (1963), 10 L. ed. 2d 248, 255 see also 15 Am. Jur. 2d Commerce, Sec. 24, at p. 656-657).

A holding of federal exclusion of state law is inescapable and requires no inquiry into congressional design where compliance with both federal and state regulation is a physical impossibility for one engaged in interstate commerce (*Florida Avocado Growers v. Paul*, supra, p. 257). On the other hand, in the absence of Congressional motive to exclude the states, state provisions which are substantially identical with federal provisions will be given effect (*Cafeteria v. Zook* (1948), 93 L. ed. 1005).

¹ The term "consumer commodity" would be defined by the bill, as follows:

"the term 'consumer commodity,' except as otherwise specifically provided by this paragraph, means any food, drug, device or cosmetic (as those terms are defined by the Federal Food, Drug, and Cosmetic Act), and any other article or commodity of any kind or class which is customarily produced or distributed for sale through retail sales agencies or instrumentalities for consumption or use by individuals for purposes of personal care or in the performance of services ordinarily rendered within the household and which usually is consumed or expended in the course of consumption or use. Such term does not include (A) any meat, meat product, poultry, or poultry product, or commodity subject to packaging or labeling requirements imposed by the Secretary of Agriculture pursuant to the Federal Insecticide, Fungicide, and Rodenticide Act or the provisions of the eighth paragraph under the heading 'Bureau of Animal Industry' of the act of March 4, 1913 (37 Stat. 832-833; 21 U.S.C. 151-157), commonly known as the Virus-serum-toxin Act; (B) any beverage subject to packaging or labeling requirements imposed under the Federal Alcohol Administration Act (27 U.S.C. 201 et seq.); (C) any household appliance, equipment, furniture, furnishings or other durable article or commodity; or (D) any article or commodity intended for use in the maintenance of exterior, or for the repair of any part, of any structure, or for use in the maintenance or repair of any article or commodity described by clause (C) of this sentence;" (par. (1), subd. (k), proposed Sec. 3A, Clayton Act)

² All section references are to sections which the S. 387 would add to the Clayton Act (38 Stat. 730 et seq.; 15 U.S.C. 12 et seq.)

Where an act of Congress purports to establish only minimum standards, the imposition of the states of stricter standards, or standards based on different criteria, is not barred by the federal action (*Florida Avocado Growers v. Paul*, supra, at p. 258).

We find no indication in the language or the legislative history of S. 387 of any Congressional intent to preempt to the federal government the regulation of the packaging of consumer products in interstate commerce. To the contrary, the bill specifically provides that the Director of the National Bureau of Standards is required to furnish to state officers and agencies information and assistance to promote to the greatest practical extent uniformity in state and federal standards for the packing and labeling of consumer commodities (subd. (j), Sec. 3A), and the author of the bill has stated that the authority of the individual states to act in this area is protected and the federal government is directed to work with the states only on a voluntary basis to help achieve uniformity in the law.

We also note that, at least insofar as S. 387 relates to standards with respect to the location and prominence of statements of the net quantity of contents appearing upon packages containing any consumer commodity and upon labels affixed thereto, the standards which are required to be promulgated are expressly described as "minimum standards" (subd. (j), Sec. 3A).

Thus, we find evidences in the language and legislative history of S. 387 of a Congressional intent to permit the continued application of state regulations to the packaging of consumer products in interstate commerce, rather than of an intent to exclude the states from the field.

While the states could not, of course, adopt and enforce, as to consumer products in interstate commerce, regulations which conflict with the regulations promulgated under S. 387, we think that the courts would hold that they could adopt and enforce regulations substantially identical with the federal regulations or which impose stricter standards than those imposed by the federal regulations.

We, therefore, do not think that federal legislation along the lines of S. 387 of the 88th Congress would be held by the courts to preempt to the federal government the regulation of the packaging of products in interstate commerce.

Very truly yours,

GEORGE H. MURPHY
Legislative Counsel

VINCENT D. KENNEDY—MANAGING DIRECTOR

Sacramento
November 2, 196

Mr. William H. Geyer, Committee Consultant
Assembly Interim Committee on Agriculture
California Legislature
Room 4098, State Capitol
Sacramento, California

Dear Bill:

A compilation of our findings in respect to the feasibility of retailers pricing commodities on a per standard unit basis in addition to price per package is attached.

Subsequent to the circulation of the original questionnaire, you asked, "Is machinery on the market today which will automatically price mark the unit?" The answer is as follows:

"Attempts have been made to manufacture such a unit, but as of now—and in the foreseeable future—it doesn't seem likely that a machine will be available to handle this function. One of the major problems in developing such a machine is the variety of cases, and variety of packages within the case. The logical place to price mark with a machine would be at the warehouse. However, most warehouses serve more than one price zone, which would create numerous problems of 'when,' 'where,' and 'how' to handle the price marked merchandise."

Please let us know if any further information is desired.

Cordially,
Leslie D. Howe
Governmental Affairs Director

SUBJECT: Feasibility of Retailers Pricing Commodities on a Per Standard Unit Basis in addition to Price Per Package

develop subject information for the Assembly Interim Committee on Agriculture hearing HR 219 (Gonsalves) study of retail food packaging practices, leading supermarket food merchandisers were questioned as follows:

- 1 How much time is spent by sales clerks in marking goods?
 - 2 How much additional time would it take to calculate and mark the price per standard unit?
 - 3 What is the estimated added burden in terms of cost which would have to be passed on to the consumer?
 - 4 Is there a spot on the label for an additional price?
 - 5 What are the problems such a requirement would cause with respect to special sales?
 - 6 A suggestion was made to the Committee that perhaps the manufacturer could pre-ticket the price per unit. Is it not desirable that retailers be free to set their own prices in order for free competition to work?
- Responses to these specific questions, in numerical order, were received from Stores A, B, and C (see below), and general commentaries were obtained from Stores D and E (see below):

Store A"—Response

After a careful analysis of our payroll records and our price marking procedures in the store, the following should give you our answers for the questions asked.

- 1) Approximately 5% of all clerk man hours in our grocery department is spent on the price marking of merchandise. This amounts to about 210 hours per week, or 10,920 hours per year.
- 2) It would take at least twice as many man hours as we presently use if we were to mark the price per standard unit in addition to the present price, in our estimation. Since only a few items are packed in the "standard" unit, virtually all merchandise would require dual marking. We are unable to estimate the time that would be needed to "calculate" the "standard unit" prices but it would be substantial.
- 3) The added cost which would have to be passed on to consumers would be a minimum of \$41,496 per year in the grocery departments alone. Since it is likely that numerous items in the other departments would also have to be dual priced, I estimate that the total additional cost would be in excess of \$50,000 per year.
- 4) Some few items have a "spot" large enough for dual pricing; most do not.
- 5) The problems such a requirement would cause, with respect to special sales, are enormous. It is apparent that customers would be thoroughly confused, since, in most instances, there would be four prices on a "special" item. Checkstand errors would be multiplied greatly.
- 6) There is no practicable way for the manufacturer to preticket the price per unit. Cost of doing business varies greatly from retailer to retailer and from store to store and consequently prices must vary too. This variance in pricing is very much in the best interests of the consumer and anything interfering with it would be highly detrimental to the general public.

Store B"—Response

- 1) This company has never "book-kept" or made a time and motion study of the amount of time spent by food clerks marking the retail price on the merchandise we sell.
- 2) Based upon general observation over a period of years, I think we could easily substantiate that at least two full-time employees spend all their time price-marking merchandise in one of our average volume stores.
I am of the opinion that it would take at least twice as much time to calculate and mark the prices per standard unit. Circumstance, of course, vary with the items being marked and it could easily run into three or four times.
- 3) Obviously no merchant should be expected to absorb the cost imposed by the revision of the law. Whatever it amounted to would have to be passed on to the consumer.
- 4) The answer to Question #4 could not be answered with a "yes" or "no." In addition to the confusion which two prices would present, I think it is pretty obvious that the only way two prices could be used would be to use a label with a sensitive type backing on which would be printed the necessary information.
- 5) To begin with, I think the problem would be minimized because of the cost involved in meeting the price requirements for special sales, and consequently, result in fewer sales where the sale price was lower than the regular price.
- 6) My understanding is that (1) very few States have Fair Trade Laws that hold up, and (2) where there is no such law there is a great variation among merchants.

Store C"—Response

- 1) It takes 17.3 seconds to price mark the average case (average case contains approx. 24 units).
- 2) An additional 17.3 seconds would be required to stamp the price alone, plus an additional 20 seconds to compute the standard unit price. This, we presume, would have to be done on some type of conversion cards, as there is not room in our ordering book for the variety of zone prices—plus the standard unit price.
At the present wage level of 6¢ per minute (which includes fringe benefits) the extra cost per case would be 3.7¢.
In addition, there is the cost of pricing numerous items which are now priced at the checkstand. Were we to put a standard unit price on all units, this would mean we would have to price our milk, eggs, candy, baby food, and a number of paper and soap products which we do not price now. Also, the clerk at the checkstand might be confused between the two prices, and might fail to ring up the correct price. We have no way of calculating what this factor might cost.

- 3) A conservative figure would be \$80.00 a week additional labor cost in our average store. This would be a continuing cost—week in and week out—and with the ever-increasing wage spiral, the cost of stamping the standard unit price on each package would increase. There is also the possibility that we would have to change our present price stamping equipment in order to differentiate between the unit price and actual price. If it were necessary for us to do this we would have to go to an adjustable band stamp, which would not be as efficient as the present used stamps. This cost factor was not taken into consideration in estimating the \$80.00 per week additional labor costs. We would have to raise our gross margin by 1% to compensate for the estimated additional cost of stamping the standard unit price.
- 4) The vast majority of packages do not have price spots. There would also be the problem of price marking such items as catsup, ammonia, liquid detergent, etc., where the price is on the cap. There is not sufficient room for more than one price.
- 5) Under the present system on special sales, the price is not stamped on the individual units, but is posted at the checkstand. This represents a considerable saving in labor because of the volume, but the sale price doesn't have to be removed from the merchandise that isn't sold. This saving would be lost if we were forced to put on the standard unit price.

"Store D"—General Commentary

Our work measurement studies have shown that the average clerk working at an average rate of stamping uses .091 man hours to price \$100 worth of groceries. At an average wage rate of \$3.10 per hour, not including fringe benefits, the double pricing of merchandise would cause an increase of .285% in grocery wage costs. To put it another way, we would have to increase our gross profits by .28% to absorb this cost. Additional costs for us would be: (1) purchasing of new stamping equipment to price items; (2) small items would have to be priced with Kum Kleen labels; (3) the cost of pricing by units would be considerably higher than the above figures because of the amount of computing that would be necessary. I believe that if you can apply the above figures to the total California Grocers' sales figure, it would be self-evident that this would cost the consumers a tremendous sum of money.

"Store E"—General Commentary

We feel very strongly that the pricing and requiring of commodity pricing will add cost to our operation and, therefore, the consumer will be paying more for her food. We do not have a breakdown, but will have to give you from experience our projected costs on the questions you ask: 1) The sales clerks spend about 10% of their time marking merchandise. 2) The additional time required to calculate and mark the price on each unit will triple this time because of the many varied packages and commodities that will have to be priced. 3) The added costs for the consumer will add about 2% to 2½% on her total food bill. In our system of a free competitive economy it will necessitate the elimination of special sales because of the added cost of marking, and, therefore, the consumer will pay more because she is now receiving the benefit of special sales which our industry promotes.

TELEPHONE SUTTER 1-1914

Mr. William Geyer, Consultant
 or Assemblyman John Williamson
 State Capitol
 Sacramento, California

Dr. Bill:

Pursuant to our telephone conversation a few days ago, I contacted various manufacturers of price marking equipment and asked the question, "Can you manufacture a small portable price marking device or machine that will show the unit price on a wide variety of sizes and shapes of food packages and containers?" I also asked that the machine be self-calculating.

I got a wide variety of answers, but yes, such a machine could be manufactured. As one company official told me "We can manufacture a machine to do anything." I then asked the question, "Would you expect your company to manufacture a machine if California was the only state that had a use for it?" They all said they doubted it very much, because there wouldn't be enough in it to warrant the expense of engineering such a machine with such a limited market. No one could give me a definite answer on this question, because there is no way at this time of knowing exactly as to how many machines would be required if California operators had to show the unit cost.

I also asked if they had any idea as to what the cost of such a self-calculating machine or marking device would be. On this I was unable to obtain any information. The manufacturers couldn't even guess without going through extensive engineering research. Most of them did, however, say that in their best judgment the machine would be expensive. And of course, Bill, we should never overlook that even with a self-calculating marking device that we are referring to the market operator would be confronted with the labor involved, and it would no doubt mean higher consumer prices.

I trust this satisfactorily answers your question that we discussed over the phone the other day.

Looking forward to seeing you soon.

Sincerely,
 CALIFORNIA GROCERS ASSOCIATION

HOUSE RESOLUTION NO. 235 (PATTEE)

Relating to a Study of Acala Cotton

Resolved by the Assembly of the State of California, That the Assembly Committee on Rules is requested to refer for study to an appropriate interim committee the subject of one-variety cotton districts, including the use of test plots of cotton other than acala cotton, and that such interim committee shall report to the Assembly its findings and recommendations not later than the fifth legislative day of the 1965 Regular Session of the Legislature.

Assembly Journal, April 18, 1963, page 2276.

PART I. DESCRIPTION OF THE ONE-VARIETY DISTRICT LAW

The one-variety cotton district law prohibits the planting, possession for planting, picking, harvesting, or ginning of any variety of cotton other than the Acala variety derived from the one-variety breeding program carried on by the United States Cotton Research Station at Shafter, California. (Agricultural Code, Section 951.) This prohibition applies to eight contiguous one-county "districts" (Kern, Madera, Fresno, Kings, Tulare, Merced, Stanislaus and San Joaquin Counties) which are collectively and informally labeled the "San Joaquin Valley One-variety Cotton District" (Sec. 952).

The counties in the one-variety district are termed "districts" only for the purpose of geographical reference, and can be considered passive in the sense that they are without any organization or powers of their own. Cotton grown by the United States Department of Agriculture (U.S.D.A.) or the California Department of Agriculture, and cotton in transit is exempted from the prohibitions of the one-variety law (Sec. 954).

Violation of the one-variety law is a misdemeanor. In addition, the applicable code section contains express liability for civil damages (Sec. 953). Since 1961, the Director of Agriculture and the county commissioners have been authorized to administer the law (Sec. 958). A like amendment also made the violation of the one-variety law a public nuisance (Sec. 955), authorized the director or the proper commissioner to complain, and required the district attorney to file, upon receiving such complaint, a civil action to abate and prevent the nuisance (Sec. 956) and set forth the method of its disposal (Sec. 957).

The concept of a one-variety district is based on several assumptions:

- (1) Premium cotton is the most profitable type of cotton for San Joaquin Valley producers to grow.
- (2) The growth of multiple varieties of cotton makes it impossible to grow premium cotton, since pure varieties are contaminated, production quality becomes nonuniform, and the resulting mixture tends to be reduced to the lowest common denominator of its components.
- (3) There is no grower within the district whose best interests would be served by planting anything other than the approved variety of Acala cotton (Sec. 950).

The preamble of the law, in which these assumptions are found, was a part of the law as originally enacted in 1925. In 1933, during the codification of the Agricultural Code, the preamble was dropped, but was reenacted by amendments adopted in 1961. The reenactment might be said to constitute the specific assertion of the Legislature that the principles which underlay the initial legal adoption of the one-variety concept were equally valid 36 years later.

A. LEGISLATIVE HISTORY OF THE ONE-VARIETY CONCEPT

The one-variety cotton district law as applied to the San Joaquin Valley has been unattended by controversy until the past few years. The concept antedated the passage of the law itself. The theory that the planting of one variety in a given area would ultimately increase the quality and yield of that area appears to have originated in the Cotton Belt states, and to have gained the support and sponsorship, at an early stage, of the U.S.D.A. and state personnel. In these areas and during its early history, however, it was practiced on a local and voluntary basis, California being the first state to have enacted legislation creating by sanction of law such a district.¹

In 1925, a number of San Joaquin Valley cotton producers, after a study, petitioned the State Legislature to use its police powers to legally establish a one-variety cotton district. The Legislature complied, with the result being a law applicable to Riverside County in addition to the present eight counties. All the cotton produced in the state at the time was grown in these nine counties. Although cotton has subsequently been grown in a number of other counties in the state, there are at present only eight significant cotton-producing counties in California. These include six of the original eight San Joaquin Valley district counties, Madera, Merced, Fresno, Kings, Tulare, and Kern; and two desert counties, Imperial and Riverside. In addition, there are five other counties having less than 1,000 acres of cotton each.

TABLE I
CALIFORNIA COTTON PRODUCTION

County	Number of farm allotments (1963)	Acreage (1962)	Bales (1962)	Rank yield per acre
MAJOR				
Imperial -----	647	51,600	180,800	1 †
Riverside -----	256	21,650	64,400	2 †
Kern * -----	1,498	191,500	509,700	3

* One-variety district county.

† Above three bales.

‡ Below two bales.

In 1941, Riverside County requested permission to withdraw from the one-variety district. Because of the physical barrier between River-

¹ An article entitled "One Variety Community Plan Shows Numerous Practical Advantages" appeared in the 1933 *Yearbook of Agriculture*, published by the U.S.D.A. This article provides a comprehensive review of the history and the justification of the one-variety concept in cotton and notes that in 1925 the Legislature in California enacted a special act "giving legal protection to communities where the farmers restricted themselves to growing a single variety," p. 134.

side and the other eight counties, the request was granted. It is of importance that Riverside was not contiguous to any of the other counties in the district since its withdrawal posed no problems of contamination within the one-variety district.

In the early days of the Imperial Valley, cotton was an important commercial crop. However, for a number of years prior to and during World War II, cotton acreage was either small or nonexistent. In 1950, when the Korean War caused the termination of federal cotton acreage controls, the Imperial Valley once more became an important cotton-growing area, and the Acala variety was in general use. In 1955, growers there successfully sponsored the inclusion of Imperial County in the one-variety district law but then reversed themselves and had their county removed at the 1956 Special Session before any plantings were made under the law. The Imperial Valley withdrawal occurred when another variety was found to show promise of outyielding the legal Acala variety.

In 1959, violations of the one-variety law were discovered in two counties, Kern and Madera. The 1959 violations were reportedly the first discovered in many years.² They were dealt with under the then existing provisions of the Agricultural Code and furnished the impetus which caused supporters of the one-variety district to request a tightening of the enforcement provisions of the law. Resulting from the request was the declaration of violation being a nuisance, reenactment of the preamble, and the provisions charging the director and commissioners with administration of the law.

In the 1963 General Session, Assemblyman Gordon Winton of Merced introduced a measure (AB 1278) which would have allowed the planting of nonconforming cotton within the one-variety district provided the plantings were in plots of 20 acres or less, the ginning all took place within Madera County, and the entire operation was supervised by the county commissioner to prevent contamination of Acala cotton within the one-variety district. As finally amended, the bill would have permitted the experimental plantings only in Madera County, would have required the planter to apply for a permit from the commissioner pursuant to regulations drawn up for that purpose, would have limited each permittee to one 20-acre and ten 5-acre plots, and would have required such permittee to post a \$5,000 bond as surety for his compliance with the conditions of the permit.

AB 1278 was defeated in the Assembly Committee on Agriculture. Subsequently, Assemblyman Alan G. Pattee authored House Resolution 235 of the 1963 General Session calling for a general study of the one-variety district law. The Legislature authorized the study, and referred HR 235 to the Assembly Interim Committee on Agriculture. It is pursuant to this resolution that this report is submitted.

B. COMMITTEE STUDY OF HR 235

HR 235 authorized the committee to study the subject of one variety cotton district, "including the use of test plots of cotton other than Acala cotton." The committee was not limited, however, to the test

² Memorandum, E. C. Breech to H. E. Spires, California State Department of Agriculture, October 10, 1963.

plot segment of the problem, but rather felt free to look into and dissect the entire concept of one-variety cotton. Accordingly, the committee scheduled three hearings and field trips at such places as would afford the opportunity to the Members to make a broad, general study of the San Joaquin One-variety Cotton District Law.

The first hearing was held in Bakersfield on November 15, 1963, for the purpose of learning about the operation of the present one-variety law and taking testimony favorable to its retention. This hearing was preceded on November 14 by a committee field trip to the U.S.D.A. Cotton Research Station at Shafter, and surrounding cotton-producing areas, described by Marvin Hoover, extension cotton specialist at Shafter.

"The committee was taken on a tour of the U.S. Cotton Research Station at Shafter and to local cotton fields representative of fields in the chain, or steps required, in the pure seed multiplication program of the California Planting Cotton Seed Distributors (CPCSD). A local gin which cooperates in the pure seed saving program was also visited.

"At the U.S. Cotton Research Station the variety improvement phase of the program of the station was reviewed. This consisted of genetic screening (germ plasm from around the world), special trait endeavors (transfer of specific traits into breeding stocks), main breeding efforts (evaluation of hundreds of progenies and families) and testing (valleywide performance of families, strains and varieties). Other supporting activities (development of cultural information) of the station were also reviewed.

"Grower fields were visited from which pure seed was produced. Fields representative of each stage of multiplication (foundation, white tag, purple tag, and green tag) were shown to illustrate the steps in the increase program. Isolation requirements were also illustrated. The cooperative role of the pure seed grower, ginner, CPCSD, and the research station was clearly shown.

"A local gin which cooperates in the pure seed program was visited. Services performed by the gin (seed saving, delinting, chemical treatment, and sacking) were explained by the gin manager."

The second hearing was held in Brawley on December 5, 1963, for the purpose of taking testimony relative to the production of cotton and the selection of varieties in an area not covered by the one-variety law. On the afternoon of the 5th, the committee visited the experimental plots of the U.S.D.A. Southwest Irrigation Field Station at Brawley, and of the Delta & Pine Land Company, and surrounding cotton-producing areas. On December 6, committee members were flown to Friendly Corners, Arizona, for the purpose of observing and discussing cotton production in an area which is without a one-variety law, and where a number of cotton varieties are grown in proximity to each other without any clear preference by the growers for any single variety. These field trips are described as follows by W. W. Bradford, manager, Western Division, Delta & Pine Land Company:

"During the afternoon a field trip was arranged jointly by the Elmore Company, Delta & Pine Land Company and the Cotton

Section of the U.S.D.A. Southwest Irrigation Field Station. A large passenger bus was provided for the tour. The first stop was at the U.S.D.A. station south of Brawley, where the breeding nursery and many interesting cultural practice tests were viewed. The second stop was at Fifield Farms three miles east of Brawley to look at Delta & Pine Land Company's main variety test. This test consisted of eight varieties and strains replicated eight times with each two-row plot extending the full one-half mile length of the field. While here one row each (one-fifth acre) of Deltapine Smooth Leaf, Deltapine 5540 and Acala 4-42 was harvested for weight comparisons. Weights of seed cotton, as provided by Growers' Brawley gin, were 950 pounds for Deltapine Smooth Leaf, 690 pounds for Deltapine 5540 and 550 pounds for Acala 4-42.

"The tour proceeded north and west of Brawley to Westmorland observing cotton fields on the way. The third stop was at Growers' Westmorland gin, hosted by the Imperial Ginning Company.

"The fourth stop was at Delta & Pine Land Company's research nursery located on John Elmore's Desert Ranch 20 miles west of Brawley. At this 40-acre nursery several hundred different strains of cotton were observed growing in progeny rows, replicated tests and observation blocks.

"The final stop for the day was at a production field on Desert Ranch where first pick was made on one acre. The weight of seed cotton harvested was 9,360 pounds, or approximately $6\frac{1}{2}$ bales per acre. An invitation was issued for anyone interested to ride the pickers through the field. Many in attendance accepted the invitation.

"On December 6, committee members and other interested parties were flown in four private planes to Friendly Corners, Arizona, to observe performance of wilt-tolerant strains in Delta & Pine Land Company's 40-acre wilt-screening nursery. While in Arizona the committee met unofficially with several growers, processors, ginners and oil mill representatives to discuss cotton production in Arizona."

The third hearing was held in Madera on September 28 and 29, 1964, for the purpose of taking testimony from cotton growers in the northern counties of the San Joaquin Valley one-variety district, including the proponents of Assembly Bill 1278, from leaders of the American Textile Manufacturers Institute relative to the need for high-quality cotton, from the California cotton industry generally relative to the testing proposal advanced by the California Planting Cotton Seed Distributors, and from individuals who wished to amplify previous remarks or who had not previously testified.

This hearing was preceded on the morning of September 28 by a committee field trip to existing U.S.D.A. test plots in the vicinity of Madera and Chowchilla. This field trip was described as follows by John H. Turner, agronomist in charge, U.S.D.A. Cotton Research Station, Shafter:

"Tour planned by John H. Turner, director, U.S. Cotton Research Station, Shafter; Aubrey Baker, Madera County grower;

and Clarence Johnson, farm adviser, Agricultural Extension Service, Madera.

"Four stops were made to view cotton tests and hear of the objectives and previous results:

1. Aubrey Baker Ranch.
2. Bill Clay Ranch.
3. Chester Weaver Ranch.
4. Chip Rogers Ranch.

Stop No. 1—Variety-cultural Test

"This is the second year of this three-year study. Deltapine Smooth Leaf (representing a typical rainbelt-type variety) was compared with Acala 4-42 (a typical Western variety) at two levels of fertility. The 1963 results showed no difference in these two cottons in their response to fertilizer. Acala 4-42 made slightly more cotton than Deltapine Smooth Leaf.

Stop No. 2—Regional Variety and Strain Test

"Following a screening of some 40 cottons in 1963, the most promising variety from each commercial breeding firm was requested for this valleywide test. In addition to the eight varieties in this study, seven experimental Acalas that are being considered for future release were also added. Two additional varieties that had not performed well in screening were grown in observational plots adjacent to the study. The varietal characteristics and the fiber traits of each cotton were explained to the committee. Also, the best information developed relative to disease and insect tolerance was presented.

Stop No. 3—Studies at This Location

"a. *Acala Family Test.* This test was a randomized yield study with the separate Acala family components that make up the advanced strains shown at the previous stops. Considerable difference was evident, especially for crop maturity at this location.

"b. *A Screening Study.* This involved newly developed lines from various breeders to check their potential in the northern zone of the valley.

"c. *Special Selection Study.* This particular study involved selections made at Chowchilla, Tulare County, and Kern County. Breeders are attempting to determine the response of plant selections made at various valley sites from the same material the following year when all lines are grown at the various locations. Results from this study will indicate whether or not it is highly desirable for the breeder to make plant selections in each zone of the valley.

Stop No. 4—Fertility, Fumigation, and Land Preparation Studies

"This location has provided the farm adviser with an excellent site on which to conduct studies with varying levels of nitrogen and potash fertilizers. Also, a wonderful response from the new land preparation practice called 'precision tillage' has been found. This latter land preparation procedure was also being studied in relationship to soil fumigants in order to control nematodes. It was

evident that soil variability as exists in Madera and Merced Counties poses a difficult problem in determining the best cultural practices for any given farm unit. Far more differences in crop yield have been obtained from *cultural* treatments than from *varietal* differences."

In addition, some committee members attended the annual Cotton Field Day at the Shafter station on November 5 and 6, 1963, and the public hearing held by the State Department of Agriculture relative to the CPCSD proposal in Fresno on June 17, 1964.

PART II. JUSTIFICATION OF THE ONE-VARIETY DISTRICT LAW CONCEPT

In commencing this study of the one-variety law, the committee felt that the use of the police power of the state in this manner was justified if the results of the legislation did, in fact, adhere to the end to be obtained contained in the preamble of the law. The information received by the committee at the three hearings has convinced the committee that the San Joaquin Valley cotton industry is in an uniquely fortunate position of being protected by a one-variety law, and is overwhelmingly appreciative of that fact.

A. UNIQUENESS

The committee found the one-variety law in California to be unique. There are one-variety communities in the United States, based on voluntary association of cotton farmers, or upon informal preference,³ but in no other area of this country can one find a statute which precludes the planting and harvesting of other than a named cotton.⁴ The San Joaquin Valley is apparently the only significant cotton producing area where the one-variety community concept as fostered by the U.S.D.A. and other cotton experts during the second and third decades of this century gained a legal foothold.⁵

In attempting to find a parallel one-variety law, the committee contacted numerous sources. Replies indicated that the specific one-variety district law was unique not only to the cotton industry, but to other agricultural products as well. However, it was not found to be entirely without parallel. The consensus of the answers is best stated in these words:

... insofar as we are aware, cotton is the only agricultural product and California is the only state in which there is a district where by law only one variety of that product can be grown. However, there are other informal arrangements which can be found throughout the country. For example, in the South, one-variety communities were stimulated by the Federal Extension Service and the Agricultural Research Service, particularly with respect to cotton, but these programs were controlled locally and through agreements among the farmers. In addition, in areas in the West devoted to seed production of cross-pollinated forage and grass legumes, because of problems created by winds blowing and crossing the varieties, the farmers voluntarily agreed to cooperate and grow

³ One such area is Imperial County. In 1963, 99 percent of the cotton grown there was Deltapine Smooth Leaf.

⁴ From 1949 to 1961 the State of Nevada had in existence a one-variety cotton district in Clark and Nye Counties, limited to the production of Acala cotton. The purpose of this district was to enable the relatively modest cotton crop originating in this area to be ginned in the San Joaquin Valley. The operative regulation was rescinded for the purpose of growing long staple cotton in that area. Letter, Lee M. Burge, Executive Director, Nevada State Department of Agriculture, November 12, 1963.

⁵ It has been said that the U.S.D.A. initially recommended one-variety communities in 1917.

only one variety in order to produce an acceptable seed of that one variety. We further understand that vegetable and fruit canners will stimulate the same type of arrangement in order to have the vegetables and fruits continuously available for canning through the year. By means of such arrangements, the canners can accurately predict the types and quantities of fruits or vegetables which will be available, and their approximate maturity dates.⁶

The mere fact that the concept is unique does not, of course, justify its existence. As a practical matter, however, the committee found that this uniqueness has been translated into an economic advantage for San Joaquin Valley cotton growers.

B. MARKETING ADVANTAGE

Testimony before the committee established the fact that Acala 4-42, the current cotton grown in the San Joaquin one-variety district, commands a varying premium over other cottons estimated at 3 to 5 cents per pound on the free market. Of equal if not greater importance is the fact that virtually the entire crop is consumed in normal commercial channels.⁷

The mills, many of whom sent representatives to testify before the committee, depend on the superior spinning qualities of Acala as part of the blend necessary to bring other cottons up to required standards. This dependence means that the one-variety district has a built-in, and apparently permanent, market for its product. According to the bulk of the testimony on the point, the commercial market for most of the cotton grown in this country is dependent upon the continued availability of this quality California cotton.

Dave Hall, a textile manufacturer from Belmont, North Carolina, and the chairman of a group of cotton users representing the American Textile Manufacturers Institute, summed up the market appraisal of San Joaquin Valley Acala cotton in this manner:

The textile industry has spent more than \$4 billion in the last dozen years to improve its plants and equipment. But for all of that money, and any additional expenditures we might make, it is impossible for the spinner to add anything to the inherent quality of cotton.

We can clean it, we can straighten it, and remove the immature and imperfect fibers, but those fibers which remain and which are responsible for the running quality through our mills, at the stepped up speeds we must employ, are no better than the seeds you plant and the care you use in the growing, harvesting and ginning of your crops.

Cotton quality is important. It is equally important that we know where to find it in substantial quantities and on a consistent dependable basis as is presently the case with the Acala cotton.⁸

⁶ John C. Bagwell, General Counsel, United States Department of Agriculture, letter dated February 14, 1964. The National Cotton Council of America furnished corresponding information.

⁷ It was definitely established that the percentage of Acala from the San Joaquin Valley placed in the government loan is appreciably less than that of any other extensive cotton producing area in the United States, although the figures given the committee were in conflict.

⁸ Testimony before the committee, Madera, September 29, 1964.

Mr. F. M. Arthur, vice president and cotton buyer, Textiles, Inc., of Gastonia, North Carolina, noted the premium presently paid for California Acala from the one-variety district and added this statement:

... Mills don't just throw money away. Textile manufacturing is one of the most competitive industries in the world, and a mill would not be long in business if it was not carefully selective in price as well as quality when buying raw materials. We don't pay these prices because we have good friends among the shippers and growers out here, or because we like an occasional trip out West. We buy your cotton and pay your prices because our customers demand the quality, and our end product requires the spinning characteristics that can be obtained only from Acala cotton.⁹

The one-variety cotton presently in existence, Acala 4-42, is a superior cotton and one which, as is shown above, commands a market. Judging from the glowing testimony received from cotton buyers and users, the committee was inclined to believe that this superior quality was, if anything, being insufficiently rewarded in the market place. This appears to be accounted for in part by the failure of the federal government to make anything more than rudimentary distinctions between cotton qualities in its support programs, and the consequent emphasis of the programs on the protection of inferior cottons. With the predicted general lowering of cotton price supports, or with modernized federal quality distinctions, the existing premium for San Joaquin Valley Acala cotton should increase. This in turn would indicate that so long as the one-variety district remains successfully in effect, San Joaquin Valley growers should remain well insulated from any hardships caused by fluctuations in federal support policies. San Joaquin Valley growers have demonstrated faith in their own self-sufficiency by voting against the existing federal cotton support program.

C. YIELD ADVANTAGE

Superior quantity is of equal importance with superior quality in profitable cotton production. Without satisfactory yield, efficient farming practices are impossible and the unit price that the farmer must receive for his crop becomes higher than that which the buyer will pay. The committee found that the San Joaquin Valley cotton growers have received from U.S.D.A. breeders at Shafter a steadily improving variety of cotton which, insofar as present levels of technology permit, has realized the natural potentialities of the valley for cotton production, and has substantially overcome the main indigenous controllable limiting factor, verticillium wilt. In San Joaquin Valley variety tests, Acala releases have for years achieved yields equal or superior to privately bred cottons, and have demonstrated a remarkable level of reliability. Conversely, the committee was able to find no proof that any other current commercially released variety of cotton would be superior in yield to the present Acala variety throughout the district.

⁹ Testimony before the committee, Madera, September 29, 1964.

D. RESEARCH ADVANTAGE

One of the leading reasons for the development and maintenance of high-quality, high-quantity cotton production in the San Joaquin Valley is the research advantage made possible by the existence of a single variety in the valley. The San Joaquin Valley produces in the neighborhood of a million and a half bales of cotton yearly. The research at the Shafter station operated by the U.S.D.A. costs about \$500,000 yearly, the costs being shared by the federal government, the state government and the local growers involved. Using rough mathematics, the costs of research, seed production, counsel and assistance provided the growers in connection with cotton, computed on a per-bale basis, amounts to about $33\frac{1}{3}$ cents per bale.

The average bale in the San Joaquin Valley sells for approximately \$170. The growers in the valley are almost unanimous in stating that the cost of research per bale is more than reasonable.¹⁰ This low research cost is directly traceable to the one-variety concept. The fact that the great bulk of research, breeding, strain tests and improvement techniques are employed on one variety means concentrated effort. As Acala is improved, so is the earning power of every cotton farmer in the San Joaquin Valley.

A hypothetical situation shows the feasibility of research in a one-variety situation as compared to a multivariety area. Assume five varieties were legally grown in the San Joaquin Valley. In order for each of the five to receive the same scientific treatment presently afforded Acala, the cost of research would be increased proportionately, or five-fold. Assuming the converse, five varieties and no increase in research moneys, it is apparent that each variety would receive substantially less than Acala presently is afforded.

E. SEED COST ADVANTAGE

Originally, the one-variety law allowed the planting of any and all Acala cottons. The 1961 amendments altered the situation by inserting a prohibition against the planting of any Acala seed other than that derived from the one-variety breeding program at the U.S.D.A. Shafter station (Sec. 951). This act was actually nothing more than legislative sanction and recognition of the long established breeding practice in the one-variety district. The U.S.D.A. had been experimenting with suitable cotton varieties in the San Joaquin Valley since 1917. When the one-variety law was enacted, the Shafter station, established in 1922, made use of its work to select a desirable variety for planting throughout the valley. Since federal law does not permit a U.S.D.A. station to sell or distribute seed commercially, a loose organization of local growers was formed for this purpose. In 1936, this organization was formalized as the California Planting Cotton Seed Distributors, a nonprofit California corporation.

Each year, the distributors receive 60 pounds of pure hand-pollinated seed from the Shafter station. This seed is that which, in the view of the Shafter personnel, constitutes its most advanced Acala seed strain compatible with large-scale commercial production. The emphasis in

¹⁰ Not one witness appeared before the committee who felt the present research program costly or wasteful. With small exception, most evidenced complete faith in the research program of the U.S.D.A.

breeding at the station has been on the development of a high-fiber-quality cotton, but also on yield and cultural adaptation. The 60 pounds of seed do not become the actual planting seed for the San Joaquin Valley until after five years have elapsed. At that time, the 60 pounds have been increased, by yearly plantings, to more than 25,000 tons.

The first year after selection, the new seed is planted on five acres at the U.S.D.A. station and termed "progeny increase." The seed saved from this five-acre plot is then planted on 300 acres of "foundation seed fields," farms under contract to the distributors. From this seed, 4,000 acres of third-year or "white tag" fields are planted. The resultant seed crop is then planted, in the fourth year, on 70,000 acres of "pure seed fields," characterized by a purple tag. Finally, the regular cotton crop or "green tag" product is grown in the fifth year. The seeds are then sold by the California Planting Cotton Seed Distributors to the cotton farmers in the San Joaquin Valley.

The organization numbers about 300 members, that figure being made up of those growers who sign contracts with the distributors to produce seed. They alone have voting rights. However, the distributors are governed by a board of seven directors who are elected by the membership but are not themselves required to be members. The sole requirement is that the directors be cotton producers in the San Joaquin one-variety district. The members are selected by the cooperators, the participating gins. These gins are not members and have no vote. Since members must sign contracts with both the distributors and the co-operators, however, the distributors maintain a voice in their membership policy although the primary initiative in dealing with members remains with the cooperators.

The distributors operate on a projected-cost basis. In effect, they have a monopoly upon the sale of seed in the valley.¹¹ The fact that it is a nonprofit corporation negates any adverse effect which this monopoly status under legal protection might otherwise create. The primary financial beneficiaries of their operation appear to be the San Joaquin Valley cotton growers in that seed cost to the grower is appreciably less than that of commercially produced varieties;¹² the seed producer, who gets both a guarantee base and incentive payment; the U.S.D.A., which receives from \$150,000 to \$170,000 annually for research out of the seed price; and the University of California, which receives \$40,000 to \$60,000 for research from the same source.

F. GROWER SUPPORT

The cotton growers in the San Joaquin Valley overwhelmingly favor the retention of the one-variety district. In the absence of any self-enforcing mechanism in the one-variety district law for determining grower sentiment, such as exists for commodities operating programs under the California Marketing Act, the responsibility for determining the sentiment of growers within the districts devolves to the Legislature. Although the committee did not specifically attempt to measure

¹¹ Although it is true that cotton growers may save their own seed for planting if it is derived from Acala stocks bred at the Shafter station, few do, since such seed would become progressively outdated each succeeding year.

¹² See Appendix B. For a description of the seed pricing policy of the distributors, see the distributors' pamphlet, *The Story of California's San Joaquin Valley Cotton* (Bakersfield, 1963), pp. 14-17.

this support, it was self-evident from the testimony and mail received by the committee. It was further attested to by the statements of proponents of private testing within the district, who not only as a rule indicated a desire to preserve the one-variety district, but also stipulated that they believed that the vast majority of district growers were also of that opinion. The fact that this program is so well established in the valley and receives such deepfelt support is indicative, the committee feels, that the San Joaquin Valley farmers are aware of the value of the one-variety district law which they have established and much prefer the marketing and production situation that presently exists under it to the uncertainties that would follow upon its abandonment.

PART III. PROBLEMS OF OUTSIDE BREEDING AND TESTING

The proponents for a program of outside testing and breeding are centered in Madera County. Various methods of allowing outside breeders and cotton researchers in the San Joaquin Valley were advanced to the committee. The major problem in all such proposals was not how this should be done but whether such testing and breeding could in fact be allowed consistent with the continuation of the one-variety concept. The case as described by proponents is as follows:

A. ARGUMENTS FOR OUTSIDE BREEDING AND TESTING

At the present time all breeding and testing in the San Joaquin Valley is done by the U.S.D.A. in conjunction with the University of California. There is no competition between these entities; they operate together with a like aim, to improve the cotton grown in the San Joaquin Valley. However, this method of attempting to improve the position of the San Joaquin Valley cotton farmer overlooks one important factor, the incentive derived from competition.

Assemblyman Winton, the author of the measure which would have allowed private testing in the valley, expressed the argument favoring such legislation when he stated:

... Why put in legislation like this? I'd like to point out that I think in any enterprise competition is very essential. In this particular enterprise we have one breeder of cotton who has charge and the only breeder actually who can do any experimentation within the valley. It seemed to us, those that were interested in the bill, that if other breeders have the opportunity to breed cotton in this area, and to experiment with it that perhaps they could come up with a variety or strain of cotton that was better suited to the climate and soil and growing conditions of this area of the state. Perhaps they wouldn't, but at the present time, with the experimentation limited to one agency, if that agency doesn't develop something that's better you have no chance. You can have three or four or maybe more breeders working on the same problem at the same time. I would say that your chances are multiplied that you might come up with a good strain or a better strain of cotton in this area. Acala is a good strain, but we're always searching. . . . We're searching for a better way of doing things, and it seems to me that this would give a much better chance to find a better strain of cotton for this particular area.¹³

Assemblyman Winton's statement implies a further contention often advanced by proponents of outside testing. That is that varietal breeding must of necessity be related to the site of production. The San Joaquin Valley one-variety district is nearly 200 miles long, running

¹³ Testimony before the committee, Madera, September 28, 1964.

from north to south, and comprises many different climatic and soil conditions. This is generally accepted as the fundamental explanation for differing yields within areas of the district. Proponents therefore contend that a cotton bred in one area of the district will have a tendency to adapt itself to that area, and be a relatively less effective producer in other areas. Specifically, they argued that the Acala cottons bred at the Shafter station in Kern County may be ideally suited to the southern and western areas of the district, but are much less suited to the northern and eastern areas, typified by Madera County.

Proponents further argue that outside breeding in areas such as Madera County must be undertaken because variety tests now carried out there do not truly test the ability of private breeders to develop a suitable cotton. Since a private cotton breeder must breed commercially, it is logical to assume that his released varieties are developed for existing markets in other cotton-producing areas, none of which approximate the production conditions in Madera County. Under these circumstances, it is possible for the Acala release to be the best available cotton in the area and yet not be the best that could be developed, given local breeding.

Finally, a collateral argument is made by the proponents of outside testing relative to the standards of cotton evaluation for the purposes of district release. They charge that the U.S.D.A. works on the development of a superior quality cotton, often to the detriment of production yield. An outside breeder, the contention is, may well find a cotton which is inferior, or even grossly inferior, to Acala in these particulars but which outyields Acala so substantially that the increase in yield puts more money into the pocket of the farmer than is received from Acala with its premium for quality.

B. ARGUMENTS AGAINST OUTSIDE BREEDING AND TESTING

Reduced to simplicity, the opponents of outside breeding state that outside breeding will ultimately lead to the breakdown of the one-variety district, and that all legitimate existing problems can be solved within the context of the present law.

1. Contamination and Bootlegging

Opponents first foresee outside testing leading to contamination and bootlegging. This point was noted by several witnesses who appeared before the committee. Lloyd Martin, with the Golden State Gins in Madera, stated:

Estimates vary on the number of breeders who might take advantage of this opportunity to come into our district, but from letters that I have received from commercial seed companies throughout the cotton belt of the south, I have to believe that there are at least 10 outside breeders who would be interested.

Assume then that each of these breeders had one plot. . . . It could amount to 200 acres of other than Acala variety cotton being grown in Madera County and unless complete and close supervision is given to this, there could even be some of the original seed

stock brought in here that might get into the wrong hands and we might even have a few illegal plots within the first year.¹⁴

It would appear that contamination and bootlegging of seeds are both possible results of any open testing programs. Other possibilities, all adverse to the best interest of the cotton farmers in the valley, also should be noted.

2. Incentive to Breeders to Emphasize Sales

Viewing the realities, any breeder who is allowed in the San Joaquin Valley may have an interest, even a desire, to improve the quality of cotton from a scientific viewpoint; however, the private breeder presumably also has a strong obligation to realize a return on his capital investment in breeding. The breeder, in other words, would ultimately want to sell his product, and his decision to do so could conceivably be only indirectly related to the relative merit of his end product.

In a normal free market situation, this would be as it should be, and inferior products would be driven out through lack of consumer acceptance. However, the policy of the one-variety district law is that uniformity of product is necessary to develop and perpetuate price premium and, by extension, the maximum return to the farmer. Under these circumstances, the existence of an inferior product on the market, even for a short time, might destroy the collective advantage for everyone else. Supporters of the present one-variety law are therefore fearful that a breeder may come up with a product not clearly superior in either yield or quality to the approved variety in the valley and still, through advertising, the encouragement of bootlegging, or other means, use his breeding operation as a lever to undermine the one-variety district. Seed companies, unable to sell their seed in the valley at this time, would have everything to gain and nothing to lose in the ultimate destruction of the one-variety district.

3. What Follows Successful Breeding?

If it is assumed that commercial breeders can operate within the valley without any of the consequences foreseen above, where would the successful breeding program lead? Opponents of such a program still fear the likelihood, if not the necessity, of an eventual breakdown of the one-variety district. As noted, the commercial breeders would be operating on a profit motive. There are possibly today inferior quality cottons which will outyield Acala in some part or parts of San Joaquin Valley and which would give to the farmer, today, more in-pocket income than he receives today from Acala. The private breeder, using this definition of superiority, could conceivably convince the majority of the farmers in an area to petition the Legislature to repeal the one-variety law for instant profit, or to substitute the new variety for Acala in the law.

The opponents note, however, that to repeal the one-variety district with its quality cotton could do irreparable harm to the cotton industry nationally as well as in this state. In addition, they point out that the government loan, from which much of the in-pocket income from in-

¹⁴ Madera, September 29, 1964. Mr. Martin went on to note numerous places where seed theft was possible, and a like number of possibilities of contamination. Included were the test plot, the cotton gin, the oil mill and the trucks enroute from any of the above.

ferior cottons presently comes, is temporary. To place the California San Joaquin farmer in the position of relying on a temporary, artificial market at the expense of a well-established, apparently permanent market might prove, in the long run, less than wise. On the other hand, to substitute the locally bred new variety for Acala would probably be unacceptable to the present satisfied Acala growers in the remainder of the district, and the result would be a political stalemate.

For the above reasons, the opponents of private outside breeding and testing—and the great bulk of farmers in the area are found within their ranks—have expressed their belief that the testing and breeding be left where it now is, with the personnel manning the U.S.D.A. Shafter station.

4. Indissolubility of the One-variety District

Proponents of outside breeding have argued that if a plan for outside breeding is not adopted, then the Legislature should make it possible for a county to remove itself from the district, either on the request of a specified percentage of the farmers in the county or of a percentage of the acreage in a given county actually planted in cotton. At face value, such a provision would seem equitable, and might appear to be the answer to the hypothetical political stalemate cited in previous paragraph.

Close examination, however, precludes the committee from making such a recommendation. The one-variety district, of necessity, must be indissoluble. To allow one county to withdraw would pose serious problems of contamination and bootlegging to neighboring counties. Even if such contamination could be reasonably well controlled, the existence of a proximate nonmember county in the San Joaquin Valley might seriously affect the buyer confidence upon which the premium price is based. It is true that Riverside, at an earlier date, was allowed to withdraw, but the natural barrier between the present district and Riverside County precluded the contamination threat. With the present member counties, no such physical barriers exist.

5. Adequate Testing Program Now Underway

Throughout the history of the one-variety law, the great bulk of the valley has been more than satisfied with the work done by the U.S.D.A. at its Shafter station. The facts support the contentment of the cotton farmers. Over the last 15 years, for instance, Acala 4-42 has shown a 71-percent gain in yield in the valley and 15-percent increase in quality. In 1945 the yield was 535 pounds, in 1955, 774 pounds, and in 1962 over 1,100 pounds of lint per acre.¹⁵ While it is difficult to estimate the precise role that variety has played in this increase, it must be given a substantial part of the credit. The relative increase in yield as opposed to quality should also be proof that production factors have not been neglected in favor of high lint standards.

In some portions of the valley, the lint per acre has lagged because of a combination of soil and growing conditions, including a shorter growing period. In these areas are concentrated the proponents of outside testing. For that reason, our discussion of the adequacy of present

¹⁵ Testimony of Kenneth Frick, cotton grower and president of the California Planting Cotton Seed Distributors, Bakersfield, November 15, 1963.

research is concerned with that portion of the valley where some dissatisfaction has been voiced.

In Madera and adjacent counties (Merced and western Fresno), variety tests were conducted during the period 1953 through 1962. These tests were aimed at the improvement of the cotton variety in the entire valley and consisted of such major type tests as variety comparison, comparison of California strains of cotton, and models of the present variety. Tests compared California cottons with those from the Mississippi Delta, Arizona, New Mexico and California. Each year in excess of one of this type of test was conducted. In five of the years concerned, tests were conducted on the Mississippi Delta cottons.

Since 1962, increased testing has been conducted in Madera County with five locations selected, each location having at least six types of tests. One particular test, for example, compared 40 cottons from seven states other than California. Besides the variety tests, evaluations were made of advanced strains from the California breeding program and strain management tests were made with advanced strains. In 1963, additional variety management tests comparing Acala and Deltapine Smooth Leaf under differing nitrogen fertilization practices were commenced and are being continued.

In 1964, the program in Madera was further enlarged, with plant breeders making plant selections of promising cottons. Eighty-four separate cottons were tested and represented cottons from 14 states and Peru besides California. These were seed stocks furnished to the California breeders for evaluation of both wilt tolerance and earliness of maturity. In addition, there was a continuation of evaluation of advanced strain materials and varieties management comparisons and models of present varieties.

It would appear, in summary, that the northern area presently is receiving as much research, breeding and testing attention as any area in the San Joaquin Valley, with the possible exception of the Shafter station. The proponents of outside breeding have themselves conceded that much more has been already accomplished in the way of increased testing than they had thought possible when they first directed attention to the problem. It is also worth noting that Tulare County, where yields have suffered badly from a wilt complex problem, but where there has been relatively little interest in amending the one-variety law, has also been the beneficiary of a stepped-up research program. This fact would seem to indicate that both the Shafter station and the seed distributors stand ready to assist any problem area in the district within the limits of available funds.

Finally, the tests currently being carried on in the northern part of the district, as well as in other areas, seem reasonably calculated to assist the Shafter station in the development and selection of a cotton that will perform well in all parts of the district. The current Acala release, 4-42, has stood up extremely well in all testing areas, both in comparison to other Acala cottons, and to other varieties of cotton. The lay judgment of the committee, based upon the evidence of such tests, is that Acala 4-42 is unquestionably the superior cotton for production within the San Joaquin Valley one-variety district.

6. The CPCSD Proposal

The recognition of the present superiority of Acala 4-42, and the conclusion that the Shafter station now has adequate information available to it through its testing program to make a reasoned judgment on the utility of promising strains of cotton in the various subareas within the district, does not mean that no more research should be undertaken. Information on the performance throughout the district of the latest releases and promising strains of other cottons is less than perfect and complete. To permit the measurement of the current release of Acala by a more extensive yardstick, and to keep the search as wide as possible for any other cotton that might hold out the possibility of better performance within the district, the California Planting Cotton Seed Distributors have proposed a new, districtwide testing program.

On June 17, 1964, The California Planting Cotton Seed Distributors reported on the findings of a special industry committee on the one-variety cotton program in the San Joaquin Valley. This proposal, and subsequent amendments to it, is as follows:

Continuous Testing

The economic welfare of the agricultural industry and the State of California will be well served by conducting, on a continuing basis, a cotton variety testing program which will insure the cotton growers of the one-variety district of the most superior and economically profitable variety of cotton.

Indeed, it is appropriate not only to commend past performance on the yield and quality objectives of the one-variety district's cultural research and breeding programs, but to urge an intensification of such efforts along with the necessary financial assistance to support them.

Rising production costs in conjunction with current restrictive acreage allotments, as well as the possibility of increased acreages with lower price supports, require continuing and accelerated research as a matter of practical economics. It is the board's belief that such research may well be even more important in the future than it has in the past.

Problem Areas

Northern Yields. While the history of Acala yield improvement shows approximately the same percentage of progress for each county within the one-variety district, lint production in the northern zone continues below the average yields of the central and southern counties.

According to authoritative testimony of U.S.D.A. and University of California specialists, the disparity in yields between the colder northern and the warmer southern zones is due primarily to the difference in average daily heat units. It is their opinion that any variety of cotton would result in similar yield differentials.

In recognition of the climatic differences, the board has authorized the Shafter station to initiate a comprehensive varietal and strain testing program to be conducted in all four zones of the one-variety district as a part of its continuing efforts to find and de-

velop those cotton strains best adapted to maximum production and uniform high quality for each of the climatic divisions of the district.

Soil Diseases

Certain areas of Tulare County are suffering wilt conditions, compounded by the probability of other as yet unidentified soil diseases, which present declining yield problems of vital economic concern. Definitive research into the problems of multiple soil diseases has been started, but practical solutions are currently non-existent or inconclusive.

It is the board's intentions that the CPCSD should pursue every reasonable and practical avenue of assistance, not only for the benefit of these problem areas, but for the benefit of the total district as well.

Supervision

The San Joaquin Valley cotton variety testing program shall be conducted under the authority of the Director of the State Department of Agriculture. There shall be a representative advisory committee appointed by the director. This committee shall be composed of one person each from the United States Department of Agriculture and the University of California plus four San Joaquin Valley cotton growers representing one each from Western Cotton Growers, Calcot, the California Planting Cotton Seed Distributors and one from another appropriate farm organization; plus one representative each from the cottonseed oil and the cotton fiber marketing companies of the San Joaquin Valley.

Zone Testing

The testing program shall be conducted in at least four locations representative of the climatic and cultural zones of the San Joaquin Valley as selected and approved by the Director of Agriculture on the recommendations of his advisory committee.

Testing Organization

The Director of the State Department of Agriculture shall designate the organization or organizations responsible for the actual conduct of the testing program including yield, fiber, and spinning quality and it shall operate under his direct supervision. It shall be an organization(s) with qualified staff and technical knowledge and equipment for conducting such research.

Varieties

Any public or private breeding organization which is conducting a substantial and recognized program should be encouraged to submit its most promising varieties for inclusion in the testing program. The number of cotton varieties included in each test location shall not exceed a reasonable number and shall include the current Aeala release as the standard by which all other varieties will be compared for all important characteristics including, but not limited to, yield, disease resistance, mechanized harvesting, and various measures of fiber and spinning quality. The Director of the State

Department of Agriculture shall have final authority in determining which varieties are included. He shall also approve testing procedures to insure that adequate scientific procedures are followed.

Superior Variety

Should any variety, public or private, prove equal to or superior in yield and spinning quality to the standard Acala release, as measured by accepted research procedures, and in the opinion of the advisory committee, be sufficiently superior in some other important character, so that it would be economically advantageous for it to be grown, that variety shall be recommended and publicized by the Director of the State Department of Agriculture for adoption by cotton growers within the one-variety district.

AMENDMENTS TO THE PROPOSAL

At a meeting of the designated members of the Industry Advisory Committee held at the Tagus Ranch on December 9, 1964, the following changes in, or addition to, the proposal were recommended:

1. That the existing industry members of the advisory committee be appointed by the organizations which they represent, rather than by the Director of Agriculture, and that a representative of the director be included on the committee.
2. That six additional grower members be appointed to the advisory committee to represent each of the significant cotton-producing counties within the district; respectively, Kern, Tulare, Kings, Fresno, Merced, and Madera Counties, and that these members be selected by vote of all A.S.C. cotton growers within each county from growers nominated by petitions signed by 10 or more growers.
3. That the testing program be financed through an assessment levied on the sale of planting seed within the district, and that this assessment be \$1 per ton for the coming year.
4. That the final choice of a testing supervisor and testing organization be postponed until after the selection of the grower members of the committee.

It is the committee's hope that the plan, when placed in operation, offers the promise of a fuller and more scientific testing of outside cotton than would be possible under any private breeding approach, and does so without threatening the existence of the one-variety district.

CONCLUSION

The committee concludes that the present one-variety law is of great benefit to, and its retention is overwhelmingly favored by, San Joaquin Valley cotton growers. The committee further concludes that while outside breeding has some hypothetically attractive features, its conduct, even under ideal circumstances, risks the future prosperity of the district and its growers to an extent that renders it an unacceptable alternative, especially in the light of the high level of general satisfaction with the present situation, and other available methods for achieving the results hoped for from private breeding. Finally, the committee concludes that with the implementation of its recommendations, the one-variety law will contain all the necessary tools for the continued prosperity of the San Joaquin Valley cotton industry.

RECOMMENDATIONS

1. That no change be made in the one-variety cotton district law except as hereinafter provided.
2. Section 954 be amended to (a) permit the U.S.D.A. and state department to harvest and gin the cotton and (b) to specifically grant to the State Department of Agriculture authority to plant, grow, harvest, and gin cotton, and to designate other persons or agencies to do so in its behalf. This legislation is necessary to clarify the authority of the State Department of Agriculture to test cotton or to designate others to do so in its behalf. Such authority would be necessary should the cotton industry desire to have a testing program within the district conducted by a body other than the United States Department of Agriculture. (See Appendix A.)
3. That the CPCSD proposal be implemented with all possible speed, with the following suggestions:
 - a. Testing should not specifically be limited to commercially released varieties but may include public and private strains that the director has reason to believe might show promise in the San Joaquin Valley.
 - b. As soon as possible, the director shall develop in concurrence with the advisory committee a scientific and acceptable definition of a "superior variety."

The committee specifically endorses the amendment of the proposal to include the election of six county grower representatives to the advisory committee as necessary to the creation of a representative committee.

4. That as soon as practical, the U.S.D.A. station and the CPCSD be encouraged to release differing strains of the Acala variety that might be suitable to differing regions within the district and would not disturb the one-variety district purposes.

PROPOSED LEGISLATION

An act to amend Section 954 of the Agricultural Code, relating to cotton.

The people of the State of California do enact as follows:

1 SECTION 1. Section 954 of the Agricultural Code is amended
2 to read:

3 954. This article does not apply to the planting ~~or~~, pos-
4 sessing for planting, growing, picking, harvesting or ginning
5 of cotton by the United States Department of Agriculture or
6 by the department, nor to the transportation of cottonseed
7 through such districts from a point without the district to a
8 destination without the district. *The department may plant,*
9 *grow, harvest, or gin cotton within such districts and designate*
10 *other persons or agencies to do so for experimental purposes*
11 *under the direct supervision of the department.*

LEGISLATIVE COUNSEL'S DIGEST

Amends Sec. 954, Ag.C.

Cotton districts.

Provides that the law concerning Acala cotton districts does not apply to the possessing for planting, picking, harvesting, or ginning of cotton, as well as the planting or growing of cotton, by the U.S. Department of Agriculture and the California Department of Agriculture.

Permits the California Department of Agriculture to plant, grow, harvest, or gin cotton in such districts and to designate other persons and agencies under the direct supervision of the department to do so for experimental purposes.

Appendix A

STATE OF CALIFORNIA
OFFICE OF LEGISLATIVE COUNSEL
Sacramento, December 28, 1964

HON. JOHN C. WILLIAMSON
212 Goodman Street
Bakersfield, California

ACALA COTTON—NO. 8445

Dear Mr. Williamson:

You have asked us three questions regarding the growing of cotton which are separately stated and considered below.

QUESTION NO. 1

Does the Director of Agriculture now have the power to plant and grow varieties of cotton, other than Acala cotton, within a one-variety cotton district for experimental purposes?

OPINION NO. 1

Yes.

ANALYSIS NO. 1

Section 951 of the Agricultural Code* makes it unlawful, in one-variety cotton districts:

“ . . . to plant, possess for planting, pick, harvest, or gin any variety or species of cotton other than that variety or species known as ‘Acala,’ which consists of the seeds or plants derived from the common seed stocks under the one variety breeding program at the United States Cotton Field Station, Shafter, California.”

We think that it is clear that these provisions of Section 951 generally prohibit the planting or growing in a one-variety cotton district of any cotton, except the prescribed Acala cotton.

The statutory provisions relating to one-variety cotton districts are, however, expressly made inapplicable to the planting or growing of cotton by the State Department of Agriculture by Section 954, which reads, in part, as follows:

“This article does not apply to the planting or growing of cotton by the . . . department [Department of Agriculture; see subd. (d), Sec. 2] . . .”

Neither this provision of Section 954, nor any other provision of law of which we are aware, expressly grants to the State Department of Agriculture, or to the Director of Agriculture, the power to plant and grow varieties of cotton other than Acala cotton in a one-variety cotton district for experimental purposes.

* All section references are to sections of the Agricultural Code.

Section 30, however, does require the State Department of Agriculture, among other things, to "... promote and protect the agricultural industry of the State. . . ." Under this provision, we think that the department and the Director of Agriculture, as the executive officer charged with the duty of conducting the department (see Sec. 21), have ample power to plant and grow varieties of cotton for experimental purposes, and to do so within a one-variety cotton district.

QUESTION NO. 2

Can the Director of Agriculture delegate to others his power to plant and grow varieties of cotton, other than Acala cotton, within a one-variety cotton district for experimental purposes?

OPINION NO. 2

Yes.

ANALYSIS NO. 2

Section 12 reads as follows:

"Whenever any power or authority is given by any provisions of this code [Agricultural Code] to any person it may be exercised by any deputy, inspector, or agent duly authorized by him."

We conclude from the express language of this section that the Director of Agriculture can delegate to any deputy, inspector, or agent duly authorized by him his power to plant or grow varieties of cotton, other than Acala cotton, within a one-variety cotton district.

QUESTION NO. 3

Is the existence of the power of the Director of Agriculture to plant or grow varieties of cotton, other than Acala cotton, within a one-variety cotton district subject to any reasonable doubt which could be corrected by legislation?

OPINION AND ANALYSIS NO. 3

As we have indicated in our analysis of your first question, there is no provision of law, of which we are aware, that now expressly grants to the Director of Agriculture the power to plant and grow varieties of cotton, other than Acala cotton, within a one-variety cotton district for experimental purposes. While, in our opinion, he does now have such power, legislation specifically granting him the power to do so would, we think, clarify the matter.

Very truly yours,

GEORGE H. MURPHY
Legislative Counsel

By STANLEY M. LOURIMORE

DELTA & PINE LAND COMPANY
January 8, 1965

MR. WILLIAM H. GEYER
Committee Consultant
Assembly Committee on Agriculture
Room 4098, State Capitol, Sacramento

Dear Bill:

As requested by Jim Bishop during a telephone conversation this morning I am sending you the price of our D&PL brand cotton planting seed. We appreciate your interest and willingness to include this in your report.

Since we are not associated with a crop improvement association in California, it is necessary that we apply our own classification to various generations of seed. We sell three classifications of seed in the west, Basic, Verified and Merited. Basic is the same generation as Foundation and is sold only to growers who have signed contracts with us for seed increase. Verified is the same generation as Registered (purple tag) and Merited is the same generation as Certified (green tag). Both of these generations are available to the general public.

We have never sold seed in the fuzzy state, so all prices are for delinted and treated seed ready to plant.

Quantity	Verified		Merited	
	Machine delinted (per ton)	Acid delinted (per ton)	Machine delinted (per ton)	Acid delinted (per ton)
1 ton to 19 tons -----	\$245	\$295	\$195	\$245
20 tons to 199 tons -----	240	290	190	240
200 tons to 499 tons -----	238	288	188	238
500 tons to 849 tons -----	235	285	185	235

As you know there are considerable costs in delinting and treating seed and these costs vary depending on the type delinting and where the delinting is done. Price quoted on a fuzzy basis is misleading at best.

I hope this information will be of some value to you.

Sincerely yours,

W. W. BRADFORD, *Manager*
Western Division

LETTERS OF TRANSMITTAL

ASSEMBLY INTERIM COMMITTEE ON AGRICULTURE

February 1, 1965

HON. JESSE M. UNRUH
Speaker of the Assembly; and

HON. MEMBERS OF THE ASSEMBLY
State Capitol, Sacramento, California

Gentlemen: In accordance with the provisions of House Resolutions 498 and 500.1 of the 1963 General Session, the Assembly Interim Committee on Agriculture herewith submits Part III of its final report, containing a record and report of the Subcommittee on Livestock and Dairies, entitled "The California Milk Stabilization Act."

Respectfully submitted,

JOHN C. WILLIAMSON, *Chairman*
HAROLD E. BOOTH, *Vice Chairman*

HON. JOHN C. WILLIAMSON

Chairman

Assembly Interim Committee on Agriculture

State Capitol

Sacramento, California

Dear Mr. Williamson :

Your Subcommittee on Livestock and Dairies of the Assembly Interim Committee on Agriculture, in accordance with your instructions, herewith submits its report on the subject matter assigned and studied during the 1963-64 interim period.

Respectfully submitted,

FRANK P. BELOTTI, *Chairman*

HALE ASHCRAFT

HAROLD E. BOOTH

CARL A. BRITSCHGI

MYRON H. FREW

ACKNOWLEDGMENTS

Your committee wishes to take this opportunity to express its appreciation to the various organizations and individuals for their fine cooperation and assistance during the 1963-64 interim.

We are indebted to Director of Agriculture Charles A. Paul for the help Donald A. Weinland, Assistant to the Director; Chief William J. Hunt, Jr., of the Division of Dairy Industry; Chief Albert E. Reynolds of the Bureau of Dairy Service; Chief Louis C. Schafer and Mr. L. R. Walker of the Bureau of Milk Stabilization, have given this committee in its deliberations.

Particular acknowledgment and thanks are extended to Dr. Olan D. Forker, Dr. D. A. Clarke, Jr., and members of the staff of the Division of Agricultural Sciences, University of California, and to the university for the invaluable assistance Dr. Forker and Dr. Clarke have given the committee by their participation in the hearings and preparation of reports.

We are extremely grateful for the continued fine service rendered by the Legislative Counsel Bureau, and to Kent L. DeChambeau and Stanley M. Lourimore, members of the staff.

Your committee is also indebted to the following industry organizations, as well as a number of individual producers and distributors whose presentations contributed to the accumulation of data and testimony represented by this report: Dairy Institute of California, California Milk Producers' Federation, California Farm Bureau Federation, Agricultural Council of California, Dairyman's Cooperative Creamery Association, Milk Producers Council, Superior Milk Producers Association, San Diego Milk Producers Council, Protected Milk Producers Association, Central Milk Sales Agency, General Dairy Industry of Southern California, Western Dairymen's Association, Dairymen's Service Association, United Dairymen's Association, Milk Producers Association of Central California, American Dairy Association of California, California State Grange, California Cheese and Butter Association, Alameda County Milk Dealers Association, Associated Dairymen, Danish Creamery Association, Northern California Milk Dealers' Association, United Dairymen's Association, Dairy Mart Farms, Inc., California Teamsters Legislative Council, California Retailers Association, and Security First National Bank.

We wish to extend a special thanks to the University of California at Berkeley, and officials of the following cities and counties for the warm hospitality and use of their facilities: City and County of San Diego, City of Dairy Valley, Lake San Marcos, Stanislaus County and City of Modesto.

PART I. COMMITTEE ACTIVITIES

A. PURPOSE OF HEARINGS

1. House Resolution 498

House Resolution 498 (Belotti) charges the Assembly Subcommittee on Livestock and Dairies with the responsibility of determining whether or not the legislative intent and objectives of the California Milk Stabilization Act are being achieved, and reads as follows:

“WHEREAS, The California Legislature has declared that fluid milk and fluid cream are necessary articles of food for human consumption; and

“WHEREAS, The production and maintenance of an adequate supply of healthful milk of proper chemical and physical content, free from contamination, is vital to the public health and welfare; and

“WHEREAS, The production, transportation, processing, storage, distribution or sale of fluid milk and fluid cream in the State of California is an industry affecting the public health and welfare; and

“WHEREAS, In the past unfair, unjust, destructive and demoralizing trade practices have been carried on in the production, marketing, sale, processing, and distribution of fluid milk and fluid cream which constitutes a menace to the health and welfare of the inhabitants of this state; and

“WHEREAS, Such practices tend to undermine sanitary regulations and standards of content and purity, however effectually such sanitary regulations may be enforced; and

“WHEREAS, It has been demonstrated in this state, as well as in many other states of these United States, that health regulations alone are insufficient to prevent disturbances in the milk industry which threaten to destroy and seriously impair present and future supplies of fluid milk; and

“WHEREAS, It has been previously declared to be the policy of this state to promote, foster and encourage the intelligent production and orderly marketing of commodities necessary to its citizens, including milk; and

“WHEREAS, The law presently known as the Milk Stabilization Act has been a part of the laws of this state since 1937; and

“WHEREAS, This law has been amended from time to time during the ensuing period for the purpose of facilitating its administration and to carry out the legislative intent as set forth in Section 4205 of the Agricultural Code; and

“WHEREAS, It is stated legislative intent as set forth in Section 4205 that the powers conferred in Chapter 17 (commencing with Section 4200) Division 6 of the Agricultural Code be liberally constructed and that nothing in the chapter be construed as

permitting or authorizing the development of conditions of monopoly in the production or distribution of fluid milk or fluid cream and that, furthermore, in the establishment of the terms and conditions under which fluid milk and fluid cream shall be purchased from producers, and under the same, such terms and conditions shall be those which will, in the several localities and markets of the state and under the varying conditions of production and distribution, insure an adequate and continuous supply of pure fresh wholesome fluid milk and fluid cream to consumers thereof at fair and reasonable prices; now, therefore, be it

"Resolved by the Assembly of the State of California, That the Assembly Committee on Rules is requested to assign to an appropriate interim committee the study of whether or not the legislative intent and objectives of the California Milk Stabilization Act, as set forth in Article 1 (commencing with Section 4200), Chapter 17, Division 6 of the Agricultural Code, are being properly carried out and that such committee be authorized and directed to call upon any agency or source of information such as, but not limited to, the University of California and the Department of Agriculture to assist in its study with such interim committee to report its findings and conclusions to the Assembly by the fifth legislative day of the 1965 Regular Session."

The legislative intent and objectives of the Milk Stabilization Act as set forth in Article 1, Chapter 17, Division 6 of the Agricultural Code that were studied are summarized as follows:

1. "... (to) insure an adequate and continuous supply . . .
2. "of pure, fresh, wholesome fluid milk and fluid cream to consumers thereof . . .
3. "at fair and reasonable prices." (Section 4205)
4. "To enable the dairy industry . . . to correct existing evils, develop and maintain satisfactory marketing conditions, and bring about a reasonable amount of stability in the production and marketing of fluid milk and cream . . ." (Section 4204d)
5. "(although) It is the intent . . . that . . . this chapter shall be liberally construed. . . . Nothing in this chapter shall be construed as permitting or authorizing the development of conditions of monopoly in the production or distribution of fluid milk or fluid cream." (Section 4205)

Hearings and field trips were held throughout the state to obtain information from producers, distributors, retailers, consumers, and other interested parties concerning the current status of the industry. Witnesses from the Department of Agriculture were specifically requested to present data that would assist the committee in this evaluation of the Milk Stabilization Act. In addition, the committee encouraged testimony concerning problems not directly related to H.R. 498 and requested that industry submit whatever proposals for legislative action that they deemed appropriate and necessary.

B. HISTORY OF HEARINGS

During the 1963-64 interim, your Subcommittee on Livestock and Dairies held five public hearings from January 10, 1964, through October 5, 1964.

On January 10, 1964, your committee met in San Diego in morning session for the purpose of outlining a program for future hearings, based on the subject matter of H.R. 498, to determine whether or not the legislative intent and objectives of the California Milk Stabilization Act are being properly achieved.

Following the committee's executive session, the meeting opened to receive testimony from representatives of the Department of Agriculture, and leaders of various segments of the dairy industry.

All eight witnesses who appeared before the committee concurred that the context of H.R. 498 provided sufficiently for a comprehensive legislative study of the problem areas outlined.

On February 14, 1964, your committee met in Dairy Valley, Los Angeles County, and heard testimony relating to the Milk Stabilization Act from 11 witnesses during a five-hour session. The city council chamber overflowed with a crowd of intensely interested dairymen. This meeting was preceded on February 13th by a field trip to Los Angeles County dairies.

On May 26, 1964, your committee met at Lake San Marcos, San Diego County, to receive testimony from 12 witnesses on the problems of the dairy industry in that area. Three proposals for legislative action were suggested for the committee's consideration. This meeting was preceded on May 25th by a field trip to dairies in northern San Diego County.

On September 15, 1964, your committee met in Modesto to obtain testimony from milk producers and producer groups, concerning the adequacy and wholesomeness of the state's milk supply, reasonableness of prices and margins, and the stability and prosperity of the industry. Four representatives from the Department of Agriculture, together with 18 producers and industry witnesses, testified in a session that lasted well over five hours. This meeting was preceded on September 14th by a field trip to Stanislaus County dairies.

On October 5, 1964, your committee met in Berkeley to hear facts and opinions from distributors and organizations relative to the adequacy and quality of the state's milk supply, reasonableness of raw product costs and margins, and whether the stability and prosperity in the marketing of milk is being fulfilled. Eleven witnesses were heard at this four-hour session.

In summary, your committee heard 64 witnesses during some 23½ hours of session in five California cities.

Each hearing was well attended by members of the committee. The large number of witnesses and interested observers clearly indicates the intense concern for the general welfare of the industry and its continued stability under the California Milk Stabilization Act. A summary of testimony and a list of suggestions for legislative action as presented by witnesses at each hearing appear in the Appendix to this report.

Your committee met in executive session on November 9, 1964, at Palm Springs and again on December 8, 1964, at Newport Beach and discussed and evaluated at great length the evidence received at formal hearings and information available from other sources. A summary of the important issues and considerations, and the committee's findings, conclusions, and recommendations are presented in the report that follows.

PART II. FINDINGS, CONCLUSIONS, AND RECOMMENDATIONS

The hearings of this interim session were held to receive testimony and collect facts as to whether or not the legislative intent and objectives of the California Milk Stabilization Act, as set forth in Article I (commencing with Section 4200), Chapter 17, Division 6, of the Agricultural Code, are being properly carried out.

The intent and objectives as specified in the Agricultural Code are to:

1. "... insure an adequate and continuous supply . . .
2. of pure, 'fresh, wholesome fluid milk and fluid cream to consumers thereof . . .
3. at fair and reasonable prices."

In addition, the act specifies the purpose as:

4. "enabling the dairy industry . . . to correct existing evils, develop and maintain satisfactory marketing conditions, and bring about and maintain a reasonable amount of stability and prosperity in the production and marketing of fluid milk and fluid cream . . ."
5. Although it was specified that the intent should be liberally construed, a warning was given that "Nothing in this chapter shall be construed as permitting or authorizing the development of conditions of monopoly in the production or distribution of fluid milk or fluid cream."
6. The act gives authority and direction to the Director of Agriculture to carry out the intent and objectives of the act.

A. FINDINGS

Generally, the witnesses were in agreement that the industry is currently, and has been, providing consumers with an adequate supply of pure, fresh, wholesome milk at reasonable prices, and that the industry has been relatively progressive and stable.

Market milk production has exceeded class I usage by more than 20 percent since 1958. Persons responsible for enforcing sanitary and quality standards stated that the stability created by the Milk Stabilization Act provides a favorable environment for enforcement of health and sanitary standards.

Testimony, supported by separate research, indicates that the producer class I price is higher and the consumer price is lower in California than average prices in most other United States markets.

The distributor representatives seem to be generally satisfied that the legislative intent and objectives are being achieved. However, some producer representatives indicate unrest and dissatisfaction with various current conditions in the industry. This dissatisfaction may now or sometime in the future contribute to industry instability. No testi-

mony was offered by consumer representatives or by the retail store sector of distribution, despite the fact that all hearings received adequate publicity and some representatives of both groups were in attendance.

Although most witnesses testified that the Milk Stabilization Act is a useful tool that benefits all segments—producer, distributor, and consumer—the testimony and requests for legislative action indicated certain problem areas that need further consideration, review, and perhaps action by either the State Legislature or the Department of Agriculture. In summary, they are:

1. The method of payment to producers,
2. Sales to military installations,
3. Producer-distributor integration,
4. Usage classification,
5. The two-pool method of producer payment, and
6. The problem of increasing costs.

1. Method of Payment to Producers

Currently, payments to producers are based on the usage of the individual plant (or group of plants in the case of a distributor pool) to which a producer ships his milk and the minimum class price in effect in the marketing area where the milk is sold.

Each producer enters into a contractual agreement with his distributor concerning quantities of milk that will be exchanged and the producer's share of the various class usages. The negotiated terms of the contract, in effect, determine the blend price received by each producer. This procedure has resulted in a wide variation among producers in the blend price or returns received.

Some producers are paid on the basis of 100 percent class I utilization, and other producers are paid on the basis of a very small percentage class I utilization. As a result, some producers receive less than \$3.39 per hundredweight for market milk, while other producers in the same production region receive average prices equal to the minimum class I price which may be as high as \$5.69 per hundredweight for 3.8 percent milk.

This difference in the average blend price received among producers is perhaps the reason for the indicated producer unrest and dissatisfaction. The system used results in this disparity and perhaps provides the underlying cause for two other specific problems presented in the hearings—the military sales problem and the producer-distributor integration problem.

Producers in the lower percentage group in the northern San Joaquin Valley that receive less than \$3.70 per hundredweight have an incentive of at least \$1 per hundredweight to somehow achieve the same blend price as some other producers in the same area. A \$1 difference in blend price amounts to about \$16,500 difference in annual income for a herd of 150 cows averaging 11,000 pounds of milk per cow. Producers with a low usage thus have a relatively large incentive to move into the higher income group either through integration, purchase of a more favorable contract, organization to make military or school bids, or violation of the minimum price or unfair trade practice provisions of the act.

Some producers indicated additional dissatisfaction with the contract as an instrument of negotiation. They claimed that the contract provides the distributor with unequal bargaining power and provides the distributor with the power to discriminate pricewise among producers. They argued that the large quantity of milk available in excess of class I usage places a producer in a position of having no alternative but to take whatever contract terms the distributor offers. Distributors argued in favor of the contract and claimed that since it is a negotiated instrument (both parties agree to its terms), the unequal balance of power argument is invalid.

However, testimony by both groups clearly indicated that the contractual arrangement does enable distributors to pay different producers different blend or average prices. The distributors argued that this was beneficial in that they were thus able to pay producers in high-cost areas a higher blend and producers in typically low-cost areas a lower blend price. High contract producers are opposed to a reallocation of usage which deprives them of a portion of their class I usage for the benefit of other producers, many of whom are only recently converted from manufacturing milk operations. Conceptually, within the limits of plant or distributor usage and minimum class prices, a plant or distributor can pay a high blend price to high-cost producers, and a low blend price to low-cost producers. If this is true, then the contract system which is required by law, permits different blend prices to be paid to different producers.

Some producers argued that this arrangement is conducive to the continued existence of inefficient, high-cost producing dairies and contributes to the surplus. Evidence of a more-than-adequate supply of milk and the disparity of blend returns among producers implies a maladjustment in the utilization of resources and supports their argument.

It should be noted at this point that producing units now in existence have developed under the current system or method of payment. A too-rapid adjustment in blend prices among producers would result in windfall losses to some and windfall gains to others. Therefore, to avoid such extreme consequences, only a long-term plan to modify the current method of payment should be considered.

Although producer groups indicated dissatisfaction in this area, no proposal for resolving this issue either administratively or through legislative change was presented.

Since the method of payment, the level of producer blend prices, and the disparity in blend returns among producers seem to underlie most of the dissatisfaction of producers and producer groups; and appears to be inconsistent with the intent of the act, and since no satisfactory legislation or administrative change is suggested by the testimony presented, this committee recommends that the Department of Agriculture and the industry study alternative methods of payment and develop a program that will alleviate the evident current condition of unrest, disparity, and inconsistency. Because of the evident importance of this issue, this committee desires to be kept informed.

2. Sales to Military Installations

During recent years, milk sold to military installations has moved at producer prices below the minimum established by the state. The state does not enforce or set minimum resale prices on milk sold to military installations. Conceivably, the state can enforce class I prices to proprietary firms, but cannot enforce minimum price provisions on cooperatives. Producer cooperatives were first to obtain bids that resulted in returns to producers below class I prices. To compete against the producer processing cooperatives, "special purpose" cooperatives were organized for the specific purpose of making bids on military sales. The "special purpose" cooperatives thus attempted to compete and maintain a class I outlet for the proprietary producers.

The whole problem of military sales is now under consideration by the courts and the Department of Agriculture. But, unquestionably, this development is causing some disruption in the stability of the industry and gives rise to a leakage problem in the regulation of milk prices. Also, as previously remarked, it is related to or may be a result of the situation summarized under "Method of Payment to Producers" above.

The net result of this activity is that producers receive less than the established minimum class I price for milk sold to military installations. A portion of this milk, some testified, ultimately finds its way to non-military households.

This committee recommends that the Assembly support the Department of Agriculture and the industry in their efforts to regulate sales of milk to military installations, and thus to fulfill the intent of the act.

3. Producer-distributor Integration

Since 1957, the industry has shown some instability in that from the period 1957-1961, integration expanded through a rapid increase in the number of milk depots or cash-and-carry outlets. These were developed by producers to obtain a higher class I usage outlet and thus a higher blend return for their production.

During the period 1960-1964, the number of such outlets was relatively stable, but an increase occurred in the number of distributing units with a financial interest in or complete ownership of producing units. Testimony indicated that this growing integration was motivated by a desire on the part of distributors, especially smaller distributors, to gain additional financial stability for their businesses as producers with high class I outlets.

Some witnesses expressed the opinion that integration moves now occur less frequently, perhaps because increased prices of feed and other inputs have reduced the incentive for integration. Nevertheless, the problem remains a serious one, and in the opinion of the committee, is directly related to the disparity conditions already discussed in the section on "Method of Payment to Producers."

As long as these disparity conditions persist, the disparity of and by itself will provide ample incentive for producer-distributor integration. The committee, therefore, suggests that any program developed to alleviate current disparity conditions will, at the same time, serve to reduce incentives for integration.

4. Usage Classification

The milk and dairy products in each use classification are specified in the 1963 Agricultural Code. In the course of hearings before your committee, producer groups asked that cottage cheese and certain other products be classed as class I, rather than class II, as at present.

Based on the evidence available, it is not possible to determine the feasibility of this proposal. A University of California report to this committee during its last interim session and testimony during this session indicates that processors could, for the period 1950 to 1962, pay approximately 30 cents per hundredweight more for milk than they were paying before they would resort to using imported ingredients. However, the relationship between the value of milk utilized in these specific products and the current price being paid by processors was not presented in evidence.

Since adequate information is lacking, the committee is unable, at present, to determine whether or not a separate class should be established for cottage cheese and other higher value products. Therefore, no recommendation is made regarding reclassification.

During executive session, this committee discussed the feasibility of releasing the power of classification to the Director of Agriculture so that his office, with all its resources, could consider such proposals. The decision was to retain the power of classification, but the committee requests that the Director of Agriculture consider the feasibility of reclassification at frequent intervals.

5. Two-pool Method of Producer Payment

This item is given separate consideration because it represents a new ruling of the Department of Agriculture and because it came under attack during the hearings.

Prior to April 1, 1964, a three-pool method of allocating the plant usage (plant pool) to producers was permitted. This three-pool method permitted distributors to make unequal payments (blend prices) to producers for contract quantities of milk through use of the guarantee provision of the contract agreement. The mandatory two-pool method results in equal blend prices to each producer member of the plant (or distributor) pool for the contract portion of milk received. This ruling in itself did not alter the pool base which was and is, except for the distributor pool for multiplant firms authorized by AB 1534, defined in terms of the utilization and effective class prices at each distributor plant.

In making the two-pool method mandatory, the Department of Agriculture stated that its purpose was to enforce minimum price regulations and equalize the blend price payment among producers.

When the authority of the director to institute the mandatory two-pool method was questioned, the Legislative Counsel gave its opinion that the Director of Agriculture had such authority. Nevertheless, this method of payment came under attack at the hearings.

This committee therefore recommends that the Department of Agriculture study closely the effects of this method and determine whether or not the results are consistent with the intent and objectives of the Agricultural Code and report back to this committee. This procedure needs the continued attention of this particular committee.

6. The Problem of Increasing Costs

Both producers and distributors have had to adjust continuously to increased prices of factors of production and distribution. Producers, especially in metropolitan areas, have had large increases in taxes, wage rates, and cost of supplies. Periodically, producers have requested increases in the class I price, feeling justified in their request because the act directs the administrator to consider costs of production in the determination of minimum prices. However, in view of the amount of excess market milk, the Director of Agriculture has not deemed an increase in the class I price appropriate. It should be noted additionally that the current interpretation by the director of what is "surplus" or "excess" milk is under attack as contrary to amendments of Section 4281 of the Agricultural Code adopted by the 1957 Legislature.

Since increased taxes place a disproportionate burden on metropolitan producers, and since this is a problem common to all agricultural firms, this committee recommends that the urban taxation of agricultural enterprises be studied. This committee endorses study and action by the full Committee on Agriculture. However, this committee recognizes that this is not the basic factor underlying the current problems specified herein, rather it is one contributing factor toward reallocation of resources among competing uses.

Distributors have often suggested that wage rate increases have not been reflected in increased margins soon enough to absorb their effect on increased cost. Sometimes 12 months elapse before hearings are scheduled to consider the effect of the increased wage rate. The reason given for the delay is that new cost estimates are necessary to provide a basis for changes in the margin. The current costing procedure requires considerable manpower and is time consuming. This committee strongly recommends that the Department of Agriculture make a study of their current costing methods and modify them so as to determine the impact of wage rate and other cost increases more rapidly.

B. CONCLUSIONS AND RECOMMENDATIONS

The overall *conclusions* of your committee are that:

1. With the exception of the disparities discussed, which the committee feels can be resolved, the intent and objectives of the Milk Stabilization Act are being properly achieved;
2. The Milk Stabilization Act has served and is serving the consumer and all segments well;
3. The performance of the Milk Stabilization Act appears to have improved markedly under the present administration; and
4. Aside from some technical amendments, there appears to be no need for major revisions of the act.

It is the committee's belief that the Milk Stabilization Act is successful today because the Legislature has continuously taken an active role in studying its effects and problems and in amending the act when amendments seemed appropriate. The hearing testimony did indicate some current problem areas that need both industry and legislative

action. Therefore, your committee *recommends* and requests the following action:

1. Since most of the problem areas described in this report are related to or associated with the level of producer payments, this committee requests that the Department of Agriculture and industry conduct a thorough appraisal of alternative producer payment and pooling procedures and keep this committee informed of their findings and action.
2. Since it appears that some portion of milk sold through military installations ultimately finds its way into nonmilitary households, your committee recommends that the Assembly support changes in rules and regulations of the Department of Agriculture to enforce minimum price provisions on milk sold to military installations, and send representatives to Washington, D. C., to discuss this problem with the appropriate authorities.
3. Since one of the factors of the increasing cost problem facing dairymen in metropolitan areas is urban taxation, your committee heartily endorses study and action on taxation of land used in agricultural production by the full Committee on Agriculture.
4. Since the time lag is long between wage rate increases and reconsideration of distributor margins, your committee recommends that the Department of Agriculture develop streamlined costing methods to enable them to determine more rapidly the impact of wage rate increases.

PART III. RESEARCH FINDINGS

A. THE CALIFORNIA MILK SUPPLY

"Is the supply of milk adequate now and will it be in the foreseeable future?" This question posed by the committee was answered in the affirmative by most witnesses. Under current departmental interpretations of "surplus" or "excess" milk, market milk production has exceeded class I usage by more than 20 percent since 1958 (Table 1) and currently exceeds class I needs by approximately 30 percent.

TABLE 1
Commercial Production and Usage of Market Milk Fat
California 1944-1964

Year	Commercial production, thousand pounds	Class I usage, thousand pounds	Other than class I usage	
			Thousand pounds	Percent of production
1944	110,729	103,731	6,998	6.3
1945	117,825	113,825	4,000	3.4
1946	128,580	122,569	6,011	4.7
1947	136,289	122,565	13,724	10.1
1948	135,274	123,173	12,101	8.9
1949	139,485	124,853	14,632	10.5
1950	142,842	128,640	14,202	9.9

As such surplus grows more and more, milk eligible for grade A cannot find a market through fluid channels and is diverted to manufacturing plants.

During the 10-year period following World War II (1947-1956), the reserve supply or "other than class I usage" never exceeded 13.5 percent on an annual average basis. During this period of time, ac-

cording to Mr. Weinland, a Department of Agriculture representative, "consumers in California were supplied very adequately and processors had little difficulty in obtaining their needs . . . (except when) some seasonal shortages appeared during the fall of 1952 . . . when the indicated standby on a milkfat basis was only 2.9 percent for October (Table 2) and the annual average for 1952 dropped to 7.3 percent."

It appears, therefore, that the unofficial standby of 13 percent, used by the Department of Agriculture and recognized by the industry for a number of years as a guide, is adequate. Thus, the current supply is more than adequate to satisfy the intent and objectives of the Milk Stabilization Act.

The production of manufacturing milk has been rapidly declining in recent years (85 million pounds of fat in 1944 compared to 50 million pounds in 1964), and the increased quantity of market milk available for "other than class I usage" is necessary to produce the manufactured dairy products required by California's increasing number of consumers (Table 3). However, the specified intent of the act is not to insure to consumers an adequate supply of manufactured dairy products, but to "... insure an adequate and continuous supply of . . . fluid milk and fluid cream to consumers . . ." (emphasis added).

A large portion of the manufactured dairy products now consumed is imported from other excess milk producing states. Since California processors must compete with imported products in the California market and since the intent of the Milk Stabilization Act does not encompass this portion of supply, the quantity of milk produced locally for manufacturing uses is outside the scope of this study.

If the department's interpretation of "surplus" or "excess" milk is accepted, the "more than adequate" supply conclusion raises some concern as to the reasonableness of prices. Since the minimum price to producers for class I usage influences the quantity of milk that producers in the aggregate are willing to produce, the class I price is higher than necessary to bring forth the adequate supply of market milk. More will be said about this later. It may be desirable that there be

further exploration of the position currently advanced by many producers that the department is not carrying out the intent of the 1957 amendment of the Agricultural Code Section 4281 in its present definitions administratively of "surplus" or "excess" milk.

Supply Is Pure, Fresh and Wholesome

All evidence received indicates that the intent of the Legislature is being fulfilled with regard to milk quality. All who testified agreed that the quality of California's fluid milk supply is now the best in the state's history, and is equal to or superior to the quality of milk in other United States markets. Mr. Reynolds, of the Department of Agriculture, stated, "It would be more difficult to enforce quality or consumer protection standards in an industry that was weak and not prosperous." To the extent then that the minimum pricing provisions of the Milk Stabilization Act are successful in maintaining a strong and prosperous industry, the act helps to insure to consumers a "pure, fresh and wholesome" supply.

Portions of testimony presented by Mr. Weinland, assistant to the Director of State Department of Agriculture, are given below to provide an indication of the current quality of California's milk supply and the means utilized to provide consumers with a pure, fresh and wholesome supply.

"Laws protecting the wholesomeness and safety of California's milk supply have been considered among the best in the nation for many years. These safeguards protect the health of the consumer in many ways; for example, market milk and fluid milk products must comply with strict standards as to bacteria, sediment, adulteration, freedom from antibiotics and pesticide residues. In addition, milk must be obtained from healthy animals properly fed and kept.

"In addition to purity standards which apply to milk itself, the California laws require all producers of market milk to comply with building standards which are the most advanced in the nation. Every construction detail is spelled out in the California Administrative Code to accomplish complete cleanliness and sanitation in the production of milk.

"The milk processor is also tightly regulated with respect to cleanliness and sanitation. Each milk processor is required to be licensed by the Department of Agriculture and as a condition of license approval must conform to building construction standards and sanitary methods of processing and packaging.

"The pasteurization process is carefully regulated to insure consumers safe milk and milk products. California is among the few states which require pasteurizer operators to be licensed. Qualification is determined by rigid examinations.

"The Director of Agriculture is empowered to delegate the responsibility of enforcing the market milk laws to city or county health departments, if they make application and provide competent personnel and laboratory facilities. These are known as approved milk inspection services. There are 34 services, operating in the state, all supervised by the Bureau of Dairy Service staff. These services employ about 100 milk inspectors who cover the

market milk dairy farms and processing plants throughout the state.

"Counties where no approved milk inspection service is available can apply to the director for permission to use the grade A label if 51 percent of the producers, processors and distributors so signify. These areas are known as established milk inspection services and are operated by the state. Thirteen counties and parts of seven others are inspected by the Department of Agriculture.

"Milk from dairy farms and milk processing plants which fails to conform to the bacterial standards is required to be degraded or excluded from the market. Milk which is impure, tainted, dirty or unwholesome is subject to condemnation.

"California has set strict requirements regarding pesticide residues in milk and milk products. Samples of raw milk at producer level are taken from each dairy farm at approximately 90-day intervals. Milk which does not meet these strict requirements for pesticides is kept off the market by the enforcement officials. Samples of pasteurized milk sold in every area of the state are tested at least once each month to determine compliance.

"Milk is also tested for the presence of antibiotics which could enter the supply from treated animals. The antibiotic control program has been so effective that now a positive sample is rarely found.

"The Bureau of Dairy Service is cooperating with the U.S. Public Health Service and the State Department of Public Health in carrying out a radiological surveillance program. Bureau officials are submitting samples of milk from every area in California for radiological testing. The bureau is also participating in a special study partially financed by federal funds to determine the causes of increased levels of radioactive fallout in the milk produced in certain areas of the state.

"In 1963 the director formed an advisory body known as the California Milk Quality Committee. The committee is made up of qualified people who represent producers, consumers, public health officials, veterinarians, farm advisers and scientists. The purpose of the group is to coordinate the efforts of all agencies, public and private, in a common effort to control bovine mastitis. A definite program has been outlined and is expected to be put into action very soon.

"We do not have access to information regarding the quality of market milk produced and sold in other states but we do know that the U.S. Public Health Milk Ordinance and Code is used as a basis of law by 34 states, 1542 municipalities and 397 counties and California standards of milk production are considerably more strict than the federal standards. For example, the U.S. Public Health Milk Ordinance and Code places a bacterial limit of 200,000 per milliliter on raw milk for pasteurization while the California limit is 75,000."

B. PRICES AND MARGINS

It is the legislative intent of the Milk Stabilization Act that consumer prices shall be "fair and reasonable" but the definition or determina-

tion of reasonableness is not specified. For the purposes of evaluating the reasonableness of California consumer prices, the committee has considered two different questions: (1) Has the California program of regulation resulted in prices to consumers "in line with" prices in other markets where different types of regulations occur? (2) Has the California program permitted and encouraged the industry to achieve economic efficiency so that an adequate but no more than adequate share of the state's resources is used in the production and distribution of fluid milk and fluid cream?

1. California Consumer Prices Compared with Prices in Other Markets

In summarizing testimony, all witnesses considered prices to consumers reasonable. In addition, available research results indicate that consumer prices are "in line" with prices in other United States markets.

One witness provided direct price comparisons stating that "a 46-city average for the month of December 1963 was 24.6 cents per quart, while . . . milk sold out of the store in Los Angeles for 24 cents and in (the bay area) for 24½ cents." Labor union representatives stated that they considered the California price reasonable even though prices were lower in some other markets. They regarded the low prices in other markets as temporary (the result of price wars), disruptive to normal marketing, and detrimental to their members.

Results of a statistical study recently made, but not published, support the conclusion that consumer milk prices on the average in California are slightly lower than consumer prices in many other United States markets. A cross-sectional analysis of the out-of-store price of milk in quart fiber containers in 161 United States markets, as reported in the *Fluid Milk and Cream Report* for January 1964, was conducted. The results indicate, after allowing for size of market and regional price differences in each of the markets, that the out-of-store price of milk in California markets averages two cents per quart lower than in markets with federal milk market orders and one cent per quart lower than the average price for markets grouped according to other types of price regulation—federal-state, state, and unregulated.

2. Economic Efficiency of Production and Distribution

a. *Producer Prices and Milk Supplies.* The class I price paid producers for fluid milk has increased from \$5 per hundredweight in 1955 to \$5.69 in 1963. Despite this increase, however, the average annual blend price received by California producers has stayed relatively stable, between \$4.67 and \$4.90 (Table 4). Figure 1 clearly depicts the increase in average class I price (San Francisco minimum used here as a basis for comparison), the relative stability of annual average blend prices, and the growing divergence of these two prices.

A comparison of California's producer prices for fluid milk with prices in other United States markets indicates that California producer prices were lower than the average of all markets during the early and middle 1950's but are now slightly higher (Table 5). While producers in 33 markets in California were paid about one cent less per quart for fluid milk in January 1950, by January 1953 California producers received an average of 0.2 cent more.

TABLE 4

SOURCE: From prepared statement of California Department of Agriculture, hearing of California Assembly Interim Subcommittee on Livestock and Dairies, Modesto, September 15, 1964.

Despite the continuous rise in class I prices since 1955 and despite an improvement relative to average producer fluid milk prices in other United States markets, California producers on the average have not realized an effective increase in returns because the production increase has brought an increase in the proportion of "other than class I usage," (Table 1). However, some individual producers have been able to maintain a favored position of usage and have realized blend returns near the class I minimum. Since the average or blend return has been relatively constant (Figure 1), the ability of some producers to achieve a higher-than-average blend return results in other producers receiving lower-than-average blend returns. Thus, while some have benefited from the increased class I price since 1955, others have not benefited and have had to accept or carry a disproportionate burden of the "other than class I usage" increase.

Since producers in the aggregate are producing 25 percent more milk than is required for class I usage at the current minimum class I price, the California consumer price is probably higher than is "reasonable" from the viewpoint of an efficiency criterion. In other words, since the class I price, from 1957 to the present, has been associated with the production of more milk than is necessary to satisfy class I needs, more resources are employed in milk production than are necessary—a less than optimum allocation of this state's resources. One can thus argue the class I price could be lower and still insure to consumers a continuous and adequate supply of fluid milk and fluid cream. And if the class I price were lower, the consumer price could be lower.

b. *Marketing Margins.* Little if any evidence on margins was received at the hearings. However, published information available to this committee provides a basis for some evaluation.

A comparison of California processor and store margins (price spreads) in two California markets with comparable margins in 18 other United States markets is shown in Table 6. From this information, the committee observes that the margins allowed California processors are *less*, but the margins allowed stores are *more* than the average of margins existing in the other 18 markets. In addition, it is noted that the total margin (wholesale, plus store spread), allowed in the California markets, is less for milk in quart containers but more for milk in half-gallon containers. Research currently underway at the University of California, but not yet published, appears to support these earlier observations.

Since California's food distribution and retailing system is considered one of the most efficient in the country, it seems reasonable to except the store and retail margin to be at least equal to or possibly lower than the average. The available information indicates, therefore, that consumers may be paying more for the store service than is necessary to maintain resources in this activity.

Indications that the wider difference in margins may be of recent origin are given in the following statements quoted from the 1963 report of the University of California previously mentioned:

"All four indexes were constructed with 1957-1959 as the base period. They have been plotted by months for 1948-1962 and are shown in Figure 2. It is clear that the retail and wholesale price spread indexes for Los Angeles have both risen less rapidly than the United States retail milk price spread index but moved in general conformity with the market basket index series. Both Los Angeles indexes rose a little less rapidly than the market basket series in the early 1950's and in the period from mid-1955 to 1957. Since 1959, however, they have advanced somewhat more rapidly and have remained at slightly higher levels than the market basket

index, thus indicating that milk prices paid by consumers in that area have compared relatively unfavorably with other food prices in the more recent years.

"In summary, it seems apparent that the results which were 'favorable'—in terms of relatively low marketing charges—in the early period of price regulation have tended to become less favorable in more recent years."¹

3. Conclusion

The California consumer price for fluid milk appears "reasonable" when compared with consumer prices in other markets. In other words, California consumers are being provided an adequate supply of pure, fresh wholesome milk at prices "in line" with prices being paid by consumers in most parts of the United States.

However, it appears that California consumers of fluid milk could be provided milk at even a lower or more reasonable price than exists now. The industry under the current program is probably not achieving its full potential of economic efficiency. This shortcoming is indicated by (a) the current large quantity of market milk available for "other than class I usage" and (b) the comparatively large margin or price spread allowed stores for milk in both quart and half-gallon containers.

C. PROSPERITY, STABILITY, AND PROGRESSIVENESS OF THE INDUSTRY

1. Producers

At the committee hearings in Dairy Valley, Lake San Marcos, and Modesto, producers and producer groups indicated some degree of financial difficulty. Some producers adjacent to large metropolitan areas and some located in the upper San Joaquin Valley were most vocal in their plea for more prosperity. The metropolitan producers are faced with continually increasing taxes, labor costs, and real estate values; but in general, have a class I usage proportion that is considerably higher than the average utilization for the state. The valley producers also subject to increasing costs blamed their prosperity difficulties on low blend returns through contractual arrangements that yield a relatively low proportion of class I usage. Testimony was offered indicating that some producers are quite prosperous. The only conclusion possible in the light of so wide a range in producer blend prices is merely that some producers are prosperous and others are not. In metropolitan areas, no doubt, the high value of land, with accompanying high taxes, constitutes a major cause of financial difficulty.

Testimony by producers provides some insight as to the indicated lack of prosperity. One producer stated that he paid no personal income tax in 1963, although he sold over \$450,000 worth of milk. He was relatively efficient because he milked 840 cows, with an average production of 15,500 pounds of milk and 553 pounds of butterfat per cow. However, his class I utilization was only 25 to 29 percent of production through October 1963. It was increased to 52 percent in November, 1963; however, he said he could make a profit only if he attained 75 percent utilization. He further stated that he saw no justice

¹D. A. Clarke, Jr., "Economic Aspects of Government Milk Price Regulation," University of California Information Series in Agricultural Economics, No. 63-4. (Berkeley: November 1963, p. 23.)

in a system that paid him on the basis of 52 percent and others on a basis of over 75 percent utilization. Why should he be penalized for having a lower cost of production and the ability to stay in business even at the lower blend price? Another producer told the same story.

Statistics concerning the stability of producing units indicated that between 1958 and 1964, there were 15 percent fewer market milk dairies and 49 percent fewer manufacturing milk dairies milking 8 percent fewer cows, and the average number of cows per dairy had increased by 43 percent (Table 7).

SOURCE: From prepared statement of California Department of Agriculture, hearing of California Assembly Interim Subcommittee on Livestock and Dairies, Modesto, September 15, 1964.

During the first six months of 1964, 122 market milk dairies went out of business while 51 new market milk dairies were built. Table 8 lists these changes by county of dairy location. The greatest net reduction in dairy farms occurred in the Central Coast counties and the San Joaquin Valley. In the southern California counties, with a net reduction of only three dairies, the pattern appears to be one of relocation from Los Angeles and Orange Counties to San Bernardino County.

2. Processors

Testimony by Mr. Blank supported by quantitative evidence from the "Marketing and Transportation Situation" (U.S.D.A., E.R.S.: November 1963, Table 7) indicated that 10 major United States dairy product companies have, for several years, enjoyed a larger average profit rate on stockholders' equity than have 49 food-processing companies (including the 10 dairy product companies). Rates for 1962 respectively for the two groups were 10.2 percent and 9.9 percent. Only a group of 7 grain mill product companies (11.8 percent rate in 1962) and a group of 9 miscellaneous food companies (14.3 percent in 1962) are now doing better. Bakery companies (8) have realized average profit rates (9.7 percent in 1962) about equal to the average for all food processing companies while 10 meat packers and 5 canning

companies realized profit rates (5.1 percent and 6.8 percent respectively) much lower than the average for all 49 food processing companies.

In California, the Bureau of Milk Stabilization allows an 8-percent return on necessary investment. Mr. Blank concluded, therefore, that "the rate of return used by the State of California in establishing minimum prices appears to be below the general earnings of food processing companies nationally, but is in line with practical conditions when we take into consideration that some of the risk has been curtailed in our industry by the Milk Stabilization Act . . ." However, no specific evidence of the profit rate of individual companies or groups of companies was available to the committee. Therefore, it is not possible to determine whether California distributors realize a reasonable or unreasonable profit rate on the basis of available information.

Some indication of stability was obtained from testimony concerning changes in the industry. It was stated that integration movements, in which producers established their own resale outlets were most

numerous during the period 1957-1962. Integration of the form where distributors established their own producing units were most common during the period 1961-62. However, it was claimed that since 1962, there has been a (relative) decline in integration activity.

Yet, incentives for further integration movements still seem to exist. More discussion on integration incentives is in the next chapter. Such integration movements may be viewed as indications of industry instability rooted in the operation of the Milk Stabilization Act.

In addition to testimony from witnesses, published material provides additional insight. A University of California report summarizes industry performance as follows:

"To summarize, the processing efficiency, price-cost margins, and the size of selling cost dimensions of performance in the California fluid milk industry appear to be reasonably 'in line' with those of other marketing systems. Its progressiveness in processing techniques and product designs also compares favorably with that of other marketing systems. In view of these observations, it would appear that the performance of the California fluid milk industry has not been adversely affected by the observed structural changes in the market environment. This conclusion establishes the basis for dismissing the premise that the observed structural changes within the fluid milk industry in California posed the threat of monopolistic exploitation. The evidence presented, while necessarily limited, points to present performance of the industry at an 'acceptable' level, but the analysis fails to give any indication as to whether, through structural or institutional alteration, future performance of the industry can be improved."¹

Mr. Weinland, of the Department of Agriculture, summarized his impression of the progressiveness of the fluid milk industry when he stated:

"Improvements are continually developing in the processing and distribution of milk. Plastic-coated cartons now replace wax-coated cartons. A new 10-quart home delivery package has emerged. The handling of bulk milk at the wholesale level in metal cans is being replaced by packing in plastic and cardboard. There is automation in the plants and data-processing equipment in the offices."

In addition, Mr. Blank testified in Berkeley:

"There have been many radical changes in the equipment and methods used for processing, packaging and distributing milk. As new developments in equipment have been made, which will either produce a better product, or tend to reduce the cost of processing and handling such, our distributors generally have been quick to make changes. They have not waited until their older equipment was fully depreciated, or at a stage where replacement was necessary from a mechanical standpoint. They could adopt this attitude because they have not had to worry about the possibility of sharp market declines which might make it extremely difficult, or impossible, to recover the additional investments. The

¹ D. I. Padberg and D. A. Clarke, Jr., "Structural Changes in the California Fluid Milk Industry," California Agricultural Experiment Station Bulletin 802, June 1964, p. 50.

United States Department of Agriculture has taken note of this progressive element in California, and in a recent summation of changes in milk processing and distribution made by the Agricultural Marketing Service they state, 'more distribution innovations have started in California than in most other states.' Whether it was bulk handling of milk from the farms to the plants, or pioneering the use of new containers for wholesale and store distribution, California distributors have acted with dispatch under our stable market conditions."

3. Conclusion

From the available information, this committee concludes that the milk control program in California has provided the economic environment for a relatively prosperous and progressive industry, and in general is properly achieving the intent and objectives of the Milk Stabilization Act. However, the committee notes some degree of instability associated with the program in the form of integration movements that may well be taking root because of the program. The committee also notes some instability because of disparity in producer returns in and among marketing regions. The basis for this observed instability is discussed in more detail in the next chapter.

D. SPECIAL PROBLEMS

During the course of the hearings, the following specific problem areas were repeatedly brought to the attention of the committee:

1. Method of payment to producers.
2. Sales to military installations.
3. Producer-distributor integration.
4. Usage classification.
5. Two-pool method of producer payment.
6. The problem of increasing costs.

Most of these problem areas have been mentioned in previous chapters. However, in this chapter each will be discussed in more detail with some attempt to present underlying causes, implications, and alternative solutions.

1. Method of Payment to Producers

The method of payment to producers currently used results in wide differences in average returns among producers for essentially the same product. This method with its resultant disparity provides the underlying cause for producer dissatisfaction, provides an incentive for integration, and provides distributors with the ability to discriminate pricewise among their producer shippers.

Individual producer payments are based on the usage of the individual plant (or group of plants in the case of a distributor pool to which a producer ships his milk) and the minimum class price in effect in the marketing area where the milk is sold. Each producer enters into a contractual agreement with his distributor concerning quantities of milk that will be exchanged and the producer's share of the various class usages. In effect, the negotiated terms of the individual contract determine the blend price received by each producer.

To illustrate, let's use a hypothetical situation. Suppose plant X in the southern metropolitan marketing area used 75 percent of its re-

ceipts for class I and 25 percent for class II products. If the minimum class I price was \$5.50 per cwt. and the class II price was \$3.50 per cwt., the average value of plant X's milk would be \$5 per cwt. $(\$5.50 \times .75) + (\$3.50 \times .25)$. If each producer shared equally in this usage, each producer would receive \$5 per cwt. for all milk shipped. Although the plant must make total payment that averages \$5 per cwt., some producers may receive more—some less—than the average because of the particular terms of their contract. Assume that plant X receives milk from two producers, A and B. If producer A's contract was such that he received payment on the basis of 90 percent class I and 10 percent class II utilization, his blend price would be \$5.30 per cwt. Since A's class I usage is greater than 75 percent, the other producer will receive less than the average. In this hypothetical situation, if both producers shipped one-half the plant's supply or equal total quantities of milk then producer B's realized usage for payment purposes would be 60 percent class I and 40 percent class II for a blend return of \$4.70 per cwt.

As demonstrated in the example, without delving into the mechanics of allocation determination, the contract required by Section 4280e of the Agricultural Code, makes permissive arrangements whereby some producers receive blend returns close to the minimum class I price while others receive blend or average returns close to the class II or III minimum price. The degree of divergence possible depends on the plant usage pattern, the producer's production relative to the terms of his contract, the willingness of the producer to enter into specific agreements, and the procurement policies of distributors.

Data presented by the Department of Agriculture at the Modesto hearing gave evidence of the magnitude of the disparity. Figure 3 is representative of the evidence presented.

In May 1963 producers shipping to plants in the south San Joaquin region received blend prices ranging from less than \$3.70 to over \$5.70 per cwt., with the largest number of producers receiving between \$4.10 and \$4.19 per cwt. Southern metropolitan shippers, on the other hand, received blend prices ranging from \$4.10 to over \$5.70 per cwt., with the largest number receiving from \$5.60 to \$5.69 per cwt. Comparatively, the class I prices in the south San Joaquin and southern metropolitan regions were about \$5.34 and \$5.62 respectively, while the average price for all market milk in May, 1963 was \$4.72 per cwt. (adjusted to 3.8 percent fat content). Therefore, the predominant number of producers in the San Joaquin Valley region received approximately \$1.50 less per cwt. than producers in southern California and \$0.50 less than the average for the state. A similar situation exists in and between the San Francisco Bay and north San Joaquin Valley regions.

Much of the industry dissatisfaction and unrest and many of the other problem areas presented seem to evolve from or be associated with this disparity in producer income. The disparity is not, in itself, necessarily good or bad; but the fact that it is possible for a producer, by obtaining a higher class I usage, to realize a higher blend return provides an incentive for producers with low blend returns to attempt to improve their position somehow. The disparity is conducive to continuation of the current producer unrest and provides a continuing in-

centive for integration movements and violations of the price and unfair trade provisions of the act.

FIGURE 3

Distribution of Blend Prices Received by Milk Producers Shipping to Fluid Milk Plants Located in the Southern Metropolitan Region and the South San Joaquin Region, May 1963^a

^a Prices adjusted to 3.8 percent butterfat.

SOURCE: Special survey by California Department of Agriculture, Bureau of Milk Stabilization.

In testimony, producers claimed that the contract, as an instrument of negotiation, provides the distributor purchaser of milk with undue power. As demonstrated above, a distributor can—via the contract—pay a high blend price to some of his producers and a low blend price to others.

Some distributors argued that this ability is good for the industry. Mr. Blank stated in Berkeley that “the fluctuation in consumer requirements always creates some arguments as to the manner of allocating usage and standby among producers. We believe the problem has been handled as well and as practically as it could be in the State of California. We must recognize this state covers vast geographic areas, and milk is produced under varying conditions as to land, labor, and feed in the milkshed areas throughout the state. . . . The procurement and payment policies followed by distributors who have plants in both types of areas (high-cost metropolitan and relatively low-cost valley areas) have been aimed at providing a profitable income to both groups of dairymen from whom they have been procuring supplies. And the upward trend in production confirms the propriety of such policies.” Distributors also argued that since terms of the contract are negotiated (i.e., both parties agree to its terms), the discrimination or unequal balance of power argument is invalid.

Some producers, on the other hand, maintained that the arrangement is conducive to the continued existence of inefficient, high-cost producing dairies and contributes to the production of excess supplies of market milk. They testified in general that an individual producer, when there are large quantities of market milk in excess of class I needs, has very little, if any, bargaining power and no alternative but to take whatever contract terms and produce whatever total quantity of milk the purchaser desires.

Another witness stated that he felt the contract system, as it exists today, is being used to create additional supplies of market milk to offset the decline in manufacturing milk production. The contract in the 1930's provided the producer an assurance of payment. If one lost a contract then, it did not mean economic chaos. Today, the loss of a contract can mean economic destruction.

Thus, it is clear that the contract instrument which specifies the method of payment and the distribution of the plant or distributor usage to individual producers is required by legislation in the Agricultural Code. However, it would seem from the evidence presented, that this authority may be inconsistent with the legislative intent that "nothing in this chapter shall be construed as permitting or authorizing the development of conditions of monopoly . . ."

2. Sales to Military Installations

Fluid milk sales are currently being made to military installations at a price probably insufficient to return to the producers concerned the established minimum class I price. A large share of these sales are made by producer cooperatives. Recently, some "special purpose" cooperatives have been formed to gain military sales contracts. Proprietary distributors process and distribute the milk for these "special purpose" cooperatives. It was argued that cooperatives entered into the military business because of the pressures of a greatly increased grade A supply and their loss of sales of grade A milk to proprietary distributors. In self-defense, they sought retail outlets, one of which has been military sales. As producer-processing cooperatives gained military sales and proprietary distributors lost sales, producers who had been supplying the latter organized special interest cooperatives in order to maintain or gain back their class I market.

This situation creates two problematic conditions. First, producers receive less than the minimum class I price for that portion of market milk sold to military installations. Second, military residents of California pay a significantly lower price for fluid milk than nonmilitary residents.

The first condition exists because producers are willing to sell excess market milk at prices above the class II or III price, but lower than the minimum class I price. The possibility that a producer (or a group of producers) may improve his blend return by obtaining a military contract creates the incentive for individual producer competition that results in a reduction in aggregate return to all producers.

Table 9 compares the prices and returns at various levels of trade for one actual existing military contract with returns from milk sold through nonmilitary commercial channels. In this instance, military consumers pay almost 10 cents less per quart than nonmilitary con-

TABLE 9

^a Based on BMS audit of returns to producers for milk sold to military under an existing contract and on established class I price for other sales.

^b Price paid for milk delivered to military installation and to retail store, discounted for volume and limited service (the maximum in this area, 10 percent for volume plus 4 percent for limited service), Zone 3, San Francisco.

^c Price paid by consumer for milk at commissary on military installation and the established minimum out-of-store price. Price for milk purchased at commissary is based on markup of 3 percent.

^d Column 2 minus column 1.

^e Column 3 minus column 2.

sumers. Of this difference, 2.4 cents is absorbed by producers. Processors absorbed 4 cents per quart. And while stores receive about 4.8 cents per quart margin, commissaries operate on a spread of 0.4 of a cent per quart, which accounts for the remaining difference of nearly 4.5 cents per quart.

No doubt, many nonmilitary consumers have wondered why they must pay a higher price for milk handled through civilian channels. Some witnesses testified that because of this price difference, a portion finds its way into nonmilitary households. A comparison of the trends in the proportion of military personnel living in California and the proportion of fluid milk sold to federal installations appears to support this claim (Table 10). While the military population is now 1.8 percent of the total population, the smallest proportion since 1950, fluid milk sales to federal installations are the highest since 1948—6.7 percent of total sales.

3. Producer-distributor Integration

Some concern was indicated by various witnesses concerning the changing ownership pattern of producing and distributing units. During the period 1957 to 1960, a large number of producing units established or purchased retail outlets of some form—cash and carry, milk depots, retail routes—as milk production began to exceed class I needs by larger and larger amounts. The producer who had received reduced blend returns looked for some means of improving his situation. While practically no cash-and-carry outlets existed in California prior to 1957, there were 18 in January, 1957; 29 in January, 1958; 53 in January, 1959; and 64 in April, 1959.¹ Although no figures are

¹ Data obtained from the Bureau of Milk Stabilization, California Department of Agriculture. These figures do not include the large number of ranch outlets that have been in existence in Southern California for many years.

SOURCES: Computed from data in reports as follows: California Crop and Livestock Reporting Service, *California Dairy Industry Statistics* (various annual issues); *Manufactured Dairy Products, Milk Production, Utilization and Prices*, Sacramento and California Department of Finance, *California Population—1963* (Sacramento, 1963).

available for subsequent years, testimony indicated that the number of cash-and-carry outlets has been relatively stable since 1959. A USDA report indicates that sales through drive-in dairies in central California accounted for 1.8 percent of total sales in that area in 1957; grew to 5.2 percent by 1959, peaked at 6.4 percent in 1962; and declined to 5.8 percent in 1963.¹

Since 1959, integration movements, according to some witnesses, have taken the form of financial merger of distribution units with production units. The direction of integration was not firmly established in the testimony, but a study was presented that indicated an increase in the number of distributing firms that had either complete or partial ownership of milk production units. Of 275 processors who had responded to a mail questionnaire, 24.8 percent said they had had some financial interest in milk production units in 1959 and 29.8 percent in 1964. Of these, 59 indicated financial interest in both years, while 21 indicated that they had developed a financial interest since 1959. Six processors who had had a financial interest in 1959 no longer had such an interest.²

Producers may enter the resale or distribution activity to obtain a better outlet. They have the milk supply—their desire is to obtain a better blend or average return by moving a larger percentage of their milk at the higher class I price. To accomplish this goal, they must develop an outlet.

¹ Jack E. Klein and L. R. Gray, "Drive-In Dairies in Central California," USDA, ERS, MED, Marketing Research Report No. 636, (Washington, D. C. 1963) p. 2.

² Special Study of the Bureau of Milk Stabilization, California Department of Agriculture. Data presented at the California Assembly Interim Subcommittee on Livestock and Dairies hearing, Modesto, California, November 15, 1964.

Distributors already have the resale outlet. They may enter production for a similar reason—to obtain high class I usage—but their starting position is much different. Under the current method of determining produce payments, producer-distributors can pay themselves the minimum class I price for all of their own production and purchase all of their class II and class III needs, if any, from other producers as needed. The integrated producer can thus obtain his class I supplies at his own cost of production and effectively have other producers supply his standby requirements at the class II and class III price. By this means, he can realize a higher blend return than can a nonintegrated processor.

The magnitude of the incentive for producer-distributor integration is quite significant. For example, if a dairyman with 150 cows currently has an arrangement that yields 50 percent class I usage and 50 percent class II usage, he can realize about \$1 more per cwt. if he can obtain a 100 percent class I outlet. This represents a \$16,500 difference in annual income, assuming his cows produce an average of about 11,000 pounds per cow per year. Producers with less than a 50-percent utilization, of which there are many as indicated by earlier figures, have even a greater financial incentive.

In summary, the current method of payment with its resulting disparity in blend returns to producers, establishes a climate in which strong incentives for integration exist in both directions. As a producer (or a group of producers) incurs the cost of integration, or as processors develop production units and thus preempt a certain share of the total class I market, other producers lose a proportionate share, all other things being equal; and instability in the industry is a consequence.

4. Usage Classification

Several producer representatives requested that perishable products as cottage cheese, sour cream dressing, cultured cream dressing, whipped cream topping, and eggnog be reclassified from class II to class I usage products. Normally, the class I price is higher than the class II price by \$1.50 to \$2 per cwt. Producers believed that the higher price would more appropriately reflect the value of these products and would, at the same time, bring them a higher blend return.

A report by the University of California to this committee in March 1963¹ indicated that during the period 1950–1962, processors perhaps could have paid approximately 30 cents more per cwt. for milk used in manufacturing. At higher prices, they would likely resort to importing alternative raw ingredients, such as butterfat and nonfat dry milk, from areas outside the state. However, neither the study nor testimony determined the exact feasibility of appropriateness of reclassifying these products. Since the above-mentioned report is available to the Department of Agriculture, and since they have resources available for evaluating this proposal, this committee requests that they study this proposal and consider either upgrading these products or increasing the minimum class II price.

¹D. A. Clarke, Jr., Olan D. Forker, and A. C. Johnson, Jr., "Pricing Milk for Manufacturing Purposes in California," California Agricultural Experiment Station Bulletin 801 (Berkeley: June 1964), pp. 37–39.

5. Two-pool Method of Producer Payment

The two-pool method of allocating the various class usages to individual producers in a plant or distributor pool was made mandatory throughout the state by marketing orders effective on April 1, 1964. It was claimed that this move disrupted the normal pattern of blend returns among producers for, in effect, it redistributed usage among producers in some plant and distributor pools. The two-pool method provides for the allocation of class I usage in a plant or distributor pool to each producer in proportion to contract quantities. The three-pool method used prior to April 1, 1964, allocated class I usage first to the "guarantee" quantity of each producer's contract. Any class I usage left over was allocated proportionate to contract quantities.

The two-pool method tended to equalize the blend return among certain groups of producers, while the three-pool method permitted distributors to make unequal payments to producers for contract quantities of milk. Those who were adversely affected suffered a financial loss, while those favorably affected realized a gain. And since this involved simply a reallocation, if one producer gained, another or others lost usage.

Several questions relative to the two-pool method of payment were asked of the committee's Legislative Counsel. The questions and answers follow:

"Question No. 1: Is the two-pool system for accounting for payments to producers of fluid milk which was required by the Department of Agriculture under stabilization and marketing plans made effective April 1, 1964, authorized under the present law?

"Opinion and Analysis No. 1: We are informed that under the two-pool method, very generally, two pools are established for the determination of the amount to be paid producers of milk, with one pool being a contract pool and the other being an over-contract pool. All producers are paid the same percentage of class I usage within the contract amount from the contract pool and the overcontract production is paid for by allotting the usage first to the lowest class usage and successively to the next higher class usage. A distributor's own production is required to be included in such pools.

"In contrast, there has been a three-pool method. The three-pool method is similar to the two-pool method, except that the three-pool includes class I guarantees. Under this method of payment, class I usage is allocated first to the class I contractual guarantees to constitute the first pool, the remaining class I usage is allocated between the class I guarantees and the contract amount to constitute the second pool, and the third pool consists of any milk which is over the contract amount.

"Section 4281 of the Agricultural Code requires that each stabilization and marketing plan must contain provisions whereby the Director of Agriculture designates and prescribes or provides methods for designating or prescribing minimum prices to be paid by distributors to producers for fluid milk in the various classes.

The director is authorized to prescribe minimum prices to be paid by distributors in accordance with a stabilization and marketing plan and to classify milk according to its usage by distributors (Sec. 4246, Ag. C.).

"The Director of Agriculture is granted broad powers in formulating stabilization and marketing plans in order to effectuate the stated purposes of Chapter 17 (commencing with Sec. 4200) of Division 6 of the Agricultural Code and is authorized to amend stabilization and marketing plans as necessary to effectuate the purposes of these provisions (Sec. 4248).

"Very generally, the principal objection to the two-pool requirements in the stabilization and marketing plans would seem to be based upon the economic effect that such a two-pool system will have upon the industry. The court stated in the case of *Marin Dairymen's Milk Co. v. Brock*, 100 Cal. App. 2d 686, at p. 693:

"... We are impressed with the statement of the court in *Queensboro Farm Products v. Wickard*, 137 F. 2d 969, 980, that "that interpretation of a statute by officers who, under the statute, act in administering it as specialists advised by experts must be accorded considerable weight by the courts. If ever there was a place for that doctrine, it is, as to milk, in connection with the administration of this act, because of its background and legislative history." We are inclined to believe that respondent agricultural director, who is the person empowered by the act to formulate and establish a stabilization and marketing plan, is in a far better position than either respondent or the court to determine the economic phases involved."

"We are not in a position to determine the economic effect of establishing such a two-pool system. The director, in establishing this system, has, in effect, determined such a system is necessary to effectuate the proper payment to producers under the stabilization and marketing plan. We believe that the court would uphold the validity of the plan as to its economic effect unless it determines that the director's determination of such action is clearly contrary to the declared purposes of the stabilization and marketing law.

"In our opinion the establishing of such a two-pool system is, as a matter of law, authorized under the authority granted the Director of Agriculture.

"Question No. 2: Is there a law which prohibits administrative regulations providing, in effect, for the same provisions as a defeated bill would have enacted, and if so, would the defeat of Senate Bill No. 1535 of the 1963 Regular Session prohibit the establishing of the two-pool system by the Director of Agriculture under stabilization and marketing plans?

"Opinion and Analysis No. 2: We are not aware of any law which prohibits regulations accomplishing what a defeated bill had proposed to enact assuming there is authority for such regulation independent of the bill. We note, in this regard, that Assembly Bill No. 1200 of the 1963 Regular Session which related to regulations to accomplish the effect of defeated bills, although

passed by the Legislature, is not in effect since it was pocket-vetoed by the Governor.

"S.B. 1535, very generally, would have required all contracts after May 1, 1963, by a distributor for the purchase of fluid milk to provide for the same percentage of payment as class I to all producers under contract to that distributor and would have required the distributor's own production to be accounted for payment as class I at the same percentage.

"As discussed above in the analysis to Question No. 1, the authority of the Director of Agriculture to require a two-pool system, as described in said analysis, existed prior to the defeat of S.B. 1535 and is independent of the provisions in that bill. Thus, even assuming that S.B. 1535, if enacted, would have accomplished the same purpose as the two-pool system established by the director, in our opinion this does not prohibit the director from acting under the other provisions of law authorizing the establishing of such a two-pool system."

6. The Problem of Increasing Costs

a. *Producers.* Increased costs of production were cited as a reason for increasingly acute problems in the industry. Complaints came mostly from producers, lending agencies, and dairy suppliers located in the metropolitan areas of Los Angeles and San Diego. One lender and one supplier indicated an increase in the number of producer accounts outstanding and in the length of time these have been overdue. Increased taxes, feed costs, wages and services were cited as factors.

Dairymen in and close to metropolitan areas are faced with large tax increases because of the rapid appreciation in the value of their property. This committee takes notice of the fact that the Assembly Committee on Agriculture is studying the problem of taxation of agricultural lands. It is also aware that the Committee on Agriculture plans to develop legislation relative to the assessment and taxation of agricultural land on the basis of use value.

In view of that committee's activity, the only action feasible for this subcommittee is to support whatever proposal is forthcoming from the Committee on Agriculture, providing, of course, it is in the best interests of the California dairy industry.

At the hearing in Dairy Valley on February 14, a question was asked concerning the feasibility of guaranteeing returns to producers above the cost of production. The legislature at the initial enactment of the act did not consider it feasible and on subsequent occasions indicated the need for supply criteria in addition to cost of production criteria. The same justification exists today as existed then.¹

b. *Distributors.* At the Berkeley hearing distributors complained that the cost determination procedures used by the Bureau of Milk Stabilization were too slow to provide distributors adequate relief from wage increases when they occurred. Sometimes 12 months elapse following a wage increase before hearings are held to consider margin

¹ See "Special Report of the Joint Legislative Committee on Agriculture and Livestock Problems on Fluid Milk Price Control in California," Senate of the State of California, (Sacramento: 1955) pp. 63-75.

increases. Distributors argued that this created an undue financial burden for them.

However, the committee notes that the Bureau of Milk Stabilization is currently developing new distributor cost estimates as rapidly as possible with available resources. It also notes that the resulting margin squeeze on distributors results in rapid adjustments in organization and technology so as to offset the wage increase effect on costs.

Nevertheless, this committee feels that the Bureau of Milk Stabilization should review their current distributor costing techniques and attempt to develop methods that will result in more rapid determination of the impact of wage increases on such costs.

APPENDIX A

SUMMARY OF TESTIMONY AND LEGISLATIVE ACTION PROPOSALS OF EACH HEARING

All of the statements and suggestions made at the various hearings were considered in the development of the recommendations of this committee. However, all important statements and suggestions are not referred to explicitly in the preceding discussion. Therefore, a summary of testimony and a list of the suggestions for legislative action as made at each hearing are presented in this chapter.

1. *San Diego, January 10, 1964*

Summary of Testimony. The purpose of this hearing was to consider House Resolution 498 relating to a study of milk stabilization. All witnesses spoke in support of H.R. No. 498. It was stated that the Department of Agricultural Economics at the University of California is currently conducting a research project as part of their regular work with the same principal purpose—to appraise and evaluate the milk price stabilization program that now is on the books. Purposes and objectives of the California Milk Stabilization Law as stated by witnesses included the following items:

1. To insure an adequate supply of pure, fresh, wholesome, fluid milk—to consumers—at fair and reasonable prices.
2. To eliminate speculation, waste, unfair trade practices and improper accounting for milk purchased from producers.
3. To bring about a reasonable amount of stability and prosperity to the fluid milk industry.
4. The legislature noted that the interpretation of these objectives in the stabilization law should not in any way be construed as permitting or authorizing conditions of monopoly.
5. "... In the establishment of the terms and conditions under which fluid milk and fluid cream shall be purchased from producers, and under which distributors and retail stores shall sell and distribute the same, such terms and conditions shall be those which will, in the several localities and markets of the state and under the varying conditions of production and distribution insure an adequate and continuous supply of pure, fresh, wholesome, fluid milk and fluid cream to consumers thereof at fair and reasonable prices."

Two basic questions were suggested: (a) Does there exist at the present time and in the foreseeable future an adequate supply of fluid milk, and (b) is the product (fluid milk) available to consumers at fair and reasonable prices?

These questions should be identified and considered with respect to three segments of society: (a) Fluid milk producers, (b) consumers, and (c) processors and distributors.

Problem areas specified by witnesses included: (a) sales to military installations, (b) producer-distributor integration, and (c) supply standards.

A general comment pointed up the belief that the public atmosphere was never better for such a legislative study because there are presently no identifiable pressures aimed at the act, and there appears to be excellent producer-distributor relations currently.

Suggestions for Legislative Action

1. The committee was urged to initiate a study into the question of "supply standards" of the milk act.
2. It was suggested that perhaps the state should require *producers* to submit a monthly form on income and usage.
3. It was suggested that all dairymen be *licensed* by the state to enter into grade A production, this to limit production and restrict entry into production. However, a warning was made that it was licensing of producers and restricting entry to the market that brought about the repeal of the Oregon milk law.
4. It was suggested that the committee chairman appoint a working industry committee of producers and distributors to consider the overall question posed by H.R. 498.

2. City of Dairy Valley, February 14, 1964

Summary of Testimony. The purposes and objectives of the California Milk Stabilization Law as reiterated by witnesses were: (a) To stabilize this industry from both the producer and distributor level so that the state does not become short in the supply of milk, (b) to provide a stabilized market for the dairymen's product, (c) to recognize consumer interest, and (d) to maintain an adequate supply of fresh, wholesome milk, by helping the producer enjoy a reasonable degree of prosperity in keeping with the objectives of the milk law.

Problem areas specified by witnesses included: (a) Producer-distributor integration, (b) unequal distribution of class I market among producers, (c) sales to military installations, (d) supply standards, (e) unequal raw product costs to processors, and (f) cost of production.

Suggestions for Legislative Action

1. The State Legislature should seriously consider amending the law to give the Bureau of Milk Stabilization the right to dictate the terms of the contract, particularly insofar as any requirement to produce milk over and above that amount that the distributor is willing to guarantee to purchase at the class I price.
2. Ways and means should be determined whereby all producers in the same production area would receive as equal a share of the market as possible.
3. Other methods of allocating the fluid milk market among producers should be considered. The alternative methods should have as their basis protection of present quotas, fair and equal treatment of all producers, allocation of new usage to lowest quotas, and establishment of a list of potential new producers on a priority basis.

3. Lake San Marcos, May 26, 1964

Summary of Testimony. Testimony presented at this hearing included such areas as producer contracts and access to class I market outlets, producer-processor integration, the two-pool method of determining producer payments, sales to military installations, excess class I supplies, and supply standards. In addition, the committee heard testimony concerning the local milk promotion program.

Proposals for Legislative Action. Three proposals suggested for the committee's consideration were:

1. That the committee consider a proposal whereby all grade A milk would be pooled and allocated to the dairyman on the basis of his share of the milk sold as fluid milk.
2. That individual contracts be continued, but that the Bureau of Milk Stabilization become a party in the negotiation of the contracts.
3. That the Bureau of Milk Stabilization ought to have the right to control the terms of the producer contract.

4. Modesto, September 14, 1964

Summary of Testimony. Only producers or producer representatives testified at this hearing. Generally, witnesses seemed to agree on most of the agenda issues. They seemed to concur that the milk supply was more than adequate now and probably would be through 1970; that the milk quality regulations were adequate to insure consumers of a pure, fresh, and wholesome supply; that the current class I and consumer price levels are fair and reasonable; and that the industry on the whole was efficient and progressive.

However, the witnesses testified that they thought the present system (a) was not equitable to producers; (b) results in unequal raw product costs among handlers; and (c) provides distributors who own their own herds—or producers who own their own processing facilities—a competitive advantage over those who are not so integrated.

The California consumer fluid milk price levels were considered reasonable relative to other sources of protein and relative to fluid milk in other United States markets.

Primary areas of concern involved the effect of contracts and integration on the wide variation in blend prices paid producers. This was emphasized by Mr. Van Maren's plea that "The milk contracts and the blend prices received by dairymen need your immediate . . . attention," and "make vertical integration less favorable as a way to market milk."

Agenda questions asked witnesses were as follows: (a) What is the supply of milk in California? Is it adequate now and will it be in the future? (b) Is the milk supply pure, fresh, and wholesome? (c) Is the current price level reasonable and is the method of payment to producers satisfactory and/or consistent with the intent of the law? (d) Is the goal of industry stability and prosperity in the production of milk being achieved?

Suggestions for Legislative or Committee Action

1. It was recommended that such perishable products as cottage cheese, sour cream dressing, cultured cream dressing, whipped cream topping, eggnog be reclassified from a class II usage to a class I usage. No evidence was presented as to the ability to pay or willingness of processors to take the milk at the class I price or any price higher than class II.
2. It was suggested (a) that the committee consider legislation to upgrade products listed above in 1. to a class I category, (b) that the bureau be given the administrative power to properly price these products, (c) that the supply standards define them as part of the adequate supply, and (d) that the bureau be asked to study the establishment of a standby equalization pool under the present administrative power of the stabilization act.
3. It was suggested that the committee be responsible for getting a group of experts together to make a completely objective study of the Milk Stabilization Act to reiterate the basics in the act.
4. One witness recommended a fairer share of the market (for each producer) according to past production with adequate standards for new producers and at the same time, growth for smaller quota producers. He made a strong plea for producer "economic equality."

5. Berkeley, October 5, 1964

Summary of Testimony. Only distributors or distributor representatives testified at this hearing. Generally, witnesses agreed that the milk supply was more than adequate now and probably would be through 1975, but that action under the Milk Stabilization Act was needed to assure adequate quantities, subsequent to that date. They indicated that the milk quality regulations were adequate and that consumers were receiving pure, fresh, and wholesome milk. In addition, the consensus was that current class I and consumer price levels are fair and reasonable. All were in agreement that the industry was efficient and progressive.

However, the witnesses testified that the present system results in unequal raw product cost among handlers in some instances; that integrated distributors have a cost advantage over nonintegrated distributors; too long a time lag exists between increases in labor wage rates and increases in margins; and the current military sales situation is a form of "leakage" in the regulation of price.

Agenda questions asked were: (a) Is the present supply of milk adequate? (b) Is the quality of milk adequate? (c) Are resale prices reasonable? (d) Is the stability and prosperity in the marketing of milk being fulfilled?

Suggested Legislative Proposals. The principal industry representatives indicated that they felt the current legislation adequate. They did not think it necessary to propose or consider any major legislative change to the current act.

Nevertheless, two proposals were suggested :

1. That there be created a statewide pool in which (a) all milk producers would be required to produce a sufficient amount of milk necessary for all three class uses, (b) each producer would be required to produce his share of each class, and (c) each producer would be guaranteed a reasonable profit.
2. That manufacturing milk plants be excluded from the bookkeeping provisions requiring the application of minimum class prices to their payments for market milk, and that, instead, they be allowed to pay a flat price for all manufacturing usage.

ASSEMBLY INTERIM COMMITTEE ON WAYS AND MEANS
CALIFORNIA LEGISLATURE

March 15, 1965

To the Speaker and Members of the Assembly

DEAR MR. SPEAKER AND MEMBERS:

Your Interim Committee on Ways and Means, in accordance with the provisions of House Resolution 500 (1963, Regular), herewith respectfully submits final reports on Legislative Review of State Highway Funds, Automated Data Processing, Support of Fireboats in San Francisco Bay, State Participation in the Long Beach World's Fair, and progress reports on Budget Reform and Standards, Procedures and Reporting.

The committee is indebted to the committee staff, consultants who served under contract, the offices of the Legislative Analyst and Legislative Counsel, and to the various state officers and private citizens who presented helpful testimony to the committee during the 1963-65 interim.

Respectfully submitted,

ROBERT W. CROWN, *Chairman*

GENERAL INTRODUCTION

This report contains the findings and recommendations of the Assembly Interim Committee on Ways and Means and four subcommittees appointed by the chairman following adjournment of the 1963 Legislature. The subcommittees, whose reports were adopted by the full committee, were constituted as follows:

SUBCOMMITTEE ON HIGHWAY FUNDS

CARLEY V. PORTER, *Chairman*

CARLOS BEE	PAULINE L. DAVIS
CARL A. BRITSCHGI	LESTER McMILLAN
CHARLES J. CONRAD	HOWARD J. THELIN
JOHN L. E. COLLIER	GORDON H. WINTON, JR.

SUBCOMMITTEE ON STATE PURCHASING

JAMES R. MILLS, *Chairman*

CARLOS BEE	CARLEY V. PORTER
CARL A. BRITSCHGI	HOWARD J. THELIN
CHARLES J. CONRAD	GORDON H. WINTON
FRANK LANTERMAN	

SUBCOMMITTEE ON FAIRS AND EXPOSITIONS

JEROME R. WALDIE, *Chairman*

TOM BANE	JAMES L. HOLMES
CARLOS BEE	JOSEPH M. KENNICK
FRANK P. BELOTTI	FRANK LANTERMAN
CARL A. BRITSCHGI	JAMES R. MILLS
CHARLES J. CONRAD	JOHN C. WILLIAMSON
EDWARD M. GAFFNEY	GORDON H. WINTON

SUBCOMMITTEE ON STANDARDS, PROCEDURES AND REPORTING

JOHN C. WILLIAMSON, *Chairman*

JOHN L. E. COLLIER	JAMES R. MILLS
--------------------	----------------

Other subcommittees and their respective chairmen appointed during the 1963-65 interim were: Economic Development, Robert W. Crown; Institutions, Nicholas C. Petris; Mental Health, Jerome R. Waldie; Omnibus Appropriations, John C. Williamson; Per Diems, Carlos Bee. The reports of these subcommittees have been submitted or will be submitted under separate covers.

LETTER OF TRANSMITTAL

ASSEMBLY INTERIM COMMITTEE ON WAYS AND MEANS
CALIFORNIA LEGISLATURE

March 15, 1965

To the Speaker and Members of the Assembly

DEAR MR. SPEAKER AND MEMBERS:

Pursuant to Assembly Bill 2768 (1963, Meyers) and House Resolution 543 (1963, Meyers), transmitted herewith is the final report of the Assembly Interim Committee on Ways and Means on Legislative Review of State Highway Funds.

The committee is appreciative of the efforts of Assemblyman Carley V. Porter and the members of the Highway Funds Subcommittee who conducted hearings and presented the recommendations and findings contained herein.

Respectfully submitted,

LETTER OF TRANSMITTAL

HON. ROBERT W. CROWN

Chairman, Assembly Ways and Means Committee

Dear Mr. Chairman:

Transmitted herewith is the final report of the Subcommittee on Highway Funds pursuant to your instructions.

Assembly Bill 2768 (Meyers), 1963 Regular Session, constituted the vehicle for the subcommittee's study of this subject matter. However, this report also complies with the request in House Resolution 543 (Meyers) referred to this subcommittee.

It was a pleasure for me to have served as your chairman for this subcommittee and I wish to express my gratitude to the members, the staff, the office of the Legislative Analyst and others who assisted me in complying with our mandate.

Respectfully submitted,

CARLEY V. PORTER, *Chairman*

Members of the Subcommittee

HOWARD J. THELIN

GORDON H. WINTON, JR.

SUMMARY OF FINDINGS

1. With the exception of certain prescribed Constitutional and statutory formulas, budgeted expenditure of state highway funds rests solely with the State Highway Commission and these expenditures are immune from modification by the Governor, the Department of Finance, or the Legislature.
2. An obvious consequence of this immunity is the more or less cursory review of the budget of the Division of Highways as contrasted with the detailed analysis and scrutiny to which other departmental budgets are subjected.
3. Since the Highway Commission's staff is composed of employees of the Division of Highways, impartial review, at least, of the administrative budget for the division is lacking.

SUMMARY OF RECOMMENDATIONS

1. We recommend for adoption that portion of AB 2768 that would require the Legislature's authorization for expenditure of that portion of state highway funds for the purposes specified under heading (a) of Section 143.1, Streets and Highways Code, (Administration, including payments for services of the Division of Contracts and Rights of Way.)
2. Although we emphatically oppose bringing the controversies over freeway location and highway design into the legislative arena, we see no reasonable justification for exempting the division's administrative budget from rigorous examination by the Governor and the Legislature.
3. Notwithstanding the outcome of legislation embodying the recommendations contained in this report, we recommend that the administrative budget of the Division of Highways be given careful study and appraisal of work standards, staffing formulae and level of service criteria by the Ways and Means Subcommittee on Standards, Procedures and Reporting.

Basis for Study

Assembly Bill 2768 and House Resolution 543, both introduced by Assemblyman Charles W. Meyers during the 1963 Regular Session, were assigned by the Assembly Rules Committee to the Assembly Interim Committee on Ways and Means for interim study following adjournment of the 1963 Legislature. The subject matter, in turn, was assigned to the Ways and Means Subcommittee on Highway Funds.

Although HR 543 requested that the subject of legislative review of Highway Fund appropriations be referred to an appropriate interim committee for study, AB 2768 constituted the vehicle for the subcommittee's interim study. Inasmuch as this measure was patterned after

Assembly Bill 1868 (1961 Regular Session),¹ reference is made to the final reports of the Assembly Interim Committee on Transportation and Commerce (Vol. 3, No. 9, pp. 38-39), and the Assembly Interim Committee on Ways and Means (Vol. 21, No. 8, pp. 20-21), both submitted to the 1963 Legislature.²

AB 2768 would make the expenditure of money in the state fund for administration, contingencies, and other proposed expenditures for highway construction (excluding capital outlay for highway construction or improvement), subject to the same budgetary and fiscal controls as expenditures of other state funds. The bill would retain the continuing appropriation of money in the State Highway Fund for construction and improvement and maintenance of state highways and acquisition of rights-of-way, and would retain, as to such proposed expenditures contained in the annual budget of the Department of Public Works, the provision prohibiting the Governor from revising the budget as submitted by the department.

Background

The State Highway Commission retains exclusive control over expenditure of State Highway Funds. With the exception of certain prescribed formulas—either by statute or by constitutional provision—the responsibility for authorizing Highway Fund expenditures rests solely with the Highway Commission. This unparalleled immunity from either executive or legislative review has evolved over the years,³ and efforts to remove it have been resisted.

It is clear that the Highway Commission was invested with this unusual exercise of control in order to prevent so-called “logrolling” or “pork barreling,” and possible prolonged delays in the approval of expenditures and, hence, delays in the construction of highways. However, this intended independence on the part of the commission has not been without its critics. Many citizens, scholars, public officials and legislators view the commission as a public body, invested with vast powers of far-reaching magnitude, but responsible to no one. Even the Governor, who appoints the commission members, concedes that the commission is answerable to no one.

Existing Budgetary Procedures

Under Sections 143.1 and 143.2 of the Streets and Highways Code, the California Highway Commission allocates the money set aside by the Legislature for the state highway program. This is accomplished by sending a prepared budget annually to the Governor (who in turn transmits it to the Legislature) and including therein a detailed report of expenditures on the program for the preceding two years. This is included in the Governor's Report to the Legislature and, of course, is available to every legislator for analysis.

In preparing this budget, the California Highway Commission is not unlimited in authority and in effect is controlled by certain stand-

¹ AB 1868 was passed by the Assembly on May 18, 1961, and sent to the Senate where it was assigned to the Finance Committee, from which it was not reported favorably.

² The reports recommended further study of the proposed legislation.

³ For a comprehensive outline of this historical development see the transcript of the Subcommittee on Highway Funds, Assembly Interim Committee on Ways and Means, dated October 2, 1964, pp. 61-69.

ards prescribed by the Legislature. Included in these standards are the following requirements:

1. The so-called Breed formula, which requires that 55 percent of the revenue available for construction and related purposes in the state highway program be expended in the southern group of counties and the remaining amount in the northern group of counties.
2. The requirement that only the sum equal to 1 cent of the revenue on Motor Vehicle Fuel Taxes be expended for administration and maintenance purposes. This in effect is a ceiling which the Legislature has placed for administration and maintenance. The subcommittee was told that the amounts required for these two purposes are very close to the ceiling.
3. The ceiling of \$7.5 million for the maintenance of landscaping and functional planting.
4. The so-called Mayo formula, which requires that a prescribed percentage of the state highway funds be spent in each highway district.
5. The requirement that a minimum amount be expended in every county in the state.

In addition, the Legislature in 1959 established the California free-way and expressway system, a master plan of freeways and expressways for the state that serves as a guide in the overall development of the state highway system.

With these requirements in mind, the Division of Highways annually prepares a planning program. This program is drafted at the district level, reviewed by headquarters and finally submitted to the Highway Commission.

The budget is likewise prepared in various parts at the district level, reviewed in detail and put together by the headquarters of the Division of Highways at Sacramento and then submitted to the Highway Commission. It is adopted by the commission formally in the fall of every year.

Budget Making Contrasted

As distinguished from the usual budget preparation and review process, the budget of the Division of Highways in terms of content, format, and control features is fixed in the Streets and Highways Code.

Stated briefly, these sections require that the budget of the Division of Highways be included in the Governor's Budget *exactly* as submitted by the Highway Commission and prohibit any change by either the Governor or the Director of Finance. In addition, the Director of Finance cannot require any additional information other than that called for by the Streets and Highways Code nor can the director establish allotment controls in any greater detail than those specified by the Streets and Highways Code. As a matter of practical fact, the powers of the Director of Finance, with respect to the budget of the Division of Highways, appear to be restricted to the approval of changes in the major construction and improvement projects adopted by the commission during the year.

An obvious consequence of such an arrangement is the more or less cursory review of the budget of the Division of Highways as contrasted with the detailed analysis and scrutiny to which other budgets are ordinarily subjected. This is particularly true in such management areas as manpower requirements, the scope and kind of construction of highway office buildings and maintenance stations, analysis in depth of support operating expenses and equipment needs, and various levels of operation and activities of the division which are ordinarily subject to intensive and continuous examination by analysts of the Budget Division.

Support and Opposition to AB 2768

Much of the support for AB 2768 and similar legislation has come from disheartened and often angry citizens protesting the route determining policies and practices of the Highway Commission⁴ who feel that at least partial review of Highway Fund expenditures by the Legislature would result in making the commission more responsive to the public. However, there is support for the concept embodied in AB 2768 from legislators, public officials and educators. Legislative Analyst A. Alan Post, in a statement presented before the subcommittee on October 1 and again on December 8, 1964, declared in part:

"We agree entirely with the intended objective of this bill, namely, that there should be only one standard of budgeting and expenditure controls in state government and that the Legislature has a proper interest in the administrative expenditures of the Division of Highways. However, we believe that there are still administrative remedies and procedures which will satisfy the legislative interest in the administrative budget of the Division of Highways short of legislation which would apply to these expenditures the same procedures and Department of Finance controls as those applied to other agencies."

Although many supporters of the Meyers Bill regard it as a "modest" approach, serious opposition to AB 2768 came from representatives of the California State Automobile Association and the Oakland Chamber of Commerce who expressed the view that the proposed legislation if enacted would constitute the "foot in the door" which would ultimately result in increasing pressures on the commission from the Legislature. Testifying before the subcommittee at Lakewood on October 1, 1964, Mr. B. W. Robinson, representing the Southern California Automobile Club, asserted in part:

"... We believe that you cannot separate administration from the actual projects. You can control the project through the expense for administration. We believe it is not logical to try to separate administration from the remainder of the program itself."

One of the more valid arguments advanced by critics of the current budget-making process in the Division of Highways is that the Highway Commission is dependent upon the division's staff almost exclu-

⁴ See transcripts of hearings by the Assembly Ways and Means Committee on Highway Funds, December 8, 1964, available from the Assembly Ways and Means Committee Office, State Capitol.

sively for budgetary recommendations. There is, they argue, no opportunity for impartial review of the budgetary requests adopted by the Highway Commission. Consequently, the subcommittee agrees that at least those who have the responsibility for developing the budgetary program for the commission should be subjected to the impartial scrutiny of the Department of Finance, the Legislative Analyst and the Legislature.

Effect of AB 2768

Assembly Bill 2768 would authorize the Governor to revise the annual report submitted by the Department of Public Works with respect to proposed expenditures under headings (a), (e), and (g) of Section 143.1 of the Streets and Highways Code (i.e., administration, contingencies, and other proposed expenditures, including capital outlay expenditures other than for highway construction). Thus, these budgetary headings would be subject to the same fiscal review by the Department of Finance and the Legislature as is the case with all other state departments. Expenditures under headings (c), (d), and (f) of Section 143.1 (i.e., major construction and improvement of highways, minor improvement and betterment of highways, and purchase of rights-of-way) would not be affected by the measure.

Although representatives of the Division of Highways testifying before the subcommittee at the Lakewood hearing on October 1, 1964, asserted that AB 2768 does not define what is meant by "administration" and that therefore it could not be determined with certainty what activities in the highway program would be covered, the Legislative Analyst in a letter to the subcommittee declared that the bill does provide an adequate definition.

With respect to the proposed removal of "contingencies" from the control of the Highway Commission, the division witnesses argued that this could make very difficult or impossible, where unexpected problems arise, the completion of a given project until the Legislature met. Moreover, it could mean that where money is saved on a project, this money could not be put to work on some other project until reappropriated by the Legislature.

Although capital outlay for construction and maintenance is excluded from the provisions of the bill, the division representatives observed that the location and the extent of a maintenance station could well affect the operation of the division in maintaining a highway.

The desired effect of AB 2768, of course, would be that the administrative budget of the division would be subject to the same workload indices, staffing formulae, and level of service criteria now employed by the Department of Finance, the Legislative Analyst and the Legislature when reviewing departmental budget requests. Proponents of the Meyers Bill argue that no segment of state bureaucracy should be exempted from rigorous examination of its staffing requirements.

Although a spokesman for the Budget Division of the Department of Finance told the subcommittee that they believe the maintenance of administrative standards across the board for all state departments is basically a sound policy, they regard the subject of AB 2768 a matter of legislative policy. Consequently, the Department of Finance has not

made a positive recommendation on the measure either at the time it was heard in committee or during its interim study.

Alternatives to AB 2768

The alternatives to AB 2768 are essentially (1) total review of the division's budget, or (2) retaining the status quo. However, a third alternative was presented by Legislative Analyst A. Alan Post, who outlined a series of administrative remedies and procedures which he felt would satisfy the legislative interest in the administrative budget of the Division of Highways. These included:

1. Tighter administrative controls over the budgets and expenditures of the division entirely on an internal basis. A mandatory report to the Governor and Legislature on defined administrative matters could be required and subjected to review by the Department of Finance.

2. The full application of the "agency" concept under which the division is a part and which includes other separate but related functions under an agency administrator should contribute to improved internal departmental controls and lessen inclinations toward dual standards on budgeting.

3. The staff of the Legislative Analyst and Auditor General could devote greater emphasis than has been the case to a review of administrative controls of the division for the purpose of reporting to the Legislature.

4. The Legislature could institute tighter budget controls in selective areas, such as space utilization, automobile usage, etc., and special control sections could be instituted without subjecting all division expenditures to control by the Department of Finance.

Conclusions and Recommendations

The subcommittee is mindful of the fact that much of the support for AB 2768 has been inspired by the many spirited conflicts over freeway routing in various sections of the state. The letters to the editor columns of virtually every newspaper in the state are liberally supplied with angry letters denouncing the Highway Commission and its technical staff from the Division of Highways for their "short-sightedness," "lack of esthetic design," and "disrespect for our natural and scenic resources," etc. The subcommittee does not desire to involve itself here with a discussion of these controversies. Neither does it wish to render judgment on the merits of AB 2768 based on this conflict.

The favorable recommendation of AB 2768 should rest, we feel, solely on its merits as a vehicle for sound fiscal review consistent with the procedures and practices employed by the Department of Finance, the Legislative Analyst and the Legislature in pursuing their responsibilities in the budgetary process. We conclude that insofar as AB 2768 would subject the Highway Division's administrative budget to the same careful scrutiny as other state agencies and departments are now required to undergo, we recommend the bill for passage.

Although we emphatically oppose bringing the freeway and highway design controversies into the legislative arenas, we see no reasonable justification for exempting the division's administrative budget from

the rigorous examination of the Finance Department's budget analysts, the Legislative Analyst and the respective fiscal committees of the Legislature. However, we further recommend that subdivisions (e) and (g) of Section 143.1 of the Streets and Highways Code be excluded from the provisions of any bill patterned after AB 2768.

Meanwhile, irrespective of the outcome of legislation embodying the recommendations above, the subcommittee recommends that the administrative budget for the Division of Highways be submitted to the Ways and Means Subcommittee on Standards, Procedures, and Reporting for appropriate study and appraisal of work standards, staffing formulae, and level of service criteria. The immunity from external control of the Highway Division's expenditure program does not, we feel, carry with it an immunity from reporting to the Legislature these basic elements of budgetary procedure.

APPENDIX

ASSEMBLY BILL 2768

CALIFORNIA LEGISLATURE, 1963 REGULAR (GENERAL) SESSION

ASSEMBLY BILL

No. 2768

Introduced by Messrs. Meyers and Pattee

April 25, 1963

REFERRED TO COMMITTEE ON WAYS AND MEANS

An act to amend Sections 143.1 and 183 of the Streets and Highways Code, relating to the expenditure of funds available for state highways.

The people of the State of California do enact as follows:

- 1 SECTION 1. Section 143.1 of the Streets and Highways
- 2 Code is amended to read:
- 3 143.1. The department shall make at least 30 days before
- 4 each regular session of the Legislature a budget report to the
- 5 Governor.
- 6 The commission shall prepare for inclusion, and the depart-
- 7 ment shall include, in said report a statement of all estimated
- 8 State Highway Fund revenues and revenues available from
- 9 any other sources and estimated regular federal aid for the

LEGISLATIVE COUNSEL'S DIGEST

A.B. 2768, as introduced, Meyers (W. & M.). Expenditure of state highway funds. Amends Secs. 143.1 and 183, S. & H.C.

Makes the expenditure of money in the State Highway Fund for administration, contingencies, and other proposed expenditures, other than capital outlay expenditures for highway construction or improvement, subject to the same budgetary and fiscal controls as expenditure of other state funds.

Retains the continuing appropriation of money in said fund for maintenance, construction, and improvement of state highways and acquisition of rights-of-way and retains, as to such proposed expenditures contained in the annual budget of the Department of Public Works, the provision prohibiting the Governor from revising the budget as submitted by the department.

1 next succeeding fiscal year, together with a statement of pro-
2 posed expenditures or obligations to be incurred during the
3 next succeeding fiscal year for the construction, improvement,
4 and maintenance of the various highways or portions thereof
5 under the jurisdiction of the department under the following
6 headings:

7 (a) Administration, including payments for services of the
8 Division of Contracts and Rights-of-way.

9 (b) Maintenance.

10 (c) Major Construction and Improvement. Under this will
11 be shown all proposed expenditures or obligations to be in-
12 curred in each county group for major construction and im-
13 provement, *including preliminary engineering*, segregating the
14 route of each highway to be constructed or improved, the
15 county in which located, the number of miles involved, and a
16 description of the type of work to be done.

17 (d) Minor Improvement and Betterment. This heading
18 will show the total proposed expenditures and obligations to be
19 incurred for each county group for minor improvement and
20 betterment, *including preliminary engineering*.

21 (e) Contingencies.

22 (f) Rights-of-way. This will show the approximate amount
23 of money needed for the purchase of rights-of-way in each
24 county group.

25 (g) Other proposed expenditures, including *preliminary*
26 *engineering capital outlay expenditures other than for high-*
27 *way construction*.

28 The said report as submitted by the department, *as may be*
29 *revised by the Governor with respect to proposed expenditures*
30 *under headings (a), (e), and (g) above*, shall be included in
31 the printed fiscal year budget submitted to the Legislature by
32 the Governor. It shall constitute as submitted the complete
33 and detailed budget submitted to the Department of Finance
34 pursuant to Section 13320 of the Government Code. Said
35 budget shall be administered by the Department of Finance as
36 the Fiscal Year Budget of the Division of Highways under the
37 provisions of this section and of Article 2 of Chapter 3 of Part
38 2 of Division 2 of Title 2 of the Government Code. In the case
39 of any inconsistency, the provisions of this section shall con-
40 trol.

41 All changes or modifications in the budget shall be by vote
42 of the commission, approved by the Director of Finance where
43 required by this section.

44 Funds may be transferred from Item (e), Contingencies, to
45 other item by vote of the commission, but no increase or de-
46 crease shall be otherwise made in any of Items (a) to (g),
47 inclusive, of said budget without the approval of the Director
48 of Finance. No project shown under Item (e) shall be elimi-
49 nated and no new project shall be added to Item (e) of the
50 budget without the approval of the Director of Finance. If it
51 is necessary to eliminate or postpone any project shown under

Item (e) to meet an emergency caused by floods, earthquake or other like cause or on account of decreased revenue or on account of increased costs on other work, the commission may eliminate or postpone such project upon the written approval of the Director of Finance.

In the event, during an annual period, the budgetary amount approved and allocated by the commission for any purpose exceeds the amount actually necessary therefor, with a resultant available surplus, such surplus may be allocated by the commission to any other purpose or supplemental project upon the written approval of the Director of Finance.

Except as otherwise provided in this section, the department shall be subject to control by the Department of Finance with respect to expenditure of funds in the same manner and to the same extent as any other state department.

In administering ~~said~~ the fiscal year budget of the Division of Highways, the Director of Finance shall not limit expenditures or incurrence of obligation ~~thereunder~~ under headings (c), (d), and (f) above to quarterly, semiannual or other periods of the fiscal years and shall not require any greater detail than that specified in this section and in Section 143.2.

Contracts for any highway construction and improvement projects for which funds are available during any fiscal year may be awarded on and after the first day of January preceding the beginning of the fiscal year.

SEC. 2. Section 183 of said code is amended to read:

183. All money available for the acquisition of real property or interests therein for state highways, or for the construction, maintenance or improvement of state highways or highways in state parks shall be deposited in the State Highway Fund. The moneys in said fund are appropriated and shall be allocated and expended for the purposes and in the manner provided in this code, *except that no expenditures for the purposes specified under headings (a), (e), or (g) of Section 143.1 may be incurred until the Legislature has specifically appropriated money from the fund therefor.*

SEC. 3. This act shall become operative with respect to expenditures authorized for the fiscal year commencing July 1, 1964 and thereafter. Expenditures made, and to be made for encumbrances incurred, for prior fiscal years to that commencing on July 1, 1964 shall continue to be effective as if this act had not been enacted.

1. The first part of the document discusses the importance of maintaining accurate records of all transactions and activities. It emphasizes that this is essential for ensuring transparency and accountability in the organization's operations.

2. The second part outlines the specific procedures for recording transactions, including the use of standardized forms and the requirement for double-checking entries to prevent errors.

3. The third part addresses the role of the accounting department in monitoring and reporting on the organization's financial health. It highlights the need for regular reviews and the importance of providing timely and accurate information to management.

4. The fourth part discusses the challenges faced by the organization in implementing these procedures, such as limited resources and the need for staff training. It suggests several strategies to overcome these challenges, including the use of technology and the establishment of clear roles and responsibilities.

5. The fifth part concludes by reiterating the importance of these procedures and the commitment of the organization to maintaining high standards of financial management.

LETTER OF TRANSMITTAL

ASSEMBLY INTERIM COMMITTEE ON WAYS AND MEANS
CALIFORNIA LEGISLATURE

March 15, 1965

To the Speaker and Members of the Assembly

DEAR MR. SPEAKER AND MEMBERS:

Pursuant to a request of the Assembly Rules Committee, transmitted herewith is a report of the Assembly Interim Committee on Ways and Means relating to support of fireboat operations in San Francisco Bay.

Assembly Bill 2690 (1963, Meyers) provided the vehicle for the study made by a special three-member factfinding team of the Subcommittee on State Purchasing. The committee is appreciative of the efforts of Assemblymen Winton, Thelin and Britschgi, who conducted the investigation culminating in the report contained herein.

Respectfully submitted,

ROBERT W. CROWN, *Chairman*

LETTER OF TRANSMITTAL

HON. ROBERT W. CROWN, *Chairman*
Assembly Interim Committee on Ways and Means

Dear Chairman Crown:

Transmitted herewith is the report of the Subcommittee on State Purchasing on AB 2690 (Meyers), 1963 Regular Session, relating to support of fireboat operations in San Francisco Bay.

I am particularly appreciative of the efforts of Assemblyman Gordon Winton, who headed a three-man team of the subcommittee which included Assemblyman Carl Britschgi and Assemblyman Howard Thelin, who conducted the investigation of the subject matter.

Respectfully submitted,

JAMES R. MILLS, *Chairman*

Subcommittee members

GORDON H. WINTON

SUMMARY OF FINDINGS

1. There is clearly a demonstrated need for the maintenance of fireboat operations at both the Port of San Francisco and the Port of Oakland.
2. The subcommittee finds no justification for state support of such fireboat operations as proposed in AB 2690 (Meyers).
3. State participation in the cost of operating fireboats in San Francisco Bay would probably invite similar requests from several other ports in the state, the cost of which would be great.

SUMMARY OF RECOMMENDATIONS

1. The subcommittee strongly urges the Cities and Ports of San Francisco and Oakland to continue their support of existing fireboat operations.
2. The subcommittee recommends that no action be taken by the Legislature on the subject matter continued in AB 2690, 1963 Regular Session.

Introduction

Assembly Bill 2690 (Meyers), introduced during the 1963 legislative session, was referred by the Assembly Rules Committee to the Assembly Interim Committee on Ways and Means following the adjournment of the 1964 legislative session. The subject matter was subsequently assigned to the Subcommittee on State Purchasing. A special three-man team from the subcommittee conducted a formal hearing in San Francisco on December 21, 1964.

The Meyers Bill, in essence, requested the Legislature to appropriate a sum of \$480,000 from the General Fund for the support of fireboats operated by the Cities of San Francisco and Oakland. The measure would have allocated \$360,000 for expenditure by the San Francisco Port Authority and \$120,000 for expenditure by the City of Oakland.

Findings

On the basis of the testimony presented to the factfinding team at the December 21 hearing in San Francisco, the subcommittee finds a demonstrated need for the operation of a fireboat for the Port of Oakland and at least one fireboat for the Port of San Francisco. Testimony from the respective fire chiefs, the fire insurance rating bureau, the Marine Exchange and other interested witnesses clearly indicated the need for port protection by the fireboats.

However, the subcommittee finds no justification for state support of the fireboats or their operation at either port. In reaching this conclusion, the subcommittee was mindful of the precedent such state financial participation would establish. Moreover, realizing that there are at least three other major ports which could also seek state support,

the subcommittee saw in Assembly Bill 2690 an inherent danger. If other port cities were to prevail upon the state's General Fund for fireboat support, the cost could be staggering.

With respect to existing financial arrangements at other major ports, the subcommittee found that the full cost of fireboat operations at both Long Beach and Los Angeles ports is borne entirely by each city's treasury. In San Diego, the Unified Port District pays all fireboat operational costs except one-fourth of the total cost of salaries, which is assumed by the City of San Diego.

Additionally, testimony was received from officials of the fire rating bureau that fire insurance rates of the entire city could be affected if there was found to be insufficient fire protection in the harbor. If this happened, fire insurance rates might be increased in the entire city costing all property owners increased premiums many times the cost of adequate fire protection afforded the harbor area by the fireboats. Enlightened self-interest would indicate citizen support of this activity by the general taxpayers as a necessity.

In view of the above, the subcommittee recommends that no action be taken by the Legislature on the proposal embodied in AB 2690 (Meyers), 1963 Regular Session.

CALIFORNIA LEGISLATURE

March 15, 1965

To the Speaker and Members of the Assembly

DEAR MR. SPEAKER AND MEMBERS:

Pursuant to House Resolutions 107 and 390 (1963, Kennick) and House Resolution 372 (1964X, Mills), transmitted herewith is the final report of the Assembly Interim Committee on Ways and Means, Subcommittee on Fairs and Expositions on the subject of proposed state participation at the Long Beach World's Fair which was to be held in 1967-68.

The committee is grateful to Assemblyman Waldie and the members of his subcommittee who conducted hearings and research that lead to the conclusions contained herein.

HON. ROBERT W. CROWN, *Chairman*
Assembly Interim Committee on Ways and Means

DEAR CHAIRMAN CROWN:

In accordance with House Resolution 107, 1963 General Session, the Subcommittee on Fairs and Expositions herewith submits its report.

Specifically, the resolution directed that study be given to the question of state participation, as an exhibitor, in the World's Fair proposed to be held in Long Beach in 1967 and 1968.

The subcommittee is appreciative of the assistance rendered by the many individuals and organizations contacted in the course of the study.

INTRODUCTION

HR 107 (Kennick and Deukmejian), calling for an interim study of the state's participation, as an exhibitor, in the proposed World's Fair at Long Beach, was referred to the Interim Ways and Means Committee. In turn, it was referred to the Fairs and Expositions Subcommittee.

During the two-day hearing held by the subcommittee in Long Beach (August 12-13, 1964), a number of serious questions were raised concerning the organizational structure of the nonprofit corporation promoting the fair and its financial support. Not all of these questions were satisfactorily answered, as evidenced by the transcript of the hearing.

Subsequent to the hearing, complications arose which resulted in the City of Long Beach withdrawing the previously selected fair site, leaving the proposed fair in a highly uncertain position. It is understood the promoters of the fair are seeking another site in the Los Angeles area.

I. FINDINGS

- A. Inadequate justification was presented to support the contemplated cost to the state to participate, as an exhibitor, at the proposed World's Fair.
- B. The question of state participation in the proposed World's Fair is moot. Arrangements to hold it in Long Beach have failed.

II. RECOMMENDATIONS

- A. Since the proposed World's Fair will not be held at Long Beach, no committee recommendation can be made with regard to the precise point of HR 107.
- B. In considering any future authorization of state participation in a similar venture, the committee recommends extremely close scrutiny of the promotional organization and its financial support structure.

NOTE: Persons desiring additional background information concerning the findings and recommendations above may request a copy of the transcript of the hearing by the Fairs and Expositions Subcommittee, August 12-13, 1964, from the Ways and Means Committee Office, Room 2140, State Capitol, Sacramento 95814.

PROGRESS REPORT

For several years, the State Assembly has recognized the inadequacy of the present budget process. The responsibilities of state government have expanded to the point where a line-item budget can no longer serve the primary function it must serve—the presentation of a comprehensive and integrated plan for government action. To the extent that a line-item budget emphasizes the individual items of expenditure, it obscures the essential information which decision makers must have—what is to be done, how it is to be done, and at what cost.

In response to this recognized inadequacy, the State Assembly, through the Ways and Means Committee, has spearheaded the development of a new form of budget. A program and performance budget based on long-range planning will best meet the needs of California.¹ A program budget is organized according to the individual objectives of expenditure rather than the individual items of expenditure. A budget written in terms of the objectives of government, the programs designed to accomplish those objectives, and the costs of those programs will thrust the important policy issues to the surface.

A performance budget is the necessary complement of a program budget. It augments the program budget through the development of performance evaluation techniques. It makes possible the comparison of actual accomplishments to program objectives. It focuses on what a dollar buys in any given program. Long-range planning is clearly necessary to meet future needs. Five- or 10-year projections of programs, their costs, and the state's revenues are basic to the anticipation of future needs and the planning to meet them.

In 1961, the Assembly passed HR 361 (Crown), which directed the Ways and Means Committee to study the problem of the inadequacy of the budget and recommend remedial action. In 1963, the committee submitted its *Report on Long-range Program and Budget Planning* to the Legislature. This report specified certain legislative requirements in budgeting and suggested several alterations in the budget process to meet those requirements, particularly a program and performance budget based on long-range projections.

After considering this report during the 1963 session, the Assembly passed HR 359 (Crown), which directed the committee to continue its study through the application of the principles and concepts contained in the 1963 report to the budgets of one or more executive agencies. In cooperation with the Department of Finance, sample program budgets were prepared by the Departments of Motor Vehicles, Fish and Game, and Youth Authority for the committee's consideration. These sample budgets were analyzed by the committee at a hearing on June 22, 1964. The present report is based on the committee's findings at that hearing.

The committee wishes to express its appreciation for the cooperation of the Department of Finance and other participating executive agencies. While the sample program budgets presented at the hearing were deficient in several respects, they represented a commendable begin-

¹ See the *Report on Long-Range Program and Budget Planning*, Assembly Interim Committee on Ways and Means, 1963.

ning.² The committee is confident that the Department of Finance will continue and indeed intensify its efforts to develop a usable program and performance budget.

Also, the Legislative Analyst has designed his *Analysis* of the 1965-66 Budget in terms of program and performance budgeting. In addition to its usual functions, the *Analysis* attempts to describe each agency's objectives or programs, link objectives to the agencies' performance in fiscal year 1963-64, and suggest criteria of evaluation. The committee appreciates the initiative and cooperation which this revision of the *Analysis* represents.

The most significant conclusion reached by the committee as a result of this past interim's study is that the development of program and performance budgeting has now progressed as far as theory alone will take it. Theory has set the broad outlines well enough, but it will not serve to sharpen the focus or fill in the details. The further development of program and performance budgeting is now confronted with a host of middle-range problems which can only be solved through experience. The Legislature, as the branch whose needs the budget must primarily serve, must define the solutions to these problems of development through active participation.

For example, the committee has determined that each program must be broken down into a certain number of component subprograms if the Legislature is to retain meaningful control over the activities of state government. This articulation of program will permit policy decisions to be better effected in the budget. It will permit the Legislature to make adjustments in programs and selective augmentations or decreases. But the point is that the Legislature is yet unsure what constitutes a sufficient number of subprograms nor under what criteria they should be broken down in each case. The Legislature can only determine the solutions to these kinds of problems by actually dealing with each program.

Other middle-range problems are what kinds of performance standards are necessary, how much data is necessary to support these standards, what kinds of cost accounting systems are appropriate, and what criteria of evaluation should be built into each program.

This gap between theory and application should be closed as the next step in the development of a usable program and performance budget. To close this gap, the committee recommends the following:

1. The administration, which the committee has been informed intends to submit at least 10 program budgets during the 1965 session, should be encouraged to pursue the development of program and performance budgeting and to cooperate even more closely with the Legislature and the Legislative Analyst in this development;
2. The Legislative Analyst should be encouraged to continue the development of a budget analysis in terms of program and performance budgeting and to advise the Legislature and the administration on the development of a usable program and performance budget;

² See transcript of hearing by Ways and Means Committee on Long-range Budgeting dated June 22, 1964.

3. The Committee on Ways and Means will actively participate in the development of a program and performance budget during the present session. The primary purpose of this participation will be to determine the most appropriate solutions to the host of middle-range problems that now confront us. The budget subcommittee chairmen will meet regularly with the Chairman of the Committee on Ways and Means throughout the session to discuss their experience and to make such adjustments in the budget process as this experience suggests. Emphasis will be placed on experimentation to discover the techniques which best meet the needs of the Legislature.
4. The committee recommends that it be authorized to continue its study of program and performance budgeting during the next interim. Particular emphasis will be placed on the development of techniques for the evaluation of performance and for comparison of performance to objective.

LETTER OF TRANSMITTAL

ASSEMBLY INTERIM COMMITTEE ON WAYS AND MEANS
CALIFORNIA LEGISLATURE

March 15, 1965

To the Speaker and Members of the Assembly

DEAR MR. SPEAKER AND MEMBERS:

In March 1964 the Assembly Rules Committee authorized a special Ways and Means Subcommittee on Standards, Procedures and Reporting. The subcommittee will continue to serve as both an interim and standing subcommittee of Ways and Means.

I am pleased to transmit herewith a progress report of the subcommittee headed by Assemblyman John C. Williamson. I wish to thank Assemblymen Williamson, Collier and Mills for their contribution to more meaningful budgetary review.

Respectfully submitted,

ROBERT W. CROWN, *Chairman*

LETTER OF TRANSMITTAL

HON. ROBERT W. CROWN, *Chairman*
Assembly Interim Committee on Ways and Means
State Capitol
Sacramento

Dear Mr. Crown:

Pursuant to Rules Committee action in March 1964, your special subcommittee on Standards, Procedures and Reporting was authorized and I was pleased to serve as its chairman, at your request.

Transmitted herewith is a progress report of the subcommittee. I hope that our work will prove of some benefit to the full Ways and Means Committee. I am indebted to all who cooperated with the subcommittee during the interim.

Respectfully submitted,

JOHN C. WILLAMSON, *Chairman*

PROGRESS REPORT

In its consideration of the Executive Budget for several past sessions, the Committee on Ways and Means has been dissatisfied with the quality of justification various departments have offered in support of their budget requests. Justification often rests solely on dramatic examples of problems. Partial information, usually onesided, is offered rather than the whole story. In other cases, only the most superficial information, lacking depth, is offered. The Legislature is often asked to rely completely on the administrator's judgment of departmental needs, lacking meaningful factual evidence. All too often the justification offered does not in fact justify the request. The personnel or supplies requested may or may not be necessary to the proper functioning of government. If the justification offered is seriously deficient, neither determination can be conscientiously made.

The availability of information is central to the budget process. Good legislative decisions on the budget depend on good information on the operations of state government. It is the responsibility of each department to provide the Legislature with the necessary information. Failure to adequately justify a budget request is indicative of poor administration and often results in legislative denial of the request.

At the conclusion of the budget hearings in the 1964 session, the Chairman of the Committee on Ways and Means requested authorization from the Committee on Rules to create the Standing Subcommittee on Standards, Procedures, and Reporting to deal with this problem. Authorization was granted on March 26, 1964, and the subcommittee has been functioning continuously since that date.

The subcommittee's assigned purpose is to **raise the quality of** budgetary justification throughout the departments of state government to a minimum level defined by the informational requirements of the Legislature. In general, the Legislature requires information which is directly *relevant* to a specific request, which is *comprehensive* in the sense that it reflects the whole of the governmental operation to which the request refers, and which is *objective* in the sense that any competent observer studying the operation would come to a proximate *conclusion* with regard to the request.

The subcommittee has found that the inadequacies of budgetary justification in most departments stem from the lack of the proper internal techniques for producing the required information: empirically based work standards, regularized operational procedures, and accurate reporting systems. These techniques of budgetary justification must be fully developed in every department to ensure that future budgets will be properly prepared in the first instance and that the Legislature will have available to it all of the information necessary to make good budgetary decisions.

The subcommittee determined that the best way to proceed would be to notify every department of the subcommittee's assessment of the general problem and its definition of the minimum level of ade-

quacy in budgetary justifications. This was followed by a questionnaire designed to elicit information on each department's currently employed standards, procedures and reporting systems. The questionnaire was also designed to instruct the departments further on the subcommittee's concept of proper budgetary justification.

Using the departments' responses to the questionnaire as a basis, the subcommittee intends to take up every department, one by one, in public hearing to review their techniques of budgetary justification, to identify the areas of deficiency, and to instruct them on remedial action. These hearings are also useful to instruct the departments on better methods of budget presentation before the Legislature. The subcommittee has a target date of 1970 for completion of its whole review. It is expected, however, that the impetus of the subcommittee's work will carry beyond just the departments the subcommittee has dealt with and that a general improvement will be effected by the other departments on their own initiative.

The subcommittee works closely with the office of the Legislative Analyst and the Budget Division of the Department of Finance. It also makes substantial use of staff level conferences. Each hearing is usually preceded by several conferences between the subcommittee staff, the Legislative Analyst, the budget analyst from the Department of Finance, and the budget officer of the department to be examined. The purpose of these conferences is to aid the departments in developing adequate techniques of budgetary justification for proposal to the subcommittee at the hearing.

Thus far, the subcommittee has received responses to the questionnaire from 35 departments. There is a June 1, 1965, deadline on the responses from the remaining departments. Staff level conferences have been held with 24 departments. The subcommittee has held four hearings; one on the efforts of the Department of Finance to improve the quality of justifications throughout the administration; two on the Department of Justice; and one on the Department of Mental Hygiene. Hearings are tentatively scheduled four months in advance on three additional departments.

In the Department of Justice, workload standards have been developed for most operations. The subcommittee counts as a major achievement the development of a time-reporting system which will be the basis of a workload standard for attorneys. In the Department of Mental Hygiene, the subcommittee is working on the development of standards for direct care personnel which are based on the results of departmental "cohort studies" and other experimental techniques of patient care.

The subcommittee has developed two major means of communication to the full Committee on Ways and Means and to the Legislature. First, upon arriving at the agreement with the department, the office of the Legislative Analyst and the Department of Finance on the specific techniques of budgetary justification to be employed, the subcommittee will prepare a report for the use of the Ways and Means budget subcommittee which considers the department's budget during the session.

Second, the subcommittee invites the chairman of that budget subcommittee in the previous session to sit with the subcommittee as an ex officio member.

In conclusion, the subcommittee believes that this method of dealing with the problem of regularly inadequate justification will prove successful. It should be pointed out, however, that not all of the problems of justification stem from inadequate standards, procedures, and reporting systems. A notable exception is the type of request which is the result of a policy determination by the Governor. Hopefully, knowledge of the general informational requirements of the Legislature will lead to more conscientious justification in the exceptional areas.

It should also be pointed out that the greatest stimulant to improvement will be an exacting and critical approach by the Committee on Ways and Means in its annual budget hearings and the reflection of this approach in its budget recommendations to the Legislature. The subcommittee suggests as an operating principle: if a department cannot prove, with relevant, comprehensive and objective evidence, to the satisfaction of a group of reasonable men that its request is necessary to the proper functioning of the department, the request is to be denied.

Finally, as the subcommittee has become better informed and has perfected its methods of operation, it has become aware of the close relationship between its regular task and the development of program and performance budgeting. Concurrent with its attempts to develop adequate techniques of budgetary justification in the departments of state government, the subcommittee is also attempting to develop the techniques of performance evaluation which will be required by a program and performance budget.

For further information, see the transcripts of the hearings of the Subcommittee on Standards, Procedures and Reporting on May 20, 1964, June 23, 1964, August 7, 1964, and December 14, 1964, available from the Committee on Ways and Means, Room 2140, State Capitol.

A Proposal to Improve the California Law Enforcement Teletype System	65

LETTER OF TRANSMITTAL

ASSEMBLY INTERIM COMMITTEE ON WAYS AND MEANS
CALIFORNIA LEGISLATURE

March 15, 1965

To the Speaker and Members of the Assembly

DEAR MR. SPEAKER AND MEMBERS :

Pursuant to House Resolution 472 (1963, Crown) and House Resolution 373 (1964, Williamson), transmitted herewith is the final report of the Assembly Interim Committee on Ways and Means on the uses of automatic data processing and on a proposal to update the statewide law enforcement teletype system.

The committee is appreciative of the many individuals and organizations, both public and private, who gave us the benefit of their knowledge and suggestions.

Respectfully submitted,

ROBERT W. CROWN, *Chairman*

Members of the Committee

Two resolutions were assigned to the committee: HR 472 (1963, Crown) directed a study of the uses of automatic data processing in state government, and HR 373 (1964, Williamson) directed a study of the reported inadequacies of the statewide law enforcement teletype system.

Recommendations Pursuant to HR 472:

1. The committee recommends that a Division of Data Processing be created within the Department of General Services and that it be headed by an appropriately high-ranking and responsible official.

2. The committee recommends that three functions be centralized in this division:

- a. Long- and short-range planning for the use of automatic data-processing systems and equipment on a statewide basis and assistance to and coordination among the individual using departments in planning.
- b. A wide range of technical services available to the using departments for the development of the most efficient systems, maximum coordination between systems, the development of integrated systems, and the maximum usage of data.
- c. A centralized service bureau to perform automated data-processing tasks for those departments whose workload does not justify an installation of their own.

3. The committee recommends that sufficient funds be made available to staff this division and that steps be taken to ensure that high professional competence is achieved.

4. The committee recommends that the Director of the Department of General Services be assigned the primary responsibility for implementing overall policies for the orderly development of automatic data processing in state government, such policies to be thoroughly consistent with a "Statewide Master Plan for Automatic Data Processing" proposed below.

5. The committee recommends that an appropriate interim committee be directed to continue the study of the uses of automatic data processing in state government and that it be directed to cooperate with representatives of the executive branch in the development of a "Statewide Master Plan for Automatic Data Processing," such plan should include but not be limited to:

- a. Specification of the systems which should be developed in the succeeding five-year period and explicit criteria upon which such specification is made, such criteria to be developed around the concept of the total needs of the state.
- b. Provisions for achieving sound economic criteria of systems development, including criteria to guide the determination of whether equipment should be bought or leased.

- c. Provisions for achieving maximum operational efficiency in each individual system including the establishment of regular standards of performance.
- d. Provisions for achieving maximum coordination between systems.
- e. Provisions for achieving maximum feasible integration of systems.
- f. The establishment of a central data index which will meet the informational needs of departmental administrators, the Governor, and the Legislature.

6. The committee recommends that preparatory to the development of the "Statewide Master Plan for Automatic Data Processing" an appropriate executive department be directed to immediately begin an inventory of state-collected data, its location, its availability, its present use, and its future planned use.

Findings:

The committee has found that automatic data-processing installations have proliferated throughout state government in a largely uncontrolled manner. There has been no statewide planning for the orderly development of automatic data processing nor any statewide policy to guide this development. As of November 15, 1963, the state had 55 installations which cost an estimated \$15 to \$18 million annually. This expenditure had more than doubled in the preceding five-year period and the Department of Finance expects it to reach more than \$40 million by 1970.

The lack of central control over this development has resulted in systems which are generally designed to perform according to the requirements of one program or, at best, of one department. And most expert observers agree that few of the state's systems perform efficiently even in terms of those single programmatic or departmental requirements. There is at present substantial waste of machine and personnel capacity and also substantial duplication of effort. The state's present configuration of automatic data processing systems is characterized by parochialism. There is almost no coordination between systems. There has been very little development of the multiple uses of data. There are no systems which have been integrated on an interdepartmental basis.

Finally, systems have not been designed to meet the total needs of the state. In particular, systems have not been designed as the tool of management, neither at the departmental level nor at the executive or legislative level.

In short, the committee has found that the state has not achieved the maximum benefit for the money invested in this field. Efficiency and economy in automated data processing require planning, a high degree of centralized control, and competent personnel. The committee's recommendations are intended to provide this. The executive branch's Steering Committee on Automated Data Processing, which has conducted a yearlong study of this subject, generally concurs with this assessment of the problem but has not expressed itself on the above recommendations.

For additional information on this subject, see the transcript of the hearing of the Assembly Interim Committee on Ways and Means on automated data processing held on December 2, 1964. The transcript

is available from the Ways and Means Committee, Room 2140, State Capitol.

Recommendations Pursuant to HR 373:

1. The committee adopts as its recommendations the recommendations of the Advisory Body on the Statewide Law Enforcement Teletypewriter System as detailed in its report entitled, "A Proposal to Improve the California Law Enforcement Teletypewriter System." In summary, this report recommends:

- a. Technical modernization of the California law enforcement communications system according to the specifications of the Communications Advisory Committee of the Peace Officers Association of California. This modernization will include the establishment of a statewide network with one central terminal in each county and the installation of automatic equipment at all terminals.
- b. The total cost of the improved system is estimated to be approximately \$1,136,772 the first year and approximately \$994,972 each year thereafter, as compared to the present state expenditure of \$467,244.
- c. The creation of a commission to operate the system and to make and enforce such rules and regulations as are necessary to its efficient operation.
- d. The repeal of several sections of the law which have added over a hundred special terminals to the present system at state expense over the past 30 years.

Findings:

The committee was informed that law enforcement agencies throughout California have complained for six years that their communications network is no longer adequate to their needs. Upon making this finding, the Chairman of the Committee on Ways and Means asked representatives of several law enforcement and other governmental organizations to form an Advisory Body to the Committee on Ways and Means for the purpose of identifying the present inadequacies of the network and making recommendations to correct them. The advisory body met three times with the committee staff and various additional law enforcement officials between July and November 1964 and on December 2 presented their report to the committee.

Basing its study on this report, the committee has found that the California law enforcement teletypewriter system, which is the primary means of communication between the law enforcement agencies in California, is indeed outmoded and inadequate to serve current law enforcement needs. The system was created in 1931 and has not benefited from any significant technological improvement since then. Law enforcement officials, from all levels, speaking as individuals or through the Peace Officers Association of California, agree that their work is substantially hampered by the present technological backwardness of the system.

In addition, law enforcement communications have suffered from the lack of any discipline on the system. It is probable that substantial improvements in efficiency and economy can be obtained through the crea-

tion of an administrative commission with rulemaking and enforcing powers.

Finally, the more than 100 stations added by special legislation at state expense have contradicted the original purpose of the system and have made state policy in this area confused and ambiguous. The result has been a general frustration on the part of law enforcement agencies and progressive neglect of the system itself. Repeal of this special legislation will clarify state policy and will rationalize the system and its financing.

For additional information, see the transcript of the hearing of the Assembly Interim Committee on Ways and Means on automatic data processing held on December 2, 1964. As an appendix, the report of the advisory committee appointed by Chairman Crown follows.

APPENDIX

A PROPOSAL TO IMPROVE THE CALIFORNIA LAW ENFORCEMENT TELETYPEWRITER SYSTEM

BY

ADVISORY COMMITTEE ON STATEWIDE LAW ENFORCEMENT TELETYPEWRITER SYSTEM

Summary

Police work in this state is being impeded because the present California teletypewriter system is inadequate for the following reasons:

1. Manually operated
2. Multistation circuitry
3. Too slow
4. Not expandable
5. Uneconomical to renovate

Effective law enforcement is dependent upon an improved California law enforcement teletypewriter system which must have the following essential components:

1. Automation
2. Independent circuits
3. Fast
4. Expandable
5. Economical

Law enforcement in California must have an improved system of communications for the typewritten exchange of vital police information with speed and accuracy.

The Peace Officers' Association of the State of California, through its Communications Coordinating Committee, has endeavored to bring the subject of teletypewriter improvement to the attention of state officials for approximately six years. Specifications for minimum improvements were drafted by the committee and approved by the Association Executive Committee but no constructive measures were accomplished. The association, in April 1964, passed a resolution to the Legislature which effected House Resolution 373 (by Williamson and Unruh) of the California State Assembly. As a result of House Resolution 373, a committee of officials was appointed to research the teletypewriter improvement plan and report to the Ways and Means Committee of the Assembly a recommendation for constructive action at the 1965 Session of the Legislature.

This ad hoc committee was named the advisory body on the statewide law enforcement teletypewriter system and is composed of the following:

- Two representative(s) from the Peace Officers' Association
- One representative from the Sheriffs' Association
- One representative from the League of California Cities
- One representative from the California Supervisors' Association
- One representative, Chairman, Governor's Communications Advisory Commission
- One representative from the Department of Justice
- One representative from the Department of Motor Vehicles
- One representative from the Department of General Services
- One representative from the California Highway Patrol

This report represents the study of the ad hoc committee and endeavors to describe the requirements drafted and justified by law enforcement officials and the Peace Officers' Association. This improvement plan, based upon today's technical knowledge, will meet the typewritten communication needs in police work for the next 10 years. The report contains and emphasizes the essentials with no attempt at sophistication or modernization for the purpose of something new or unproven.

The present system has served law enforcement faithfully but has undergone no major change since its inception in 1931. The original network was established with 22 stations which has now grown to a system of law enforcement agencies numbering 152, which have been, for the most part, added by legislative enactment. The system has grown as a normal result of expansion rather than as a result of scientific advancements in the media of wire or line communication. Teletypewriter service has become an efficient tool in police work by communicating with offices in adjoining states, districts or areas and nationally. In addition to the California subscribers, the network serves approximately 550 stations through subordinate county networks and connections with the western states. This total of some 700 stations can be augmented by service to some 40 other states.

State statutes and court decisions have made it imperative that the law enforcement officer be provided written data such as:

1. Criminal records of individuals
2. Transcripts of Motor Vehicle records and violations
3. Warrants of arrest
4. Lists and reports of lost or stolen property

Voice transmission of such data is no longer sufficient for the exchange of information due to the possibility of human error.

The system today transmits in excess of two million messages annually, or approximately 7,000 per day at a speed of 75 words per minute with more than eight hours of the day devoted to all points broadcasts. Technical advancements, appropriate to the present design, have been employed to the advantage of the network to the degree that it is no longer possible to expand the system in its present status. Speed cannot be increased without a major change in the equipment at most stations. The change of such equipment will be costly and of no particular advantage without a change in the concept of the network.

The modern criminal depends on speed, not only in the commitment of an unlawful act, but also in escaping apprehension and disposing of the result of the criminal activity. Law enforcement must employ even faster measures to cope with the mobility of the criminal of today. Police agencies can no longer depend on the limitation of their own office records but must have a central source of current information or a direct avenue of inquiry to other departments. Faced with the population explosion, the increase in the number of police agencies and the increased rate of crime, the new concept of law enforcement is the centralization of information, the up-to-date or current status of such records and the speed with which data can be obtained.

These conditions are recognized by the principle law enforcement officers within the state, especially in southern California, from which 65 percent of the traffic over the system originates. In that area there are two independent networks, connected to the state system, that are far more advanced than the state system in that they are fully automated, employing a minimum of communication personnel, using speeds up to 100 words per minute, and equipped with technical machinery capable of interconnection with modern day computers. The improved system must be able to transport typewritten information from any connecting network or manufacturer's method of transmitting the typewritten word.

The proposal provides for the application of data-processing computers in police work. The California Highway Patrol commences computer operation of the automated statewide auto theft inquiry system (AUTO STATIS) in April 1965, and the County of Alameda has a computer center. Plans are going forward for early installations at the Department of Justice and other agencies.

There are essential features within the proposed improvement plan that will be factors in the final contract with any chosen vendor. No attempt will be made in this report to discuss the specifics but the following must be requirements of any agreement:

1. Equipment capability to measure traffic
2. Contractor training of user personnel
3. Dependability of equipment maintenance
4. Future capability of facsimile transmission

An appropriation will be essential to the establishment of the improved California law enforcement teletypewriter system. Various economies may equal or exceed the expenditure, but the greatest economy will result from more effective law enforcement. Without this consequence, this proposal would not be submitted.

The following recapitulates, for quick review, the principle features that distinguish the present inadequate service from the proposed improvement plan.

Present system

1. Manually operated
2. Multistation circuitry
3. Too slow
4. Not expandable
5. Uneconomical to renovate

Proposed improvement

Automation
Independent circuits
Fast
Easily expandable
Economical

1. *Manual operation versus automation*

The present system is inadequate to the needs of law enforcement in that it can no longer handle the volume of traffic generated by police work with the speed which must be designed into the improvement plan.

The current network operates under the concept of a "manual store and forward" operation on multistation circuits at a speed of 75 words per minute.

A typical message from Alturas to El Centro, under the present system, would require the following: "Off-line" tape-cutting equipment is not a part of the installation at Alturas, and, therefore, an operator would have to secure the circuit and type the message direct into the active line. Operators at such a remote office often cannot type at the speed of which the system is capable of receiving traffic (75 words per minute). For the purpose of this demonstration assume the operator is capable of typing 25 words per minute. The machine is activated and the message is typed at 25 words per minute with the circuit open, thereby preventing six other stations from using the line. In the meantime, a citizen may appear at the reception area of the office and the operator must leave the machine to attend the caller. Likewise, a radio call might be necessary and the operator must leave the line to service the radio call. All of this time the circuit is open and the remaining six stations are unable to use the network. The message must enter the Sacramento relay center, where, when it is concluded, the tape is torn from the receiver, put into a grid in the priority order of its receipt. An employee takes the message from the grid and places it in a transmitter for relay to the Los Angeles relay center. The same operation is manually handled in the Los Angeles relay center and ultimately the message reaches El Centro. This manual operation is cumbersome because of the many times a message must be handled and inefficient because only one station of seven may use the circuit.

This same message, under the proposed improvement plan, would be handled in the following manner: The message (tape) is typed on the teletype machine "tape cutter," which operates without activating the circuit. When the tape has been cut, it is inserted into the transmitter which is activated by a dialing arrangement or coding that brings in the "receive" signal of the addressee machine and, properly coded, will route the message automatically to El Centro at the improved speed of 100 words per minute. As a result, there is a maximum use of the equipment, there is no delay of the transmission, and no other subscriber is prevented from using the network.

The present system requires personnel to handle each message at each relay center, ascertain the addressee station and appropriately assign the tape to the proper circuit for relay.

The proposed improvement of the system provides semi-automatic (activation of the transmitter by the sending station) acceptance of traffic within the network and the fully automated ability of routing this traffic to its ultimate destination.

Outdated teletype machines (models 14, 15, and 19) are still used by some offices generating a minimum of traffic. These models are obsolete and manufacture has been discontinued.

Under the improvement plan all state stations will be equipped with model 33 and model 35 machines which will permit the preparation of tape by what is called "off line," meaning that the machine can receive traffic while "tape-cutting" equipment is used for the preparation of tape for outgoing messages. When tape has been prepared, it is inserted into a transmitter for immediate dispatch into the network. No delay of waiting for an available circuit will be encountered at the point of origin. Once the message has been accepted by the network, it will be switched to its destination automatically.

A most important feature of this topic of multistation operation vs. automation is the security of transmission.

The present system depends on message numbering for transmission security. Communication personnel are required to use a "tally sheet" when assigning a number to a message and any deviation from the continuity of sequence alarms either station of a possible "lost message."

Built into the improvement plan must be certain transmission securities. The equipment must be able to secure a machine signal from the destination station that it is available to receive the message and an answering signal will inform the originating station that it may send. Such certainty will be accomplished in a matter of seconds. This gives the assurance, within the system, that both stations are connected and that traffic transmission is guaranteed between those points.

2. Multistation Circuitry Versus Independent Circuits

Multistation circuits, by which the present system operates, is very similar to the old "party line" telephones of many years ago. This is indicative of the obsolescence and inadequateness of the current network. The present circuits are designed to accommodate no more than seven stations. The "party line" plan is no longer compatible with today's law enforcement needs.

The concept of automation makes it necessary that there be dedicated circuits—that is, circuits that are individual between a county center and the state switching center, which makes available the full, "on line" use of that circuit for the traffic of any member station. The minimum specifications of the Peace Officers' Association Communications Coordinating Committee includes the requirement that the improvement plan provide sufficient circuits to handle overloads during the busy hours. Sufficient circuits will also insure the movement of great volumes of traffic in order that not more than 1 in 100 messages will be held at an intercept or storage point longer than $1\frac{1}{2}$ minutes.

3. Too Slow Versus Fast

The system, as it now operates, cannot fulfill the needs of law enforcement—it is too slow. Though it is repetitive there is no simpler way of stating the facts than reemphasis of the inadequacy.

1. Manual operation slows the continuous flow of traffic and reduces the network capacity.
2. Multistation circuitry slows the constant availability of transportation facilities for transmitting messages.
3. Speed cannot be increased in the present equipment.
4. An increase of 75 to 100 words per minute is not of itself the answer to the problem.

5. The present equipment is not technically capable of the automation essential to fast police agency service, i.e., computer applications.

The proposed improvement plan is to eradicate the inadequacies and speed the service.

1. Automation will contribute to speed because personnel inefficiencies will be reduced to a minimum. Also, the relay center message handling will be eliminated.
2. Independent circuits will provide immediate transportation of traffic, a decisive speed factor.
3. Equipment speed will be increased one-third, but more importantly the machines will accommodate those factors that combine to the overall requirements.
4. Point-to-point traffic will be transported one-third faster.
5. Computers can be serviced by the system which will speed the service and provide for the volume of traffic police work faces today. An example of such volume is found in the 154-percent increase in the southern California area broadcasts of August 1964 over August 1961.

4. *Not Expandable Versus Easily Expandable*

Renovation of the present system is impractical in the face of technical advancements in the art of teletypewriter communication. Furthermore, the circuits are filled to capacity with respect to stations and usage, the equipment operates at the maximum speed and new space would be required if like equipment were added. The present inadequacies would remain.

The system now in service is:

1. Antiquated in manual switching
2. Obsolete in multistation circuitry
3. Incompatible with subordinate modern systems
4. Unimprovable without major, costly alterations
5. Unadaptable to electronic data processes
6. Outdated in view of modern developments
7. Slow, cumbersome and unexpandable
8. Serviceable but inadequate to police needs

It is the consensus of the law enforcement officials and the members of the ad hoc committee advisory to the Ways and Means Committee on this subject of teletypewriter improvement that the state service should extend to each county seat in the state. Therefore, the new concept of the California law enforcement teletypewriter system is to provide service only to such locations. As a consequence of this policy, an expansion of the network would be confined to the furnishing of additional circuits in the advent of increased volume.

Service to be furnished by the state must necessarily be based upon a 10-year expansion plan and be able to accept traffic from many other types or methods of typewritten communication. The state service must use eight-channel tape now accepted by major manufacturers as the basic method of fast, written exchange of information. These same manufacturers have agreed to accept the American Standard Code for

Information Interchange, reduced to the letters ASCII, which can be transmitted on eight-channel tape. Any system using five-, six-, or seven-channel tape will be acceptable to the state network through converters which can be installed for the purpose of making any other teletypewriter system adaptable to the state transportation line. It has been necessary to plan in this manner because, within the State of California, we have a great variation in the size of law enforcement agencies.

5. *Uneconomical to Renovate Versus Economical*

Any renovation of the present teletypewriter system would be a temporary measure and therefore uneconomical. No one feature of the system could be selected for improvement to the neglect of the others and be of material benefit to police work.

Economies are most difficult to measure with any definiteness when so many other agencies are concerned so the following will only identify the tangible and intangible opportunities for savings as a result of the improvement plan:

Tangible

1. State personnel is estimated to be reduced by an annual saving of \$50,000. It would be impossible to estimate the number of personnel who could be released to other duties within local agencies as a result of the proposed improved system.

2. Decrease in recordkeeping personnel

It will be necessary for certain police or civilian employees to be retained by the local agencies to see that information reaches the centralized information center. However, a number of such employees, paper stock, files, and space can be released to considerable savings if such improvements as herein proposed replaces the need for local record operations.

3. Stable state expenditures

Within this item is compared the philosophy of an improved California law enforcement teletypewriter system which would be a "spinal" network of service to each county seat to the present method of legislating agencies into the system at state subsidy. Under the present program some 600 stations might eventually be subjects of state support. Should the state continue its present program it could lead to the state assuming much of the cost burden of local agencies.

4. Local law enforcement agencies are now subscribing to private lines direct to the Department of Justice for special records of urgent need. Similar expense will apply soon to the California Highway Patrol. The improvement plan would obviate the need for this added expense to the result of further economies.

5. Information centralization

This item affords another opportunity to emphasize the need for centralized information and the resultant reduction of maintaining local records. The three major state agencies to serve local enforcement would be the Department of Justice, California Highway Patrol, and the Department of Motor Vehicles.

6. Saving of peace officer time

This item best can be demonstrated by the officer holding a suspect at a remote area when fast response to his inquiry might have resolved the problem and released the officer to pursue his duties. Also, the booklet entitled *Centralized Electronic Information System*, which is a description of "The Key to Effective Law Enforcement in Alameda County," portrays a system of "warrant checks." It takes approximately 39 minutes 15 seconds to inquire of some 12 law enforcement agencies regarding a warrant, whereas the proposed Bay area counties "warrant check" through the "centralized electronic information system" would take approximately 1 minute 45 seconds.

7. Peace officer protection

To attempt to evaluate a saving within this subject is to attempt to place a value on the life of an individual. The proposed improvement seeks to arm the officer with information so fast that he may be forewarned of any precautions necessary in the pursuit of his duty.

8. Confidentiality of information

There is no way to measure the value of being able to communicate information regarding criminals without the criminal intercepting such data and thereby using it to advantage. It is difficult to measure, in terms of money, the security that comes from the message being safe from accessibility by the criminal or other unauthorized person. It is the nature of the teletype, the message must go from a machine in a particular law enforcement location to similar equipment in another law enforcement location. There is no probability that the criminal can intercept such traffic as is possible in radio, telephone or other voice means of police communication.

9. It can be estimated that the present cost per message based upon state expenditures would approximate 25 cents as compared to 40 cents some 10 to 12 years ago. Current estimates are that the proposed improved system would make possible such large volumes of traffic that our costs could approximate 10 cents per message and that a driver's license inquiry of the Department of Motor Vehicles would approximate 7½ mills.

Intangible

1. More effective law enforcement

To put a monetary value on the efficiency of a law enforcement agency as a result of information being more readily available at faster speeds would be most difficult.

2. Saving of citizen inconvenience

One can only imagine oneself in the position of being delayed by an officer for a period of time, subject to arrest, held in detention or generally kept from normal pursuits for lack of prompt information to put an appropriate self-evaluation of saving in this item.

Conclusion

The population explosion, the resultant increase in crime, the increase in law enforcement agencies, the modern methods of transportation which facilitate the mobility of the criminal, the additional statutes and court decisions necessitating written evidence of the criminal record make it mandatory upon law enforcement to centralize its source of information. Such centralization is a most valuable asset to police work when there is speed in retrieving this information that it may be effectively acted upon by the officer. It is necessary that law enforcement be provided a system of typewritten communication which will service all peace officer agencies from a central source rather than inquiring of numerous local record bureaus.

The present teletypewriter system cannot service law enforcement in this new concept of speed, accuracy and availability of information. Law enforcement today must have information available almost instantaneously from records such as those maintained by the Department of Justice, the Department of Motor Vehicles, and the California Highway Patrol, and this data is becoming so voluminous that it cannot be maintained efficiently on a manual basis but must be mechanized and treated with dispatch that only the modern-day computers can cope with. What is being proposed in the improvement plan is a system that is so dependable and reliable, without human intervention, that law enforcement will be more effective through the readily accessible sources that defy the mobility and shrewdness of the criminal element.

Effective law enforcement needs the best tools available and the proposed improvement contained in this article is a serious attempt in providing this need.

	Improvements	Current budget	Total annual cost	Nonrecurring (installation)	First annual appropriation
General Fund					
Justice	\$388,608	\$276,000	\$664,608	\$122,500	\$787,108
Corrections ¹	32,400	1,644	34,044	1,500	35,544
Youth Authority	2,400	9,600	12,000	700	12,700
Total, General Fund ²	\$423,408	\$287,244	\$710,652	\$124,700	\$835,352
Motor Vehicle Fund					
California Highway Patrol	\$49,300	\$167,900	\$217,200	\$10,500	\$227,700
Department, Motor Vehicles	55,620	12,100	67,720	6,600	73,720
Total, Motor Vehicle Fund	\$104,920	\$180,000	\$284,920	\$17,100	\$301,420
TOTAL STATE COST	\$527,728	\$467,244	\$994,972	\$141,800	\$1,136,772
Other Costs					
FBI	\$16,200	\$7,800	\$24,000	\$1,100	\$25,100
Connecting states	60,000	11,400	80,400	2,200	82,600
Total, other costs	\$82,200	\$19,200	\$104,400	\$3,300	\$107,700
TOTAL SYSTEM COST	\$612,928	\$486,444	\$1,099,372	\$145,100	\$1,244,472

¹ Now paid in Justice budget—\$14,736 (total present cost \$16,580).

² Other quasi-law-enforcement agencies not included.

These costs have been exploratory, since no letter of intent has been issued to any specific vendor. It has been necessary to confine any estimate to the current contractor. Adjustments will have to be made for any additions or decreases within existing networks at the time of final decision.

REPORT OF COMMUNICATIONS ADVISORY COMMITTEE

PEACE OFFICERS' ASSOCIATION OF CALIFORNIA SEPTEMBER 4, 1964

FUNCTIONAL SPECIFICATIONS OF A STATEWIDE LAW ENFORCEMENT INTERAGENCY AUTOMATED MESSAGE AND INFORMATION MANAGEMENT SYSTEM

The following is a description of the organization and the functional requirements essential to the establishment of an adequate automated message and information control system for the exchange of intelligence among the law enforcement agencies in the State of California. These specifications have been drawn and submitted in support of the action taken by the Peace Officers' Association of California, which resulted in the passage of House Resolution No. 373 authorizing the creation of an Assembly interim committee to study the limitations of the present state law enforcement teletype system as a basis for upgrading said communication system in the interest of public safety and to provide electronic data communication facilities for the interagency exchange of police information among those agencies having such requirement.

SYSTEM SPECIFICATIONS

Establishment and Control of LEAMIS

The State of California shall provide and maintain a statewide law enforcement interagency automated message and information control system to facilitate and support the performance of law enforcement services and to coordinate functional responsibility among agencies at the state and local government levels.

- A. LEAMIS shall be under the administrative control of the Attorney General of the State of California.
- B. A commission shall be established to determine operating standards and procedures to be followed by agencies participating in the system. Said commission shall be responsible for the maintenance of operating discipline on the system. The commission shall consist of representatives of the users of the system. The commission shall prepare and issue an annual report of LEAMIS operations together with such recommendations pertaining to the improvement and maintenance of the system as it deems appropriate. A copy of the annual report and recommendations shall be directed to the attention of the Governor, the Attorney General and to each agency participating in the system.

NOTE: For the sake of identification and brevity, the system proposed in these specifications shall be referred to under mnemonic symbol LEAMIS (law enforcement automated message and information system).

II. Scope of Service

LEAMIS shall provide and maintain service among the following agencies but need not be limited thereto:

A. The primary purpose of the LEAMIS program is to provide for the communication of messages and information between law enforcement agencies on the state and county levels, and such related government agencies dealt with extensively by law enforcement. The program should provide for the requirements of:

1. *State Agencies*

- a. Department of Highway Patrol
- b. Department of Motor Vehicles
 - (1) Division of Drivers' Licenses
 - (2) Division of Vehicle Registration
- c. Department of Justice
 - (1) Criminal Investigation and Identification
 - (2) Bureau of Narcotics Enforcement
- d. Department of Fish and Game
- e. Department of Corrections
- f. California Youth Authority
- g. Department of Mental Hygiene
- h. Department of Alcoholic Beverage Control
- i. California Disaster Office
- j. Department of Parks and Recreation,
 - Division of Small Craft Harbors (boat registration)
- k. Foreign state agencies
 - (1) Arizona Highway Patrol
 - (2) Nevada state, county, and local law enforcement agencies
 - (3) Oregon State Police

2. *County Communication Control Point.* The state shall establish and maintain a LEAMIS communication control point in each county of this state. Each county communication control point shall be provided sufficient communication circuits and associated terminal equipment to permit county and local participation in the system.

3. *Local Law Enforcement Participation.* The LEAMIS program shall permit participation in the system by established law enforcement agencies at the municipal level subject to such conditions as the commission shall establish for such participation.

4. *Federal Agencies.* The LEAMIS program shall provide for participation of the following offices of the Federal Bureau of Investigation:

- a. Los Angeles office
- b. San Diego office
- c. San Francisco office
- d. Las Vegas office

B. *The LEAMIS design shall provide for projected system expansion* to maintain an adequate level of service for a minimum of 10 years after activation. The expansion and/or modification of the system shall be subject to the recommendations of the LEAMIS

Commission and approval of appropriate authority. Such recommendations for expansion and/or modification shall be based upon trends in population, criminal activity, activity of the system in operation and the particular requirements of law enforcement service.

II. *Physical Provisions*

- A. *Standardized Equipment at All Stations.* Law enforcement is deeply concerned as to the degrading of operations by the installation and use of manual on-line terminals in a system designed for automatic operation, hence:
1. *All stations participating in the LEAMIS program shall be equipped for automatic transmission and operable at the transmission speeds set forth in Section 3 below.*
 2. *The system shall be engineered to permit all stations full duplex circuit operation capable of simultaneous sending and receiving. The initial installation shall provide for full duplex circuits between all principal stations on the system where such need is evident on the basis of communication traffic records and current trends in operation requirements.*
 3. *The minimum transmission requirements for the system are:*
 - a. Circuit quality that will permit a transmission speed of at least 1,050 words per minute, and
 - b. Terminal equipment that will operate at a speed of 100 words per minute.
3. *The system design to provide automatic switching facilities that will assure the following:*
1. Individual stations in the system shall be able to transmit messages with minimum delay and of different categories and classifications interspersed.
 2. System to provide adequate safeguards to assure that a message correctly directed will arrive at the point of destination.
3. *System design shall provide for alternate routing of backbone circuits serving the principal areas of the state in event of major disaster or failure of a cable or associated equipment. Provision should be made for sufficient backup facilities to assure continuity in law enforcement communication services.*
- D. *Supervision of the System.* The system design shall provide for the establishment of at least one system control center to supervise the system in operation and provide the basis for administrative control.
1. The system control center(s) shall be housed on a site located on state property. Said site to be selected to provide adequate security against enemy air attack and/or sabotage as recommended by the California Disaster Office.
 2. The system control center(s) shall be staffed and operated by state employees with the exception of routine and preventative maintenance services or the repair to equipment which shall be performed by the contractor for said services.

3. The system control center(s) shall be equipped with adequate standby power equipment and facilities as recommended by the California Disaster Office.
4. The switching equipment controlling the communication circuit shall be housed at suitable locations based upon the system design and user requirements and provide for the:
 - a. Automatic or electronic routing of messages from originating station to addressee station(s).
 - b. Interception and temporary storage of messages, if necessary, to insure the completion of transmission when an addressee station is initially found to be busy.
 - c. Interception, storage and holding of scheduled group messages on basis of either statewide or designated area or combination of areas and further be capable of transmitting those group messages automatically according to a prearranged schedule.
5. The LEAMIS equipment and facilities shall be equipped with built-in alarm guards to indicate disorders and malfunctions in equipment and circuitry and identify the terminal(s) and/or circuit(s) effected.
6. LEAMIS circuits and/or equipment shall be equipped with meters of suitable design to provide an accounting and measurement of traffic loads, either on a word-count or lapse-time-in-use basis.
7. LEAMIS circuits shall be capable of carrying effectively any sudden increase in traffic volume. The circuitry shall be engineered to accept and maintain emergency traffic loads up to 10 percent over the normal maximum rated load for any period.
8. LEAMIS circuits and trunks shall be capable of expansion and modification as the normal requirements of the system increase and improvements in transmission methods become available.
9. The system shall be capable of the transmission of integrated data for electronic processing, storage and retrieval.

IV. Maintenance Requirements

The entire system is to be maintained in adequate working order.

- A. A preventative maintenance program shall be established on a regularly scheduled basis to insure that all machines and equipment are in satisfactory working order.
- B. Repair services shall be of high priority and available to all stations participating in the system without delay following the report of trouble.
- C. Maintenance services shall not be disrupted due to labor disputes.

V. Other Considerations

- A. In practical operation a law enforcement interagency message and information control system is not a two-party communication system. In most instances the transmission is of a three-party variety hence in the design of a system this concept must be recognized.
- B. Any proposal to design and establish a law enforcement interagency message and information control system must give due consideration to the personnel requirements and training necessary to assure

effective operation of the system. This evaluation encompasses not only the personnel assigned to duty at the system control center(s) but includes the personnel performing duty at the county communication point(s) and the public safety employees required at each local station in the system.

- C. The LEAMIS program shall be designed and implemented in such manner as to support existing local county law enforcement communication networks and maintain coordination of services among adjacent jurisdictions.
1. The system design shall consider the status of existing county networks and associated communication equipment.
 2. If the proposed system design requires the use of code-conversion equipment to permit automatic integration of various terminal devices, said code-conversion devices shall be incorporated in the terminal control equipment provided at the county communication control points or the system control center(s).
- D. The LEAMIS specifications indicated above describe the minimum standards that must be provided at all levels of law enforcement in the State of California to assure an efficient and rapid interagency communication service. Definite control responsibility must be placed with the state agency most logically constituted to coordinate the communications of all user agencies. Discipline must be maintained on the system if it is to provide efficient service. The creation of a commission representative of the users would be an effective control device. If the system is to remain effective it must be subject to operational review improvement and adjustment commensurate with current public safety demands and the technical improvements in the art and practice of communication and information control.

CALIFORNIA LAW ENFORCEMENT TELETYPEWRITER SYSTEM SUGGESTED ORGANIZATION

The Department of Justice shall maintain a statewide teletypewriter system of communication for the use of police (law enforcement) agencies.

The system shall be under the direction of the Attorney General who also is the Director of the Department of Justice.

The Attorney General shall appoint a committee to advise and assist him in the management of the system with respect to operating policies, service evaluation, and system discipline. The committee shall serve at the pleasure of the Attorney General without compensation except for reimbursement of necessary travel expenses and shall consist of representation of the following organizations:

- Two representatives from the Peace Officers' Association
- One representative from the Sheriffs' Association
- One representative from the League of California Cities
- One representative from the California Supervisors' Association
- One representative, Chairman, Governor's Communications Advisory Commission

One representative from the Department of Justice
One representative from the Department of Motor Vehicles
One representative from the Department of General Services
One representative from the California Highway Patrol

The Department of Justice shall provide an executive secretary to the committee.

The committee shall elect a chairman for a term to be determined by the committee.

The committee shall meet at least twice each year at a time and place to be determined by the Attorney General and the chairman. Special meetings may be called by the Attorney General or the chairman by giving at least 10 working days' notice to the members.

The Attorney General shall publish, for distribution to the system subscribers and other interested parties, the operating policies, practices and procedures, and conditions of qualification for membership established by the committee and approved by the Attorney General.

The system shall provide efficient and modern teletypewriter communication service in each county seat in the state at a place and with such circuitry and terminal equipment as shall be recommended by the committee and approved by the Attorney General.

The system shall maintain relay centers with qualified state personnel to insure the efficiency of the service.

The system may connect and exchange traffic with compatible systems of adjacent states and otherwise participate in interstate operations.

The system shall provide service to any police (law enforcement) agency qualified by the committee which, at its own expense, desires connection through the county terminal.

The system shall be maintained at all times with equipment and facilities adequate to needs of law enforcement. The committee shall recommend to the Attorney General any improvements of the system to meet the requirements of the subscribers and to take advantage of advancements made in the science of teletypewriter communications.

The system shall be engineered to serve automated data-processing equipment.

Any subscriber to the system shall file with the Attorney General an agreement to conform to the operating policies, practices and procedures approved by the committee under penalty of suspension of service or other appropriate discipline by the committee.

Current statutes pertaining to the state teletypewriter system would need revision to effect this program of organization.

LETTER OF TRANSMITTAL

Assembly Interim Committee on Way and Means
California Legislature

March 31, 1965

To the Speaker and Members of the Assembly

Dear Mr. Speaker and Members:

In accordance with House Resolution 64, 1963 General Session, your Interim Committee on Ways and Means herewith submits its final report on state mental health services.

The committee is indebted to the many persons, both private citizens and public officials, who were of invaluable assistance in the course of this study.

Respectfully submitted,

INTRODUCTION

About 5 percent of California's mentally retarded population have traditionally been a responsibility of state government. These are the ones who require care and services their families are unable to provide. Since 1850, the state has maintained state hospitals for these people.

This is the first of two reports about these retarded persons, their families, and the state system designed to meet their needs. This first report describes an organizational weakness.

The second report, to be published later this year, will review the state's hospitals for the retarded and will include suggestions for improving the services in these state facilities.

* * * * *

In 1963, House Resolution No. 64 created an interim committee to study mental health services in California. Three assemblymen have served as a special subcommittee of the Assembly Ways and Means Committee to conduct this study.

The interim committee members are: Jerome R. Waldie (D), of Antioch, Chairman; Frank Lanterman (R), of La Canada, and Nicholas Petris (D), of Oakland.

The first few months of the subcommittee's activities were devoted to investigating general problems in the Department of Mental Hygiene, culminating in a public hearing on October 22, 1963. In December 1963, the subcommittee selected the field of mental retardation for intensive study and since then has been conducting an analysis of the state's program for the retarded.

There were several reasons for concentrating on mental retardation:

a *Federal funds had recently been made available to speed the development of state programs for the retarded, and the Legislature would have to be prepared to make effective use of these funds.*

b *In 1962 the Department of Mental Hygiene, at the request of the Legislature, prepared a "Long Range Plan for Mental Health Services in California." That plan suggested a sharp change of direction in state services for the retarded, but the Legislature had not yet taken steps to enact laws to accomplish the recommended changes.*

c *In 1963, the California Study Commission on Mental Retardation was created to suggest additional legislation to the 1965 General Session. The Legislature should be prepared to evaluate the commission's proposals.*

d *From time to time questions have been raised regarding conditions in our state hospitals. Previous legislative committees had probed specific incidents, but a comprehensive review of hospital programs and policies was needed.*

e *The Legislature has long been frustrated in its efforts to solve the chronic problem of families with children on the "waiting list" of state hospitals. Despite the rapid expansion of the state hospital system and the development of community mental health programs, the "waiting list" remains a constant problem. The subcommittee determined to focus a major portion of their energy in an effort to understand and solve this problem.*

The subcommittee conducted its activities in a somewhat unique manner and a brief chronology of their work may be interesting to students of the legislative process in California:

Step No. 1—(December – January)

A questionnaire was submitted to each of the state hospitals serving the mentally retarded. The 48-page questionnaire covered every major aspect of program from admission policies to "after-care" services. Responses to the questionnaire were thorough and complete. They were analyzed and a number of problems were noted. During this same period, hospitals were visited and discussions were held with hospital employees, parents with children in the hospitals, and representatives of professional and citizen groups interested in problems of the retarded.

Step No. 2—(February – March)

Two public hearings were held (February 21st and March 26th). These hearings were concerned with some of the problems uncovered in visits to the hospitals and through the questionnaire. The hearings focused on: educational services, uniformity of standards and policies, aftercare services, training of psychiatric technicians and several other administrative problems.

Step No. 3—(April – June)

In the early spring the subcommittee decided to prepare and publish a preliminary report describing their initial findings and conclusions regarding the problem of the "waiting list." The report was issued in June under the title "*A Preliminary Proposal to Eliminate Waiting Lists for State Hospitals for the Mentally Retarded.*" The report was mailed to over 1,000 individuals and organizations for the purpose of soliciting reactions and suggestions.

Step No. 4—(July – October)

During the summer months, the subcommittee conducted a survey of the 225 private facilities licensed to care for the mentally retarded in California. The results of the survey were published in October under the title "*Supplementary Factual Report No. 1.*"

On October 2nd the subcommittee held a public hearing in Los Angeles to give citizens from southern California an opportunity to react to the preliminary proposal.

Step No. 5—(November – December)

Because the subcommittee's preliminary proposal suggests major changes in the state's pattern of services for the retarded, it was vital to determine the reactions of those who would be most directly affected. A questionnaire was therefore submitted to every family in California with a retarded child on the "waiting list" to a state hospital. Through the questionnaire and numerous letters the subcommittee was able to communicate with over 1,200 families facing this problem. (There are over 1,800 on the "waiting list.") In December the results of this survey were published under the title "*Supplementary Factual Report No. 2.*"

On December 5th a public hearing was held at Santa Cruz to enable citizens from northern California to react to the preliminary proposal.

The report that follows summarizes the results of the subcommittee's investigation of the "waiting list" problem.

SUMMARY OF FINDINGS

- 1 Procedural weaknesses in existing state programs to aid the mentally retarded have resulted in an inability to provide badly needed services on a timely basis.
- 2 By making admission to state hospitals the sole route to gain state support for the costly care of the mentally retarded, lengthy waiting lists have resulted which have worked undue hardships on the afflicted and their families.
- 3 Many mentally retarded persons not requiring hospital care are unnecessarily forced to seek state hospital placement rather than being placed directly in community facilities or receiving other services more suited to their individual needs.
- 4 Public and private community-based services, including residential facilities, are not used to full advantage. While state hospital facilities for the mentally retarded are filled to capacity and lengthy waiting lists exist, state-licensed private facilities have substantial numbers of vacant beds.
- 5 Private residential facilities and professional home care services may be more suited to individual needs and in most instances can be secured at a cost less than the \$300-\$400 monthly cost of maintaining a mentally retarded patient in a state hospital.
- 6 Mentally retarded children, who can receive proper care in the community and whose parents prefer such service, should remain in the community whenever possible. Few families can now afford this.
- 7 Expanded state support for community residential care of the mentally retarded, in addition to supplying more appropriate care to the patients involved, would ease the strain on state hospital facilities and would reduce the need for the extremely costly construction of new facilities.
- 8 Privately operated facilities providing care for the mentally retarded are hampered by conflicting policies regarding licensing, inspection and standard setting administered by different state agencies.

SUMMARY OF RECOMMENDATIONS

1 State responsibility for the mentally retarded should be shifted from the time the patient enters a state hospital to the earlier point when expert diagnosis determines that special care is needed that the family is unable to provide.

2 The State Department of Public Health should be given the responsibility for contracting with appropriate community-based medical agencies to provide regional services, including the initial diagnosis determining whether special care beyond that available in the home is necessary.

3 The regional centers, in addition to diagnostic services, should:

- a. Provide counseling services to affected families;
- b. Determine eligibility for state support of patients in community facilities;
- c. Assist families in selecting appropriate community services;
- d. Provide continuing supervision and case management services for patients receiving state supported care;
- e. Periodically inspect community service facilities for compliance with established standards.

4 In addition to the above actions, the budget for 1965-66 of the Department of Mental Hygiene should be augmented in whatever amount necessary, up to \$500,000, to expand its private placement program to open space in the hospitals for some of the more urgent cases on the waiting list.

5 A position "Director of Mentally Retarded Care Standards" should be established in the Health and Welfare Agency having the responsibility to:

- a. Set licensing standards for institutions contracting with regional centers to provide care to the mentally retarded;
- b. Set rates which will permit licensed institutions to meet and maintain established standards.

6 An advisory body should be established composed of representatives of agencies rendering services to the retarded and representatives of families of retarded patients to review and advise on standards established for various kinds of care.

7 Families of the mentally retarded should be permitted to transfer personal guardianship of their children to the Director of the State Department of Public Health after appropriate screening by a regional center.

PART I: THE PROBLEM

A Greek myth tells of Sisyphus, an evil king of Corinth, condemned in Hades to roll up a hill, a huge stone which constantly rolled back.

Each year, hundreds of families plead for help when the problems of caring for their mentally retarded children become overwhelming. And each year the State of California increases the capacity of its hospitals in response to this pressure. But as California's population grows, and as medical science finds new ways of keeping retarded infants alive, the problem of the "waiting list" stubbornly remains. We've grown accustomed to a "waiting list" for our state hospitals. The ever-present "waiting list" is tragic testimony to an organizational weakness in state services.

The State of California and its elected officials have been responsive to this problem. The state has always accepted its responsibility for the care of retarded children. Year after year the Legislature has appropriated additional funds to eliminate the problem. Since 1955 the support budget for state hospitals for the retarded has increased from \$15.2 million to \$44.7 million. Nevertheless at almost any time during the past 10 years a "waiting list" of 2,000 or more retarded persons was knocking at the door.

There are now over 13,000 retarded persons in our state hospitals. To meet the total need for residential care in the traditional manner, the Department of Mental Hygiene has estimated the state should build over 3,000 new hospital beds during the next four years. The estimated capital outlay for this expansion would be \$47.6 million.¹

(Plans are already in motion to construct such facilities. The Department of Mental Hygiene now recommends the construction of 2,000 of these new hospital beds and the Department of Finance has already been granted \$75,000 for working drawings for one 500-bed facility.)²

Should the *only* response to the problem be to construct 3,000 new beds, by 1968 there would be 16,000 retarded persons in our state hospitals. In addition to the \$47.6 million the state would have spent on construction, the yearly support budget for hospitals for retarded would be at least \$11 million more than the present \$44.7 million.

But, as this is done, a new "waiting list" would accumulate and by 1968 it would be necessary to build again!

¹ See appendix for complete discussion of hospital bed projections and costs.

² Tentative Proposal for a Five-Year Program, California Department of Mental Hygiene, October 5, 1964.

The dilemma is not unique to California. New York State has twice the number of state hospital beds that we do, but they are also involved in a Sisyphean struggle with a "waiting list."

AN ORGANIZATIONAL WEAKNESS

The state now assumes responsibility for the care of a retarded child *only after that individual enters the state hospital. As a result, the number of beds available, posed against the steadily growing population, creates an ever-present bottleneck.* As the system now operates, the pathway to state-supported service can be reached only through the state hospital door whether or not hospital care is needed or desired.

The Department of Mental Hygiene has determined that *less than half of the children on the present "waiting lists" require care in a state hospital.*³

Of the 2,171 retarded persons on the "waiting list" on April 30, 1963, only 924 were found to be in need of hospital care after thorough clinical diagnosis. Nevertheless, all 2,171 were placed on the preadmission list for state hospital placement.

The fact that more than half of our present state hospital population and more than half of our "waiting list" must be channeled unnecessarily through state hospitals is testimony to a basic flaw in the way state responsibility is structured. Other alternatives simply are not available to parents of these children.

For over a century the narrow definition of state responsibility has meant that children who cannot be maintained at home must be fitted into the state hospitals.
